Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

+ *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.

+ *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.

+ *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.

+ *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter `http://books.google.com` durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

The date shows when this volume was taken.
To renew this book copy the call No. and give to the librarian.

HOME USE RULES.

All Books subject to Recall.

Books not used for instruction or research are returnable within 4 weeks.

Volumes of periodicals and of pamphlets are held in the library as much as possible. For special purposes they are given out for a limited time.

Borrowers should not use their library privileges for the benefit of other persons.

Books not needed during recess periods should be returned to the library, or arrangements made for their return during borrower's absence, if wanted.

Books needed by more than one person are held on the reserve list.

Books of special value and gift books, when the giver wishes it, are not allowed to circulate.

Readers are asked to report all cases of books marked or mutilated.

Do not deface books by marks and writing.

INDEX.

ARTICLES, &c.

Adams, Prof. J., on Illustration in Class Teaching, 241.
Adamson, Prof., on the History of Education, 489.
Addis, W. J., on Head Masters and Assistant Masters, 206.
American National Education Association, 69.
Anglais, Les, dans le Sud-Ouest, 453.
Anthropology and Political Science, 448.
Appointments and Vacancies, 22, 63, 124, 167, 204, 235, 280, 316, 374, 416, 457, 499.
Assistant Master in French Schools, 319.
Assistant Masters in Secondary Schools—Conference, 282.
Bagnall, Mme, on "Mouvement Féministe en Angleterre," 199.
Bird, C., on the Teaching of Handwork, 237.
Bowen, the late H. C., 195.
British Association at Winnipeg, 409, 448.
Brown, W. C., on the Relations between Heads of Schools and Parents, 459.
Canivet, A., on Madame Tallien, 283.
Charles, R. F., on the Educational Value of Play, 168.

COLLEGE OF PRECEPTORS:—
Evening Meetings: see below.
General Meetings, 64, 311.
Meetings of Council, 27, 66, 120, 160, 199, 233, 276, 312, 411, 448, 501.
Pass Lists:—
Teachers' Diploma Examination.—Christmas, 1908, 127; Midsummer, 1909, 451.
Certificate Examination.—Christmas, 1908, 85, 129, 161; Midsummer, 1909, 335, 412.
Professional Preliminary Examination.—March, 1909, 160; September, 1909, 411.
Lower Forms Examination.—Christmas, 1908, 95, 131; Midsummer, 1909, 344.
Certificate of Ability to Teach, 161, 464.

Conférences Françaises, 27, 161, 199, 245, 283, 453, 494.
Coquelin, Les, 494.

CORRESPONDENCE:—
Head Masters and Assistants: A Second Master, 274; Thomas Wyles, 320.
Moral Education League: H. Johnson, 162.
Registration of Teachers in Secondary Schools: J. O. Bevan, 236.

Current Events, 21, 61, 123, 165, 203, 234, 279, 315, 373, 415, 455, 497.
De Lupé, Mlle, on "Une Femme du Second Empire," 161.
Duckworth, J., on the Development of Initiation, 378.
Duhamel, J., on England through French Glasses, 245.
Education, History of, 489.
Educational Ladder, 16, 66, 131, 160, 198, 233, 274, 309, 369, 447, 502.
Educational Wastage, 463.
Elle et Lui, 27.
Endowments and Benefactions, 22, 62, 124, 166, 203, 234, 280, 316, 374, 416, 456, 498.
England through French Glasses, 245.
Equal Pay for Equal Work, 419.

EVENING MEETINGS at the College of Preceptors, Papers read at:—
On the Government of Children: Prof. Findlay, 116.
Educational Value of Play: R. F. Charles, 168.
Relations between Head Masters and Assistant Masters: W. J. Addis, 206.
Dangers of Illustration in Class Teaching: Prof. J. Adams, 241.
Relations between Heads of Schools and Parents: W. C. Brown, 459.
History of Education as a Professional Study: Prof. J. W. Adamson, 489.

Femme du Second Empire, 161.
Findlay, Prof., on the Government of Children, 116.
Fixtures, 21, 61, 123, 165, 203, 234, 279, 315, 373, 415, 455, 497.
German Higher Schools, 321.
German in Secondary Schools, 493.
Government of Children, 116.
Grammatical Terminology, 161.
Greek, Pronunciation of, 132.
Handwork, Teaching of, 237.
Hanks, F. G., on the Assistant Master in French Schools, 319.
Hayward, Dr. F. H., on a Budget of Controversies, 24, 67.
Head Masters and Assistant Masters, 206.
Head Mistresses and the Franchise, 382.
Heads of Schools and Parents, 459.
Herculaneum, Treasures of, 311.
Honours, 21, 62, 123, 165, 203, 234, 279, 315, 373, 416, 456, 497.
Illustration in Class Teaching, 241.
Imperial Aid for Education, 313.
Initiation, The Development of, 378.
Jackman, M., on Imperial Aid for Education, 313.
Karpinski, L. C., on the Teaching of Mathematics, 380.
Latin in the Schools, 132.
Latour, Mme, on "Les Coquelin," 494.

LEADING ARTICLES:—
Christmas Card for Mr. Runciman, 11.
Circulation of Teachers, 109.
Compulsory Continuation Schools, 305.
Education in Japan, 267.
Education in Russia, 403.
For Private Profit, 51.
Hegel as Educationist, 363.
How to Teach Geometry, 193.
Not how to Teach Foreign Languages, 227.
Registration in Delay, 153.
Regulations for Secondary Schools, 485.
Religion in Schools of the Future, 441.

Literary Items, 23, 63, 125, 168, 205, 236, 281, 318, 375, 417, 458, 500.
Local Authorities and Private Schools, 125.
London Mathematical Society, 38, 80, 142, 182, 219, 258, 294, 514.
Magnus, Sir P., on Practical Instruction in Elementary Schools, 133.
Margueré, l'Abbé, on "Elle et Lui," 27.

MATHEMATICAL QUESTIONS AND SOLUTIONS:—Aiyar, M. S. V., 330; Aiyar, S. N., 35, 141; Aiyar, V. Ramaswami, 473, 513; Anderson, Rev. W., 392, 512; Archibald, R. C., 328; Ball, W. W. Rouse, 328; Barniville, J. J., 180, 257; Bateman, H., 471; Bates, G. N., 428; Beard, W. F., 79, 180, 255, 330, 393, 471, 473; Berwick, W. E. H., 427, 512; Biddle, D., 78, 139, 329, 429; Blaikie, J., 139, 216, 256, 257, 291, 330, 472; Blythe, W. H., 181; Böcher, Prof., 292; Brown, F. G. W., 139, 256, 292, 513; Carr, G. S., 393; Chartres, R., 37, 393, 473, 512; Chaundy, T. W., 393, 471, 512; Chepmell, Major C. H., 36; Christie, R. W. D., 35, 257; Clifford, Prof., 473; Cochez, Prof., 330, 427; Cunningham, Lt.-Col., 35, 37, 78, 140, 179, 217, 257, 292, 300, 331, 427, 472, 512; Dakin, A., 139; Dallas, R. J., 392; Daniell, V., 77; Davis, R. F., 78, 140, 141, 181, 218, 255, 300, 393, 427; De Longchamps, Prof., 511; Dick, Hon. G. R., 140, 292; Dobbs, W. J., 392; Dudeney, H. E., 329, 392; Eckenstein, O., 391; Edwardes, D., 35; Escott, E. B., 78, 141, 179, 331, 471; Finlay, F. C., 139; François, 217; Fudge, J. H., 78; Gallatly, W., 218, 473; Ganguli, S., 37, 218, 255, 472; Gardner, R., 218, 330; Genese, Prof., 181, 256; Gillson, A., 256, 292, 393, 512; Gould, S. C., 472; Grace, J. H., 392; Greenstreet, W. J., 140, 181, 218, 472; Griffiths, J., 180; Hardy, G. H., 179; Hernández, Prof. E., 78, 218, 256, 513; Hippisley, Col. R. L., 180; Hudson, Prof., 330; "Inquirer," 291, 473; Isserlis, L., 181; Johnston, J. V., 393; Kelkar, D. M., 140; Lal, Manohar, 256; "λμ," 257; Lemoine, Prof., 36; Lindfield, T. E., 256; Macmillan, J., 218; McVicker, C. E., 256, 513; Madhavarao, V., 330; Marks, Constance I., 256; Marks, F. C., 139; Marr, W. L., 392, 393; Martin, Artemas, 37, 291; Morley, Prof., 77, 140, 428; Morrison, Edith J. D., 330, 512; Muir, T., 329; Nanson, Prof., 37, 77, 79, 139, 141, 179, 180; Naraniengar, M. T., 77, 180, 181, 255, 291, 328, 330, 331, 428, 472, 473, 512, 513; Narayana, M. S., 330; Narayanan, S., 255, 256, 291, 472, 513; Nesbitt, A. M., 35, 140, 181, 215, 293, 394, 473, 512; Neuberg, Prof., 181, 217, 256, 512; Orchard, Prof. L., 139; Pal, Jagat Chandra, 330; Prasad, Prof. 512; Prosper, V. R., 511; Purushotham, S., 472; Ramamurty, S. V., 292; Rao, C. M., 180; Redgrove, H. S., 180; Reeves, F. W., 512; Relton, F. E., 392; Riddell, H., 36, 139, 140, 292; Rigby, W., 77, 78, 291, 392;

MATHEMATICAL QUESTIONS AND SOLUTIONS (*continued*):—
Ross, C. M., 79, 139, 181, 216, 217, 292, 300, 427, 512; Sanjana, Prof., 35, 36, 77, 78, 140, 181, 257, 292, 428, 472, 512; Sarkar, Prof., 292; Satyanarayana, M., 139; Sergeant, E. P., 139; Shovelton, S. T., 330; Sih, Prof., 471; Sleigh, W. A., 181, 257, 293, 330; Soal, S. G., 140, 428, 472; Solidus, 140; Stuart, T., 78, 179, 427; Sylvester, Prof., 329; Tate, J., 328; Tavani, P., 37; Taylor, H. M., 216; Trachtenberg, H. L., 37, 471, 513; Varadarajan, D. P., 139; Venkataraman, T. K., 78, 141, 218, 330; Walker, J. J., 181; Wallis, B. C., 78, 217, 255, 256, 257, 291, 472; Watson, G. N., 78, 216, 256, 292, 330, 427; Wertheim, P., 256; Wolstenholme, Prof., 77; Woodall, H. B., 139, 393, 471; Youngman, C. E., 35, 36, 79, 139, 257, 291, 328, 428, 472, 473.

Published Monthly, price, to Non-Members, 6d.; by Post, 7d.
Annual Subscription, 7s.

COLLEGE OF PRECEPTORS.
(INCORPORATED BY ROYAL CHARTER.)

GENERAL MEETING.

The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 23rd of January, 1909, at 3 p.m.

MEMBERS' DINNER.

The Members' Dinner will take place at the Hotel Cecil, Strand, W.C., on Saturday, the 23rd of January, at 6.30 p.m. Tickets (not including wine), 6s. each. Members who intend to be present are requested to send early notice to the SECRETARY. Members may obtain tickets for their friends.

LECTURES FOR TEACHERS.

The First Course of Lectures (Thirty-seventh Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on **"The Psychological Bases of Teaching and Education,"** will commence on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods. The Fee for the Course is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C. *For Syllabus, see page 6.*

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 30th of August, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in February, 1909.

Certificate Examinations.—The Midsummer Examination for Certificates will commence on the 29th of June, 1909.

Lower Forms Examinations.—The Midsummer Examination will commence on the 29th of June, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Spring Examination in 1909 will commence on the 2nd of March.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*
Bloomsbury Square, W.C.

JOINT AGENCY FOR WOMEN TEACHERS,

74 GOWER STREET, LONDON, W.C.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.)

THIS Agency has been established for the purpose of enabling Teachers to find work **without unnecessary cost.** All fees have therefore been calculated on the **lowest basis** to cover the working expenses.

No Registration Fees are charged to members of the above Associations, and their Commissions are reduced.

Hours for Interviews:
11 a.m. to 1 p.m., and 3 to 5 p.m.;
Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be arranged.

Registrar, Miss ALICE M. FOUNTAIN.

THE JOINT SCHOLASTIC AGENCY.

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies:—

HEAD MASTERS' CONFERENCE.
INCORPORATED ASSOCIATION OF HEAD MASTERS.
COLLEGE OF PRECEPTORS. TEACHERS' GUILD.
INCORPORATED ASSOCIATION of ASSISTANT MASTERS.
ASSOCIATION OF TECHNICAL INSTITUTIONS.
ASSOCIATION OF PREPARATORY SCHOOLS.
WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION.

Interviews (preferably by appointment) 12 p.m.–1.30 p.m., and 3 p.m.–5.30 p.m. Saturdays, 12 p.m.–1 p.m.

Telephone—City 2257.

For terms and vacant dates address—ERIC WILLIAMS, c/o Educational Times, 89 Farringdon Street, London, E.C.

University Tutorial College.

(Affiliated to University Correspondence College.)

LONDON MATRICULATION.

Annually, for the last nine years, about **100** *students of University Tutorial College have passed London Matriculation.*

Morning, Afternoon, and Evening Classes in preparation for the Matriculation Examination of the University of London commence Monday, January 25th, and meet daily.

In the Compulsory Subjects and the more important Optional Subjects the Morning Class is divided into Senior and Junior Sections. These Sections work simultaneously, so that a student who attends the Senior Section in his stronger subjects may at another time pay special attention to a weak subject in the Junior Section. The Lectures are supplemented by Exercise Classes and frequent Test Examinations, and a strict record is kept of each student's progress.

Classes are also held for the

College of Preceptors'

and the

City and Guilds Entrance Examination.

All communications should be addressed to

THE PRINCIPAL,
University Tutorial College,
32 Red Lion Square, Holborn, W.C.

BURLINGTON CORRESPONDENCE COLLEGE.

Principal—Mr. J. CHARLESTON, B.A.
(Honours Oxon. and Lond.)

TUTORS.—The Staff includes Graduates of London, Oxford, Cambridge, and Royal Universities.

METHOD.—Thoroughly individual system, which ensures the closest attention to the needs of each student.

Rapid Preparation for:—

Matriculation,

Intermediate Arts and B.A.,

Intermediate Science and B.Sc.,

L.L.A. (St. Andrews),

COLLEGE OF PRECEPTORS' DIPLOMAS.

Address—THE PRINCIPAL,
Burlington Correspondence College,
CLAPHAM COMMON, LONDON S.W.

Messrs. TRUMAN & KNIGHTLEY, LTD.,

Educational Agents,

158 to 162 OXFORD STREET, LONDON, W.

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSEKEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

USE **The "DUST-ALLAYER" CO.'S**

ODOURLESS or powerful GERMICIDAL

FLORIGENE

(A REGISTERED NAME suggested by FLOOR-HYGIENE)

On all

SCHOOL, LABORATORY,

Art Gallery, Library, Museum, and other Floors—

Either Wood, Concrete, Stone, or Polished; also Linoleums, Cork-Mattings, &c.

"Florigene"

LAYS THE DUST

(See the Official Memorandum on the Cleansing and Disinfecting of Schools),

Purifies atmosphere, aids prevention of diseases and throat irritations, preserves floors, greatly reduces labour.

Hygienic, economical, easily and quickly used by the unskilled, and each application lasts for 2 to 4 months, according to wear.

Scrubbing (unless preferred) **also injurious and other sprinkling of floors are entirely dispensed with.**

Not sticky, but dust and dirt absorb "Florigene" from impregnated floors and become "weighted"—**floors can be cleaned daily with an ordinary broom alone—the sweepings** are not distributed.

BOOKS, FURNITURE, APPARATUS, &c., are less likely to soil, and seldom require dusting or cleaning.

The "DUST-ALLAYER" CO.'S "Florigene"

(Awarded the Bronze Medal of the Royal Sanitary Institute)

is extensively used in Government (Royal Colleges, Science and Art and other Departments) and Municipal Buildings, also Schools, Laboratories, Libraries, Museums, Offices, &c., with highly satisfactory results.

*Send for particulars, **Bacteriological, Medical,** and other Reports and Testimonials to the Sole Manufacturers*

COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, LONDON, W.C.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL BASES OF TEACHING AND EDUCATION.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The First Course of Lectures (Thirty-seventh Annual Series) will commence on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods.

SYLLABUS.

I. (Feb. 4.) *The Data of Psychology:* unique character of consciousness: generic consciousness: insulation of the individual consciousness: polarity of consciousness: the objective and the subjective: the self and the ego: nature of the soul: evolution of personality: interplay of personalities: self-realization as goal of education: the teacher's lever.

II. (Feb. 11.) *Psychology as an Educational Instrument:* prevalent misunderstanding: Münsterberg's theory: nature of hypostasis: the exploded faculty psychology: distinction between soul and soul content: education as a process of assimilation of and by the external world: apperception: dynamic view of knowledge: Herbert Spencer's view of the educational value of knowledge.

III. (Feb. 18.) *Presentational Processes:* Sensation and the senses: the "preferred sense": practical applications of the theory of preferred sense: the training of the senses: distinction between sensation and perception: meaning and limits of observation and experiment: the "gaping point": the area of observational activity: distinction between observation and inference: the movable inference index.

IV. (Feb. 25.) *Representational Processes:* distinction between gathering and elaborating material: conception: the static and dynamic view of ideas: ideas as forces: changes in the activity of a given idea: copresentation and interplay of ideas: hierarchy of ideas: the fixed idea: marginal and focal ideas: the possibility of the subconscious influence of ideas.

V. (March 4.) *Soul-building:* nature and scope of association: usual limitation to ideas: really of general application: association makes habits possible: advantages and disadvantages of habit forming: the "growing point": accommodation and co-ordination: the old and the new laws of the association of ideas: Paulhan's view: manipulation of association in teaching.

VI. (March 11.) *Memory:* relation to personal identity: physical basis of memory: possibility of improving memory as a natural power: the associative and the rational memory: mnemonics and the *memoria technica:* mediate and immediate recall: temporary and permanent memory: the nature of the memory implied in "cram": rote-learning: relation between memory and general intelligence.

VII. (March 18.) *"The Busy Faculty":* unjustified depreciation of the imagination: differentiation from memory: æsthetic and practical spheres of imagination: "day-dreaming": need to imagine processes as well as results: misleading use of the word "ideal": the need for clearly imaged ends in practical life: application to the teaching of Geography, History, Arithmetic, and Geometry: imagination as a drag on thought.

VIII. (April 29.) *Regulation of Consciousness:* nature of attention: relation to interest: teachers' distrust of interest: confusion with pleasure: interest and attention as cause and effect: various classifications of the kinds of attention: the physiological basis of attention: the alternation between concentration and diffusion: possibility of degrees of attention.

IX. (May 6.) *Reasoning:* technical distinction between judgment and reasoning: both included in popular term *thinking:* fundamentally an adaptation of means to ends on the ideational plane: thinking may be called the purposive aspect of apperception: laws of thought as thought: the most fundamental law of all thinking: induction, deduction, and fallacies.

X. (May 13.) *Feelings and Emotions:* the pleasure-pain tone that accompanies the activities of the soul: unjustified depreciation of the emotions: driving power of spiritual life: relation to ideas: expression of the emotions, and the various theories connected with it: practical applications to school work: control of the emotions: relation between feeling and desire.

XI. (May 20.) *Desire and Will:* activity of desire: relation to possibility of attainment: expectation of success: evolution of will out of desire: nature and function of motive: fallacy of "the strongest motive" theory: subjective and objective aspects of the will: what is meant by training the will and breaking the will: the problem of the free will of educator and educand.

XII. (May 27.) *Temperament and Character:* various meanings attached to the term *temperament* in ancient and modern times: accepted classifications: physical characteristics of the temperaments: permanency of temperament: possible modifications: the time element: influence of temperament on character: character types and their classification: use and abuse of schemes of classifying characters.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

EISENHANS AND OTHER TALES. A Second Year German Reader, with Exercises. By WALTER RIPPMANN. Extra fcap. 8vo, 1s. 4d.

NATURE STUDY, BOTANY, & AGRICULTURAL SCIENCE.

NATURE STUDY.

By Professor J. R. AINSWORTH DAVIS, Author of "The Natural History of Animals," &c., &c.

Profusely Illustrated with a remarkable series of well-chosen subjects. Crown 8vo, 2s. 6d.

This Nature Study Reader describes the adaptations to surroundings of common native plants and animals together with others that are familiar. Beginning with the wild geranium (Herb Robert), the structure, life-functions, and life-histories of typical plants are dealt with in succession. A similar method is pursued with regard to animals. The elements of classification are embodied, but subordinated to the ecological plan of the book. One important object kept steadily in view is to encourage personal observation of living things. Another, and even more important aim, is to stimulate the reasoning powers by showing that details of form and structure have a definite meaning in relation to mode of life. By training the powers of observation, and stimulating scientific curiosity, not only may a child be made an enquirer and discoverer on his own account, but that priceless endowment, a sympathy with Nature, may be engendered in him to his lifelong benefit.

THE RUSKIN NATURE READERS.

FOR SENIOR, INTERMEDIATE, AND JUNIOR STUDENTS.

Selected and edited by G. R. BENNETT, D.Sc. (Lond.).

Numerous Full-page and Line and Text Illustrations. Small crown 8vo, 1s. 9d.

The Ruskin Readers have been compiled to illustrate the effect which the observation of natural phenomena has had upon literature, and at the same time to give an insight into the methods of some of our greatest naturalists.

The first of this Series, namely, the Senior Book, is now ready, and contains descriptive passages from Ruskin, Lamb, R. L. Stevenson, and Dickens. Izaak Walton and Sir Edward Grey, whose affection for the river-side has produced the two English Classics relating to angling; eminent scientists such as Hugh Miller, Charles Darwin, and Prof. Tyndall; keen observers, who also have proved themselves brilliant men of letters, such as Gilbert White, Richard Jefferies, Thoreau, and W. H. Hudson, have all been put under contribution.

PLANTS AND THEIR WAYS.

An Introduction to the Study of Botany and Agricultural Science.

By ERNEST EVANS, Natural Science Master, Technical School, Burnley; Author of "Botany for Beginners," "How to Study Geology," &c.

Many Illustrations, 1s. 4d.

This book is the work of an enthusiastic teacher of Natural Science, and it has been prepared with the object of serving as a text-book of Nature Study and as an introduction to the Science of Botany.

The book is especially a practical one, and it contains instructions how to perform numerous experiments with different parts of plants. These can be carried out with very simple apparatus, and in the open air or schoolroom. All the specimens required can be easily obtained, and examined either with the naked eye or with the aid of a hand lens. The portion of the book which deals with the structure and functions of plants, and the soil in which they grow, is treated in simple language and very few technical terms are introduced. It is illustrated by numerous drawings, and can be recommended as a suitable book for use in Secondary Schools, Evening Continuation Schools, Technical Schools, and by Private Students.

The Publishers invite Application from Principals of Schools for Specimen Copies with a view to introduction.

London: J. M. DENT & CO., Aldine House, Bedford Street, W.C.

The Educational Times.

A Christmas Card for Mr. Runciman.

Among the rubbish that blocks the editorial table at Christmas time and overflows upon the chairs and floor—Abecedarian Arithmetic, Artist's Almanack, Bible Beauties, Comic Cuts from English Chronicles, Dante for Dullards, and so on through the alphabet down to Zodiacal post-cards—we have lighted on one pearl of great price, a booklet published by Bowes & Bowes, Cambridge, entitled, "Microcosmographia, a Guide for the Young Academic Politician." It is a pungent satire on University politics; but, like all good satires, it has more than a local application, and we need no excuse for directing our readers' attention to this delightful skit, which touches so delicately the sore place in our educational macrocosm.

"Nothing is ever done until every one is convinced that it ought to be done, and has been convinced so long that it is now time to do something else." Is not this true of the great question that has occupied public opinion chronically, and Parliament by fits and starts, ever since the Act of 1870 and before—the nationalization of elementary education? We have patched and botched and see-sawed, alternately advancing and retreating, and successive Chancellors of the Exchequer have "dallied with their golden chains, and smiling put the question by," and now, in 1909, we seem further off a solution than we were in 1908.

And, when we pass to secondary education, the satire of "Microcosmographia" appears even more direct and pointed. The academic person (we read) is to Hamlet as Hamlet is to the instinctive female. He is, "to use his own quaint phrase, a 'beast'; his discourse is many times larger, and he looks before and after many times as far. There is only one argument for doing something; the rest are arguments for doing nothing." Among the latter are the Argument of the Wedge, "that you should not act justly now for fear of raising expectations that you may act still more justly in the future"; the Argument of the Dangerous Precedent; of "Give the present system a fair trial," and of "the Time is not ripe," for an exposition and exposure of which we must refer our readers to the original. But, if any one were inclined to doubt the applicability of the satire to current educational politics, he could not do better than read the report of the last Head Masters' Conference; had he heard the debates the proof would be still more convincing. Mr. Gilson brought forward what, in one form or another, has been a standing dish at every recent Conference, the place of Greek in schools. He asked the Conference to affirm, what is now assumed as axiomatic by every authority on pedagogics, that the average boy cannot with advantage undertake the study of more than two foreign languages before the age of fourteen, and, as a rider, that if Latin be one of them, French and German should be accepted as equivalents for Greek. Dr. James declared himself sick of the Greek question, but was ready once more to apply the *argumentum ad cuneum*. This seemingly innocent proposal would open the floodgates of scientific barbarism. The neglect of Greek was already sapping the foundation of our national life, corrupting our literature, and degrading our morals. He was backed by Mr. Lyttelton with the *argumentum ad cruditatem*. The question was sprung on them; let them confer with the preparatory head masters (as if they had not conferred already); let these together draw up a well considered curriculum (as if the conference had not at that very sitting approved the curriculum of the British Association)—in a word, "the time was not ripe." Those of the Conference who could not stomach the strong meat thrown to them by Dr. James greedily swallowed Mr. Lyttelton's honeyed sop, and appointed a Committee to confer with the Preparatory Masters and report to the next meeting.

Academic parties are not easy to distinguish precisely, but there is no difficulty in classifying according to the "Guide" Mr. Lyttelton. "A Conservative Liberal is a broad-minded man who thinks that something ought to be done, only not anything that any one now desires, but something that was not done in 1881–82." Nor, when we read the definition of the "Young Man in a Hurry," is there any difficulty in fitting the cap. In spite of his years and gravity, Dr. Gray of Bradfield College was "inexperienced enough to imagine that something might be done before very long, and even to suggest definite things." He had the audacity to propose to the Conference that, in order to secure a more complete co-ordination of the educational system, non-local schools should submit themselves to inspection by the Board of

Digitized by Google

Education and even welcome Inspectors as allies and friends. It is needless to say that so rank a proposition was rejected, and the wonder is that the previous question was carried by so small a majority. All agreed that inspection in the abstract was at worst a necessary evil and that, if conducted by the Universities—that is, by friendly amateurs—it might be pleasant and even comfortable; but a compulsory inspection conducted by professionals was a very different matter. That head masters should be compelled to fill up forms and compile statistics was not only vexatious but derogatory to their dignity, and, as one gentleman remarked, subversive of character. The tricolour of the Conference—"Liberty, Variety, Elasticity"—must be nailed to the mast. A head master's school was his castle into which no Board would be admitted. But the argument that carried the day was "Inopportuneness." A member of the Conference was at the moment threatened by the Board with legal action, and for the Conference to express any opinion *pendente lite* would be obviously unfair and prejudice the case.

E pur si muove! 1908 will be remembered as the Annus Mirabilis in which the Head Masters' Conference—Conservative Liberals, Liberal Conservatives, Non-placets, Adullamites, and Young Men in a Hurry—passed a unanimous resolution which, as the *Morning Post* interpreted it, is tantamount to a direct vote of censure on the Board of Education. It was moved by Dr. Gow, seconded by Canon Swallow, and carried unanimously:—

(*a*) That this Conference is of opinion that, in the formation of a Registration Council under the Education (Administrative Provisions) Act of 1907, representatives of the teaching profession should be chosen with reference to the types and grades of existing schools, and not with reference to the several faculties of teachers; and (*b*) that this Conference trusts that the Board of Education will take steps to facilitate the constitution of such a Council without further delay.

The motion, as proposed by Dr. Gow, was couched in stronger terms, calling upon the Board to proceed to the constitution of the Council; but the amendment, accepted in deference to Dr. Fry's plea for meekness and patience, comes, as Dr. Gow remarked, to the same thing.

The principle of the draft scheme for a Registration Council, which was so unceremoniously rejected by the Board of Education, will be familiar to all our readers, even if they have forgotten the details. It is enough for our purpose to remind them that it was approved by all the delegates of the various educational associations at the meeting held last February at the College of Preceptors, and afterwards confirmed by the several associations, including the College of Preceptors. Further, these delegates were acting at the instance of the President of the Board, who had given them to understand that, if they could come to an agreement among themselves, the Board of Education would accept their conclusions and forthwith take steps to issue an Order in Council in pursuance of the Act. That agreement is now repudiated by Sir Robert Morant, but Dr. Gow stated to the Conference that he had it on the highest authority that "the account given in the White Paper of the preliminary negotiations that resulted in Clause 16 is a mere travesty of what took place."

The scheme of the delegates was by no means perfect; there were overlappings and serious omissions. So much Dr. Gow frankly admitted. It was open to amendments in details, and it was intended that the Board of Education should so modify it. But it was not intended that the Board should invite objections from every educational society to be found in Whitaker, and some too obscure to be found there, and then, as Dr. Gow complained, fling all the protests at his head. Dr. Gow is a good Christian, but he refuses, at Sir Robert Morant's invitation, to enter the lions' den with six drawing masters, four musicians, two stenographers, a bookkeeper, and other denizens of the fringe, all flying at his throat and demanding the reason why they were not admitted to the Council.

Mr. Runciman is in Egypt, enjoying a well earned holiday after his long and strenuous efforts to settle a weightier and far more thorny question than the Registration of Teachers. He has been hailed by all parties as a true peacemaker, and won universal admiration in spite of his ill success. In the land of the lotus the resolution of the Head Masters' Conference, if it reaches him at all, will appear "a tale of little meaning, though the words are strong." But, when he returns to his duties at Whitehall, we hope that the first business he takes in hand will be to master for himself the question of registration, to abandon, if not to repudiate, the *non possumus* attitude of his Permanent Secretary, and proceed without further delay to put into operation Clause 16. Let him remember that that clause is backed not only by the Head Masters' Conference and the Incorporated Association of Head Masters, but by a far more numerous and more influential body, the National Union of Teachers.

NOTES.

THE Education Bill is dead and gone. We confess we had considerable hopes of a settlement when a compromise was seriously attempted after the questions at issue had been thrashed out thoroughly and reduced to specific and manageable points. We do not think that the failure can be laid at the door of the prominent negotiators. We have no doubt whatever that both sides were most anxious to arrive at an accommodation. But the facts appear to have been inadequately realized, and the lack of time to ascertain them with sufficient clearness to establish an agreement gave a welcome opportunity to extremists in both camps. The sore thus remains open and aggravated. Compromise is essentially unsatisfactory to both parties; but, failing compromise, there is nothing to look for but a further period of bitter struggle. Yet, if the teaching of religion in the schools had been left to the parents and the teachers, there can be little doubt that it would have gone on satisfactorily and smoothly. Dogma seems strangely out of place in conflict with religion.

THE Presidential address of Mr. A. C. Benson to the Teachers' Guild, published in full in the December number of the *Teachers' Guild Quarterly*, is well worth reading, alike for its wisdom and for the excellent literary form in which that wisdom is embodied. The subject is "The Personality of the Teacher." Mr. Benson begins by dwelling on the

Digitized by Google

importance of preserving a due proportion between the scientific and the emotional elements in the teacher. The early appetite for knowledge is often, he reminds us, fitful, and can be cultivated only by a certain sympathetic influence. It is destroyed by a bore, and cannot be stimulated by even an enthusiast without a certain attractive and persuasive power. The question for each teacher to consider is how to make the best of himself, remembering that if a lesson goes badly the fault lies with himself rather than with his class. First comes the maintenance of physical health: the teacher should conscientiously observe the laws of health in matters of food, exercise, and the like, and should especially "obey the dictates of honest fatigue." Next the intellectual side: he should never become stereotyped, but read widely, not so much on the lines of his prescribed studies as in books which he enjoys and which cultivate the intellectual sense and widen the horizon. He must cultivate his imaginative faculty, and, above all, he must be alive, with all his deep-seated seriousness, to the infectious influence of gaiety. Method he must have, and must adhere to it, and at the same time be ready to change it if it fails to appeal to his pupils. Lastly, the moral or ethical region of self-development is briefly discussed. The ramifications of the subject are infinite; probably the safest rule is that the teacher should aim sincerely at making himself what he desires his pupils to be.

The Board of Education has just issued a Circular (No. 599) on the Teaching of History in Secondary Schools, and along with it a Memorandum "in explanation and expansion" of it. The Circular recommends a course extending over at least three years, and, if possible, four; for the course is to include English history from the earliest times, with such reference to and explanation of the chief events of European history as is necessary for the understanding of English history, and with special attention to local history. The history results are usually not very satisfactory; nor is this to be wondered at when one considers the quantity as well as the nature of the matters to be grasped and the immaturity of the apparatus that is expected to grasp them. The Circular, however, "also recommends that a large liberty should be assumed in each school to leave out freely much which is now included in the ordinary school treatment." Here, at last, is sound sense; and inspectors must attend to it as well as teachers. The obvious course is to concentrate on the essential points. The Circular rules out "special periods," except "very late in the school course: they are really more suited for University work"; while acknowledging certain advantages in the "concentric system," it finds "fatal objections in practice"; and it argues against the plan of working back from the present into the past. The scheme is, on the whole, a very good working arrangement, provided it is carried out in the large and free spirit that appears to animate it. "The practical difficulty that we have to meet is examinations." That, again, depends upon getting sensible examiners. The scheme has evidently been well thought out, and abundant illustrations are given by way of example and argument. But when teacher and pupil have done their honest best, we shall not expect more than moderately satisfactory results; for the subject is intrinsically difficult, requiring exceptional capacity both in teacher and in pupil. Still, we may improve on previous results.

The Army Qualifying Board had some 326 candidates before them in September, and passed only 113 of them—say one in three. On the face of it, there is nothing very remarkable in the proportion of passes and failures; but there is significance in the details of the report. The English essays might have been expected to be, as they are described, "mediocre"; and some allowance may be made even for "the most grotesque mistakes both in orthography and in punctuation," but marks ought not to have been lost "by pure carelessness and inattention." Précis-writing is a testing exercise. "In most cases it was unequivocally bad": not only had the candidates "little idea of the purposes served by précis-writing," not only was their writing "slovenly" &c., but there was "recklessness in misstatement and an apparent inability of the writers to read a simple narration with any degree of care and intelligence." "Much of the arithmetic work was very unsatisfactory"; "the results of the examination in geometry were very poor indeed." The chemistry was "distinctly poor." An unduly large proportion of the candidates "knew practically nothing of geography." "A lamentable ignorance of sound elementary knowledge of French was shown"; and "of the ten candidates offering German not one was really good, and some were very bad." How of Latin and Greek? "Only a small proportion of the candidates in Latin are safe from making blunders of the most elementary description." Only a single candidate offered Greek, and his achievement was to "send up half-a-dozen words of no value." After this disastrous catalogue, it is some relief to learn that "Algebra was good, and history was better than it has sometimes been." But one would like to know something of the educational history of these astonishing candidates. Surely it is only an elaborate and ingenious course of training that could have led to such egregious results. If young men of such calibre be set to command even a corporal's guard in these days of scientific warfare, we may well pray earnestly for peace in our (and their) time.

Among the many celebrations of Milton, the first place is due to the memorial reverence done him at Cambridge, which is duly chronicled in the "Milton Tercentenary Number" of *Christ's College Magazine*. Fortunately a "commodious lie" of a virulent disputant furnished the poet with "an apt occasion to acknowledge publicly with all grateful mind that more than ordinary favour and respect which I found above any of my equals at the hands of those courteous and learned men the Fellows of that College wherein I spent some years, who at my parting, after I had taken two degrees, as the manner is, signified many ways how much better it would content them that I would stay, as by many letters full of kindness and loving respect, both before that time and long after, I was assured of their singular good affection towards me." "Not only Christ's, but Cambridge itself, and the studies for which Cambridge was even then becoming famous," said Prof. Mackail, "gave a specific direction to his genius and left an indelible

Digitized by Google

impress on his poetry." It was right, therefore, that Christ's and Cambridge should do special reverence to the memory of Milton, and hail him as the greatest ornament of the College and the foremost "on the dazzling roll of poets whom Cambridge claims as her sons."

SUMMARY OF THE MONTH.

THE London County Council have agreed, with reference to teachers' pensions, "that the principle of such a complementary scheme of superannuation as will provide that the retiring allowance receivable by a certificated teacher in a London public elementary school, together with the benefits receivable by him or her under the Elementary School Teachers (Superannuation) Act, 1898, shall, so far as possible in all the circumstances, be the same as those to which officers of the Council of equal service and similar average salary are entitled."

THE Herts County Council are spending some £8,000 on the erection of a new elementary school for Letchworth (Garden City), with features diverging from the ordinary type of elementary school. All the classrooms surround an open quadrangle, on two sides of which there is a series of cloisters for shelter. Thus, every classroom will be in direct communication with the open air to a degree which is impossible in the ordinary school where the classrooms cluster round a central hall. Moreover, each classroom has been limited to 400 square feet of floor area, which gives forty as the maximum number of children. It is hoped, however, that not more than thirty-two children will be taught in each classroom; and this reduction in the number of children to each teacher will be no inconsiderable gain educationally.

THE Westminster School play this year opened with words of welcome to Princess Henry of Battenberg, who was present, and a merry quip on women's suffrage. The play selected was the "Andria" of Terence, a standard classic at Westminster. The familiar story was well told in excellently spoken Latin. The principal parts were worthily filled. Simo the determined father, Pamphilus the wayward son, and Davus his faithful servant acted and spoke well; and Messrs. I. L. Benvenisti, G. G. Williams, and R. M. Barrington-Ward (the captain of the school) are to be congratulated on their histrionic powers. The play was, as usual, followed by an amusing epilogue, also in Latin, comprising the same cast, and consisting of a series of skits on present topics, including, of course, the Suffragette question, the Franco-British Exhibition, and the Marathon race.

THE Head Masters' Conference was held (December 22 and 23) at Merchant Taylors' School, under the presidency of Dr. Arbuthnot Nairn. Over a hundred head masters attended. The Rev. Dr. Gow (Westminster) moved: "That, in the formation of a Registration Council under the Education (Administrative Provisions) Act of 1907, representatives of the teaching profession should be chosen with reference to the types and grades of existing schools, and not with reference to the several faculties of teachers, and that this conference trusts the Board of Education will take steps to facilitate the constitution of such a Council without delay." Canon R. D. Swallow (Chigwell) seconded, and the motion was carried. Dr. Gray (Bradfield) moved: "That this Conference, while anxious for the preservation of a variety of types in the secondary schools of this country, recognizes the value of securing a more complete co-ordination of the educational system, and with this end in view would welcome a closer touch between the Board of Education and the authorities of the non-local schools, through inspection and other direct means of communication." He hoped that the non-local schools and the Board of Education would join hands in proposing a scheme which would be pressed upon the Universities. So long as Oxford and Cambridge insisted on the retention of two dead languages as a *sine qua non* for entrance into their courts, so long would educational progress be cramped, encased, and crushed. The Rev. A. A. David (Clifton) seconded, and Dr. A. E. Hillard (St. Paul's School), opposing, said that the Inspectors of the Board of Education were not suitable for the work of inspection of public schools. Eventually the "previous question" was carried.

ON the second day of the Conference, Dr. Upcott (Christ's Hospital) moved a resolution to the effect that the Conference, while withholding its assent to many details, and in particular to the proposal to postpone the study of Latin to the age of twelve, approved of the main conclusions of the Report of the Committee of the British Association, Education Section. This was carried. A motion that the Army Council be urged at once to make it a rule that recognized schools may send in candidates for any examination recognized by the Council was referred to the Committee. Mr. R. C. Gilson (Birmingham) submitted a resolution in three parts. The first laid it down that, in the opinion of the Conference, the average boy could not undertake the study of two languages besides English before attaining the age of fourteen without detriment to his general education. The second part declared it desirable that no candidate of the ordinary age for admission should be allowed to offer more than two foreign languages in the Entrance and Entrance Scholarships Examinations of the public schools, and that, provided Latin was taken, Greek, French, and German should be alternatives carrying equal weight. The third part stated that, as experience showed it to be possible for a boy to attain a high standard of Greek scholarship by the age of eighteen or nineteen, even though he might not have begun Greek till fourteen or even later, it was the duty of public schools to provide a class or classes in which the study of that language could be begun. The Head Master of Eton moved as a rider that a Committee be appointed to confer with the preparatory-school masters as to a scheme of studies for schoolboys from the age of nine to about sixteen, and to draw up a report. It was time head masters showed the country that they had made up their minds as to what the curriculum in the schools should be. An amendment by Mr. W. G. Rushbrooke (St. Olave's) to substitute thirteen years as the age instead of fourteen in the first clause of the resolution was adopted. The second clause was defeated and the third carried. The rider was also agreed to. On the motion of the Rev. W. C. Compton (Dover), seconded by the Rev. T. N. H. Smith-Pearse (Epsom), the Conference adopted a resolution stating that the standard of the School Certificate Examination conducted by the Oxford and Cambridge Joint Board was too high for the purpose for which it was intended, and instructing the Committee to approach the Board on the subject. Mr. W. W. Vaughan (Giggleswick) asked the Conference to view with regret the apparently increasing neglect of the study of German in secondary schools. A resolution to that effect was carried, only five dissenting.

THE Chelsea Secondary School for Girls was formally opened on November 20. The school was originally part of the South-Western Polytechnic, and the transfer was effected in September last. The new buildings are situated in Hortensia Road, and represent the first school building expressly designed and erected by the London County Council for the secondary education of girls. The aim of the new school is to provide a liberal education for girls up to the age of eighteen or nineteen years. The claims of science to a prominent place in the school curriculum have been duly recognized, and ample accommodation has been provided for the practical study of chemistry, physics, and botany. The home arts are to be taught, and suitable rooms have been arranged for this purpose, as well as for practical work in geography.

A CONFERENCE of teachers and others interested in education was held at the University of Birmingham (December 5), a number of urban and rural districts throughout the Midlands being represented. Mr. J. W. Willis Bund, Chairman of the Worcestershire Education Committee, presided at the morning session. A discussion took place on "Evening Schools," Mr. W. A. Brockington, Director of Education for the County of Leicester, reading a paper on "Compulsory Evening Schools," and Mr. J. Penrice, Meriden, dealing specially with rural evening schools. Mr. Willis Bund emphasized the difficulty entailed by having two education rates and so many controlling authorities. He would like to see the county the authority for education all over the educational area. He was also in favour of the raising of the school age at elementary schools from fourteen to sixteen, and, if possible, "beneficial employment" abolished. Prof. Muirhead contended that the most practical line of advance was not so much the raising of the leaving age as the development of the continuation schools. At the afternoon session, over which Prof. Hughes presided, a paper was read by Mr. W. J. Morgan, President of the Birmingham Trades Council, on "Maintenance

Digitized by Google

Scholarships from Elementary Schools." He urged that the children of the working man had to be sacrificed to the necessity of keeping a home together, the financial difficulty of giving promising scholars the advantages of higher education being often insurmountable at present.

THE report on the Bradford Technical College for the session 1907–8 shows that the total number of students in attendance during the session was virtually the same as in the previous year, but there was a fall in the number of day students from 242 to 217. The average age of these students at the commencement of the session was nineteen years, as compared with eighteen years five months at the corresponding period of 1906. A new scholarship scheme, adopted during the session, provides opportunity for the transference of evening students of exceptional ability to the day courses, and offers special scholarships for apprentices in works. In order to carry the specialized training to as high a point as practicable, a number of fourth-year scholarships are offered to day students who have completed their three years' course, and, as a recognition of the necessity for securing the best brains and the highest possible preliminary training, a certain number of entrance scholarships are awarded on merit alone. The scheme affords evidence of the desire that all sections of the community should have equal facilities, as they have an equal claim to the advantages of the college training. The scheme for building a new block for the accommodation of the department of textile industries on an adjoining site, already purchased, has taken definite shape; detailed plans are being prepared and building is to be begun shortly. The staff of the department of chemistry and dyeing has been strengthened with a view to the encouragement of research work in the college. The testing laboratory of the department of textile industries has been employed to a much greater extent than previously in carrying out investigations for the trade. It is pleasing to note that the advantages offered to manufacturers and others are being more fully realized.

A MEETING of the Scottish Modern Languages Association was held in the University of Edinburgh (November 28), Miss Robson, Edinburgh, presiding. Miss Elizabeth Fish, Glasgow, was appointed President for the ensuing year, and Dr. T. Pettigrew Young, of the University College, Dundee, Vice-President. Dr. Schlapp, Edinburgh, submitted a report on a memorandum prepared by the Association dealing with the different aspects in the teaching of modern languages. He said everybody was aware of the alarming condition of the subject of German in the schools of this country. The Committee suggested a change in the conditions of the present intermediate certificates, and he understood the Education Department were inclined to give greater facilities for modern languages. On the motion of Dr. Schlapp, it was agreed to petition the Universities to reform as soon as possible the bursary examination, so as to give equal chances to candidates in modern languages with candidates in all other subjects; and to reorganize the honours class in modern honours language so as to allow of honours being taken separately in French and German. Mr. J. D. Rose, Kirkcaldy High School, moved a resolution to the effect that, while welcoming the prospect that the leaving certificate might become the normal mode of entrance to the University, it was highly important that the University preliminary examination should be maintained, in addition to the leaving certificate examination, so that those prevented in any way from obtaining the leaving certificate might not be shut out from higher careers for which they might have qualified themselves in other ways. The motion was unanimously agreed to. Dr. Pettigrew Young afterwards read a paper on "The Teaching of French in Scotland before the Nineteenth Century."

UNIVERSITIES AND COLLEGES.

Oxford.

THERE are 304 students on the books of the Association for the Education of Women, and 290 of these are in residence. The corresponding figures of last year are 271 and 259, and this year's numbers are a record. The quality is equally well maintained; 51 students obtained honours, 7 in the first and 24 in the second class; and in the examination for the Diploma in Anthropology, held in 1908 for the first time, the only candidate who obtained distinction was a woman student.

Early next term the University will be asked to make a very important change in its own constitution by meeting a reform of Congregation. That body consists at present of all resident members of Convocation and of certain University officials. A resolution will be submitted to Congregation on January 26 in the following terms: "That it is desirable that Congregation should be limited to members of Convocation who hold, or have held, University or College appointments, or are directly concerned with the studies, teaching, or administration of the University." The resolution has the support of over 120 members of Congregation, but it is already evoking a considerable amount of opposition.

(From our own Correspondent.)

Cambridge.

HISTORY has not been made this term, but this is no cause for grumbling. Good solid work has been done in all departments, and our best men have not been called away from the things they know to take part in controversies which are as unsettling as they are unprofitable. The long deferred report on the General Examination will probably make its appearance next term. Here is an examination confessedly producing good results, free from most of the evils innate in examinations as a class, conducted by men of experience and tact, who know the difficulties and dangers of examination divorced from teaching; and yet this is the object of the reformers' attack. Some years ago, as a result of a consensus of the leading lights in Cambridge, essay writing was introduced as a subject into all our examinations, including the General, but not a thing have the College authorities done towards providing adequate teaching. What is the result? The examiners in most examinations have to adapt themselves to the capabilities of the candidates.

The appointment of the Rev. J. P. Whitney to the Chair of Ecclesiastical History at King's College is a well deserved honour paid to a distinguished teacher. Mr. Whitney is, above all things, a man of wide and liberal ideas. In history, law, and theology alike he has made his mark, and he possesses that peculiar faculty, possessed in such perfection by the late Sir Henry Maine, of being able to focus upon the point argued the light derived from sources far apart. Fortunately for Cambridge, Mr. Whitney means to live among us. A Cambridge professorship and an English bishopric will probably follow in due course.

Just after these notes were written for your last issue, Cambridge received a visit from a party of German officials connected with the profession of the law. The excursion was avowedly educational, but in Cambridge it is possible that our visitors gave more than they received in the way of education. Through the hospitality of Dr. Breul a few representative Cambridge men were privileged to meet the foreign visitors, and the most charming speeches were made, notably one by Dr. Ward, Master of Peterhouse, the purity of whose diction made the German guests believe him to be one of their own nation.

The football match, on December 12, turned out much in accordance with the predictions made in these notes last month. Cambridge had the best of the game for more than three-quarters of the time, and were unlucky not to win outright one of the most remarkable games of the past few years. There was a curious unanimity on the part of the London press six weeks before the match that Oxford couldn't lose, and, a week before, that they ought not to do so. But they nearly did.

We ought to have a good crew for Putney this year. The trials have disclosed an abundance of new talent. Shortly after these notes see the light the President will be starting practice with a crew which will probably contain the following or most of them:—Arbuthnot (stroke), Hornidge, Rosher, Perry, Thomson, Fairbairn, Williams, and Richardson. Thiart will come in at seven or bow, according to the needs of the crew.

One of the usual disorderly "rags" after a big dinner has led to an undergraduate's being summoned for doing wilful damage to the amount of more than £5, and this between the hours of 9 p.m. and 6 a.m. There were two other charges of doing damage of a less amount which the magistrates dealt with severely; but, as they could not deal summarily with the third charge, they committed the defendant for trial at the Sessions on this, although practically all were one continuous transaction. This will be a lesson to undergraduates, for Recorders and Judges of the High Court are not always so lenient as a Borough Bench. What we really want is a stipendiary for Cambridge. Local shopkeepers are, no doubt, excellent men in their way; but there seems to be no reason why other qualified men should be excluded from the Bench because they take no part in local, as opposed to Imperial, politics.

Digitized by Google

The death of Mrs. J. W. Clark will cause an immense amount of sympathy for the bereaved family, more especially for its venerable head. "J," as he is invariably called by all "the boys," to whom he is such a trusty friend, will have some little consolation in knowing how many there are who feel for him in his trouble.

The poll examination lists are now coming out. There seems a tendency to strictness on the part of the examiners, but, as long as this is accompanied by good examining, nobody objects. The Engineering Special is growing and will grow; the M.B. seems to have reached its stage of maximum development for a time. In a year or two it will possibly make fresh developments.

The thirty-fifth annual report of the Local Lectures Syndicate contains a recommendation from Mr. Cranage, the secretary, that the summer meeting, which is held biennially at Cambridge, should be removed to the north of England, where many of the strongest Cambridge centres are located. It is regarded as a disquieting feature that the summer meeting at the University is supported chiefly by students connected with other University Local Lectures—Oxford and London particularly—and does not attract the Cambridge Local Lectures students in the proportion held to be desirable. Mr. Cranage says it is extremely difficult for many of the students engaged in the ordinary occupations of life to spare the time and the money to come to Cambridge, and he suggests that the summer meeting should become peripatetic.

London. Negotiations have been in progress for some time between the authorities of the University of London and the University of Paris with regard to a proposed interchange of students, or, in other words, the institution of a system whereby students of the one University should be allowed to spend a certain time at the other, such period being officially recognized as part of the course for a degree. The constitution of the University of London did not, however, permit of its accepting any part of a course of study not pursued in one of the ways mentioned in the definition of an "internal student," and, in order to carry out the arrangement, the statutes of the University have had to be altered. The Senate, having previously submitted a draft of the new statute to Convocation, have now adopted it, with this proviso: "A course of study, extending over not more than one year, taken in another University approved for this purpose, subsequent to the passing of the Intermediate Examination, may be accepted in lieu of an approved course of study taken in this University." This new statute has been laid, as is required, on the tables of both Houses of Parliament. Under this new power the University of London will be able to approve the University of Paris, and send its students to study there for one year out of the three required for the bachelor's degree, provided that it is not the first of those three years. There is no constitutional difficulty on the part of the University of Paris, such as there was here, and it is within the power of that University to reciprocate. During the negotiations it was considered whether professors, as well as students, might be interchanged, but the practical difficulties were insurmountable.

The Senate unanimously adopted the following resolution (December 2):—

That, having regard to the desirability of securing incorporation of the Imperial College of Science and Technology with the University, as recommended by the Departmental Committee and contemplated by the Charter of the Imperial College, the Government be requested to appoint a Royal Commission for the purpose with a view to the introduction of a public Bill, and that the Senate reaffirms its willingness to increase its numbers, and will take steps to secure such powers of delegation to its Councils and to any Committees it may appoint as shall appear expedient.

The Report of the Council of King's College alluded to the steady advance of the College in every Department and the improvement in the numbers of the regular students. In particular, the Faculty of Theology showed a large increase, and the system of training had been made more satisfactory. During the past session the King's College Incorporation Act had been passed, receiving the Royal Assent on August 1. The Commissioners appointed under the Act, with Sir James Stirling as chairman, had begun to sit, and the statutes were being drafted. The earliest day on which Incorporation could take place was September 1, 1909. The policy of incorporation and reorganization which would thus be carried out would help in the building up of a teaching University for London out of existing institutions, and would strengthen the portions of the College not incorporated, and especially the School of Theology.

During the session 1907–8 twenty-nine students submitted essays for the University Extension Sessional Certificate in Honours. Of these fifteen were approved for the Honours Certificate, and eight were "commended."

Bristol. A petition has been presented to His Majesty the King by Bristol University College, asking for the establishment of a University in that city. It has been referred to the Privy Council for consideration. It states that there has been a strong and growing feeling for some time in Bristol and the surrounding districts that it would be of great advantage to the inhabitants if such a University were established. With a view to providing the financial support which would be required for developing and adding to the teaching equipment of the College in such a way as to meet the requirements of an independent University, donations amounting to £172,000 have already been received or promised, including £100,000 promised by Mr. Henry Overton Wills, of Kelston Knoll, Weston. The present endowment of the College is £57,316; the income last year was £13,860, and there are at present nearly five hundred registered students, whilst it is stated that there is every reason to believe that, if a University were established, the additional interest created, the facilities afforded, and the prestige conferred thereby would lead to a substantial increase in these numbers.

The draft charter of incorporation of the University of Bristol has been issued. The following are to be the first chief officers of the new University:—Chancellor, Mr. H. O. Wills: pro-Chancellors, the Bishop of Hereford, the Right Hon. Lewis Fry, and the Right Hon. Henry Hobhouse; Vice-Chancellor, Prof. C. Lloyd Morgan, F.R.S.; and Treasurer, Mr. G. A. Wills. Women are to be eligible for any office in the University and for membership of any of its constituent bodies, and all degrees and courses of study in the University are to be open to them. It has been announced that the authorities of the Bristol University College have purchased the blind asylum and its land which adjoin University College. The site thus secured will be used for the erection of part of the new University.

THE EDUCATIONAL LADDER.

Cambridge University.—Carus Greek Testament Prizes:—Bachelors: F. S. Marsh, B.A., Selwyn. Undergraduates: R. H. Willey, B.A., Caius. George Williams Prize for Theology: C. E. Raven, B.A., Caius. Whewell Scholarships: (1) A. E. Brown, B.A., St. John's; (2) N. G. Scorgie, B.A., LL.B., Sidney Sussex.

Christ's.—Scholarships: L. G. Jacob, Clifton, £80 for Mathematics; J. C. Butterwick, Malvern, £60 for Classics; A. F. R. Lumby, Rugby, £60 for Classics; G. D. Roseway, Merchant Taylors', London, £60 for Natural Science; O. H. Grove, Sutton Coldfield, £40 for Mathematics; F. C. Walker, Wolverhampton Grammar School, £40 for Classics; and R. G. Martin, Hackney Downs School, £40 for Natural Science. Exhibitions: A. G. F. Willis, St. Olave's, £30 for Mathematics; A. C. Blyth, Aldenham, £30 for Classics; and H. M. Sale, Aldenham, £30 for Mathematics and Natural Science. Walter Wren Prize: C. F. Wood, B.A., late Scholar of the College.

Clare.—Dr. T. R. Elliott, late Scholar of Trinity, has been elected to a Fellowship (Natural Science). Scholarships:—Classics: £80, J. J. Wiles, Perse School; £50 (also an Archdeacon Johnson's Exhibition), I. H. Taunton, Uppingham; £40, P. R. Frost, Charterhouse, and H. L. Garson, Malvern. Mathematics: £60, M. Segal, St. Paul's; £50, D. J. Watson, High Wycombe Grammar School; £40, A. J. Wright, Dulwich. Science: £60, A. L. Bacarach, St. Paul's, and R. W. P. Jackson, Oundle; £10 (Science and Mathematics), H. H. Stevens, Liverpool College.

Corpus Christi.—Mathematical Scholarship: C. J. A. Buckell, Marlborough. Mathematical Exhibition: F. S. Thomas, Haverford West Grammar School.

Emmanuel.—Scholarships: F. W. Wallace, Fettes, £80 (Classics); R. H. W. Moline, King's School, Canterbury, £60 (Mathematics); F. Williamson, Bedford Modern School, £60 (Natural Science; W. P. Bennett, Cheltenham, £60 (History); W. C. S. Wigley, King Edward's, Birmingham, £40 (Mathematics); K. H. Coxe, Eastbourne College, £40 (Classics); W. A. Nowers, Stamford School, £40 (Classics); and J. H. Burn, North-Eastern County School, Barnard Castle, £40 Natural Science). Exhibitions: H. D. Henderson, Rugby, £30 (Mathematics); H. R. Charter, Camberwell Grammar School, £30 (Natural Science); and S. C Miskin, Tonbridge, £30 (Natural Science).

Gonville and Caius.—Scholarships: R. A. Fisher, Harrow, £80 for Mathematics; P. H. C. Allen, Christ's Hospital, £60 for Mathematics; H. V. Neilson, Oakham, £80 for Classics; S. H. Batty-Smith, Bradfield, for History honorary); H. C. Read, Wellington, £60 for Classics; T. H. Somervell, Rugby, £60 for Natural Science; W. D. G. Batten,

Clifton, £60 for Modern Languages; T. J. Dannhorn, City of London, £40 for Classics; P. Sargant-Florence, Rugby, £40 for History; J. A. O. Muirhead, Glenalmond, £40 for Natural Science; E. Watson Williams, Clifton, £40 for Natural Science; J. F. A. Christie, Clifton, £40 for Modern Languages; and A. B Bratton, Harrow, for Modern Languages (honorary). Exhibitions: L. B. Eyre, Dulwich, £30 for Classics; and G. W. Paget, St. Paul's, £30 for Natural Science.

Jesus.—Scholarships: M. L. W. Laistner, Merchant Taylors', London, £80 for Classics; W. W. Fletcher, St. Olave's, £60 for Mathematics; W. M. Peacock, Marlborough, £60 for Classics (Rustat); A. Wright, Boulevard Secondary School, Hull, £40 for History; J. C. Hill, Camberwell Grammar School, £40 for Natural Science; C. E. Hughes-Davies, St. Edmund's School, Canterbury, £40 for Classics (Rustat); and H. Burnaby, Haileybury, £40 for Classics (Rustat). Exhibitions: R. S. S. H Stafford, Haileybury, £30 for Classics; C. W. G. Eady, Clifton, £30 for Classics; and C. P. Miller, Bradford Grammar School, £30 for Natural Science.

King's.—Foundation Scholarships: J. Gray, Merchant Taylors', £80 for Natural Science; A. Roscoe, Aldenham, £80 for Classics; E. D. Spring Rice, Eton, £80 for Classics; F. M. Hardman, Eton, £80 for Classics; and H. C. Prior, Eton, £80 for History. Minor Scholarships: F. H. M. Ralph, Tonbridge, £60 for History; J. E. Davey, Campbell College, Belfast, £60 for Classics; E. W. Matthews, Eton, £60 for Classics; and A. N. M. Garry, Eton, £60 for Classics. Exhibitions: C. L. Purves, Fettes, £40 for Classics; W. A. C. Brooke, Rugby, for History (honorary); E. J. K. Braunholtz, Oundle, £40 for Classics; H. Craven, Harrow, for History (honorary); A. Winterbotham, St. Paul's, for Classics (honorary); J. H. Walton, Armstrong College, £40 for Natural Science; E. M. B. Ingram, Eton, for Classics (honorary); B. B. Buckley, Eton, for Classics (honorary); and F. L. Birch, Eton, for Modern Languages (honorary).

Peterhouse.—Scholarships: J. L. Nayler, King's School, Chester, £80 (Mathematics); W. B. Chope, Bath College, £60 (Classics); V. Stott, Bradford Grammar School, £60 (Natural Sciences); G. H. Atkinson, Marlborough, £50 (History). Exhibition: R. B. Beveridge, St. Andrews University, £30 (Mathematics).

Pembroke.—Scholarships: E. C. Sturdy, St. Paul's, £80 for Classics; R. A. Frazer, City of London, £80 for Mathematics; C. J. Tree, Charterhouse, £60 for Classics; S. H. Thomas, King Edward's, Birmingham, £60 for Mathematics; E. O. Niven, Bedford Grammar School, £60 for Classics; P. M. Wilson, Marlborough College, £60 for Classics; F. H. Smith, Reigate Grammar School, £40 for Natural Science; L. H. Alison, Harrow, £40 for Natural Science; P. Crow, Tonbridge, £40 for Classics; and C. G. Barton, Cheltenham College, £40 for Mathematics. Exhibitions:—K. B. Bellwood, Coatham Grammar School, £30 for Natural Science; J. G. Madden, Bradford Grammar School, £30 for Mathematics; H. R. Uzielli, Marlborough, £30 for Classics; W. G. Gabain, Charterhouse, £30 for Classics; R. S. Thicknesse, Gresham's School, Holt, £30 for Classics; and C. Eade, Marlborough, £20 for Mathematics.

Queens'.—Foundation Scholarships in Classics: H. C. Stork, Merchant Taylors'; L. M. Davis, the City of London School; R. L. Hardy, Rugby (Classics with History). Foundation Scholarship for Mathematics: P. J. Edmunds, Christ's Hospital. Eglesfield Scholarship for Classics: J. S. Eyton, Bradfield. Hastings Exhibitions: G. G. R. Hunter, St. Bee's School for Modern History, with honorary scholarship; S. W. Rawson, King Edward VII. School, Sheffield, for Classics; L. Forbes, Appleby School, for Classics; W. J. Lambert, Appleby School, for Natural Science; C. S. Holdsworth, Bradford Grammar School, for Mathematics.

Sidney Sussex.—Scholarships: F. C. Johnson, Leeds Grammar School, £60 (Mathematics); W. W. Coultas, St. Laurence College, £50 (Classics); S. T. Martin, Campbell College Belfast, £50 (Classics); W. Buddin, St. Olave's School, £50 (Mathematics); F. G. Foulds, Oundle, £50 (Natural Sciences); H. F. Ball, Blundell's, £40 (Classics); L. W. Berry, Wellington County School, £40 (Natural Sciences); J. H. Longrigg, Highgate School, £40 (Natural Science). Exhibitions: J. Gluckstein, St. Paul's, £30 (Classics); J. A. Molony, St. Peter's School, York, £30 (History); G. L. Waller, Haileybury, £30 (Classics); and J. C. Wynne-Edwards, Cheltenham, £30 (Classics).

St. Catharine's.—Fellowship: W. H. S. Jones, M.A., late Scholar of Selwyn.

St. John's.—Scholarships: P. J. Grigg, Bournemouth School, £80 (Mathematics); J. H. Cole, Gresham's School, Holt, £80 (Mathematics); E. E. Raven, Uppingham, £80 (Classics); R. W. James, City of London, £80 (Natural Science); S. E. Sears, Felsted, £60 (Classics); J. B. P. Adams, Malvern, £60 (Classics); F. R. Ennos, St. Olave's, £60 (Natural Science); S. I. Levy, City of London, £60 (Natural Science); T. R. Banister, Trent College, £60 (History); N. B. Jopson, Merchant Taylors', Crosby, £60 (Modern Languages); H. L. Rees, Merchant Taylors', London, £40 (Mathematics); W. E. Douglas, Wellingborough Grammar School, £40 (Mathematics); W. A. C. Darlington, Shrewsbury, £40 (Classics); and J. W. T. Walsh, Hampton Grammar School, £40 (Natural Science). Exhibitions: F. R. W. Hunt, University College School, London, £30 (Mathematics and Mechanical Sciences); F. P. Cheetham, City of London, £30 (Classics); G. F. Lord, Tonbridge, £30 (Classics); H. M. Lloyd, Rossall, £30 (Classics); W. L. Turner, Aske's School, Hatcham, £30 (Natural Science); A. T. Hedgecock, Wreight's School, Faversham, £30 (Natural Science); and H. P. Griffiths, Merchant Taylors', £30 (Hebrew). Elected to Fellowships: W. L. Balls, M.A. (Natural Science); J. A. Crowther, B.A. (Natural Science and Physics).

Trinity.—Major Scholarships: H. F. Jolowicz, St. Paul's (Classics); A. W. St. C. Tisdall, Bedford Grammar School (Classics); R. M. Wright, Winchester (Mathematics). Minor Scholarships: J. Burnaby, Haileybury (Classics); W. G. D. Butcher, Eton (Classics); G. K. M. Butler, Harrow (Classics); J. H. Clarke, St. Paul's School (Mathematics); W. B. Copeland, Rugby (History); H. H. George, Westminster City School (Natural Sciences); G. W. V. Hopley, Harrow (History); G. J. Lamb, Eastbourne College (Mathematics); R. W. Prowse, Clifton (Natural Sciences); and H. Townshend, King's School, Canterbury (Mathematics). Sizarships: C. S. S. Higham, Liverpool College (History); J. Jackson, Glasgow University (Mathematics); L. P. W. Renouf, King Edward's School, Birmingham (Natural Sciences); and C. A. Stewart, Glasgow University (Mathematics). Exhibitions: C. M. Balfour, Charterhouse (Mechanical Sciences); F. E. Cowlin, Dulwich (Mathematics); K. G. Digby, Haileybury (Classics); B. S. Gossling, Whitgift School (Natural Sciences); W. N. Leak, Berkhamsted School (Natural Sciences); M. A. Lewis, Uppingham (History); R. G. M. Lias, Marlborough (Classics); A. S. Marsh, Sexey's School, Bruton (Natural Sciences); W. G. Oncken, New College, Harrogate (History); and G. C. N. Wardley, Eton (Mathematics).

Trinity Hall.—Cressingham Essay Prize: A. H. Ardeshir. Scholarships: Classics, £40, B. D. Armstrong, St. Paul's, and C. G. Crawford, Clifton; Mathematics, £40, W. Budd, Dulwich; History, £50, D. G. Hopewell, Nottingham High School; £40, S. A. Gibbons, Bishop's Stortford; Natural Science, £40, L. C. Fox, Owen's School, Islington, and L. H. Parker, Dulwich.

CANTERBURY: KING'S SCHOOL.—Junior King's Scholarships: R. J. N. Norris, D. H. G. Northcote, H. C. Powell, R. Juckes (for Mathematics), all of King's School. Probationer King's Scholarships: E. J. Gent (Mr. Moseley, Gate House, Kingston-on-Thames), K. C. Lillingston (Mr. Stallard, Heddon Court, East Barnet), G. D. Watkins (Mr. Millard, Shrewsbury House, Surbiton), C. S. Pittis (Rev. G. Ewing, Bedford House, Folkestone), P. S. Barber, Junior King's School. Entrance Scholarships: E. J. Gent (Mr. Moseley, Kingston-on-Thames), C. E. W. Chapman (Mr. Chapman, Fritham House, Lyndhurst), E. F. Smart (King's School), K. C. Lillingston (Mr. Stallard, East Barnet). House Scholarships: D. F. Kelly (Mr. Olive Rokeby, Wimbledon), C. R. Evershed (Mr. Molyneux, Streatham Hill, College). Heyman Scholarship (open *pro hac vice* to all boys under 14 now being educated at the King's School): F. C. Gentry.

LONDON: ROYAL ACADEMY OF MUSIC.—Battison Haynes Prize for Composition: Ethel F. Woodland, London. Hyne Prize for Composition: Francis Hutchens, New Zealand. Sainton-Dolby Prize for Contraltos: Mary A. Davies, Llanelly. Rutson Memorial Prize for Sopranos: Eugénie Ritte, London. Bonamy Dobree Prize for Violoncello: Audrey S. Whitaker, Palermo. Westmorland Scholarship for Male Vocalists: James M. Blair, Uddington, Scotland. Potter Exhibition for Female Pianists: Helen M. Dodd, Newcastle-on-Tyne.

LONDON: ROYAL COLLEGE OF MUSIC.—Council Exhibitions: Rebecca T. Clarke (Composition); Sidney C. Bostock, and Violet T. M. Pearce (Violin). Dove Prize (£13): Ellen C. Edwards (Pringle Scholar), for Pianoforte Playing.

LONDON UNIVERSITY.—LL.B. Honours Examination: University Scholarship in English Law, E. L. Burgin; University Scholarship in Jurisprudence and Roman Law, Ivor Jackson. Martin White Scholarship (£25 for 2 years), J. C. Flower. Grants of £25 from the Martin White Scholarship Fund: Miss Emma Thomas, London School of Economics, and M. J. Wodislawski, King's College.

OXFORD UNIVERSITY.—Craven Fellowship: M. S. Thompson, B.A., Corpus. Craven Studentship at the British School at Athens: A. M. Woodward, B.A., Magdalen. John Locke Scholarship: John C. Flügel, B.A., Balliol. Ireland Scholar and First Craven Scholar: Ronald A. Knox, Scholar of Balliol. Second Craven Scholar: Eric A. Barber, Scholar of New College. Third Craven Scholar: Leslie W. Hunter, Scholar of New College. Proxime Accesserunt: Edgar Lobel, Scholar of Balliol, and Arnold Joseph Toynbee, Scholar of Balliol. Distinguished in the Examination: Frederic C. Geary, Scholar of Corpus Christi; Druce R. Brandt, Exhibitioner of Balliol; John D. Denniston, Scholar of New College; and Reginald M. Y. Gleadowe, Scholar of New College. Seatonian Prize: H. A. Field, Corpus. Derby Scholarship: F. A. B. Newman, sometime Scholar of University College.

All Souls.—Elected to Fellowships: Alan E. G. Hulton, Scholar of New College (History); John G. Archibald, Rhodes Scholar, New College (Law).

Balliol.—Scholarships in Classics: J. Cell, Marlborough; R. M. Barrington-Ward, Westminster; Hon. G. W. Grenfell, Eton, Exhibitioner of Balliol: R. Stanton, Dulwich. Major Exhibitions in Classics: F. Whittle, St. Paul's; A. De C. Williams, Marlborough. Williams Exhibitioner of Balliol; M. R. Ridley, Clifton. Williams Exhibition in Classics: E. F. W. Besley, Winchester. Brackenbury Scholarships in History: E. Ker, Rugby, and R. C. F. Dodgson, Rugby

Digitized by Google

and private tuition. Williams Exhibition in History: G. W. S. Hopkins, Marlborough. Special Exhibition in History: J. E. Todd, Commoner of Balliol College, formerly of Edinburgh University. Brackenbury Scholarship in Natural Science: H. W. Holmes, Manchester Grammar School. Williams Exhibition in Natural Science: W. J. Lodge, Oundle. Scholarship in Mathematics: F. C. Quinson, Cheltenham Grammar School. Skynner Scholarship in Mathematics: F. L. Heywood, Wrexham County School. Honorary Scholarship in Mathematics: S. N. Ziman, Rhodes Scholar of Balliol, formerly of Auckland University College, New Zealand.

Brasenose.—Open Scholarships: Arthur F. Willmer, Birkenhead School; and William G. N. Bower, Cheltenham. Junior Hulme Scholarships: Neville R. Murphy, Christ's Hospital; and John A. Reid, Fettes. Somerset Scholarship (open *pro hac vice*): J. E. Reid, Cheltenham.

Christ Church.—Open Scholarships in Classics: Wilfred J. Heaton, Rugby; Harold M. Willis, St. Paul's; John F. L. Fison, Charterhouse. College Exhibitions in Classics: Ernest Evans, Glasgow University; Norman E. Hardy, St. Paul's.

Corpus Christi.—Classical Scholars: P. G. Bainbrigge, Eton; H. Balmforth, Manchester Grammar School; G. Dunn, Rugby; E. W. Evans, Marlborough; H. I. Rayner, Tonbridge; E. C. Smith, Dulwich (Charles Oldham scholar). Modern History Scholar: R. H. M. Harvey, Manchester Grammar School.

Exeter.—Open Classical Scholarships: Robert W. R. Gramshaw, Charterhouse; Hubert Graham, Manchester Grammar School; and Arthur S. R. Dodd, Christ's Hospital. Open Mathematical Scholarship: Sidney C. L. Miller, Magdalen College School and private tuition. Stapeldon Scholarship for Classics (open *pro hac vice*): Hugh Fraser, Wellington. Open Classical Exhibition: William D. Barron, Aberdeen University. Hasker Exhibition for Divinity: David S. Horne, Reading. Stapeldon Exhibition for Classics: Winthrop Pyemont, Blundell's.

Lincoln.—Scholarship in Modern History: Ronald F. W. Fletcher, King Alfred's School, Wantage. Exhibition in Modern History: Philip H. Bellot, Bedales School, Petersfield. Natural Science Scholarship of £80: John G. Gilbert, Tottenham County School. Natural Science Scholarship of £60: Harold W. Pierce, University College, Bangor. Scholarships in Classics: J. Arman, University College, Cardiff, £80; R. B. Beckett, Woodbridge School, £60. Exhibitions in Classics (£30); H. W. Howe, Eltham College, and J. B. Morton, Rugby.

Magdalen.—Demyship in Natural Science: Archibald T. A. Ritchie, Harrow. Exhibition in Natural Science: Percy Ball, Rugby. Demyship in History: K. J. Campbell, Marlborough. Exhibition in History: E. H. Crooke, Cheltenham.

Merton.—Postmastership in Mathematics: Eubule J. Waddington, Dulwich. Exhibition in Mathematics: Harold M. Gardner, Royal Grammar School, Worcester.

New.—Scholarships in Classics: L. E. Atkinson, Clifton, and R. W. T. Cox, Merchant Taylors'. Exhibitions in Classics: P. R. F. Tottenham, Harrow, and W. R. Smale, Shrewsbury.

Oriel.—Open Scholarships: Hugh Lea Guillebaud, Marlborough; Frederick Grant, Fettes; and David M. Low, Westminster. Adam de Brome Scholarship: John M. Thomson, Glenalmond and Edinburgh University. Bible Clerkship: Thomas Brown Stowell, Merchant Taylors', Crosby.

Trinity.—Foundation Scholarships of £80 for Classics: R. M. Gent, King's School, Canterbury; T. F. Higham, Clifton; W. O. Stevens, Dulwich; P. E. Mitchell, St. Paul's. Millard Scholarship for Natural Science (Chemistry): M. Greenwood, Bradford Grammar School. Exhibition of £70 for Classics: D. C. Macgregor, George Watson's College and Edinburgh University. Exhibition of £60 for History: E. Hornby Shears, Bradfield. Tylney Exhibition (for a commoner of the College): C. H. Masterman, lately of Winchester College. Exhibition for a graduate of the College studying medicine: N. G. Chavasse, B.A.

University.—Scholarships: B. T. M. Hebert, Harrow; C. S. Nason, Christ's Hospital; W. H. Croome, Wellington. Exhibitions: J. H. Wise, Christ's Hospital.

Wadham.—Scholars: H. B. Hake, Christ's Hospital; E. B. Hosking, Canterbury; H. L. Hughes-Jones, Rossall; J. G. Monteath, Edinburgh Academy. Woodward of Dean Forest Scholar: D. Veale, Bristol School. Exhibitioners: H. Beckett, Monmouth School; W. E. Nicholson, Leeds Grammar School; A. E. P. Sloman, Bradfield; G. P. Higgs, St. Edward's, Oxford.

Wellington College.—Scholarship of £50 on the Modern Side and to the Robert Henry Wentworth Hughes' Scholarship, A. R. R. Woods (Mr. M. Roderick, Praetoria House, Folkestone); Scholarship of £50, J. C. Eppstein (Mr. P. Christopherson, Locker's Park, Hemel Hempstead); Scholarships of £50 on the Classical side, D. A. R. Young (Mr. A. W. W. Roberts, Langley Place, St. Leonards); and E. A. Simson (Mr. P. Christopherson); Scholarships of £30 on the Classical Side, S. R. Hurst (Wellington College, late Mr. W. R. Lee, Ashdown House Forest Row), and D. P. Gordon (Messrs. Wynne and Jenner, Hazelwood Park, Limpsfield).

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, Bart.
Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,351,137. Annual Income, £471,097.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS. LARGE BONUSES. Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES. Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

1. **WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

2. **PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

ANNUAL PREMIUMS FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

Note.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

SOME NEW BOOKS FOR THE NEW TERM

EXAMPLES IN ELEMENTARY MECHANICS, Practical, Graphical, and Theoretical. By W. J. Dobbs, M.A., Author of "Elementary Statics." With 52 Diagrams. Crown 8vo, **5s.** [*Text-books of Science.*

This book is intended for use at Schools and Technical Institutes, for Army and Navy Candidates, and Students of Engineering. It consists of some 1400 examples in Elementary Statics and Kinetics.

OUTLINES OF PHYSICAL CHEMISTRY. By George Senter, D.Sc. (Lond.), Ph.D., Lecturer in Chemistry at St. Mary's Hospital Medical School With many Diagrams. Crown 8vo, **3s. 6d.** [*Text-books of Science.*

This book is designed to serve as a general introduction to Physical Chemistry.

FIRST YEAR PHYSICS. By C. E. Jackson, M.A., Senior Physics Master, Bradford Grammar School. With 51 Diagrams. Crown 8vo, **1s. 6d.** [*Text-books of Science.*

AN ORGANIC CHEMISTRY for Schools and Technical Institutes. By A. E. Dunstan, B.Sc. (Lond.), F.C.S., East Ham Technical College. With many Illustrations. Crown 8vo, **2s. 6d.** [*Text-books of Science.*

This book is intended for the use of the higher forms of schools taking the Special Science Course, and as a first year book in Technical Institutes.

A JUNIOR LATIN PROSE. By H. N. Asman, M.A., B.D., Second Master at Owen's School, Islington. Crown 8vo, **2s. 6d.** [*Junior School Books.*

It contains an explanation of, and exercises on, the chief rules of Syntax, with special attention to points which cause difficulty to boys, and concludes with exercises in Continuous Prose. Vocabularies are included.

ELEMENTARY LATIN: Being a First Year's Course. By F. J. Terry, B.A., Assistant Master at Preston House School, East Grinstead. Crown 8vo, Pupils' Edition, **2s.**; Masters' Edition, containing the necessary supplementary matter to Pupils' Edition, **3s. 6d.** net.

This work is divided into thirty units—ten for each school term. The text and exercises are carefully graduated, and are separated from the instruction in grammar, which is based on stem formation only. Pupils construct their own grammars and dictionaries.

JUNIOR ENGLISH. By F. J. Rahtz, M.A., B.Sc., Lecturer in English at the Merchant Venturers' Technical College, Bristol. Crown 8vo, **1s. 6d.**

This book is intended for the Lower Forms of Secondary Schools. It deals with grammar, the construction of phrase and sentence, analysis, parsing, expansion, condensation, composition, and paraphrasing, and many other exercises in the use of English. The questions and exercises are numerous and varied.

A HISTORY OF GREAT BRITAIN: From the Coming of the Angles to the year 1870. By E. M. Wilmot-Buxton, Author of "Makers of Europe." With 20 Maps. Crown 8vo, **3s. 6d.**

ENGLISH LIFE 300 YEARS AGO: Being the first two chapters of Mr. G. M. Trevelyan's "England under the Stuarts." Edited by J. Turral, B.A., Head Master of the Blackpool Secondary School. Crown 8vo, **1s.**

A welcome and useful addition to the prose books in English Literature for Middle and Upper Forms of Secondary Schools.

A SHORT HISTORY OF GREECE, to the Death of Alexander the Great. By Walter S. Hett, B.A., Assistant Master at Brighton College, and formerly Scholar at Wadham College, Oxford. With many Maps. **3s. 6d.**

This book is intended for the use of students reading for the Oxford and Cambridge Higher Certificate, and as an introduction to a wider study of the subject.

A PRELIMINARY GEOMETRY. By Noel S. Lydon, Owen's School, Islington, Author of "A Junior Geometry." With 159 Diagrams. Crown 8vo, **1s.**

The "Preliminary Geometry" is intended for the use of beginners.

A KEY TO BOTTING'S JUNIOR LATIN EXAMINATION PAPERS. Compiled by H. T. Facon, B.A., Head Master of Waverley School, Nottingham. Crown 8vo, **3s. 6d.** net. [*Junior Examination Series.*

☞ **Please write for particulars of all Messrs. Methuen's New Educational Books.**

Cambridge University Press

ENGLISH LITERATURE FOR SCHOOLS

In order to meet the demand for works of English writers edited for school use, the Syndics of the Cambridge University Press have arranged to publish a series of reading books for the upper and middle forms of Secondary Schools. The books are printed in a bold, clear type, and are strongly bound in cloth boards. The following are the titles of the first six volumes:—

Daniel Defoe. Memoirs of a Cavalier. Edited, with Introduction and Notes, by ELIZABETH O'NEILL. 1s. 4d.

Captain John Smith. True Travels, Adventures, and Observations in Europe, Asia, Africa, and America; and The General History of Virginia, New England, and the Summer Isles, Books I.-III. Edited, with Introduction and Notes, by E. A. BENIANS, M.A., Fellow of St. John's College, Cambridge. 1s. 4d.

William Cobbett. Rural Rides. Selected and Edited by J. H. LOBBAN, M.A., Lecturer in English Literature, Birkbeck College, London. 1s. 4d.

William Hazlitt. Characters of Shakespeare's Plays. Edited, with Introduction and Notes, by J. H. LOBBAN, M.A., Lecturer in English Literature, Birkbeck College, London. 1s. 4d.

North's Translation of Plutarch's Lives, Selections from. Edited by P. GILES, M.A., Fellow of Emmanuel College, Cambridge. [*Ready immediately.*

Sir Walter Scott. Tales of a Grandfather, Selections from. Edited by P. GILES, M.A. [*Ready Immediately.*

Several more volumes are in active preparation at prices ranging from 1s. to 1s. 6d.

Applications from teachers for specimen copies should be addressed to Mr. C. F. Clay, Manager, Cambridge University Press Warehouse, Fetter Lane, London, with a statement as to the number of copies likely to be required if the books are adopted for school use.

CAMBRIDGE COUNTY GEOGRAPHIES

General Editor: F. H. H. GUILLEMARD, M.A., M.D.

Ready early in January. With Maps, Diagrams, and Illustrations. Price 1s. 6d. each

Kent. By GEORGE F. BOSWORTH, F.R.G.S.
Surrey. By GEORGE F. BOSWORTH, F.R.G.S.
Essex. By GEORGE F. BOSWORTH, F.R.G.S.
Norfolk. By W. A. DUTT.
Suffolk. By W. A. DUTT.

(*Other volumes are in preparation.*)

Elementary Algebra. By C. H. FRENCH, M.A., and G. OSBORN, M.A., Mathematical Masters at the Leys School, Cambridge.

Crown 8vo 4s. 6d.

This book includes Common Logarithms and the Binomial Theorem for a Positive Integral Index, so that it covers the ground of all school examinations not requiring a special knowledge of the subject. It is amply sufficient for such examinations as the London Matriculation, the Cambridge Previous, the ordinary passwork of the Higher Certificate Examination of the Oxford and Cambridge Board, the Oxford and Cambridge Locals, and others of similar standard.

Algebra for Secondary Schools. By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham.

Crown 8vo 6s.

"Dr. Davison's book covers the ground up to and including the exponential and logarithmic series. The work is very thorough, the examples plentiful, and the matter well arranged. . . . The text-book strikes us as being a thoroughly satisfactory one, and we are specially glad to note the place taken by graphs as an illustration and not an end in themselves."—*Journal of Education.*

Plane Geometry for Secondary Schools. By CHARLES DAVISON, Sc.D., and C. H. RICHARDS, M.A., Mathematical Masters at King Edward's High School, Birmingham.

Crown 8vo 4s.
Or in Four Parts 1s. each.

This book may now be obtained in four separate parts, corresponding to the four main divisions of the work:
Book I.—Triangles and Parallelograms.
Book II.—Areas.
Book III.—The Circle.
Book IV.—Proportion applied to Geometrical Magnitudes.
"The plan of the present volume is good. Whilst the leading propositions appear in the form of bookwork, others scarcely less important are discussed as worked riders. A full complement of exercises for individual practice in original solution is, moreover, included, the questions being sometimes set as exercises on special propositions, and sometimes classed together as miscellaneous problems and theorems."—*Educational Times.*

Inorganic Chemistry. By E. I. LEWIS, B.A., B.Sc., Assistant Master at Oundle School,

Demy 8vo 5s.

"A decidedly original work, very superior to the average text-book used in schools, especially in throwing light on general principles."—*School World.*
"This should be a satisfactory course for boys in the middle forms of a public school. The procedure is logical, and the experiments are made practicable by a liberal use of diagrams."—*Cambridge Review.*

LONDON, FETTER LANE: CAMBRIDGE UNIVERSITY PRESS WAREHOUSE. C. F. CLAY, Manager.

NEW AND IMPORTANT TEXT-BOOKS.

PRINCIPLES AND METHODS OF PHYSICAL EDUCATION AND HYGIENE. By W. P. Welpton, B.Sc. With a Short Sketch of the History of Physical Education by J. Welton, M.A., Professor of Education in the University of Leeds. **4s. 6d.**

"There is a good historical survey of the subject, and the book is well planned and thought out."—*Morning Post.*

PRINCIPLES AND METHODS OF TEACHING. By James Welton, M.A., Professor of Education in the University of Leeds. **4s. 6d.**

"An eminently practical book on teaching."—*Cambridge Review.*

SCHOOL HYGIENE. By R. A. Lyster, M.B., B.Sc., D.P.H. Second Edition. Containing a new chapter on the Organization of Medical Inspection in Schools. **3s. 6d.**

"The author has succeeded in giving an adequate account of what a teacher ought to know about school hygiene. The book may be confidently recommended."—*Public Health.*

VOICE TRAINING IN SPEECH AND SONG. By H. H. Hulbert, M.A. Oxon., M.R.C.S., L.R.C.P., Lecturer on Voice Production at the London County Council Day Training College. **1s. 6d.**

"Dr. Hulbert speaks with authority on this subject of vital importance to teachers. It will pay any teacher to get this book and read it carefully."—*Schoolmaster.*

PLANT BIOLOGY. A Modern Course of Elementary Botany. By F. Cavers, D.Sc. Lond., F.L.S., A.R.C.S. **3s. 6d.**

"The freshness of treatment, the provision of exact instruction for practical work really worth doing, and the consistent recognition that a plant is a living thing, should secure for Professor Cavers's book an instant welcome."—*School World.*

LIFE HISTORIES OF COMMON PLANTS. A Text-Book for Beginners based on the Study of Types. By F. Cavers, D.Sc. **3s.**

"This excellent manual supplies a long-felt want to the Nature Study teacher; the chapter on the most important subject of Plant Ecology is quite the best exposition of the subject we have yet seen."—*Schoolmaster.*

A TEXT-BOOK OF BOTANY. Including Angiosperms, Vascular Cryptogams and Flowering Plants, and the Lower Cryptogams. By J. M. Lowson, M.A., B.Sc., F.L.S. Fourth Edition. **6s. 6d.**

"It is abundantly evident that Mr. Lowson is an accomplished teacher. The book is well and clearly printed, and also profusely illustrated."—*Knowledge.*

GROUNDWORK OF ENGLISH HISTORY. By M. E. Carter, Honour School of Modern History, Oxford. **2s.**

"Any student in search of the best bird's-eye view of English history will turn to 'The Tutorial Series' in the natural order of search, and will here find his reward."—*School Guardian.*

TEXT-BOOK OF GEOGRAPHY. By G. Cecil Fry, M.Sc., F.I.C. For University Entrance Examinations and the Upper Forms in Schools. **4s. 6d.**

"Mr. Fry brings out the fascination of the broad view of geography."—*Literary World.*

THE NEW MATRICULATION HEAT.—THE NEW MATRICULATION LIGHT.—THE NEW MATRICULATION SOUND. By R. W. Stewart, D.Sc. In Three Volumes, **2s. 6d.** each.

These volumes provide a complete school course of coordinated theoretical and practical work in Physics.

AN INTRODUCTORY COURSE OF CHEMISTRY. A Text-Book for Beginners, written on modern lines. By H. W. Bausor, M.A., late Scholar of Clare College, Cambridge. **2s. 6d.**

University Tutorial Press, Ld.,
157 DRURY LANE, LONDON, W.C.

CURRENT EVENTS.

Fixtures.

The Half-yearly General Meeting of the members of the College of Preceptors will take place on Saturday, January 23.

* * *

Mr. W. Williams, F.L.S., will address the School Nature-Study Union on "School Gardens, their Nature and Management," at the College of Preceptors on January 29, at 7.45 p.m. All interested in the work of the Union are cordially invited.

* * *

The Annual Meetings of the Assistant Masters' Association will be held on January 6–8 at St. Paul's School, West Kensington, W.

* * *

The third Annual Meeting of the Historical Association will be held at University College, London, on January 8 (6 p.m.) and 9 (10.30 a.m.). Particulars from Miss M. B. Curran, 6 South Square, Gray's Inn, W.C.

* * *

The Annual General Meeting of the English Association will be held at University College, London, on January 15 and 16. Particulars from the Secretary, 8 Mornington Avenue Mansions, W.

* * *

The Modern Language Association will hold its annual meeting at Oxford on January 11–13.

* * *

The Long Vacation Course in Practical Physics at Cambridge for assistant masters in secondary schools will be held again in August next. Apply to the Secretary of the Association, 31 Great James Street, W.C.

* * *

Dr. F. H. Hayward will deliver a course of three lectures on "Problems of Education and Heredity," at South Place Institute, on January 19 and 26, and February 2, at 8 p.m. Tickets at the Institute or from Miss M. Pitts, 9 Clarence Road, Wood Green, N.

Honours.

The University of Dublin has conferred the honorary degree of D.D. upon the Dean of Westminster; the honorary degree of LL.D. upon Sir Robert Hart; and the honorary degree of Litt.D. upon Mr. Justice Madden (Vice-Chancellor).

* * *

The University of Berne has conferred the honorary degree of Ph.D. upon the Rev. W. A. B. Coolidge, M.A., Fellow of Magdalen College, Oxford, in recognition of the value of his many works on Swiss history and geography.

* * *

Dr. James John Hornby, D.D., Provost of Eton, formerly Fellow and Tutor of Brasenose College, Oxford, has been elected an honorary Fellow of the College.

Digitized by Google

THE REV. THOMAS R. R. STEBBING, M.A., F.R.S., F.L.S., Gold Medallist of the Linnæan Society, formerly Fellow and Tutor of Worcester College, Oxford, has been elected an honorary Fellow of the College.

Scholarships and Prizes.

CERTAIN Goldsmiths' exhibitions will soon be vacant. Examination, April 28, 29. Particulars from Sir Walter S. Prideaux, Goldsmiths' Hall, E.C.

* * *

AN examination will be held at Pembroke College, Oxford, and at Elizabeth College, Guernsey, on February 10, 1909, for one scholarship of £100 a year and one exhibition of not less than £50 a year, at Exeter College; one scholarship of £100 a year, and one exhibition of not less than £50 a year, at Jesus College; two scholarships of £80 a year, and one exhibition of at least £60 a year, at Pembroke College. No limit of age. Candidates must have been born in Jersey, or in Guernsey, or in one of the adjacent islands, or educated for two out of three years last preceding the election at Victoria College, Jersey, or at Elizabeth College, Guernsey. Apply to the Rector of Exeter College, by January 10.

* * *

SIX Stewart of Rannoch Scholarships, £25 each for three years, will be offered at Cambridge in May next: two for Hebrew, two for Greek and Latin, and two for Sacred Music, open to natives of the counties of Wilts, Somerset, and Gloucester, including the city and county of Bristol. Two Open Scholarships for Hebrew, and one Open Scholarship for Sacred Music, will also be offered.

Endowments and Benefactions.

THE Combe Trustees have made a further grant of £400 for the purchase of apparatus in connexion with the George Combe Lectureship in General and Experimental Psychology in Edinburgh University.

* * *

OXFORD Convocation has accepted the annual Scholarship for Rural Economy offered by the Surveyors' Institute.

* * *

A PLOT of ground (30 acres), lying immediately to the south-west of Shotover Plain, has been presented by a number of subscribers to the University of Oxford for public use.

* * *

THE delegates of the Common University Fund, Oxford, have voted a grant of £450 a year for seven years to provide for advanced history teaching. It is intended to organize a two years' course for students, either for research work or for the degree of B.Litt.

* * *

THE Pelham Memorial Fund (about £1,100) is to be applied to the maintenance of a Henry Pelham Studentship, tenable at the Oxford School at Rome under conditions similar to those attaching to the studentship already tenable by Oxford men at the British School at Athens.

* * *

DR. ARTHUR J. EVANS has presented to the Ashmolean Museum his father's (Sir John Evans's) collection of Anglo-Saxon jewellery and other relics, together with a comparative series illustrating the early Teutonic art of the Continent.

* * *

IT is proposed to devote the income of a fund collected by scientific friends of the Chancellor of Cambridge University to "Rayleigh Prizes," augmenting and supplementing the "Smith's Prizes."

* * *

IN connexion with the movement promoted by the Royal Geographical Society for the development of the Department of Geography at the London School of Economics, the following grants have been made:—The Mercers' Company, £210; the Goldsmiths' Company, £500; the Skinners' Company, £100.

* * *

MR. W. H. LEVER, M.P., has made an offer to the School of Architecture, Liverpool University, to enable it to undertake a systematic study of town planning, including all architectural aspects of civic design; £300 for a Commission to collect information abroad, and £500 to £1,000 a year for three years for continued research and instruction.

* * *

THE Institution of Gas Engineers has decided to endow a Chair of Fuel and Gas Engineering in the University of Leeds, in memory of the late Sir George Livesey.

* * *

MR. WILLIAM KNOX, grain merchant, recently left to the University of Aberdeen £5,000 for scholarships in Arts, Divinity, and Medicine. The Arts Scholarship, over £60 a year, will go to the best student graduating in double honours.

* * *

THROUGH the kind offices of the French Ministry of Public Instruction, the Board of Education have received from certain French publishers a very considerable number of educational books which were exhibited in the French Education Section of the Franco-British Exhibition. The firms which have co-operated in making this generous and valuable gift to the Board's Library are: Belin Frères, Librairie Armand Colin, Edouard Cornély et Cie., Librairie Ch. Delagrave, Delalain Frères, Hachette et Cie., Masson et Cie., H. Paulin et Cie.

* * *

THE REV. J. M. GORDON, Redhill, Surrey, has presented a further collection of minerals, some of them unique specimens, to the Geological Department of the University of Aberdeen.

* * *

MR. CHINUBHAI MADHOWLAL has given four lakhs of rupees (say, £25,000) to be applied by the Bombay Government towards the development of science teaching in Ahmedabad, in connexion, if possible, with the proposed Curline Institute in Bombay.

Appointments and Vacancies.

M. E. FANNIERE, L.-ès-L., Lecturer in French, University College, Nottingham, has been appointed Additional Lecturer in French at the Taylor Institution, Oxford.

In order to provide additional lectures for students reading for the Final Honour School in French, the curators have appointed M. Julien Jacques Champenois, Lic.-ès-L., Lic.-en-Droit, Agrégé de l Université de Paris, M.A. Edinburgh, to lecture on French Literature.

* * *

THE EARL OF DERBY has been elected Chancellor of the University of Liverpool, in place of his late father.

* * *

DR. WALSH, the R.C. Archbishop of Dublin, has been elected Chancellor of the National University of Ireland.

* * *

THE REV. GEORGE EDMUNDSON, M.A., D.Litt., formerly

Digitized by Google

Fellow and Tutor of Brasenose, has been appointed Ford Lecturer for 1910.

* * *

The Rev. James Pounder Whitney, B.D. Cantab., formerly Principal of the University of Bishop's College, Lennoxville, Canada, has been appointed Professor of Ecclesiastical History at King's College, London.

* * *

Mr. D. G. Hogarth, M.A., Fellow of Magdalen College, Oxford, has been nominated Keeper of the Ashmolean Museum and the Antiquarium, in room of Dr. Arthur J. Evans, resigned.

* * *

The Keepership of the Archives of Oxford University is vacant by the death of the Rev. Thomas V. Bayne.

* * *

Prof. Adam Sedgwick, M.A., F.R.S., Professor of Zoology in the University of Cambridge, has been appointed Professor of Zoology at the Imperial College of Science and Technology at South Kensington.

* * *

Prof. Hillhouse, M.A., F.L.S., will retire from the Chair of Botany in the University of Birmingham at the end of the present session.

* * *

Dr. Ernest de Selincourt, Lecturer in Modern English Literature in the University of Oxford, has been appointed to the Chair of English Language and Literature in Birmingham University, in succession to the late Prof. Churton Collins.

* * *

Dr. Cecil H. Desch, D.Sc. Lond.. Ph.D. Würz., formerly Research Assistant in Metallurgy, King's College, London, has been appointed Graham Young Lecturer in Metallurgical Chemistry in Glasgow University.

* * *

Dr. George Macdonald, M.A., LL.D., has been appointed Dalrymple Lecturer in Archæology in the University of Glasgow for 1909.

* * *

Dr. A. Pearce Higgins, Lecturer of Clare College, Cambridge, has been appointed Lecturer in Public International Law at the London School of Economics and Political Science (University of London), in succession to Prof. Oppenheim.

* * *

Mr. William Evans Hoyle, M.A., D.Sc., Director of the Manchester Museum, has been appointed Director of the National Museum of Wales.

* * *

Mr. A. R. Skemp, M.A. Manc., Ph.D. Strass., Lektor in English in Strassburg University, has been appointed Lecturer in English in the University of Sheffield.

* * *

Mr. John Duncan Mackie, B.A. Oxon., has been appointed Lecturer in Modern History in St. Andrews University.

* * *

Prof. R. C. MacLaurin, Professor of Mathematical Physics in Columbia University, and previously Professor of Mathematics in the University of New Zealand, has accepted the Presidency of the Massachusetts Institute of Technology.

* * *

A Lecturer in Geography (for one year) is required by the St. Andrews Provincial Committee for the Training of Teachers. £200. Apply to James Malloch, Esq., 77 North Street, St. Andrews.

An Assistant in Invertebrate Zoology is required for the Free Public Museum, Liverpool. £150, commencing. Particulars from Director.

* * *

A Principal (graduate, with experience in the training of teachers) is required for the Day Training College, Dudley. £500. Apply to J. M. Wynne, Esq., Town Hall, Dudley.

* * *

Miss Wordsworth will resign the Principalship of Lady Margaret's Hall, Oxford, at the end of the current academic year.

* * *

Mr. Charles Henry Tyler, B.A. Cantab., assistant master, Rossall School, has been appointed Head Master of Cranleigh School, in succession to the Rev. Dr. Allen, retired.

* * *

Mr. J. Evans, M.A., has been appointed Head Master of Sir W. Judd's School, Tonbridge.

* * *

Mr. A. S. Lamprey, B.A., late Scholar of Corpus Christi College, Cambridge, assistant master at Maidstone Grammar School, has been appointed Head Master of Ashford Grammar School, Kent.

* * *

Mr. Thomas Hay, M.A. Cantab., B.Sc. Lond., F.C.P., Head Master of Midhurst Grammar School, has been appointed Head Master of Chelmsford Grammar School.

* * *

Mr. E. S. Hayward has been appointed Head Master of Wallingford Grammar School.

* * *

Mr. B. M. Narbeth, B.Sc. Wales, Lecturer in Physics at the Technical Institute, Swindon, has been appointed Principal of the Technical Institute, Durban.

* * *

The Rev. Julian Ll. Dove, M.A. Cantab., second master, Durham School, has been appointed Head Master of the Collegiate School, Whanganui, N.Z.

Literary Items.

A volume on the Post-Augustan Poets, by Mr. H. E. Butler, Fellow of New College, Oxford, will be issued by the Clarendon Press early this year. Mr. Nowell Smith's volume on the earlier Latin Poets, including the Augustans, which was announced several years ago, will, it is hoped, also appear during 1909.

* * *

The third volume of the "Cambridge History of English Literature" (Renascence and Reformation) may be expected early in the year.

* * *

Messrs. Witherby & Co. announce, for January 1, the publication of *Travel and Exploration*—a new monthly magazine devoted to travel in all its aspects (1s. net). It is to be popular in form, substantial in matter, and copiously illustrated.

General.

Letters Patent, bearing date December 2, have passed the Great Seal of Ireland, constituting and founding a University having its seat in Dublin, under the name of the National University of Ireland, and a University having its seat in Belfast, under the name of the Queen's University of Belfast.

* * *

A scheme has been started, and is under consideration by an influential committee of Oxford and Cambridge men,

for the promotion of a University in China. "The main purpose is to attract into better channels the intellect of the more thoughtful and broad-minded Chinese of the rising generation, which is in danger of being diverted into anarchism and irreligion. It is believed that this may be best effected by setting before the youth of China the ideas and inspiration of Western learning."

* * *

THE University of Liverpool, following Manchester and Birmingham, has established the degree of Bachelor of Commercial Science.

* * *

IT is proposed to provide a college at Barry for the reception of 120 Glamorgan male students and 30 Monmouthshire male students, and at Caerleon for 60 Glamorgan female students and 40 Monmouthshire female students.

OPEN COURT.

Thay haif said . . .
Quhat say thay?—Lat thame say!

A BUDGET OF CONTROVERSIES: MAINLY OVER MORAL EDUCATION.

By Dr. F. H. HAYWARD.

THE more one dabbles or flounders in educational theory the more one realizes that the problems of sociology and psychology must be defined and, in a measure, solved before we can expect anything like intelligent and continuous advance. But the prospect is not cheerful. At the present moment, for example, we find in works such as "New Worlds for Old," by Mr. H. G. Wells, and "The Principles of Heredity," by Dr. Archdall Reid, the expression of a view of human progress in large measure opposite to that held by the advocates of "Eugenics"; the stress in the one case is on the potencies and possibilities that lie latent in stimulating ideas; the stress in the other case is on the hereditary potencies and possibilities (for good or evil) of the germ-plasm. The former view links on naturally with proposals for making the school-teacher more directly and explicitly than at present a moral instructor—an exponent of lucid, arrestive, alluring, perhaps far-reaching ideas; the latter view links on to the more conventional advocacy of "training" methods. Very probably the pedagogical question can best be approached from the sociological, biological, and psychological side; and for that reason, had I the time to spare, I would spend twenty continuous years in sociological study before putting a pen to paper again.

But twenty years of study, unremunerated though assiduous, are more than most of us can afford. And, even if we could afford it, and came forth in the end scientifically equipped for every pedagogical battle, the old controversies would meanwhile have been going on, new books and new articles would have been issued, new lights would have risen above the horizon, and perhaps the long looked for and badly needed educational prophet would have appeared and rendered our years of study superfluous. One is driven, therefore, to state one's present conclusions despite the conviction that wider knowledge will probably modify them.

On a good many questions vital to educational progress I want help, and it is in the capacity of a seeker that I write these words. Fresh from the Moral Education Congress, from books like Mr. Keatinge's "Suggestion in Education," and from an attempt to grapple with the dogma of "formal" or "faculty training," I propose to set down a few of my own thoughts and to propound a few interrogatories.

1. MR. KEATINGE AND "THE HERBARTIANS."

I appreciate Mr. Keatinge's book, "Suggestion in Education." It is helpful, hopeful, constructive, stimulating. It is, on the whole, singularly free from conventional phrases. The rich vein in which the author is at work is a promising one, which will last for many a lifetime and will grow broader as he and others follow it up—not ending, as so many educational veins do, in valueless dirt and flinty rock. When he speaks of the teacher as being a "creator of mind" in the process of manipulating and organizing (the pupil's) "mental elements"; as being a true producer of "mental energy"; as being one who "builds an ideal construction in boys' minds," which construction "exercises a control on conduct," Mr. Keatinge is on the side of the angels. Such language sends a thrill through every teacher who is not yet fossilized.

But then these phrases about creating mind and producing energy are the phrases used by Herbartians. In 1905 I said in a little pamphlet: "We have to realize, with Herbart, that there is a primal vitality, a creative power, a transforming energy, in ideas." I think I took the notion from Wundt and at second-hand. Again, when Mr. Keatinge attacks snippets (page 56), and formal training (page 67), and the faculty doctrine (page 107), and praises humanistic subjects because by means of them "moral ideas can be introduced" (pages 160–1), he is on our side or we on his.

These, however, are broad and untechnical issues. There are other things in Mr. Keatinge's treatment which come under another category. There is an adoption, it seems to me, of Herbartian psychology—or the language of Herbartian psychology—even to its minor details.

Now, for my own part, I am an Herbartian only in a vague sense. The intimate relationship between instruction (or some equivalent of instruction), apperception, interest, and character is all the Herbartianism for which I care, and it is quite independent of any Herbartian psychology. I have rarely employed Herbart's metaphors about "contrary ideas," "fusion of ideas," and the rest. But Mr. Keatinge has deliberately and elaborately done this. He endows ideas with "energy" and "intrinsic virility," which "energy" or "virility" is reduced to "inertness" or "latency" when ideas pass beyond the "margin." He speaks of ideas "blocking" or "obstructing" or "checking" each other, "competing" with each other or "impinging" on each other from different sides of the "blocked point." He speaks of ideas "sinking" and "shooting up," forming "great masses" or "groups of ideas," and "setting the mechanism in motion." He speaks of "systems of ideas," of ideas "filling the centre of consciousness," of "centre points for idea systems," of "small idea systems left to float," of "meaning being imposed upon new ideas," and he goes a length from which most Herbartians would shrink when he speaks of "ideas that will produce interests."

I have never in my life employed the minute terminology of Herbartianism in this wholesale way. I have shrunk from it as too fatally complete and too repulsively technical. I have, indeed, done little more—as Mr. Keatinge says—than "coquette" with this "outworn psychology." I did not know that so desperate a flirt as Mr. Keatinge was already in the field ruthlessly cutting me out, or I might have "coquetted" more adventurously. The truth is that I have felt all the time that the goddess was a trifle faded, though beautiful yet in spots; so I have timidly apologized for her perhaps, sometimes going even so far as to utter a warm word of chivalrous appreciation. But never has my admiration been so whole-hearted as Mr. Keatinge's. He calls her "outworn"; but, with all her faults of age and temper, he loves her still—every inch of her.

Banter apart, I would ask whether Mr. Keatinge's extensive employment of even the minute terminology of Herbartian psychology does not prove the usefulness, convincingness, or at least the immense plausibility of that terminology? I can draw no other inference. I am glad he uses it. I believe he uses it because he sees that, though it explains nothing ultimately, it brings us closer up to explanation than the terminology of the "faculty" psychology. Heterodox and half-hearted myself, I therefore welcome him as leader of the straiter sect of the Herbartians; and, as my hand meets his, I offer a suggestion that may serve to fill up a serious gap in his own teaching.

2. "CONTRARIANT IDEAS."

I refer to the mystery that surrounds his "contrariant ideas." Now Herbart talked of "contrary ideas," and described them as "checking" each other. Mr. Keatinge has noticed a similar phenomenon in moral education. Direct attempts to deal with moral questions at school awaken "contrariant" ideas in the bosoms of schoolboys.

Now what is the origin of these ideas? Mr. Keatinge hints at "boredom," and I frankly concede that, if teachers are bores and duffers, they will awaken "contrariant ideas" not only in the course of moral instruction, but in the course of geography and every other subject. Mr. Keatinge's experience of teachers seems to have been unfortunate; moral instruction consists of "assaults on a boy's moral standard," "attacks upon his code of

Digitized by Google

morals." I admit the whole case for "contrariance" if our teachers are of this breed; neglectful in allowing a bad code of morals to grow up under their noses, arbitrary and tactless in "assaulting" it. The head master's minatory address in "The Hill," or an exhortation of a still cruder kind, seems the only type of "direct moral instruction" of which secondary masters have any conception.

This matter is vital to an understanding of what is intended by the advocates of moral instruction. If opponents will insist on retaining in their minds either a picture of Miss Montflathers bullying little Nell, or of some grotesque pedagogue of their own acquaintance (or imagination) falling into a fury at a boyish freak or at some youthful defiance of rules, all hope of convincing them is vain; they are hopelessly biased and unimaginative, "inaccessible," as Matthew Arnold said, "to ideas," living examples of the truth underlying Bernard Shaw's taunt "that every man over forty is a scoundrel."

Moral instruction implies (for its advocates) appeal to the personality, the conscience, the reason, the idealism of the youth. For my part, I do not believe for a moment that stories of heroism or effort, told or read to a class and accompanied by a few words of frank and rational discussion, will awaken contrariant ideas at all; they will rather awaken "similar ideas," "apperceiving ideas"—provided the previous experience and education of the child has not been gravely at fault. I know little except by hearsay of the typical public-school boy, but I know something of pupil-teachers, and I have generally found them responsive to the discussion of serious topics of morals or politics. My belief is—and I find it confirmed by such authorities as Dr. Stanley Hall and his disciple, Dr. J. W. Slaughter—that adolescence is "the golden age of adult influence, provided it is wise enough not to offend." The years when conscience, reason, and personality are developing by leaps and bounds are precisely the plastic years when—I will not say direct moral "instruction" if the last word is offensive, but—direct moral elucidation, illumination, suggestion, or something of this kind will be specially craved and assimilated. But, I repeat, if the instruction is of the kind described by Mr. Keatinge ("attacks," "assaults," &c.) it will certainly be worse than ineffective.

Our critics seem hard to please. "Assaults upon a boy's moral standards" they regard at one moment as likely to awaken "contrariant ideas." We agree. Such methods are peculiarly reprehensible. The teacher should, in adolescence more particularly, appeal to the youth's reason, conscience, and personality. But this will not please our critics either. There should be no "reasoning" about morals, no abstract or general treatment of such weighty themes: the teacher should deal with them "incidentally," "as occasion serves"—in other words, "when some offence has been committed." Thus, we are back again at "assaults upon a boy's moral standards."

But this "contrariance" question needs further discussion. I admit "contrariance." I thank Mr. Keatinge for teaching me that word, and presently I will do something which he himself has not done—namely, give an explanation of the phenomenon. But, first, I distinguish pseudo-contrariance from real.

Contrariant *passions* are not, I think, directly intended by Mr. Keatinge. His contribution to educational terminology would be a small one if he were but emphasizing the fact that there is a good deal of the animal in us yet. Nor are contrariant *habits* his theme. Passion and habit are serious questions for all of us, and there is no need of a new treatise to convince us of the fact. And let me add here that I think opponents of moral instruction have been dwelling too much on the one or two graver problems of moral education, where acute temptation is almost inevitable; while supporters of moral instruction have been thinking more of social and civic duties, in performing which temptation need scarcely assail at all, and to which, once we have seen (or apperceived) them, we may say

> Nor know we anything so fair
> As is the smile upon thy face.

The distinction is important. Our opponents are thinking of a few conventional virtues (Mr. Paton's list rarely goes beyond diligence, thoroughness, truthfulness, honesty, and purity). We, too, are thinking of these; but we think of others also—of some only just rising above the moral horizon of the world—and we believe that, in the case of these virtues, there need be little or no conflict at all. Illumination will lead to action; volition will follow insight. Even to-day decent men feel no *temptation* to be dirty or boorish, and in centuries to come they may feel no temptation to be selfish or lazy. In short, the advocates of moral instruction regard human nature as in less desperate way than the opponents.

Admitting, however, the existence of "contrariant" passions and "contrariant" habits, I pass on. Direct instruction, I agree, is only one out of many weapons when these enemies of the moral weal have to be assailed. Against them both there is the weapon of "many-sided interest" whose potency I have elsewhere discussed; and there are other weapons, too—such as religion. I smile when I find the Herbartians (including myself) regarded as mere champions of "direct" methods in the place of indirect.* I thought every one knew that Herbart and his followers emphasized the almost total inadequacy of direct methods when employed in a vacuum where apperception is impossible. Was it not Herbart who said that "the individuality must first be changed through widened interest . . . before teachers can venture to think they will find it amenable to the general obligatory moral law"? And when, similarly, I find our opponents, apparently in ignorance of what may be called the "downfall of the dogma of formal or faculty training," assuring the world that training is more important than instruction, I smile again (though this time rather bitterly) and recollect that Herbart elaborately distinguished between the functions of instruction, training, and school discipline, wrote page after page on each of the three, and showed their mutual relations and relative values. One almost sickens of controversy when one is reminded, by men who apparently have never in their lives read a scientific work on pedagogics, that we must not "omit" or "forget" this or that, when we have no desire but to remember.

But my proffered explanation of "contrariant ideas" has not been forthcoming. The reader shall now have it.

I assert that—after we have made a certain allowance for adolescent secretiveness, for an apparent, though not real, philistinism on the part of youth, for a refusal to be demonstrably sentimental and responsive, for what has been called by students of pedagogics a "low power of expression"; and after we have made the other allowances detailed above, for incompetence on the part of pedagogues and for the existence in us all of a sensual life—if ideas "contrariant" to reasonable morality arise in the minds of our pupils, the fault is with our educational methods.

We must deliberately or unintentionally have adopted a *tabu* of moral topics, and regarded them as "bad form," in the pursuit of which policy we must not only have neglected to supply copious apperception material, or (what is much the same thing on the verbal side) a copious moral terminology, through the agency of indirect moral instruction; but we must also have shown, by our attitude towards such moral matters as have fitfully presented themselves in school life or in our school subjects, that the less said about them the better. If this explanation be the true one, "contrariant ideas" towards moral instruction or elucidation of a systematic kind, are seen to be almost inevitable. *Tabu* is no novelty in human life. If we allow our schools to frown on hard work as mere "swotting," and on the discussion of serious topics as a form of "priggishness," of course "contrariance" will arise.

Now every public-school opponent of moral instruction bears witness to this *tabu*, little recognizing, as a rule, that he is helping some of us to fill the mysterious gap in Mr. Keatinge's psychology. "The better the class and the better the master the less will be said" is Mr. Paton's way of expressing it. The attitude adopted by all secondary-school opponents of moral instruction must indeed strike the primary teacher as amusing in the extreme. For all these years he has been expected, in his religious or Biblical lessons, to deal most expressly and directly with moral laws; he has had to do this whether he wished or no, and he has had to do it (horror of horrors!) in a "watertight compartment," bounded by 9 o'clock a.m. on one side and 9.45, or thereabouts, on the other. And the primary teacher has been at least sufficiently competent to be able to prevent, so far, the emergence of "contrariance." His Bible lessons may not have been perfect, but they are not commonly supposed to have created a hatred of moral topics. This latter is the crowning glory of secondary education, and it is a glory (or an infamy) which any one with an elementary acquaintance with Herbartianism could have predicted. "Keep back the supply of apperception material, and you will fail to build up an apperception organ"; that is the negative side of the process, and it explains why our public-school boys are, as one of their defenders admits,

* *E.g.*, by Mr. Keatinge. See the contributions to the recent Moral Education Congress (page 132).

"morally colour blind." Link on to the mention of moral topics, the idea that such topics are *tabu*, make fun of the word "moral," scatter broadcast the word "prig," and you will produce the phenomenon of "contrariance" as inevitably as if you link on to the idea of hard study the notion that it is underbred "swotting."

That is my solution of the "contrariance" enigma, and I would point out that no reports of "contrariance" to moral instruction or discussion come from Japan or from Catholic colleges, or from any institutions except English public schools. Nor, in reading Mill's "Autobiography," have I found any recorded traces of a "contrariant" attitude towards his father's "moral inculcations," "grave exhortations," or "stern reprobations" relative to "justice, temperance, veracity, perseverance, readiness to encounter pain, and especially labour, regard for the public good, estimation of persons according to their merits," and so forth; the explanation being that James Mill took his son into his confidence and appealed to his reason.* Since the time of Locke it is illegitimate to speak of ideas that have no origin or antecedents: and if "contrariant" ideas exist, their origin must be traceable, and I have traced it. Mr. Keatinge, on the other hand, has suggested no origin at all but one that is applicable to all lessons (geography, &c.) that are dull.†

I admit, however, that if once "contrariant ideas" have obtained a footing in the soul, Mr. Keatinge's plan may be advisable; the teacher may advisably be very, very "reticent"; very, very "discreet"; very, very capable of "diverting the boys' attention from the moral undercurrent of their work"; and very, very fastidious to preserve the "covering of reserve." And I admit freely that if the phrase "moral instruction" is offensive, there is no need to press it; and that, as to *method*, an organized series of literary readings, or of biographies, or of discussions, or of sermons, or of talks, or whatever plan may be found most convenient, will satisfy the advocates of moral instruction. What will *not* satisfy them is a perpetual and unintelligent confusion between "training" and "instruction" (or its equivalent); or the employment of conventional and almost hypocritical expressions concerning "atmosphere," "personality of the teacher," and the like—expressions which, through their very obviousness, are perfectly useless, and merely mean that the problem of a renovated curriculum is to be shelved.

(*To be continued.*)

THE TEACHERS' REGISTRATION COUNCIL.

LETTER FROM THE BOARD OF EDUCATION.

THE following letter from Sir R. L. Morant to Dr. Gow, dated November 17, 1908, is the Board of Education's reply to the letter from the delegates printed in our last number (see page 527):

I am directed to send the following reply to the letter concerning the constitution of a new Teachers' Registration Council which was addressed to the President of this Board by some of the delegates of the twelve educational societies who before addressed him on this subject, and was forwarded by you on October 25.

1. The Board learn with regret from that letter that your Committee have apparently been unable to agree together upon any effective amendments of their original scheme which would make the new Council to a greater degree "representative of the teaching profession" as required by the Act of Parliament.

2. The Board find it difficult to understand how your Committee could see fit to resolve that "the plan of the Registration Council already recommended be further pressed upon the Board of Education," in spite of the earnest protests submitted to your consideration from various important branches of the teaching profession against the non-representative character of the proposed Council and against the exclusion from it of all direct representation of those branches of the profession.

3. The Board note with surprise that your Committee have not invited to their more recent gatherings, and have apparently in no way consulted, any representatives of those branches of the teaching profession that had thus expressed their sense of injustice at having been excluded from deliberations of such importance to their professional interests. It seems to the Board very difficult to suppose that this treatment of the problem will be likely to lead to the establishment of a Council that will be regarded as "representative" in any complete sense by "the teaching profession."

4. The Board are, however, interested to learn that there were "some members of the Committee who thought that certain modifications of the plan submitted to the Board might be desirable"; and I am to state that if you, or your Committee, or those individual members, would submit those "modifications" to the Board in writing, with a clear indication of the difficulties or anomalies or injustices which they are respectively intended to remove, and of the manner in which they would operate in practice, this Board would gladly give them the most careful and favourable consideration, and would bring them to the notice of such branches of the teaching profession as would be likely to be interested, with a view to obtaining a general consensus of professional opinion upon them.

5. The Board must, on the other hand, demur emphatically to certain propositions contained in the letter under reply, *e.g.*, (i.) that modifications of your proposals for the composition of the new Council, which would render it more truly representative of the teaching profession as required by Parliament, "can only be made by the Board"; (ii. that this "Board alone is in a position to arbitrate between rival claims" of different sections of the teaching profession who find themselves accorded no direct representation in your proposals; and (iii.) that it is, therefore, now incumbent on this Board (for this is what the letter implies) to formulate a scheme for the solution of the difficulties involved in your Committee's proposals, and to take steps at once to bring into existence a new Teachers' Registration Council with a view to the speedy establishment of an official Register of Teachers for this country.

6. In reply to this part of the letter, the Board find themselves compelled to remind you that the express purpose for which Clause 25 was introduced into the Education Bill, 1906, and again into the Bill of 1907, was to make it no longer necessary in view of the insoluble difficulties that had arisen in connexion with the then existing Register) that there should be any official Teachers' Registry at all, so far as the Government or any Government Department was concerned. It is true that subsequently, quite late in the course of the debates on the Bill in the House of Lords, an amendment to this clause was added at the instance of representatives of certain educational bodies. The purpose of the amendment was to leave the door open for the possibility of there being at some future time an official Teachers' Register, if and when (but, as was clearly understood, only if and when) proposals were forthcoming for a Teachers' Council and Register which should be truly representative of the teaching profession, and the constitution of which no substantial body of teachers in this country should look upon as involving any injustice. And, as you will remember, one of the essential elements in the arrangement under which the amendment was at the time inserted in the Bill, was that proposals for such a Council and Register were to be evolved by the teaching profession itself, and were not to be the work of any Government Department. In these circumstances it is obvious that it would not be proper for this Board, as you have suggested, now to intervene to impose its arbitration upon any "rival claims" of different portions of the teaching profession. For it would clearly contravene the whole principle upon which the new Council and Register were (by common consent) to be based were this Board to step in and to fix, by Departmental action instead of upon proposals made by the teaching profession, the constitution and composition of the new Council. Yet this is precisely what would result were this office, as you suggest, now to determine the various "modifications" of the proposals of your Committee needed to remove the many difficulties that are involved in them, as pointed out to you and your colleagues at this office last May and confirmed by the correspondence from the various Educational Associations addressed to this Board and to your Committee.

7. The President of this Board greatly regrets the delay that has occurred in this matter since the passing of the Act, in consequence of the ineffectual nature of the proceedings of your Conference since that date, resulting, it would seem, from their insufficiently representative character. He desires it to be made perfectly plain that this Board are and have always been anxious to receive, as soon as possible, from the teaching profession proposals for a new Teachers' Registration Council which are considered just and fair by the various branches of the profession, since by this means, and by this means alone, will it be possible for the requisite steps to be taken, in accordance with the provisions of the Act, for bringing about the establishment of a new Council without further delay. I am, therefore, directed, in conclusion, to repeat that the Board will be glad to receive a clear, written statement of the particular "modifications" considered desirable by some members of your Committee if it is believed that they would, in fact, produce a constitution for a Council so composed as substantially to fulfil the requirements of the statute in being really "representative of the teaching profession."

* "Conformably to my father's usual practice of explaining to me as far as possible the reasons for what he required me to do."—"Autobiography."

† I would add that the experiments of Dr. Boris Sidis, from which Mr. Kea inge gathers encouragement, were absolutely arbitrary and meaningless, whereas advocates of moral instruction have the idea that genuine morality is rational and meaningful. Until our opponents clear their minds of the notion that such instruction is a process of mingled humbug, bullying, fume, and tyranny, we can make no progress in mutual understanding.

Digitized by Google

Besides the foregoing letter, and the letter it answers, there are included in a White Paper (Cd. 4402; 2½d., Wyman) the letters (omitting some which were addressed to the Board by private individuals) which have, up to the present, been received by the Board since the publication on July 10 of the "Scheme for a new Teachers' Registration Council proposed to the Board of Education by the representatives of certain Educational Associations." [Cd. 4185.] In each case they were suitably acknowledged, and a copy was sent to Dr. Gow for the information of his Committee. The twenty letters may be conveniently grouped in the following six categories:—(*a*) teachers of little children, (*b*) teachers of art and drawing), (*c*) teachers of music, (*d*) teachers of manual training, (*e*) teachers of special subjects, such as shorthand, gymnastics, &c., (*f*) associations of head teachers, as distinguished from assistant teachers, (*g*) teachers of the deaf. For convenience of reference the proposals of "the representatives of certain educational associations" are again set out in an appendix.

LETTER FROM THE TEACHERS' GUILD.

Mr. H. Wesley Dennis, Chairman of the Teachers' Guild, has addressed the following letter on behalf of the Guild to the Secretary to the Board of Education (December 18):—

At a meeting held on December 10, the Council of the Teachers' Guild considered the White Papers (Cd. 4185 and Cd. 4402) relating to a Scheme for a new Teachers' Registration Council, and instructed me to embody in a letter to you the conclusions which were then drawn and adopted by the meeting with virtually no difference of opinion.

The formation of a Register that should include duly trained and qualified teachers of every grade has been one of the main objects of the Teachers' Guild ever since its foundation. While conscious of the inherent defect which vitiated and eventually wrecked the old Register—a radical error against which the Guild from the first protested—it was with profound regret that the Guild learnt the determination of the Government in 1906 to abolish the Register instead of amending its constitution. With no less satisfaction they welcomed Section 16 (2) of the Education (Administrative Provisions) Act, 1907, as the promise in the near future of a new Register that would represent the teaching profession as a whole, with no invidious distinction of rank as determined by employment.

The draft Scheme for a Registration Council proposed and received unanimously at the meeting of Delegates held at the College of Preceptors on February 29 last was submitted to the Council of the Guild on March 5 and unanimously approved. It was not, in their judgment, an ideal scheme, and there were various minor points in which it seemed to some members capable of improvement; but the Council considered it sound in principle and a fair compromise between the conflicting claims of primary and secondary teachers, which the old Register had so disastrously discriminated. They considered, further, that any defects or omissions in the scheme could and would be remedied and made good by the Board of Education.

The Council regret, therefore, to gather from the published correspondence, and in particular from your last letter to Dr. Gow, dated November 17, that this is not the view of the President of the Board. In it you speak of "the possibility of there being at some future time an official Teachers' Register, if and when (but only if and when) proposals were forthcoming for a Teachers' Council and Register which should be truly representative of the teaching profession, and the constitution of which no substantial body of teachers should look upon as involving any injustice."

My Council desire, with all respect, to point out that the condition you now impose is not contemplated in the Act of 1907 and is one that it is impossible for teachers to satisfy. A Council to which each separate body of teachers sent a representative would be unworkable by reason of its numbers and, further, by reason of the disproportionate representation, it would not be truly representative of the teaching profession. Already some twenty more or less "substantial" bodies of teachers have submitted to the Board claims for representation, and there are other bodies to come whose claims would deserve at least equal attention. There exists no parliament or judicial committee of teachers competent to hear and adjudicate upon such claims. The delegates who at your instance attempted the task and who have in your judgment so signally failed, decline, for the sufficient reasons assigned by their Chairman, to take any further action.

In conclusion, my Council would humbly suggest to you that the Board of Education is the only court competent to arbitrate upon rival claims and that it is to the Board of Education that Parliament has assigned the duty of "constituting a Registration Council representative of the teaching profession." They therefore appeal through you to the President of the Board to take immediate steps for the issuing of an Order in Council under the Education Act of 1907. Thus and thus only can he remedy the grave injury that the teaching profession has suffered and is suffering by the suppression of the Register.

THE COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on December 12. Present: Prof. Adams, Vice-President, in the chair; Dr. Armitage Smith, Mr. Bain, Mr. Barlet, Rev. J. O. Bevan, Mr. Brown, Miss Crookshank, Miss Dawes, Mr. Eve, Mr. Hawe, Mr. Kelland, Mr. Ladell, Rev. R. Lee, Prof. Lyde, Dr. Maples, Dr. Marx, Mr. Millar-Inglis, Dr. Moody, Mr. Morgan, Mr. Pendlebury, Miss Punnett, Mr. Rule, Rev. Dr. Scott, Mr. Starbuck, Mr. Storr, Mr. Vincent, and Mr. White.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Certificate and Lower Forms Examinations had been held on December 8–12 at 150 centres in the United Kingdom and at 30 Colonial centres. The number of candidates entered was about 6,700. For the Christmas Examination of Teachers for the College Diplomas the number of entries was about 570.

The best thanks of the Council were voted to Mr. John Angell, who was compelled, on account of the state of his health, to resign the office of honorary Local Secretary for the College at the Manchester Centre, the duties of which he had discharged most efficiently for thirty years.

The Diploma of Licentiate was granted to Mr. F. W. Towle, and that of Associate to Miss E. M. Anderson, who had satisfied the prescribed conditions.

The Secretary was directed to express to Mrs. Stewart the profound regret with which the Council had received the intelligence of the death of her husband, the Rev. John Stewart, who had been for more than thirty years a valued member of their body.

The report of the Finance Committee was adopted.

The consideration of the report of the Examination Committee was deferred to the adjourned meeting of the Council to take place on January 23.

The draft report of the Council to the General Meeting was considered, and was referred to the President, Vice-Presidents, and Dean for final revision.

It was resolved that the Council should make a representation to the Board of Education protesting against the phrase "conducted for private profit" employed in official documents to designate schools founded and conducted by private enterprise.

The following persons were elected members of the College:—

Mr. C. A. Dobson, B A., Victoria House, Shahginig, Agra, India.
Mrs. M. E. Pillow, The Grange, Thorpe Road, Norwich.

The following books had been presented to the Library since the last meeting of the Council:—

By A. & C. BLACK.—Farrar's Eric (Supplementary Reader); Fairgrieve's The Round World.

By BLACKIE & SON.—Teacher's Handbook to Blackie's Adaptable Arithmetics, Book III.; Archibald and Rankin's Electrical Laboratory Course for Junior Students; Cochrane's Three-Term Course in German; Lee's School History of English Literature, Vol. III.; Ruskin's The Crown of Wild Olive.

By the CAMBRIDGE UNIVERSITY PRESS.—Davies's Sophocles' Electra (abridged from Sir Richard Jebb's Edition); South's Gospel of St. Luke; C. W. Watson's Acts of the Apostles; Foster Watson's The English Grammar Schools to 1660; Winstanley's Chaucer's Clerkes Tale and Squieres Tale.

By MACMILLAN & CO.—Dowse's Book of Poetry illustrative of English History (Part III.).

By METHUEN & CO.—Dunstan's Organic Chemistry; Rahtz's Junior English; Terry's Elementary Latin.

By J. MURRAY.—Harlog's Hugo's Bug-Jargal.

By the OXFORD UNIVERSITY PRESS.—Select English Classics edited by A. T. Quiller-Couch (14 Parts).

By WHITTAKER & CO.—Monteverde's Spanish Idioms, and Spanish and English Commercial and Technical Terms.

Transactions of the Second International Congress on School Hygiene, 1907.

CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

ELLE ET LUI.

Par M. l'Abbé MARGUERÉ.

LE samedi, 28 novembre dernier, M. Margueré nous parlait de George Sand et d'Alfred de Musset. Le conférencier, en traitant ce sujet littéraire et psychologique à la fois, au point de vue de l'homme du monde, et du moraliste surtout, en a fait ce que l'on pourrait appeler une conférence à thèse, et a surtout appuyé sur les leçons que l'on en peut déduire.

Ces deux grandes célébrités du siècle dernier, nous dit-il, semblaient, sinon tomber dans l'oubli, mais voir du moins leur

éclat s'assombrir, et voici qu'une histoire d'amour va les ressusciter à la gloire, "ce soleil des morts," et nous les faire revivre dans toute la splendeur de leur génie.

Mais il est une chose certaine, et qu'il faut dire dès le début, c'est que cette liaison fit une impression profonde sur Musset et changea pour ainsi dire la direction de son talent. Il fut frappé au cœur. Il avait aimé pour la première fois, et les "deux grands yeux noirs de la Sand" devaient le hanter toute sa vie.

"Ôte-moi, mémoire importune,
Ôte-moi ces yeux que je vois toujours."

Il s'est heurté à l'un de ces accidents rares, extraordinaires, dont on ne cite que quelques exemples : une grande passion. Heureuse passion, dirons-nous, car elle devait avoir sur lui une heureuse influence. Le poète de *Rolla* deviendra le poète des *Nuits*, et ce que son talent perdra en variété et en richesse, il le gagnera en intensité. George Sand sera la femme grâce à qui nous seront révélés chez Musset le cœur et le génie.

George Sand, au contraire, n'a pas du tout ressenti les mêmes effets. Ce n'a pas été une date dans l'histoire de son cœur ni de son esprit ; elle n'a pas fait dévier d'un pas cette vie qui, au point de vue littéraire, s'est écoulée avec la plus grande régularité.

Deux causes suffisent amplement pour expliquer leur mésintelligence et leurs querelles. L'un et l'autre avaient un passé derrière eux lorsqu'ils se sont connus. Musset, il est vrai, était touché au vif et aimait profondément. Mais il rêvait d'un amour idéal, surhumain, qu'il ne pouvait trouver dans son amie, culte et délire à la fois. George Sand rêvait pour son "cher enfant" une sorte d'affection semi-maternelle. Elle jouait vis-à-vis de Musset au rôle protecteur d'Ange Gardien.

En outre, ces deux êtres d'exception étaient trop auteurs dans leur liaison. Au lieu de cacher leur vie, ils l'ont étalée au grand jour. Ils l'ont mise dans leurs écrits — ce que M. Doumic appelle si bien du "cabotinage littéraire" — et le monstre romantique s'est plu à torturer cet homme et cette femme qui avaient voulu prendre leurs héros en dehors de toute réalité, et se mettre au-dessus de la nature comme les Hernani et les Lélia. Pour nous en convaincre, lisez les *Lettres d'un Voyageur*, de Sand, et surtout la *Confession d'un Enfant du Siècle*, de Musset, qui restera comme l'histoire d'un cas, comme un chapitre de psychologie morbide et de marivaudage effréné.

Nous autres, à plus de cinquante ans de distance, nous sommes obligés de constater que les êtres qui nous sont supérieurs par le génie, n'en sont pas moins faits de boue et de chair comme nous. Le génie lui-même ne dispense pas ses privilégiés d'avoir part à l'humaine misère. Et George Sand, à son retour à Paris flanquée du fameux docteur Pagello, dut vite s'apercevoir que le monde ne peut pas admettre qu'il y ait des privilégiés, ou plutôt des dispensés en morale.

De toutes ces considérations que se dégage-t-il ? Faut-il conclure, comme l'un de nos plus célèbres moralistes, à l'impuissance d'aimer ? Nous serions tentés de croire que, comme Musset et George Sand, nous souffrons de la maladie du siècle. Nous doutons, alors que nous avons un grand besoin de croire. Il est un des appétits de l'homme qui, à l'heure actuelle, reste inassouvi et dont on semble ne vouloir plus s'occuper : c'est le besoin de l'au-delà, besoin qui nous est venu de nos ancêtres, transmis de génération en génération par les croyants de toute religion. Nous avons hérité de ce besoin, il s'est infiltré pour ainsi dire dans nos idées, nos mœurs, nos habitudes, notre milieu, et comme cette faculté, ce besoin de l'au-delà demande à s'exercer, veut vivre, de force elle se dépense en d'étranges excès. Nous sommes des névrosés, des neurasthéniques. Voilà le grand mal dont nous souffrons. Nous souffrons aussi d'un autre mal qui minait ces deux grands génies, qui est un excès de pensée critique. Pour nous guérir, il faudrait donc que l'équilibre de la vie intérieure fût corrigé par une volonté forte et énergique. Il faudrait surtout que cet équilibre fût restauré, que le mariage redevînt saint et sacré, que la femme fût la compagne de l'homme, que l'enfant ne se gâtat pas les sens et l'imagination entre les murs de ces collèges, si bien appelés "des sentines d'infection morale."

Mais utopie que tout cela ! Nous marchons vers un affinement de plus en plus aigu des intelligences, vers une séparation de plus en plus marquée des sexes, vers une centralisation de plus en plus intense, et alors se vérifiera le mot de l'observateur : "Les classes pauvres manqueront de pain, les classes riches d'idéal, de religion, de santé morale, d'influence et de prestige."

Je finis, conclut le conférencier, par un mot de Musset dans une lettre suprême où il semblait défier les profanateurs d'outre-tombe : "Prenez garde que je n'écrive sur ma tombe qu'elle était sincère, bonne et grande."

Paix et pardon, disait la grande romancière à Sainte-Beuve. Ce sera aussi notre dernier mot. Paix et pardon pour ces deux tristes victimes de l'amour romantique, non point tant parce qu'ils ont aimé, mais parce qu'ils ont beaucoup souffert.

M. l'abbé Margueré s'est magistralement acquitté d'une tâche difficile, que sa qualité de prêtre et de moraliste a su sauvegarder d'un banal réalisme et élever à la hauteur d'une thèse morale. En vain M. Barlet, qui était au fauteuil, a-t-il invité la discussion, et, se retranchant lui-même derrière sa qualité de profane pour ne point approfondir un sujet de si poignante actualité, il a demandé pour le conférencier un vote de remerciements bien mérités, sûr qu'il était que les personnes présentes emporteraient de cette conférence ample matière à sérieuses cogitations.

OXFORD AND THE WORKERS.

RECOMMENDATIONS OF THE COMMITTEE.

THE Report of the Committee on Oxford and Workpeople, just published at the Clarendon Press (1s. net) has been drawn up with great care and is satisfactorily comprehensive in scope.

There are interesting chapters on the educational movements, particularly affecting workpeople, on the past history of the University, on the University Extension movement, on the demand for University education, on the establishment of tutorial classes beyond the limits of the University, on the admission of workpeople to Oxford, and on the after career of the working-class students.

Following is a summary of the Committee's recommendations :—

1. Teaching beyond the limits of the University.—Lectures and tutorial classes—consisting of not more than thirty students in each class—should be formed in certain centres, to undertake organized study for minimum periods of two years. A diploma under the authority of the University Extension Delegacy should be given at the close of the period of study based on the essays written by the students on the report of the tutor and of two University representatives ; this diploma should admit students to the diploma courses of the University. (The Committee for Economics have accepted this proposal.)

2. Admission of working class students to Oxford.—Qualified students from the tutorial classes should be readily admitted to residence at Oxford ; the colleges and trustees of the University Appeal Fund should be asked to provide scholarships, exhibitions, and financial assistance, the selection of members to these privileges being based on the report from a committee of selection, consisting of the class teachers, the two University representatives, a representative of the Workers' Educational Association, of the local organization, and the class. A Standing Committee of the University Extension Delegacy should organize funds for scholarships and so forth, to be tenable either at a college or hall of the University, by a non-collegiate student or at Ruskin Hall.

3. The position and payment of teachers.—The teachers should be paid £80 per unit of twenty-four classes (the year's course) : in other words, £400 per session of twenty-four weeks, when in full work, and travelling expenses in addition. They should be regularly employed by a college or by the University at Oxford. One-half of the teacher's salary should be paid by Oxford, the remaining half and all other expenses by the workers and their associations.

4. The Authority for organizing working-class education.—A Standing Committee should be formed of the University Extension Delegacy, consisting of equal numbers of University representatives and of representatives of the working classes appointed through the Workers' Educational Association. The Committee, through its secretaries, should conduct all correspondence between Oxford and working-class centres.

5 Ruskin College.—Residence for a year at Ruskin College, and a certificate given by a college and supported by two University representatives appointed by the Committee of Economics, should be accepted as the "good general education" required to qualify for the study of economics. In any scholarship scheme second-year students of Ruskin College should participate.

6. Diploma in Political Science.—A Diploma in Political Science should be established paral el to the Diploma in Economics.

7. Special Inquiry Department.—A special department should be formed by the University to collect information about the educational needs and educational movements in this country and abroad.

The report is supplemented by a number of appendixes, in which the main features of the work already done and the work proposed to be done are described, and in which the text of the report is illustrated by University and Government documents.

REVIEWS.

Early Irish History.

The History of Ireland to the Coming of Henry II. By Arthur Ua Clerigh, M.A., K.C. (12s. 6d. net. Fisher Unwin.)

One can readily accept the author's statement that "this volume is the fruit of many years' labour." In the earlier chapters he has to deal with a great variety of matters that call for expert knowledge and for the most cautious expert inference. The traditional stories are embroidered with a lively fancy and seem rather difficult to get within the bounds of history at all, except in so far as they supply incidental indications of religious, social, or other conditions. Mr. Clerigh is pretty well up to date in his applications of anthropology and archæology, and he thinks "it may be safely stated as a general rule that, whenever anything is stated to be a fact in connexion with an etymology, in nine cases out of ten it is sure to be pure fiction." Yet, though he thus seems to be on his guard, he goes only fourteen pages before he perpetrates this: "'Sacra,' sacred, is in the Greek ἱερὰ, which comes near πίειρα (ἄρουρα) and ἱερνη, the Greek name for Erin. The poetic licence is not great." There are too many printers' blunders throughout the book, and possibly the quotation to some extent shares the misfortune, but even then the statement suggests grievous doubts, reaching far beyond its immediate bearings. At any rate, Mr. Clerigh works his way steadily through the jungle of tradition, presenting the substance of it and diligently commenting upon it with varying success. Where he differs from scholars like Sir John Rhys and Prof. Bury on their own ground, it is not easy to be hopeful for his contentions; and, when he quotes from St. Patrick's Confession that when Satan tempted him one night in his journey through the desert "it came home into my mind that I should call out Helias (*Heliam vocarem*), and in that moment I saw the sun rise in the heavens," and suggests that ἐλέεσον (*sic*) "is indicated by the context" as the right reading for "Heliam," one's confidence is again rudely shaken. Surely what is indicated by the context is obviously enough "Helion"—the Sun, the morning light—to dispel the darkness and to put Satan to flight. On the whole, we should be inclined to regard the traditional period of the work as an interesting collection and disposition of the salient materials and to leave the reader to interpret them for himself, taking Mr. Clerigh's explanations with critical caution. No doubt, however, much helpful discussion will remain after the winnowing out of weaknesses.

The coming of St. Patrick and the Patrician Documents afford scope for ingenious discussion, and the religion of the Gael before St. Patrick is reviewed in a long and interesting summary. On the Senchus Mor and the Tribal System Mr. Clerigh brings to bear his professional training and experience, though on the latter subject he recognizes the elaborate and careful studies of Dr. Seebohm. The invasion of the Northmen, if invasion it can be called (for their raids seldom went far inland), he summarizes from the Annals (795–1014): the most serious part of the raids, in spite of much outrage, was the taking of captives. The deeds of Brian Boru are recounted and assessed: Mr. Clerigh judges that he was neither a patriot statesman nor an ambitious usurper, but "a tribal chieftain fighting for tribal ascendancy, nothing more or less," and "this was the weakness of his position and the cause of his failure." Though he puts in a good word for Maelseachlainn, he says: "Unfortunately for Erin, the chieftains were warriors rather than statesmen, and, fighting amongst themselves, they left to the future historian the melancholy duty of recording how a nation of brave men surrendered their liberty without ever fighting with their whole strength one pitched battle in its defence." Of course, "the tribalism and political incapacity of the chieftains must be held responsible" for this, then and later; and, though there are extenuating circumstances, these do not mend the mischief—probably an inevitable mischief in historical evolution. The remainder of the volume is mainly occupied with the organization of the Church, the spreading of the teaching of the Church in Scotland and in the north of England, and doctrinal and ceremonial controversies. It closes with the remarkable ecclesiastical-political transactions leading to the invasion of Ireland by Henry II. The latter, the more strictly historical, half of the volume is characterized by industrious inquiry and independent judgment. If Mr. Clerigh dispels some popular illusions of his countrymen, he yet "conveys lessons of high political import which they may take hopefully to heart." "The early history of Ireland is a story of arrested evolution": what of the later history?

Life in the Sea.

Conditions of Life in the Sea. By James Johnstone, Fisheries Laboratory, University of Liverpool. (9s. net. Cambridge University Press.)

This is a new volume of the "Cambridge Biological Series." Its purpose is to present a short account of the main results of quantitative marine biological investigations, and of the related results of hydrography and oceanography. The jaw-breaking terms need not discourage a closer acquaintance, for the treatment is remarkably simple, and the materials teem with interest. Part I. is quite elementary: it explains the methods and the apparatus applied in the exploration of the sea; describes the form and the deposits of the floor of the North-Western Ocean, and the physical characters and the circulation of the sea water; reviews marine organisms and their life history; and treats of the methods, conditions, and economics of the sea fisheries. Let Mr. Johnstone speak of one of the three categories of organisms found in the sea:

> The mariner, it has been said, when he sails over a tract of sea, thinks that he traverses a "barren waste of waters" through which there swims here and there an occasional fish or porpoise. But in reality he sails over a "pasture," and beneath his ship is a wealth of life much more abundant than is contained in the richest or most luxuriant forest. Beneath his feet may be a couple of miles of water, and every cupful of this may teem with life, and this is so even if no fishes or other large animals may be visible. This enormously abundant life is the plankton, the drifting fauna and flora of the sea, the presence of which is only revealed by the tow-net and the microscope. Of all the forms of marine biological investigation the study of the plankton is the most entertaining. Equipped with the tow-net and the microscope, the naturalist finds here a veritable "wonderland" awaiting him, and the variety and beauty of the creatures so obtained, and the ever present possibilities of finding forms of life new to science, combine to make the study of the plankton a most fascinating one. To any one who lives near the sea the observation of the microscopic life may be a continual occupation and delight. But, in addition, no department of biology presents more abstruse problems to those who care for such investigation.

This First Part is a very simple, lucid, and interesting description of judiciously selected points, the sum of which is calculated to convey a good general idea of the subject on the lines indicated.

In Part II. the author attacks his main thesis—the methods and results of quantitative marine biological research. Marine biology is one of the last of the sciences to adopt quantitative methods, and the reason is simply that "an enormous mass of descriptive work had to be done before the exact methods of physical and mathematical science could be applied to the solution of problems of a general nature in marine biology." Mr. Johnstone describes Hensen's methods and apparatus and considers objections that have been made to the validity of his conclusions. He then investigates the distribution of the plankton and takes a general "census of the sea," having due regard to the fact that the imperfect methods and data can give only rough approximations. The inquiry into the productivity of the sea at different depths and in different latitudes includes, with much other matter of extreme interest, considerations bearing directly upon controverted practical questions in connexion with the sea fisheries. It needs but little reflection to realize the difficulty of reaching solid general conclusions of wide reach. "One stands," says Kjellmann, "as before an insoluble problem when one makes a haul with a tow-net in the Arctic and obtains abundant and strong vegetation, and this at a time when the sea is covered with ice, the temperature is extremely low, and nocturnal gloom predominates even at noon."

Part III. deals with the general conditions of life in the sea—the conditions of nutrition of marine organisms and the effect of changes in physical surroundings upon the nature and intensity of the processes, the multifarious and ubiquitous bacteria, their kinds, distribution, and operation, and the circulation of nitrogen. Special points are treated in appendixes.

There are, of course, multitudes of memoirs and articles on this subject, less or more inaccessible; but this work, we take it, is the only adequate introductory English summary of the researches. It is thoroughly well informed, deliberately and judiciously selective, and written in plain and clear style, so that laymen can have no difficulty in following the exposition of the marvellous facts.

GENERAL NOTICES.

CLASSICS.

Latin Prose Composition. By W. R. Hardie, M.A., Professor of Humanity in the University of Edinburgh, formerly Fellow of Balliol College, Oxford. (4s. 6d. net. Edward Arnold.)

The First Part consists of notes on grammar, style, and idiom, of a more advanced character, partly to obviate common errors, partly to formulate afresh various matters on which there is essentially common agreement. The object is to rise above mere syntactical rules to literary qualities of composition. To this end the points are judiciously selected, and illustrated and enforced with abundant knowledge and skill. The Second Part consists of passages for translation in wide variety both of subject and of difficulty—315 in all. The volume impresses one as the outcome of a long process of observation and selection by a proved scholar and teacher. It will be extremely useful in the higher classical forms.

Cicero: Philippic Orations I., II., III., V., VII. Edited by John R. King. Second edition, revised by A. C. Clark, Fellow of Queen's College, Oxford. (3s. 6d. Clarendon Press.)

Mr. King's second edition is now some thirty years old, but it was a very good book, and Mr. Clark, while adding his own critical foot-notes, reproduces substantially the original introductions and notes, with minor omissions, changes, and additions. The five orations here selected are the more important of the series: "they are of especial value not only as bringing out more strongly Cicero's power as an orator and his importance in the State during the most honourable portion of his life, but also as illustrating a period of history concerning which we have but little contemporary information." The volume is edited with the greatest care and ability, and will be very valuable in schools.

Aeschylus in English Verse. Part III.: *Agamemnon, Choëphoroe, Eumenides.* By Arthur S. Way, D.Lit. (3s. 6d. net. Macmillan.)

Dr Way now brings his rendering of Aeschylus to a triumphant conclusion. His mannerisms, inversions, metrical licences, and embroideries are swept away in the tide of poetical transmutation. We could have wished a more rugged strength—warts and all; but still, here is a substantial Aeschylus for the English reader, and it is a great achievement both of scholarship and of literature.

MATHEMATICS.

A School Arithmetic. By H. S. Hall, M.A., and F. H. Stevens, M.A. (4s. 6d. Macmillan.)

In drawing attention to the production of a new school text-book by authors so well known in the educational world as Messrs. Hall and Stevens, it is needless to dwell at length on the fact that the latest volume appears to maintain fully the standard of general excellence which marks the authors' previous works. A few notes on the constitution of the "School Arithmetic," will, however, be serviceable to teachers and students. Algebra in its character of *general* arithmetic plays a distinct part in the text and, further, pupils are taught by its means the first principles of graphical work. The order of the contents also deserves notice. No rigid course can be laid down as suitable for the purposes of all teachers or the needs of all pupils. In view of this, the plan adopted by the writers has been to group together as far as possible allied portions of the subject under consideration, and thus it becomes easy for the reader to find all that the work contains on any special topic and to link together the parts of the science in any desired order. The authors have, perhaps, devoted more than usual attention to the question of decimal approximation, and a decidedly modern feature of the book is observable in the introduction into such a work of a consideration of four-figure logarithms. These are thoroughly explained, and skill in the use of them is provided for by the furnishing both of tables and of unworked exercises. The text-book has been issued in various forms: thus not only can it be obtained complete, either with or without answers, but also Parts I. and II. have been similarly published separately.

Constructions in Practical Geometry. By Rev. H. F. Westlake, B.A. Oxon. (1s. Philip.)

From this little work candidates for various College Preliminary and School examinations may select suitable practical courses in practical geometrical work, or they may adopt the more useful plan of making a careful study of the complete set of problems contained in the volume. In nearly every case the constructive portion of the solution is all that is given, and we consider that the author would have done well to urge *as an essential* that the proof be invariably furnished by either teacher or student, whereas he only suggests that pupils may with advantage be required to supply the demonstrations. In some instances the methods employed (those of the ordinary text-book on the subject) are capable of being improved by greater precision. One other point invites comment, namely, that in the discussion of a locus the text merely shows that points situated on it satisfy the given conditions, whilst the equally important task of proving that *only* such points fulfil the requirements is ignored. The compilation is nevertheless a thoroughly useful one, and affords in compact form a large amount of most valuable instruction.

SCIENCE.

Modern Electrical Theory. By Norman Robert Campbell, M.A., Fellow of Trinity College, Cambridge. (7s. 6d. net. Cambridge University Press.)

Mr. Campbell's volume makes a most useful addition to the "Cambridge Physical Series." The purpose of it is "to expound the subject in its logical order, to analyse the arguments by which the various phenomena are correlated, to draw special attention to the assumptions that are made, and to show which of these assumptions are fundamental in the modern theory of electricity and which may be expected to be abandoned in the further progress of investigation." The selection of material has been determined not by the intrinsic importance of the subjects or by the interest of the accessory studies with which they are connected, but by the light they throw upon the central problem—the relation of electricity and matter. Mathematical analysis is involved only when and so far as it is necessary in order to show the nature of the argument. Mr. Campbell started with the idea of providing a much needed text-book "from which students well grounded in the elementary branches of physics might obtain some knowledge of the later developments," but as he proceeded he "departed from the original scheme" in the direction both of simplicity and of difficulty. This wavering of purpose, however, does not really matter, at any rate for keen students of the subject, who will follow Mr. Campbell's lucid exposition and stimulating discussions with intense interest and with great profit.

Electricity, Present and Future. By Lucien Poincaré, one of the Inspectors-General of Public Instruction in France. Translated by Jasper Kemmis. (7s 6d. net. Sisley.)

The volume is devoted to the investigation of certain matters that were purposely omitted from M. Poincaré's well known work, "La Physique Moderne"—the different methods of the production and utilization of electric energy, and the numerous applications of it within the sphere of electrotechnology. It is not intended for experts alone, nor yet for mere beginners; the author's purpose is rather to address himself to "that intelligent class, so widespread nowadays, which takes a genuine interest in the advance of modern science, and to place before it as accurate a picture as possible of the existing condition of electricity." He lays "special emphasis on the practical outcome, in a general way, of the skill which investigators have displayed in drawing their conclusions from the principles"; and he insists on the importance of close touch between pure scientists and engineers, so that the one class may know well what the other class is doing. "Within the past few years," he says, "the use of electric energy has transformed our methods of lighting, our means of transportation, and our chemical industries; the telegraph and the telephone have entirely altered the conditions of everyday life; the discoveries in radiography and high-frequency have brought about far-reaching changes in the medical world; while, in another direction, it is common knowledge that the study of radioactive bodies has led physicists to form daring theories of the composition of matter and of the laws of mechanics." With all these developments M. Poincaré deals in a lucid and popular manner—popular within the limits indicated. The volume will foster an intelligent interest in the subjects treated.

MODERN LANGUAGES.

A German Reader and Theme-Book. By Calvin Thomas, Professor in Columbia University, and William Addison Harvey, Instructor in Columbia University. (4s. 6d. George Bell.)

The authors furnish about sixty selected passages in prose and verse, largely varied, and on the whole fairly representative in point of style and of difficulty. A considerable number of serviceable notes are given; and carefully constructed questions and themes based on the selected passages are appended. There is also an English Word-List, and a very full vocabulary. The volume is designed for students that "have advanced far enough in the study of the language to be ready for the reading of simple literature"; and the matter has been arranged with careful reference to interest, variety, and proper gradation. A very comprehensive and useful work.

A Second Course in Colloquial French. By Albert Thouaille, M. ès A. (2s. 6d. Blackie.)

The volume presupposes the author's "First Course," or else some similar systematic course in spoken French, with the essentials of accidence. Sixty-six lessons are devoted to "scenes of every day life described in simple language, with questions, and conversational and reading exercises," and are supplemented with a synopsis of grammar and a vocabulary. The work is constructed with rigid regard to the colloquial use of everyday French. It has obviously involved immense labour and care, and it is excellently adapted to its purpose. There are six illustrations.

Pedro Sánchez. By D. José M. de Pereda. Edited by Ralph Emerson Bassett, Associate Professor of Romance Languages, University of Kansas. (4s. 6d. Ginn.)

The text follows the author's standard Madrid edition, but omits many digressions and lesser episodes, without substantial harm to "the essential character of the main narrative as a specimen of modern Spanish realism in its most classical spirit, and as a reflection of Spanish politics, unique in its impressiveness, from the middle of last century."

The narrative centres in the revolution of 1854, of which Pereda was a spectator while a student at Madrid; and the work ranks as one of the author's most finished productions. The introduction treats very fully of Pereda and his work, and sketches the historical situation. The notes are adequate and generally helpful, and a very careful and complete vocabulary is appended. The volume will be most useful and agreeable to students of Spanish and of Spain.

"Heath's Modern Language Series."—(1) *El Trovador*, por Antonio Garcia Gutiérrez, edited by H. H. Vaughan, Ph.D., Instructor in the University of Michigan. (1s. 6d.) (2) *Lo Positivo*, por Tamayo y Baus, edited by Philip Harry and Alfonso de Salvio, Instructors in Romance Language, North-Western University. (1s. 6d.) (3) *Spanish Composition*, compiled and edited by Alfred Remy, Instructor in Modern Languages in the Commercial High School, Brooklyn. (1s. 6d.) (Harrap.)

Both (1) and (2) have short biographical introductions, brief notes, and full vocabularies. Perhaps the notes might have been extended with advantage, but they will be helpful so far as they go. Both plays are interesting and distinctive examples of the modern Spanish drama. (3) furnishes carefully chosen English passages, dealing exclusively with Spain and Spanish life, customs, and institutions, for translation into Spanish. It is intended for students that have already had practice in easy translation and retranslation. All the three volumes will be very serviceable both in the schoolroom and in private study.

ENGLISH LITERATURE.

"The Cambridge English Classics."—(1) and (2) *The Works of Francis Beaumont and John Fletcher*, Vols. V. and VI. (3) *The Complete Works of George Gascoigne*, Vol. I. (4) *Samuel Butler: Characters and Passages from Note-Books*. (4s. 6d. net each volume. Cambridge University Press.)

(1) and (2). Each of the new volumes of Beaumont and Fletcher contains five plays, admirably edited by A. R. Waller, M.A. The text is printed from the folio of 1679, together with a complete record of the earlier variant readings from the folio of 1647 and from all the quartos. The edition will be an immense boon to the student of English dramatic literature. There will be four more volumes of text and one volume of explanatory notes, glossary, and other material useful alike to the student and to the general reader. (3) The first Gascoigne volume contains *The Posies*, edited by John W. Cunliffe, M.A., D.Lit.Lond., Professor of English in the University of Wisconsin, as "corrected, perfected, and augmented by the Authour, 1575." The posies are of "Flowers," "Hearbes," and "Weedes," with various alternate pieces—"the delectable history of sundry adventures passed by Dan Bartholomew of Bathe," "The Fruites of Warre" (*Dulce Bellum inexpertis*), two dramatic works ("Supposes" and "Jocasta"), "The Pleasant Fable of Ferdinando Jeronimi and Leonora de Valasco"; and there are added "Certayne Notes of Instruction concerning the Making of Verse." The matter is most varied and often curious; and wide scope is afforded for both literary and linguistic study. The variants are laboriously collected in appendix. Another volume will be needed for the rest of Gascoigne's works. (4) The larger portion of Butler's "Characters" is a reprint from Thyer—somewhat less than half the present volume; the rest of the "Characters" and the whole of the "Miscel aneous and Reflections on various Subjects" are now printed for the first time from the British Museum MSS. Mr. Waller acknowledges substantial assistance from Miss Edith J. Morley, to whom "is due the sole credit for the very laborious work of having transcribed from, and first collated with, the MS. these further 'Characters' and the passages from Butler's notebooks, and for having thereby materially assisted in the production of a complete text of Butler's works"; and to Mr. George Brown for the further checking of the transcript and the proofs with the original MS., &c. The matter is incisive and quaint and remarkably varied. The critical notes in append x are not very numerous, but they are carefully compiled. All these volumes are very valuable additions to the admirable series.

Modern Studies. By Oliver Elton, Professor of English Literature in the University of Liverpool. (7s. 6d. net. Edward Arnold.)

The volume contains about a dozen articles reprinted from different reviews and journals with numerous alterations and additions. The scope is wide and of varied interest, and the treatment of each subject is substantial and capable. "Literary History," "Literary Fame," and "A Word on Mysticism" are among the more comprehensive themes. "Giordano Bruno in England" connects English and Continental literature, and establishes a relation with succeeding articles on Spenser and Shakespeare, the latter of which, however, is specifically concerned with four recent critics—Brandes, Bradley, Churton Collins, and Raleigh. The others treat of Tennyson, Swinburne, Meredith, Henry James, and "Living Irish Literature" The criticism is well informed and discriminating, with much collateral illumination and independent judgment. The whole volume is most interesting and suggestive.

POETRY FOR SCHOOL AND HOME.

The Call of the Homeland, a collection of English Verse selected and arranged by R. P. Scott, LL.D., and Katharine T. Wallas, M.A., in two volumes (1s. 6d. net each. Blackie), is one of the very best of recent

Digitized by Google

anthologies appealing to Great and Greater Britain. Its purpose is "to stimulate and foster the emotions which are bound up with the love of our country"—to "indicate the sources which nourish and ennoble our national life." The compilers wisely take care to illustrate not merely the active and heroic side of patriotism, but also "the feeling, suffering, non-combative element, which, alike in the contemplative and the work-aday world, concerns all women and children and many men—those who are never called upon to risk their lives on any field, whether of war or of industry." The poems are carefully and suggestively classified, and the collection is enriched by an unusual number of copyright pieces of great interest and merit. The task of selection has been very arduous, but it has been guided by the right spirit, so that the results are admirable. The work ought to be, and is sure to be, a great success.

A Treasury of Verse for School and Home, selected and arranged by M. G. Edgar, M.A., in four handy Parts (1s. each, Harrap), contains many copyright pieces as well as old favourites, and is clearly printed and strongly bound.—*A Treasury of Ballads*, selected and arranged by M. G. Edgar, M.A., and published by Messrs. Harrap, is an attractive companion volume.

Messrs. Macmillan include in their excellent series of "English Literature for Schools," *A Book of Poetry illustrative of English History*, Part III., *The Hanoverian Dynasty*, edited by G. Dowse, B.A., Assistant Master at Preston Grammar School (9d.). The same house issues *The Boy's Book of Poetry* in three Parts: (1) Junior, (2) Intermediate, (3) Senior (4d. each). The pieces (many of them copyright) are well chosen and judiciously graded.

Poetry for Upper Classes, selected and arranged by Edmund Arthur Helps, formerly one of H.M.'s Inspectors of Schools (1s. 6d., George Bell), is a comprehensive and varied collection excellently adapted to its purpose. A considerable amount of useful annotation is appended. The book is beautifully printed and strongly bound in limp cloth.

HISTORY.

Marie de Médicis and the Court of France in the Seventeenth Century. By Louis Battifol. Translated by Mary King and edited by H. W. C. Davis, Fellow of Balliol College, Oxford. (7s. 6d. net. Chatto & Windus.)

M. Battifol "aims at presenting the picture of a French Queen surrounded by her court between the years 1600 and 1617, when Marie de Médicis was Queen and Queen-Regent—a period of particular interest, because one in which a new dynasty, but recently emerged from the throes of civil war, had not yet suffered the fate which buries the individuality of princes beneath the artificiality of courts and courtly etiquette." The interest of the work, then, lies partly in the depiction of real social conditions of much historical interest, but, to a large extent, also in a fresh examination of the relations of the Government and the administration. "Amidst all the troubles and disorders of the sixteenth century the administrative machine proper remained all-powerful with its spirit of narrow regulation, its tendency towards formalism, and meticulous and peremptory 'functionalism'"; so that "the throne in France in the early seventeenth century was so far from wielding the absolute power claimed for it by contemporary jurists as to be circumscribed on all sides by a series of passive forces, more masters of the State indeed than the King's self, and invoking principles of immemorial usage and the 'fundamental laws of the realm.'" The volume is a laborious and interesting contribution to the historical reconstruction of the period. There is a collotype portrait frontispiece reproduced from the contemporary copper-plate in the British Museum.

A cheaper reissue of *The Development of the European Nations*, 1870–1900, by J. Rose Holland, Litt.D. (7s. 6d. net, Constable) will be very welcome to students of modern history. It deals pretty fully with the great movements and events of a generation that immediately influences the present time, but that is too near to us to receive anything like adequate attention in school histories. The treatment is mainly limited, as the title indicates, to "events which had a definitely formative influence on the development of European States," but the limitation is not pedantically strict. Generally refraining from "expressing a decided verdict" on questions of motive and policy, Dr. Holland has not hesitated "to pronounce a judgment on these questions." Necessarily; but he is much more at home in the marshalling of facts: the Central Asian question, for example, needs large reconsideration. The first half of the volume, occupied with France, Germany, and Russia, seems decidedly the better half. However, the handling generally is useful, even when provocative; and the work furnishes a convenient survey of a very important period from a very practical standpoint. There are sixteen serviceable maps and plans.

MISCELLANEOUS.

Hazell's Annual, edited by William Palmer (3s. 6d. net, Hazell, Watson, & Viney), continues to justify its claim to be indispensable. Whatever the topics—political, economic, educational, artistic, scientific, foreign, or domestic, &c.—the reader is sure to find the kernel of the best and latest information. The volume has been seriously revised and rewritten to bring it into accord with the changing needs of the time, many new articles introducing subjects that have come to the front since the preceding issue. The biographical section has been very usefully extended in the way of giving details of foreign persons of importance that are not readily to be found elsewhere in English books of reference.

Sport and Athletics in 1908 (5s. net, Chapman & Hall) is a most comprehensive register of "the results for the year 1908 (to November) of all the important events in athletics, games, and every form of sport in the United Kingdom, together with the winners, records, and notable achievements of past years, also a full list of results in the Olympic Games." No doubt it may fairly claim to be the standard reference work in its sphere.

The first volume of *The Country Home* (5s. net, Constable) makes a handsome record of articles and illustrations of great interest and of practical value. Houses, gardens, fields are surveyed from the practical as well as the artistic point of view; and attention is given to natural history, rural industries, and country customs. The scope is comprehensive, and the execution in detail is instructive and agreeable.

NEW YEAR GIFT-BOOKS.

French Literature.

Messrs. Hachette provide with their accustomed liberality a variety of handsome and interesting volumes for readers of French. *Rita la Gitane*, by H. de Charlieu (6 fr.), is a delightful story of the later half of the sixteenth century, when the Spanish power was at its height. The hero is no less than Michel de Cervantès Saavedra, and Philip II. exhibits a generosity of disposition not altogether expected. Forty-eight gravures d'après Ed. Zier.—In the charming series, "Bibliothèque des Ecoles et des Familles," we have (1) *Excursions en France*, par Henri Boland (3 fr. 90), a book of picturesque and most interesting description, with seventy illustrations; (2) *L'Enfant aux Fourrures*, par Adrien Remacle (3 fr.), a story of stirring adventures in the mountains, with thirty-three illustrations; (3) *Le Caillou Rouge*, par Ivan D'Urgel (3 fr.), concerned about the mysterious disappearance of "un cercle d'or avec un rubis," with sixty-nine illustrations; and (4) *La Dernière des Spartiates*, par Georges Gustave-Toudouze (5 fr.), a strenuous narrative of battle and intrigue in the war of Greek independence (1821), with numerous illustrations. In the "Petite Bibliothèque de la Famille," we have *Ma Grande*, by Paul Margueritte, with illustrations by Marold (5 fr.); and in the "Bibliothèque Rose illustrée," *La Cousine Gudule*, by Mlle. G. du Planty, with fifty illustrations by Ed. Zier (3½ fr.)—both of them delightful stories in their several ways.—*Mon Journal*, "recueil illustré en couleurs pour les enfants de 8 à 12 ans" (10 fr.), is as fresh and interesting as ever. All these volumes furnish excellent reading in easy French.

The *Almanach Hachette*, "petite encyclopédie populaire de la vie pratique," contains the usual extraordinary variety of useful and curious information, with a profusion of illustrations, and in tasteful get-up.

More Good Things for the Children.

Messrs. Constable provide an attractive edition of *The Arabian Nights* in fine round print and handy form, with some 130 illustrations by W. Heath Robinson, Helen Stratton, and other artists (3s. 6d. net)—a delightful volume for young readers.

The Gateway to Shakespeare for children (Nelson) is a very handsome book, containing selections from seven of the plays and from Lamb's "Tales," with a life of Shakespeare and some account of Charles and Mary Lamb by Mrs. Lang, and with sixteen coloured plates and many other illustrations. A very pleasant introduction to Shakespeare, which will be widely appreciated.

Tales from Spenser, by R. W. Grace, Head Master of Lindisfarne College, Westcliffe-on-Sea (5s., Fisher Unwin), is one of the most charming books of the season. It retells the story of the Red Cross Knight in simple and direct language, and impresses that the days of chivalry are not yet past, though the battle ground is changed. Twelve illustrations by Helen S. Kück.

Mr. Fisher Unwin offers a number of series to choose from, and one is bound to make an agreeable choice. There is a pleasant series of "Bible Stories for Children" (with other publishers' names on the title-page: Alf Cooke, Ltd., London, and Frederick A. Stokes Co., New York): for example, *Ruth and Esther* and *David and Jonathan*, both written by W. Mord and illustrated (a dozen coloured illustrations in each) by E. North (1s. each). Then there is the "Dutch Series," represented by *Betty's Holiday* (1s.), *Lazy Peter* (6d.), and *Why Mina was Glad* (6d.), all by H. M. Howie. Also the "Nursery Series": for example, *Penelope's Escape*, by Grete Hahn (1s.), *Mother's Birthday*, by Eric Stowell (6d.), and *The Doings of Awdrey*, by J. C. D. Boyd (6d.). The "Willie Wimple Series": *The Magic Forge* (1s.) and *The Bear beneath the Stairs* (6d.), both by John Lea. The "Bird Series": *Bird Twitterings*, by Alton Towers (1s.), and *Baby Blossom at the Farm* and *Grandfather Seagull* (6d. each), both by M. F. Howie. The "Arabian Series": *Persian Tales* (2s. 6d.), *The Foolish Tailor* and *The Golden Bowl* (1s. each), all by W. Mord. The "Cartone Series": *Bible Pictures*—twelve full-page illustrations in colour by F. Elphick, mounted on strong cardboard (2s. 6d.). In all these series the letterpress—prose and verse—is suitable for children; and the get-up is attractive. Each of the shilling books has eight, and each of the sixpenny books has four, full-page coloured illustrations and numerous black-and-white drawings.

There is also the "Monarch Series." *All the Monarchs of Merry*

(Continued on page 34.)

MR. MURRAY'S NEW BOOKS.

By W. C. FLAMSTEAD WALTERS, M.A., and R. S. CONWAY, Litt.D.,
Professor of Classical Literature in King's College, London. Professor of Latin in the University of Manchester.

LIMEN. A First Latin Book.

Crown 8vo. pp. xxii + 376. **2s. 6d.** *Also in Two Parts*, 1*s.* 6*d. each.*

SUPPLEMENT FOR TEACHERS, CONTAINING HINTS ON THE ORAL METHOD, 6d.

As soon as the influence of the Classical Association began to make itself felt, it became evident that a new First Latin Book must be written. To supply this need, Mr. Murray, as long ago as 1904, invited the help of two well-known classical scholars who had wide experience as teachers, and who had also from the beginning supported the Classical Association and the reforms which it advocated.

The end which they have kept in view throughout has been to produce a book which should not only be worthy of the old English tradition of sound scholarship, but should make suitable use of the recent increase of archæological and linguistic knowledge, and should further embody, as far as possible, the fruits of much recent and valuable discussion on the order of the course and the methods of teaching. They have endeavoured also so to shape the study as to draw from it the help which it has to offer towards the teaching of English syntax and etymology, and of the history of Britain.

In the preparation of *Limen* the authors have consulted a number of distinguished teachers of Classics in schools of many different types, as will be seen by a reference to the Preface.

They have counted it essential that the book should serve both as a Reader and a Grammar, so that from the first possible moment—*i.e.* as soon as they know the simplest verbal construction—the pupils should begin to read some continuous Latin. They have therefore composed a series of Reading Lessons, carefully adapted in Accidence, Syntax, and Vocabulary to the stage at which they are introduced, describing, *inter alia*, in a connected form some of the most characteristic incidents in the History of Rome. The Accidence begins with the simplest verbal forms, on p. 12; the first Reading Lesson follows the introduction of the Accusative, on p. 25.

A NEW SYSTEM IN CHEMISTRY TEACHING.

By J. B. RUSSELL, B.Sc. (Lond.),
Formerly Senior Science Master at the Grammar School, Burnley.

THE TEACHER'S BOOK.

Notes on the Teaching of Elementary Chemistry.
With a Sequence of Experiments on Air and Combustion. 2s. 6d.

THE PUPIL'S BOOK.

Notes on Elementary Chemistry for the Use of Schools. 2s. 6d.

In this book an attempt has been made to solve the chief difficulty a teacher of chemistry has to contend with, *i.e.* that of a text-book forestalling the practical work. A filing arrangement is used instead of the ordinary method of binding, and each lesson is printed as a detachable Section, which should not be filed by the pupil until he has written his own record of the work done.

MURRAY'S FRENCH TEXTS.

FOR UPPER AND MIDDLE FORMS.

Edited by W. G. Hartog, M.A. (Lond.), Lecturer in French at University College, London; Oral Examiner to the London County Council and to the Army Qualifying Board.

La Mare au Diable. Par George Sand. 1s. 6d.

Confessions d'un Ouvrier. Par Émile Souvestre. 1s. 6d.

Bug-Jargal. Par Victor Hugo. 1s. 6d.

La Vénus d'Ille et la Dame de Pique.
Par Prosper Mérimée. 1s. 6d.

This series consists of selections from the masterpieces of nineteenth-century French authors. Each volume will contain: Notes (which are given *only* when necessary to clear up obscurity and are printed at the bottom of the page); a series of questions upon the text; grammatical drill upon points which arise in the course of reading; suggestions for free composition, parsing, dictation, &c., and a biographical note (in simple French) descriptive of the career of the author.

From Montaigne to Molière.
Or the Preparation for the Classical Age of French Literature. By Arthur Tilley, Fellow and Lecturer of King's College, Cambridge. 5s. net.

An Introductory History of England.

From the Earliest Times till the Year 1832.
By C. R. L. Fletcher, M.A., late Fellow of Magdalen College, Oxford. With Coloured and other Maps, Plans, and Index.

Vol. III. of Mr. C. R. L. Fletcher's *Introductory History of England*—carrying the story down to the end of the American War of Independence—will be published shortly. Owing to its length, it will be necessary to issue this volume in two separate parts.

ALREADY PUBLISHED.

Vol. I.—FROM THE EARLIEST TIMES TO THE END OF THE MIDDLE AGES. 5s.

Vol. II.—FROM HENRY VII. TO THE RESTORATION. 5s.

"It is a truism to speak of such simplicity in complexity as being only attainable by ripe scholarship and security of knowledge; but Mr. Fletcher's feat is remarkable enough to be allowed to endow an old truth with new value."—*The Journal of Education.*

"Neither Mr. Rudyard Kipling nor Mr. Henry Newbolt has a happier touch than his in drawing you a man or in picturing a battlefield; while his vivid, homely manner of sketching the stages of constitutional, legal, and social progress is original and most helpful."—*Child Life.*

". . . We commend it to the notice of schoolmasters sick of the arid typical text-book."—*Academy.*

"The method may be regarded as approximating to the ideal."—*Athenæum.*

The Teaching of Grammar.

By Laura E. Brackenbury, M.A., Principal of the Clapham Day Training College. 2s.

A Primer of Ethics.

With Questions and Examination Papers. By E. E. Constance Jones, Mistress of Girton College, Cambridge. 1s.

This is the latest addition to Mr. Murray's Series of Primers. Other volumes are: Philosophy, by A. S. Rappoport; Physiology, by E. H. Starling; The Use of Words, by Miss Kinnear; Logic, by E. E. Constance Jones; and Psychology, by Laura E. Brackenbury. Prospectus on application.

JOHN MURRAY, ALBEMARLE STREET, LONDON, W.

Digitized by Google

England, from William I. to Edward VII., consists of "humorous rhymes of historical times," by Roland Carse, with forty illustrations in colour and black and white by W. Heath Robinson (15s., Fisher Unwin). The history is told in free-and-easy versification, and the illustrations are broadly humorous. At the glorious Revolution the writer pulls up somewhat suddenly: he gives only half-a-dozen pages (out of 252) to the later events. The binding, in full leather, is gorgeous. The work appears also in two volumes of a somewhat less magnificent outfit (6s. or 5s. each, according to binding); and in four Parts (2s. 6d. each).

Messrs Chatto & Windus add three new volumes to their long series of "Dumpy Books for Children": (1) *The Story of an Irish Potato*, by Lily Schofield; (2) *The Little Frenchman*, text by Eden Coybu, illustrations by K. J. Fricero; and (3) *Simple Simon*, by Helen Reid Cross (1s. net each) The illustrations are humorous and clever.

Messrs. Jack include in their charming "Told to the Children Series" (1) *Stories from the Ballads*, by Mary Macgregor, with pictures by Katharine Cameron, and (2) *Stories of Siegfried*, by Mary Macgregor, with pictures by Granville Fell (1s. 6d. net cloth; 1s. boards). Both volumes will be voted delightful.

The Rest.

The Childhood of Man, by Leo Frobenius, translated by Dr. A. H. Keane (16s. net, Seeley), may be regarded as a Christmas or New Year book in virtue of its 415 illustrations and its liberal and tasteful get-up. It is "a popular account of the lives, customs, and thoughts of the primitive races"—popular, not in the sense of an elementary sketch of the more picturesque aspects of the subject, but in the sense of a simple presentation of the essential characteristics as discovered by real scientific inquiry, and more especially by the prolonged and severe original investigations of the author. Dr. Frobenius has based his work substantially upon the products especially of infantile crafts and industries, which he assiduously collected from all parts of the world. He describes (with illustrations) the nature of the action of the various mechanical and other contrivances of rude and barbarous people, and he essays to trace these, as well as the traditions, legends, and general folk-lore of the lower races, to their origins in remote prehistoric times. Though some of his theories will, no doubt, be contested by anthropologists, still his work is an extremely able and suggestive, as well as laborious, attempt at scientific explanation of a most difficult and obscure mass of questions. The general reader will be able to follow the exposition with ease, and the interest is continuously sustained throughout the work. The illustrations are of exceptional excellence and value.

Things Seen in China, by J. R. Chitty (2s., Seeley), is a charming addition to an instructive and agreeable series. The first thing that strikes a Westerner about the Chinese is "the sense of contrariness," and too many of them fail to get beyond that. The writer, however, has dwelt among the Chinese and knows them well enough to recognize "the many great qualities and the outstanding mental capacity of the most remarkable of Oriental peoples," "whom the Western world still ventures to patronize." The essential characteristics of Chinese life—familial, social, commercial, artistic, literary, and religious—are piquantly described, and there are fifty effective illustrations.

Six Girls, by Fanny Bell Irving (3s. 6d., Fisher Unwin), is "a home story." It has had a run of more than twenty years in America, where, the American publishers say, "its success seems to be growing rather than diminishing." All the more generous is it on their part to arrange that our girls on this side may at last have an opportunity of perusing these "wholesome, joyous, and fascinating pages."

Victories of the Engineer, by Archibald Williams (3s. 6d., Nelson), is a popular record of great undertakings successfully carried out by engineers in different parts of the world and in diverse forms; railways, ships, bridges, dams, reservoirs, aqueducts, canals, harbours, tunnels, mines, and so on—an extremely interesting (not to say astonishing) book, with two hundred and sixty illustrations.

Highways and Byways in Surrey, by Eric Parker (6s., Macmillan), is a charming book describing in detail such part of Surrey as remains unengulfed in London, and working in the vast and varied lore that has grown up in connexion with a multitude of places and scenes. The illustrations, which must number somewhere about one hundred and fifty, are admirable examples of Mr. Hugh Thomson's delicate and suggestive art.

Messrs. Gay and Hancock issue opportunely a third edition of *Pushing to the Front, or Success under Difficulties*, by Orison Swett Marden (3s. 6d.) —"a book of inspiration and encouragement to all who are struggling for self-elevation along the paths of knowledge and of duty." An excellent book for young people to read.

Life Histories of Familiar Plants, by John J. Ward (6s., Cassell), is intended primarily "to assist that large and growing class of non-professional Nature investigators who derive pleasure from seeking the Why and the Wherefore of details in plant structure and the relation of these details to animal life." It is written in a popular style, free from technicalities (as far as may be), and it is full of interest. There must be many boys and girls, as well as grown persons, that would be delighted with it.

In the charming "Red Letter Library" there is *Sesame and Lilies, and Unto This Last*, by John Ruskin, with an introduction by Alice Meynell (2s. 6d. net, Blackie). The whole series is a magazine of excellent little gift-books.

FIRST GLANCES.

Classics.

Basis Latina: an Introduction to Latin through the Language to the Literature. By Edward Vernon Arnold, assisted by Walter Rippmann. Part I.: Introduction, Syllabus, Grammar Notes, Vocabulary, Index. 1s. 6d. Dent.

[Deserves the careful attention of teachers of Latin.]

Cicero: Philippic Orations, I., II., III., V., VII. Edited by John R King. Second edition, revised by A. C. Clark, Fellow of Queen's College, Oxford. 3s. 6d. Clarendon Press.

[Introduction and notes are taken almost entirely from King's larger edition. Mr. Clark has settled the text and revised the notes. Excellent school edition.]

Latin Prose, A Junior. By H. N. Asman, M.A., B.D., Second Master of Owen's School, Islington. 2s. 6d. Methuen (Junior School Books).

[For Oxford and Cambridge Junior Local and like Examinations. Salient points of syntax; short introduction to prose composition; short exercises on syntax; continuous passages for prose; vocabulary. Very careful and serviceable.]

Latin Prose Composition. By W. R. Hardie, M.A., Professor of Humanity in the University of Edinburgh, formerly Fellow of Balliol College, Oxford. 4s. 6d. Edward Arnold.

[Part I., Notes on grammar, style, and idiom. Part II., English passages for translation into Latin.]

Martial, Select Epigrams of: Spectaculorum Liber and Books I.–VI. Edited, from the text of Prof. Lindsay, by R. T. Bridge, M.A., and E. D C. Lake, M A., Assistant Masters at Charterhouse. 3s. 6d. Introduction and Notes separately, 2s. Clarendon Press.

[For upper forms. Introduction gives connected account of certain features of Roman life constantly referred to in the epigrams. Notes concise, especially directed to explanation of the thought and point of the epigrams. Scholarly; excellent.]

Algebra.

Algebra, Elementary. By C. H. French, M.A., and G. Osborn, M.A., Mathematical Masters at the Leys School, Cambridge, formerly Scholars of Emmanuel College, Cambridge. 4s. 6d. Cambridge University Press.

[Revised and enlarged, the changes being in accordance with modern methods. Distinctive simplicity of style. Examples largely original; others selected from examination papers set at Cambridge and elsewhere. Answers. Excellent.]

Algebra, Elementary, for the use of Higher Grade and Secondary Schools. By P. Ross, M.A., B.Sc., Head Mathematical Master of Broughton Junior Student Centre and Higher Grade School, Edinburgh. Parts I. and II. (in one volume), 4s. 6d. Part II., separately, 2s. 6d.

[Stress on main principles; in selection of material, "preference has always been given to the theory and examples which lead to an immediate practical application." Examples abundant; answers.]

Algebra, Elementary, Cassell's. By V M. Turnbull, M.A., Senior Mathematical Master at the Perse School, Cambridge. 2s. 6d. Cassell.

[As far as Geometrical Progression, with Indices and Logarithms Mainly oral and written exercises; illustrative examples worked. Gradual development from arithmetical processes. Examples plentiful; no answers.]

Algebra for Secondary Schools. By Charles Davison, Sc.D., Mathematical Master at King Edward's High School, Birmingham. 6s. Cambridge University Press.

[For highest classes in secondary schools.]

Algebra, School. By W. E. Paterson, M.A. Cantab., B.Sc. Lond. Mathematical Master, Mercers' School, London. Part I., with answers, 3s.; without answers, 2s. 6d.

[Simple explanations; experimental method; practical suggestions; revision and repetition. Abundant examples.]

French.

Blackie's Modern Language Series.—(1) La Belle aux Cheveux d'Or (Mme. D'Aulnoy), edited by A. J. Berwick, L.L.A., and A. Barwell, B.A. 1s. (2) La Mare au Diable (George Sand), edited by Mrs Margaret Pease. 1s. 6d. (3) Vivent Les Vacances! by Clémence Saunois, Officier d'Académie. 1s.

(1) Vocabularies, questionnaires, retranslation exercises, and passages for recitation. "Term reader for elementary French classes in secondary schools." (2) First chapter omitted; text otherwise adapted. Brief notes; vocabulary. (3) Scènes et conversations familières et instructives, for middle forms in ladies' schools. Preface by M. George Petilleau, B.A.; illustrations by R. Hope. Bright, amusing, and very instructive.]

Grammar, A Short French. By Otto Siepmann, Head of the Modern Language Department at Clifton College. 2s. 6d. Macmillan.

[Essentials of Accidence and Syntax, with notes on pronunciation.

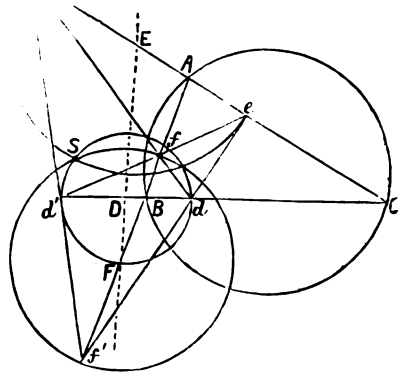
MATHEMATICS.

16522. (S. NARAYANA AIYAR.)—S is a variable point on the circumcircle of a fixed triangle ABC. For different positions of the point S four systems of conics can be described circumscribing the triangle ABC with S as focus. Show that the directrices of each system of these conics are concurrent and that the points of concurrence are the in- and ex-centres of the triangle ABC.

[N.B.—The Proposer's question was sent in prior to the publication of the Note by Mr. Davis to which the solver refers.—ED.]

Solution by C. E. YOUNGMAN, M.A.



This has been very simply proved in a note by Mr. R. F. Davis (see *Educational Times*, March, 1908). Generalizing a little, take S any point in the plane; draw DEF the radical axis of S and the circle ABC, cutting the sides at D, E, F; and, with these points as centres, draw circles through S, giving dd', ee', ff'. They cut ABC orthogonally, therefore dd' are harmonic conjugates between B and C; therefore Sd, Sd' bisect the angles BSC, and divide BC in the ratio BS : SC. Hence $d'ef$, $de'f$, def', $d'e'f'$ are the four directrices corresponding to the focus S for conics ABC; and they make a quadrilateral having ABC for diagonal triangle. Now, any conic touching these four lines has director-circle coaxal with (D), (E), (F), and therefore passing through S and cutting ABC orthogonally; and if we fix one of these conics, we shall provide both a locus for S and an envelope for the directrices, and obtain the proposition: If the focus S of a conic ABC be made to describe a circle orthogonal to the circle ABC, the corresponding directrix will touch the conic which has that circle for director, and with respect to which ABC is a self-polar triangle.

In particular, when the circle shrinks to a point, that is, when S lies on the circle ABC, the directrices touch a rectangular hyperbola having S for centre: and the points of contact must be the in- and ex-centres of ABC; for if p, q, r stand for AS, BS, CS, the trilinear equations of $d'ef$, &c. are $pa\pm qb\beta\pm rc\gamma = 0$; but by Ptolemy's Theorem $pa = qb \pm rc$; therefore each directrix goes through one of the centres.

16543. (A. M. NESBITT, M.A.)—EF is a common tangent to two circles, ADBE and ADCF. CDB is drawn parallel to EF, and G is the harmonic conjugate of D with respect to BC. If the circles GDA and EDF cut in H, prove that DH is perpendicular to BC.

Solution by Dr. E. J. EDWARDES.

O, P, N are centres of circles GDA, DEF, CDF respectively; since DH is a common chord of the circles O, P, therefore DH is perpendicular to their central line PO. Produce FN to meet BC in K; PO meets HD in Z and FK in T; HD meets EF in L. Since in quadrilateral ZTFL the angles at Z and F are right angles, therefore $\angle L$ and $\angle ZTF$ are supplementary; also since DK is parallel to LF, therefore the angles at L and D are supplementary; therefore $\angle ZDK = \angle ZTF$; and therefore ZDKT is a cyclic quadrilateral, but the two opposite angles DKT and DZT are right angles; therefore also the angles ZDK and KTZ are right angles, and thus HD is perpendicular to BC.

16513. (The late R. W. D. CHRISTIE.)—Find an endless chain of integral solutions of $A^2 + B^2 = C^2$, where $A-B = a^2+b^2$, $C-A = a^2$, $C-B = 2d^2$, are all integers.

Solutions (I.) *by* Lt.-Col. ALLAN CUNNINGHAM, R.E.
(II.) *by* Professor SANJÂNA, M.A.

(I.) Numbering the equations

$A^2 + B^2 = C^2$, $A-B = a^2 \cdot b^2$, $C-A = a^2$, $C-B = 2d^2$...(1, 2, 3, 4).

Here (2), (3), (4) give $a^2 + b^2 = 2d^2 - a^2$, whence

$a^2 \quad d^2 - \frac{1}{2}b^2$ .....(5).

Or, $a^2 = d^2 - 2(\frac{1}{2}b)^2$, so that b must be even, and a, b, d must be of forms $a = \alpha^2 - 2\beta^2$, $\frac{1}{2}b = 2\alpha\beta$, $d = \alpha^2 + 2\beta^2$ .....(6).

Also, by (1), A, B, C must be of forms

$B = t^2 - u^2$, $A = 2tu$, $C = t^2 + u^2$ .....(7).

Digitized by Google

Here α, β, t, u are connected by the relations (2), (3), (4) (equivalent to only two independent relations). Here (4) and (7) give

$$u = d \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots(8).$$

Also (2) and (7) give $2tu - t^2 + u^2 = a^2 + b^2$, (3) and (7) give

$$t^2 + u^2 - 2tu = a^2,$$

whence $t^2 - 2tu = -\frac{1}{2}b^2$. Hence, by (8), $t^2 - 2tu + u^2 = d^2 - \frac{1}{2}b^2 = a^2$, by (5). Hence $t - u = \pm a$, $t = u \pm a = d = a$ .....(9).

Finally, a, b, d are given by (6), where α, β are arbitrary integers, and A, B, C are given by (7), wherein t, u are given by (8), (9).

[Rest in *Reprint*.]

11215, 15116, & 16397. (11215.) (Professor LEMOINE.)—Sur les perpendiculaires MA', MB', MC' abaissées d'un point M sur les côtés du triangle ABC on prend respectivement les points A'', B'', C'' tels que

$$MA'.MA'' = MB'.MB'' = MC'.MC'' = \rho^2.$$

Quel que soit ρ, le triangle A''B''C'' est perspectif avec ABC et le centre de perspective est sur l'hyperbole équilatère ABCM.

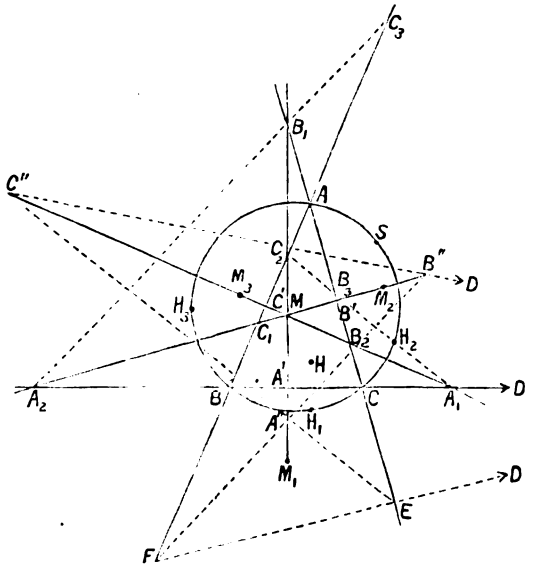
(15116.) (C. E. YOUNGMAN, M.A.)—If H be the orthocentre of ABC, and DEF any transversal, perpendiculars from A, B, C, H on HD, HE, HF, DEF will meet at P. If this be still true when H is simply a fixed point in the plane, find the locus of P and the envelope of DEF.

(16397.) (HENRY RIDDELL, M.E.)—If two parabolas touch the sides of a triangle, and with the intersection of their directrices as focus a third parabola be described, and a tangent to this curve cut the sides of the triangle. Then, if the focus of this third parabola be joined to the three intersections of the tangent with the sides of the triangle, and upon each of these joining lines perpendiculars be let fall from the vertex opposite the side concerned, these three perpendiculars will meet in a point, and the locus of this point is a circle.

Solution by C. E. YOUNGMAN, M.A.

Direct proofs of Question 11215 are given in the *Reprint*, Vol. XIII., pp. 67, 93, New Series; but the following, though long, may still be worth while, as it brings in wider connexions.

Let M_1, M_2, M_3 be the images of M in BC, CA, AB; and H_1, H_2, H_3 those of the orthocentre H; and let MM_1, ..., cut the sides of ABC at A', B_1, C_2; B', C_1, A_2; C', A_1, B_2, as in the figure. Then the points



A, M_2, M_3, B_2, C_1 are concyclic, for AM_2 and AM_3 both subtend at B_2 and C_1 the same angle $(90°-A)$ as AM; and, similarly, $BM_3M_1C_2A_1$ and $CM_1M_2A_2B_1$ are concyclic.

These three circles, with the lines H_1M_1, H_2M_2, H_3M_3 (the images of HM), all meet at a point on the circle ABC. For H_1 already lies on that circle; let H_1M_1 cut it again at S. Then $\angle SM_1C_2 = SH_1A = SBC_2$ or SCB_1; so that S lies on the circles BM_1C_2 and CM_1B_1. Similarly, H_2M_2 and the circles ABC, CM_1M_2, AM_2M_3 meet at a point, which must be S, as two of the circles are the same as before.

Since the projections of S on all six lines BC, CA, AB, B_2C_1, C_2A_1, A_2B_1 are collinear, S lies on the circum-circle of the triangle formed by any three of them; for instance, AB_2C_2 formed by AB, AC, and C_2A_1, and AB_1C_2 formed by AB, AC, and A_2B_1. Hence the figures $SCB_1B_2B_3$ and $SBC_2C_1C_2$ are directly similar, and any circle through AS will cut AC and AB at points which correspond to each other in these figures.

Let the like sides of ABC and A''B''C'' meet at D, E, F. Now C''A''C'A' are concyclic, and so are $C_2A_1C'A'$; therefore C''A'' is parallel to C_2A_1; and, similarly, A''B'' to A_2B_1. Therefore

$$B_1E : EB_2 = B_1A'' : A''C_2 = C_2F : FC_2;$$

therefore E and F correspond in the similar figures above, and the circle AEF goes through S.

In the same way BFDS and CDES are concyclic; hence DEF is a straight line, and therefore AA'', BB'', CC'' must meet at a point P. And, since the projection of S on DEF lies always on the pedal line of S, DEF envelopes a parabola with focus S inscribed in ABC.

M lies on the radical axis of any two of the circles DA'A'', DB'B'', DC'C''; therefore all three meet again at D' on DM, and

$$\text{the angle } B'D'M = B'B''D = \pi - B'C_1B_2 = \pi - B'AM$$

(since M is the orthocentre of AC_1B_2); therefore D' lies also on the circle AB'C'M. Hence both A''D and AM subtend a right angle at D'; consequently AA'' is perpendicular to MD, and the transversal DEF is such that perpendiculars from A, B, C on MD, ME, MF meet at P. The triangles MEF, MCB are in orthology, having A'' for one centre; and the other must be P; therefore MP is perpendicular to DEF.

Reciprocate from M; A, B, C become the sides of a triangle *abc*, DEF a point *p*, and P a transversal *def*; and these are still such that perpendiculars from *a*, *b*, *c* on *Md*, *Me*, *Mf* meet at *p*. Therefore the envelope of *def* is a parabola, and the locus of P is a conic—a rectangular hyperbola because A, B, C, H are all special positions of P. Since M also lies on this hyperbola, it has like properties with P: namely, perpendiculars from P on AM, BM, CM will cut BC, CA, AB on a line perpendicular to MP.

The focus in Question 16397, lying on the directrices of two inscribed parabolas, must be H. Now when M is placed at H, by "continuity" there will still be transversals DEF with corresponding P's; but, since S is indeterminate, they are now free of restriction, except that P will be the reciprocal of DEF with respect to the polar circle of ABC. Accordingly, when DEF is made to touch any conic with focus H (not only a parabola), P will describe a circle.

16497. (Major C. H. CHEPMELL, (late) R.A.)—The special roots of the cyclotomic equation $x^{21} - 1 = 0$ are given by the sextic

$$y^6 - y^5 - 6y^4 + 6y^3 + 8y^2 - 8y + 1 = 0 \quad (y = x + 1/x),$$

and this can be resolved into two cubics

$$2y^3 - y^2 - y - 5 \pm \sqrt{(21)}\,(y^2 - y - 1) = 0.$$

Resolve the sextic into three quadratics, the coefficients of which depend on ω, $1/(1-\omega)$, $(\omega-1)/\omega$, the three roots of $\omega^3 + \omega^2 - 2\omega - 1 = 0$ the 7-cyclotomic equation.

Remarks by Professor SANJÁNA, M.A.

The special roots of $x^{21} - 1 = 0$ are readily obtained by the usual algebraic process. We have to equate to zero

$$[(x^{21}-1)/(x^7-1)]/[(x^3-1)/(x-1)] = (x^{14} + x^7 + 1)\,(x^2 + x + 1)$$
$$= x^{12} - x^{11} + x^9 - x^8 + x^6 - x^4 + x^3 - x + 1;$$

hence, dividing by x^6 and putting $x + 1/x = y$, we get

$$y^6 - y^5 - 6y^4 + 6y^3 + 8y^2 - 8y + 1 = 0.$$

And we can shew without much difficulty that the expression on the left side is equal to the product of the two cubics or the three quadratics indicated in the Question, barring certain numerical common factors. But the great difficulty is to obtain the factorization of the sextic. In such cases I have employed a trigonometrical method: see my paper in *Proc. of Edin. Math. Soc.*, Vol. XXVI.

In the present instance,

$$(x^{14} + x^7 + 1)/(x^2 + x + 1) = (x^{14} - 2x^7 \cos \tfrac{4}{3}\pi + 1)/(x^2 - 2x \cos \tfrac{2}{3}\pi + 1)$$
$$= \Pi\,(x^2 - 2x \cos \tfrac{1}{21}k\pi + 1), \quad \text{where } k = 20, 26, 32, 38, 44, 50;$$
$$= x^6 \Pi\,(y + 2\cos k'\alpha), \quad \text{where } \alpha = \tfrac{1}{21}\pi \text{ and } k' = 1, 5, 11, 13, 17, 19.$$

It will be found that

$$(y + 2\cos\alpha)(y + 2\cos 5\alpha)(y + 2\cos 11\alpha)$$
$$= y^3 + \tfrac{1}{2}y^2\,[\sqrt{(21)} - 1] - \tfrac{1}{2}y\,[\sqrt{(21)} + 1] - \tfrac{1}{2}\,[\sqrt{(21)} + 5]$$
$$= y^3 - \tfrac{1}{2}y^2 - \tfrac{1}{2}y - \tfrac{5}{2} + \tfrac{1}{2}\sqrt{(21)}\,(y^2 - y - 1);$$

and that

$$(y + 2\cos 11\alpha)(y + 2\cos 13\alpha)(y + 2\cos 19\alpha)$$
$$= y^3 - \tfrac{1}{2}y^2 - \tfrac{1}{2}y - \tfrac{5}{2} - \tfrac{1}{2}\sqrt{(21)}(y^2 - y - 1).$$

Thus the first result is at once obtained.

To obtain the resolution into quadratics, take the products

$$(y + 2\cos\alpha)(y + 2\cos 13\alpha), \quad (y + 2\cos 5\alpha)(y + 2\cos 19\alpha),$$
$$(y + 2\cos 11\alpha)(y + 2\cos 17\alpha);$$

these will be respectively found to be

$$y^2 - 2y\cos\tfrac{5}{7}\pi + 4\cos^2\tfrac{5}{7}\pi - 3, \quad y^2 - 2y\cos\tfrac{3}{7}\pi + 4\cos^2\tfrac{3}{7}\pi - 3,$$
$$y^2 - 2y\cos\tfrac{1}{7}\pi + 4\cos^2\tfrac{1}{7}\pi - 3.$$

Thus each quadratic factor is of form $y^2 + \omega y + \omega^2 - 3$, where ω is one root of the cyclotomic equation $z^3 + z^2 - 2z - 1 = 0$ corresponding to $x^7 - 1$. It would therefore be simpler to say that the quadratic factors involve ω and ω^2 respectively. Of course ω_2 and ω_2^2, and ω_3 and ω_3^2 may be expressed in terms of ω_1, $-1/(1+\omega_1)$, $-(\omega_1+1)/\omega_1$, the three roots expressed in terms of any one root.

[For the Proposer's very full Solution, see *Reprint*.]

About the Absolute Limits of Series of Positive Terms.

By F. TAVANI.

If $a_n < a_{n+1}$, we have the relation

$$1/a_n > \frac{(1/a_n - 1/a_{n+1})}{\log(a_{n+1}/a_n)} > 1/a_{n+1} \quad \ldots\ldots (1),$$

which is obtained by calculating the integral of the relation

$$1/a_n > \int_n^{n+1} e^{-\log a_n - (x-n)(\log a_{n+1} - a_n)}\, dx > 1/a_{n+1},$$

which is obviously true.

Therefore, if P and M represent respectively the absolute minimum and the absolute maximum of the set $[\log(a_{n+1}/a_n)]_{n=1}^{n=\infty}$, when these limits exist we have

$$\sum_{n=1}^{\infty} 1/a_n^{\rho} > 1/a_1^{\rho} M_{\rho},$$

ρ being the exponent of convergence of the series.

$$\sum_{2}^{\infty} 1/a_n^{\rho} < 1/a_1^{\rho} P_{\rho} \quad \text{or} \quad \sum_{1}^{\infty} 1/a_n^{\rho} < 1/a_1^{\rho}(1 + 1/P_{\rho}),$$

$$1/a_1^{\rho}(1 + 1/P_{\rho}) > \sum_{1}^{\infty} 1/a_n^{\rho} > 1/a_1^{\rho} M_{\rho} \quad \ldots\ldots (2).$$

These relations are applicable to all series having either P or M or both, and may be used for transforming the series into expressions of finite form.

In fact, (2) may be written

$$(1 + 1/P_{\rho}) > 1 + \sum_{2}^{\infty} a_1^{\rho}/a_n^{\rho} > 1/M_{\rho}.$$

Now $(1 + \sum_{2}^{\infty} a_1^{\rho}/a_n)$ is either $>$ or $<$ $1/M_{\rho} + 1$.

In the latter case we have

$$\sum_{1}^{\infty} 1/a_n^{\rho} = (1/M_{\rho} + \theta).\ (0 < \theta < 1).$$

In the first case we have

$$\sum_{1}^{\infty} 1/a_n^{\rho} = (1/\nu_{\rho} + 1),$$

where ν is a uniquely determined number between P and M, the existence of which is evident; its calculability forms a different question.

It is easy to prove also that, if $\sum_{1}^{\infty} 1/b_n > \sum_{1}^{\infty} 1/a_n$ and the low limit of the set $[\log b_{n+1}/b_n]_{\infty}^{1} > 0$, then both series admit an absolute superior limit and are both expressible under a finite form.

As obvious applications of the formulæ above we may add

$$\sum_{1}^{\infty} 1/n! < (1 + 1/\log 2); \quad (\sum_{2}^{\infty} 1/n^{2+\delta} + \sum_{2}^{\infty} 1/n^{3+\delta} + \ldots) < \sum_{2}^{\infty} 1/[n \log(n)^{1+\delta}];$$

$$\sum_{2}^{\infty} 1/a_n^{\rho} < 1/a_1^{\rho}, \text{ if } P \geqslant 1; \quad \sum_{2}^{\infty} 1/n^{1+\delta} < 1/\delta$$

the last relation being immediately obtained if we put $a_n = n^{\lambda}$ and $\rho = \kappa + 1$, and use

$$\int_1^{\infty} dn/[(n^{\lambda})^{\kappa+1}] > \sum_{2}^{\infty} 1/[(n^{\lambda})^{\kappa+1}] = 1/[\lambda(\kappa+1) - 1],$$

and, putting $\lambda(\kappa+1) - 1 = \delta$, the said relation is established.

I should like to call the attention in particular to relation (1): very general because it supposes only $a_{n+1} > a_n$, and very simple and susceptible of important applications; these mentioned here being all, except the last, simple consequences of (1).

16393. (SARADAKANTA GANGULI, M.A.)—Show that it is possible to find any number of integers such that the square of the greatest is equal to the sum of the squares of the rest. Hence, solve in integers $x_1^2 + x_2^2 + x_3^2 + x_4^2 = x_5^2$.

Additional solution by ARTEMAS MARTIN, LL.D.

In the well known identical equation

$$(x-y)^2 + 4xy = (x+y)^2 \quad \ldots\ldots (1)$$

it is obvious that x may have any value whatever; hence we may assume

$$x = z_1 + z_2 + z_3 + z_4 + \ldots + z_{n-1},$$

and then (1) becomes by substitution

$$(z_1 + z_2 + z_3 + z_4 + \ldots + z_{n-1} - y)^2 + 4y(z_1 + z_2 + z_3 + z_4 + \ldots + z_{n-1}) = (z_1 + z_2 + z_3 + z_4 + \ldots + z_{n-1} + y)^2.$$

Now, if we assume $y = b^2$ and $z_1 = a_1^2$, $z_2 = a_2^2$, $z_3 = a_3^2$, $\ldots z_{n-1} = a_{n-1}^2$, we will have

$$(a_1^2 + a_2^2 + a_3^2 + a_4^2 + \ldots + a_{n-1}^2 - b^2)^2 + (2ba_1)^2 + (2ba_2)^2 + (2ba_3)^2 + (2ba_4)^2 + \ldots + (2ba_{n-1})^2 = (a_1^2 + a_2^2 + a_3^2 + a_4^2 + \ldots + a_{n-1}^2 + b^2)^2,$$

or n integral square numbers whose sum is a square, where a_1, a_2, a_3, a_4 $\ldots$ a_{n-1} and b may have any integral values chosen at pleasure.

When $n = 4$, we have

$$(a_1^2 + a_2^2 + a_3^2 - b^2)^2 + (2a_1b)^2 + (2a_2b)^2 + (2a_3b)^2 = a_1^2 + a_2^2 + a_3^2 + b^2)^2.$$

Take $a_1 = 1$, $a_2 = 2$, $a_3 = 3$, $b = 2$; then, after dividing by 2^2,

$$2^2 + 4^2 + 5^2 + 6^2 = 9^2.$$

Take $a_1 = 1$, $a_2 = 2$, $a_3 = 3$, $b = 3$; then we have

$$5^2 + 6^2 + 12^2 + 18^2 = 23^2.$$

An innumerable number of sets of four squares may be found whose sum is a square.

16410. (H. L. TRACHTENBERG, B.A.)—Prove that the centres of a system of conicoids having a common curve of intersection lie on a line, provided that part of the common curve is a conic at infinity.

Solution by Professor NANSON.

If S is any one of the conicoids, the system is given by

$$S + \lambda(ax + by + cz + d) = 0.$$

Differentiating with respect to x, y, z, and eliminating λ from the three resulting equations, the locus of the centre is the straight line

$$\partial S/\partial x : \partial S/\partial y : \partial S/\partial z = a : b : c.$$

16516. (R. CHARTRES.)—P is a random point within the triangle ABC ($\Delta = 1$).

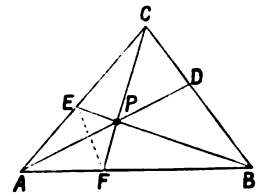
Show that the mean value of the area

$$AEF = \sum_{1}^{\infty} \frac{1}{n^2(n+1)^2},$$

and the mean of

$$DEF = \sum_{1}^{\infty} \frac{1}{n^3(n+1)^3},$$

without calculating their numerical values.



Solution by the PROPOSER.

Let the triangle APC $= x$, APB $= y$, $\Delta = 1$,

(1) $$M(AFE) = \int_0^1 \int_0^{1-x} \frac{x}{1-y} \frac{y}{1-x}\, dx\, dy \Big/ \int_0^1 \int_0^{1-x} dx\, dy$$

$$= 2\int_0^1 x \left\{ \frac{(1-x)}{2} + \frac{(1-x)^2}{3} + \ldots \right\} dx = 2\sum_{1}^{\infty} \frac{1}{(n+1)^2(n+2)}$$

$$= \sum_{1}^{\infty} \frac{1}{n^2(n+1)^2}.$$

(2) $$\sum_{1}^{\infty} \frac{1}{n^3(n+1)^3} = \sum_{1}^{\infty} \left(\frac{1}{n} - \frac{1}{n+1} \right)^3 = 1 - 3\sum_{1}^{\infty} \frac{1}{n^2(n+1)^2} = 1 - 3M(AFE)$$

$$= M(EFD).$$

(3) $M(AFE^n)$ [see Question 15993]

$$= \frac{n^2\pi^2}{3} - 2n^2\left(\frac{1}{1^2} + \frac{1}{2^2} + \ldots + \frac{1}{n^2} \right) - (2n-1).$$

16461. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Factorize completely (into prime factors) $N = (19^{24} + 1)$.

Solution by the PROPOSER.

$$N = (19^{24} + 1) = (19^8 + 1)(19^{16} - 19^8 + 1) = N_1 N_2 \text{ (suppose)}.$$

Here $N_1 = (19^8 + 1) = 2.15073.563377$;

$N_2 = 288,441,413,550,637,604,641,$

$= 241.577.1009.4657.14929.29569.$

These divisors are found from two Tables of Solutions (y_8, y_{12}) of the two congruences $y_8^4 + 1 \equiv 0$, $(y_{12}^{12} + 1)/(y_{12}^4 + 1) = 0$, (mod p), compiled by the author; these are now complete up to $p \not> 32000$, and therefore suffice for the above work.

QUESTIONS FOR SOLUTION.

16566. (T. K. VENKATARAMAN, M.A.)—Integrate

$$\int \frac{z\sqrt{[5a^2 + 2z\sqrt{(a^2 - z^2)}]}\, dz}{\sqrt{(a^2 - z^2)}}.$$

16567. (T. K. VENKATARAMAN, M.A.)—Solve the differential equation

$$dx/(5x + 10y + 5z + 4) = dy/(4x + 15y + 10z + 7) = dz/(-3x - 5y + 5z + 1)$$

and interpret the result geometrically.

16568. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Let

$$N_\nu = (x^5 \mp y^5)/(x \mp y), \quad N'_\nu = (x'^5 \mp y'^5)/(x' \mp y');$$

$$N_{\nu 1} = (\xi^6 + \eta^6)/(\xi^2 + \eta^2), \quad N'_{\nu 1} = (\xi'^6 + \eta'^6)/(\xi'^2 + \eta'^2).$$

Find a solution of some generality (in integers) of $N_\nu + N'_\nu = N_{\nu 1} + N'_{\nu 1}$, and find the lowest solution thereof.

$$xy+ax+by+c=0,\quad yz+ay+bz+c=0,\quad zx+az+bx+c=0,$$

then $x=y=z$ or $a^2-ab+b^2=c$. If, in the latter case, $x+y+z=0$, find the equation giving the values of x, y, z.

16573. (G. N. WATSON, B.A.)—The conic of closest contact, C, is drawn to a cubic curve with a double point, at the double point. The tangents to the cubic at the double point are T_1, T_2, the tangent which is touched by the conic being T_1; I is the straight line on which the inflexions of the cubic lie. Prove that I touches C at the point where T_2 meets I.

16574. (K. S. PATRACHARI.)—Find the polar equation of the curve in which the distance along the tangent from the point of contact to the foot of the perpendicular upon it from the pole is constant.

16575. (W. F. BEARD, M.A. Suggested by Question 16486.)—ABC is a triangle; a conic is described to touch AB, AC at B, C and to touch the circum-circle; if P is the point of contact and PQR is drawn parallel to BC to meet the circle at Q and the conic at R, prove

$$PQ=QR.$$

16576. (Professor NEUBERG.)—Une parabole P touche les côtés de l'angle xOy aux points donnés A et B; une seconde parabole P′ touche ces côtés en C et D. Construire le troisième tangente commune aux deux paraboles.

16577. (Hon. G. R. DICK, M.A.)—P is any point in the plane of a triangle ABC whose circum-centre is O; a, b, c are the sides, R the circum-radius, Δ the area and AP $=x$, BP $=y$, CP $=z$. Show that $\Delta.OP^2=R^2(\Delta\pm\Delta')$, where Δ' is the area of a triangle whose sides are ax/R, by/R, cz/R respectively. Deduce Ptolemy's theorem.

16578. (S. NARAYANA AIYAR.)—If O (AA′, BB′, CC′, ...) be any pencil in involution, and if a circle be drawn through the point O cutting the rays of the pencil in the points A, A′; B, B′; C, C′; ...; then the locus of the orthocentre of the triangles OAA′, OBB′, OCC′, ... is a circle.

16579. (V. RAMASWAMI AIYAR, M.A.)—If the line joining the vertex A to the circum-centre O of a triangle ABC cuts the sides FD, DE of the medial triangle DEF in the points B′, C′; and O′ be the harmonic conjugate of O with respect to B′C′. Prove that the circle described on OO′ as diameter touches the nine-point circle of ABC.

16580. (R. GARDNER.)—Given the length of each side of a quadrilateral, and that the diagonals are perpendicular, find the lengths of the diagonals.

16581. (JAMES BLAIKIE, M.A.)—AKL, BKL are two triangles such that AB is parallel to KL, also AB $>(n-1)$ KL, and $<n$KL. Prove that the two triangles can be shown to be equal by the superposition of $2n+1$ rectilineal portions (or, if possible, by a smaller number).

16582. (Professor SANJÁNA, M.A.)—If $C_2, C_3, C_4, \ldots$ denote the sums of the products taken 2, 3, 4, ... at a time of the quantities

$$\cos(\theta+2\pi/n),\ \cos(\theta+4\pi/n),\ \ldots,\ \cos[\theta+(2n-2)\pi/n],$$

prove that

$$(-2)^2C_2\sin\theta=\sin3\theta-(n-1)\sin\theta,\ (-2)^3C_3\sin\theta=\sin4\theta-(n-2)\sin2\theta,$$
$$(-2)^4C_4\sin\theta=\sin5\theta-(n-3)\sin3\theta+\tfrac{1}{2}(n-1)(n-4)\sin\theta,$$
$$(-2)^5C_5\sin\theta=\sin6\theta-(n-4)\sin4\theta+\tfrac{1}{2}(n-2)(n-5)\sin2\theta,\ \ldots.$$

16583. (Professor NANSON.)—Show, geometrically, that in a spherical triangle $B+C>=<\pi$ according as $b+c>=<\pi$, and deduce (1) that the greater side is opposite the greater angle, (2) that any two sides are greater than the third, (3) the three sides are less than the perimeter of a great circle.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

11224. (Professor WOLSTENHOLME, Sc.D.)—If three pairs of parallel generators of the hyperboloid $ax^2+by^2+cz^2=1$ be drawn, they will form a *gauche* hexagon, whose sides are edges of a parallelopiped; prove that the two corners of this parallelopiped which do not lie on the given hyperboloid lie on the hyperboloid $ax^2+by^2+cz^2+3=0$, that the volumes of all such parallelopipeds are equal, and that the sum of the squares of the three diagonals of any one of them whose ends lie on the given hyperboloid exceeds the square of the remaining diagonal by a constant quantity.

11462. (H. W. SEGAR.)—Show that (n^2+n+1) multiplied by

$$\begin{vmatrix} 1! & 2! & 3! & \ldots & n! \\ 2! & 3! & 4! & \ldots & (n+1)! \\ 3! & 4! & 5! & \ldots & (n+2)! \\ \ldots & \ldots & \ldots & \ldots & \ldots \\ n! & (n+1)! & (n+2)! & \ldots & (2n-1)! \end{vmatrix}$$

= the same determinant with the constituents of the last row multiplied by $n, (n+1), (n+2), \ldots, (2n-1)$ respectively.

11581. (The late Professor CLIFFORD, F.R.S.)—Prove that (1) the co-ordinates of a point on a curve of the third order or class may be expressed in terms of elliptic functions of a parameter u; and hence (2) when $u+v+w=iK'$, $\begin{vmatrix} 1 & \mathrm{sn}^2u & \mathrm{sn}\,u & \mathrm{cn}\,u & \mathrm{dn}\,u \\ 1 & \mathrm{sn}^2v & \mathrm{sn}\,v & \mathrm{cn}\,v & \mathrm{dn}\,v \\ 1 & \mathrm{sn}^2w & \mathrm{sn}\,w & \mathrm{cn}\,w & \mathrm{dn}\,w \end{vmatrix}=0.$

11584. (Professor HUDSON, M.A.)—Assuming that a mass of liquid contained in a vertical cylinder can rotate about the axis of the cylinder, under the action of gravity only, in such a manner that the velocity at any point of the liquid varies inversely as the angular velocity of its distance from the axis of the cylinder, find the form and position of the free surface.

11602. (J. J. WALKER, M.A., F.R.S.)—Show how to form, say in the case of three or four linear equations, the cubic or biquadratic whose roots shall be the values of the three or four unknown quantities—of course, without assuming the usual solutions of those linear equations.

11663. (Professor LITTLEHALES.)—A. discovers a circular shoal spot, 100 yards in diameter, in mid-ocean, and determines the geographical latitude of its centre within 2′, and its longitude within 3′. B. attempts to find the shoal again by proceeding to the geographical position assigned to it by A., and making a cast of the lead; but he can only determine within 2′ of latitude and 3′ of longitude when he has arrived at the assigned position. What is the probability that B. will find the shoal?

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XIV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, December 10th, 1908.—Sir W. D. Niven, President, in the Chair.

Messrs. G. F. S. Hills, H. B. Heywood, W. H. Salmon were elected members.

Mr. F. M. Saxelby was admitted into the Society.

The following papers were communicated :—

"On the Theory of Waves propagated vertically in the Atmosphere," Prof. H. Lamb.

(i.) "On Sir William Rowan Hamilton's Fluctuating Functions," (ii.) "On the Representation of a Function by a Series of Bessel's Functions," Dr. E. W. Hobson.

"Theory of Cauchy's principal Values (Fourth Paper)," Mr. G. H. Hardy.

"Note on a Continued Fraction equivalent to the remainder after n terms of Taylor's Series," Prof. L. J. Rogers.

"Solid Angles and Potentials of Plane Discs," Mr. Balak Ram.

"The Solution of the Homogeneous Linear Difference Equation of the Second Order," Mr. G. N. Watson.

"On Four Systems of Three Quaternary Quadrics that can be expressed by means of Five Squares," Prof. A. C. Dixon.

"On Differentials," Dr. W. H. Young.

(i.) "On Cubic Surfaces.—The Reduction of a Quaternary Cubic from the Sum of Six Cubes to the Sum of Five," (ii.) "Addition to a former Paper on the Eliminant of Three Quantics in two Independent Variables," Mr. A. L. Dixon.

Dr. T. Stuart gave an account of a method of solution of Mersenne's problem.

HYGIENIC SCHOOL FURNITURE ON SCIENTIFIC PRINCIPLES.

THE STANTON DESK.
Many thousands of these desks have been sold.

The proportions of the different parts of the **STANTON DESKS** are carefully arranged in relation to each other: the desk portion slides backwards and forwards, allowing the edge of the desk to be vertically over the edge of the seat when used for writing, and also providing ample room for standing or sitting comfortably at other times.

The **FARRINGDON ADJUSTABLE DESK** is constructed so as to accommodate Pupils of different ages and development.

All the movements are automatic.
All the adjustable parts are Iron.
There are no springs to get out of order.
The Desks are adjustable by inches.
The Seats are adjustable by ½ inches.
The Desks and Seats are adjustable independently.
The Foot Rail is adjustable to 3 positions.
Shallow Lockers are provided so that the correct position for writing as regards the shoulders is preserved. The locker also slides, thus allowing the correct position to be assumed both for reading and writing.

THE FARRINGDON ADJUSTABLE DESK.
(Protected by several Patents.)

CHEMICAL AND PHYSICAL LABORATORIES COMPLETELY EQUIPPED.

The Association will send, where desired, a skilled expert for consultation as to the best utilization of the available space, and also to take instructions for the drawing up of the necessary plans and specifications and the submission of estimates.—This entirely without charge.

Having a vast experience in this class of work, the Association can guarantee that all work entrusted to them will be carried out in a scientific and satisfactory manner.

In many instances the Association have permission to refer intending Customers to work done by them, and would mention that they have lately fitted up

The New Science Rooms at Charterhouse and **The New Science Schools at Dulwich College,**

and are now fitting up, amongst others,

The Merchant Venturers' College at Bristol and **The New Science Rooms at Epsom College.**

For estimates of all kinds and full particulars, post free, apply as at foot.

HIGH-CLASS SCHOOL STATIONERY.

The Stationery manufactured by the Association is the best of its kind.

EXERCISE BOOK No. 21, just issued, contains 80 pages of good Cream-laid Paper, bound in strong, flexible, leatherette cover, thread stitched, at **16s. 6d.** per gross. **A good Twopenny Book.**

These Books are supplied in all the usual rulings and in six distinct colours—maroon, scarlet, dark blue, light blue, dark green, and light green. Orders for 2 gross printed with name of School on a tinted label that tones with the cover without extra charge. (*Specimen will be sent post free on application.*)

In addition to the above, the Association holds the largest stock of all kinds of Scholastic Stationery, including—

Science and Physics Note Books, **Laboratory Note Books,** **Nature Note Books,**
Science and Plotting Paper, **Examination Paper,** **Foolscap Paper,**
Cartridge Paper, **Blotting Paper,** **Note Books,**
Drawing Books, **Reporters' Note Books,** **Book-keeping Books,**
Brushwork and Colour Books, &c., &c.,

so that Customers' immediate requirements can be at once supplied.

THE

EDUCATIONAL TIMES,

AND

Journal of the College of Preceptors.

Vol. LXII.] New Series, No. 574. FEBRUARY 1, 1909.

Published Monthly, price, to Non Members, 6d.; by Post, 7d. Annual Subscription, 7s.

FEB 15 1909

COLLEGE OF PRECEPTORS.
(INCORPORATED BY ROYAL CHARTER.)

MEMBERS' MEETING.

The next Monthly Meeting of the Members will take place on Wednesday, the 17th of February, at 7.30 p.m., when Professor J. J. FINDLAY will read a Paper on "Reward and Punishment in School."

A discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

LECTURES FOR TEACHERS.

The First Course of Lectures (Thirty-seventh Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on **"The Psychological Bases of Teaching and Education,"** will commence on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods. The Fee for the Course is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C. *For Syllabus, see page* 47.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 30th of August, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in February, 1909.

Certificate Examinations.—The Midsummer Examination for Certificates will commence on the 29th of June, 1909.

Lower Forms Examinations.—The Midsummer Examination will commence on the 29th of June, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Spring Examination in 1909 will commence on the 2nd of March.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

Bloomsbury Square, W.C.

(*Affiliated to University Correspondence College.*)

LONDON MATRICULATION.

Annually, for the last nine years, about **100** *students of University Tutorial College have passed London Matriculation.*

Morning, Afternoon, and Evening Classes in preparation for the Matriculation Examination of the University of London commenced Monday, January 25th, and may be taken up at any time at proportionate fees.

In the Compulsory Subjects and the more important Optional Subjects the Morning Class is divided into Senior and Junior Sections. These Sections work simultaneously, so that a student who attends the Senior Section in his stronger subjects may at another time pay special attention to a weak subject in the Junior Section. The Lectures are supplemented by Exercise Classes and frequent Test Examinations, and a strict record is kept of each student's progress.

Classes are also held for the

College of Preceptors'

and the

City and Guilds Entrance Examination.

All communications should be addressed to

THE PRINCIPAL,
University Tutorial College,
32 Red Lion Square, Holborn, W.C.

BURLINGTON CORRESPONDENCE COLLEGE.

Principal—Mr. J. CHARLESTON, B.A.
(Honours Oxon. and Lond.)

TUTORS.—The Staff includes Graduates of London, Oxford, Cambridge, and Royal Universities.

METHOD.—**Thoroughly individual system,** which ensures the closest attention to the needs of each student.

Rapid Preparation for:—

MATRICULATION,
B.A. AND B.SC.,
L.L.A.,
COLLEGE OF PRECEPTORS' DIPLOMAS.

Address—THE PRINCIPAL,
Burlington Correspondence College,
BIRKBECK BANK CHAMBERS, LONDON, W.C.

Messrs. TRUMAN & KNIGHTLEY, LTD.

Educational Agents,

158 to 162 OXFORD STREET, LONDON, W.

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

THE
MIDDLESEX HOSPITAL
MEDICAL SCHOOL.

A SCHOOL OF THE UNIVERSITY OF LONDON.

The Medical School of the Middlesex Hospital has been largely rebuilt and equipped to meet the most recent educational requirements.

HOSPITAL APPOINTMENTS.

In addition to Clerkships and Dresserships, Sixteen Resident Appointments are annually open to all General Students. Also Medical, Surgical, and Obstetric Registrars are appointed annually.

SCHOLARSHIPS AND PRIZES.

Scholarships and Prizes to the value of £860 are awarded annually.

Full particulars may be obtained on application to

Mr. J. MURRAY, M.B., F.R.C.S.,
Dean of the Medical School,
Middlesex Hospital, London, W.

CHARING CROSS HOSPITAL
MEDICAL COLLEGE.
(UNIVERSITY OF LONDON.)

The SUMMER SESSION, 1909, will be opened on Monday, April 26th.

The College is complete in all Departments.
SPECIAL TEACHERS
for all Preliminary and Intermediate Subjects.
EIGHT ENTRANCE SCHOLARSHIPS
are awarded annually of the aggregate value of £430.
Twenty-two Hospital and Teaching APPOINTMENTS are made yearly.

For Prospectus and details of fees apply to—
FREDERICK C. WALLIS, *Dean.*

THE ROYAL DENTAL HOSPITAL
AND LONDON SCHOOL OF DENTAL SURGERY,
LEICESTER SQUARE, LONDON, W.C.

The SUMMER SESSION, 1909, will commence on Monday, May 3rd.

The Royal Dental Hospital was founded in 1858 at Soho Square, and in March, 1874, was removed to Leicester Square. The increased demands made on it by the public and the rapid growth of the Medical School necessitated the erection of an entirely new building. The new Hospital was opened in March, 1901, and is complete in every detail with modern appliances, and the School portion of the building thoroughly equipped for teaching purposes. The clinic of the Hospital is unrivalled. In 1908, 109,659 operations were performed.

The following SCHOLARSHIPS and PRIZES are open for competition.

The ENTRANCE SCHOLARSHIP, of the value of £20, awarded in October.
The SAUNDERS SCHOLARSHIP, of the value of £20.
The STORER-BENNETT RESEARCH SCHOLARSHIP, of the value of £50.
The ALFRED WOODHOUSE SCHOLARSHIP, of £35.
The ROBERT WOODHOUSE PRIZE, of the value of £10.

INSTRUCTION IN MECHANICAL DENTISTRY.

The instruction in Mechanical Dentistry as required for the Dental Curriculum can be obtained at this Hospital.

Further particulars concerning Fees, Scholarships, &c., can be obtained on application to
THE DEAN.

GUY'S HOSPITAL MEDICAL SCHOOL.
(UNIVERSITY OF LONDON.)

The SUMMER SESSION will begin on May 3rd, 1909.

(Students who have recently passed the College of Preceptors' Examination are advised to enter forthwith to prepare for the Conjoint Examinations in July next.)
The Hospital contains 608 Beds, which are in constant occupation.
ENTRANCE SCHOLARSHIPS.—Five Scholarships will be competed for in September, 1909. Two in Arts of the value of £100 and £50, and three in Science of the value of £150, £60, and £50. Students who enter in May, if otherwise eligible, are able to compete.
APPOINTMENTS.—Hospital appointments are made strictly in accordance with the merits of the Candidates, and without extra payment.
DENTAL SCHOOL.—A recognized Dental School is attached to the Hospital, which affords to Students all the instruction required for a Licence in Dental Surgery.
PRIZES AND SCHOLARSHIPS are awarded to Students in their various years, amounting in the aggregate to more than £650.
RESIDENTIAL COLLEGE.—The Residential College accommodates about 50 Students in addition to the Resident Staff of the Hospital. It contains a large Dining Hall, Reading Room, Library, and Gymnasium for the use of the Students' Club.
For Prospectus, particulars of the Scholarships, and further information, apply to the Dean, Dr. H. L. EASON, Guy's Hospital, London Bridge, S.E.

WESTMINSTER HOSPITAL
MEDICAL SCHOOL
(UNIVERSITY OF LONDON),
BROAD SANCTUARY AND CAXTON STREET, S.W.

The Summer Session begins on April 19th.

Special Terms given to Sons of Medical Men.

ENTRANCE SCHOLARSHIPS.

On April 14th and 15th the following Scholarships may be competed for by students entering in the Summer Session:—

University Scholarships	...	70 guineas and £60.
Two in Arts	...	£60 and £40.
Two in Science ...	...	£60 and £40.
Dental Scholarship ...	...	£20.

For Prospectus and further particulars, apply to
E. ROCK CALEY, F.R.C.S., *Dean.*

ST. MARY'S HOSPITAL MEDICAL SCHOOL, PADDINGTON, W.
(UNIVERSITY OF LONDON.)

The SUMMER SESSION will begin on April 20th.

The Medical School provides courses of Instruction covering the ENTIRE MEDICAL CURRICULUM for the Degrees of the Universities, for the Diplomas of M.R.C.S., L.R.C.P. All Courses are recognized by the University of London for Internal Students.

SIX ENTRANCE SCHOLARSHIPS, value £145 to £25 competed for in September next. Candidates joining the School in January or April are eligible.

Complete Handbook on application to the DEAN.

ROYAL COLLEGE OF PHYSICIANS OF EDINBURGH, ROYAL COLLEGE OF SURGEONS OF EDINBURGH, AND FACULTY OF PHYSICIANS AND SURGEONS OF GLASGOW.

IN ALL BRANCHES OF
EDUCATIONAL HANDWORK
WILL BE HELD AT
SCARBOROUGH
from July 26th to August 21st, 1909.

Students are prepared for the Examinations of the **BOARD OF EXAMINATIONS FOR EDUCATIONAL HANDWORK** and the **CITY AND GUILDS OF LONDON INSTITUTE** by specially qualified Teachers.
Hostel accommodation provided.
For particulars write to **J. SPITTLE**, Hon. Sec., 47 Spring Street, **Huddersfield.**

1909 COMPETITION OF ESSAYISTS, R.S.P.C.A.

NOTICE TO PRINCIPALS OF LONDON SCHOOLS.

All papers relating to this year's Competition for Prizes, given by the ROYAL SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS, for the best Essays on the Duty of Kindness to Animals, were issued on December 14, 1908. The only addresses of Private and other Schools available to the Society are derived from London and Suburban Directories, covering a radius of twenty miles from Charing Cross.

In the event of no delivery of papers having been made by post, I shall be glad to send parcels on receipt of applications from Principals.

No Essay received after February 27th next.

E. G. FAIRHOLME,
Secretary.

105 Jermyn Street, St. James's, S.W.

UNIVERSITY OF LONDON.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.
Rector: The Right Hon. GEORGE WYNDHAM, M.P., LL.D.
Principal and Vice-Chancellor: Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.
Secretary of Senatus: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The ***Winter Session*** begins about the beginning of October, and closes about the middle of March: the ***Summer Session*** extends from about the beginning of May to the end of July.

The University embraces ***Six Faculties,*** viz.: ***Arts, Science, Divinity, Law, Medicine and Surgery,*** and ***Music,*** in all of which full instruction is given and Degrees are conferred. There are many different avenues to the ***Arts Degrees,*** the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The Widening of the Arts Curriculum permits to a greater extent than formerly, the Combination of Arts, Science, Medical or Special Studies, and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. Education in Military subjects is given in connexion with the Scheme of allotment of Army Commissions to Graduates of the University. Degrees in ***Science*** (B.Sc. and D.Sc.) may be taken in ***Pure Science, Engineering,*** and in ***Public Health,*** and the Degree of B.Sc. in ***Agriculture*** and in ***Forestry.*** There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in ***Divinity*** affords a thorough training in Theological subjects, and in Hebrew, Arabic, and Syriac. The Degree of Bachelor of Divinity (B.D.) is conferred. The ***Law*** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and History, Roman Law, and Political Economy, as also Lectureships in other important branches of Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of ***Medicine*** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.), and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A ***Diploma in Tropical Medicine and Hygiene*** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and a University ***Certificate in Tropical Diseases*** is also conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In ***Music*** also there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 41 Professors, 62 Lecturers, and over 50 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £18,660. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, Law, and Music, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 6d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers: Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each.

December, 1908. By authority of the Senatus, L. J. GRANT, *Secretary of Senatus.*

EDUCATIONAL AGENCY.

(ESTABLISHED OVER 70 YEARS.)

Proprietors:—
Messrs. GRIFFITHS, SMITH, POWELL & SMITH.

BLOOMSBURY SQUARE, LONDON, W.C.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL BASES OF TEACHING AND EDUCATION.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The First Course of Lectures (Thirty-seventh Annual Series) will commence on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods.

SYLLABUS.

I. (Feb. 4.) *The Data of Psychology:* unique character of consciousness: generic consciousness: insulation of the individual consciousness: polarity of consciousness: the objective and the subjective: the self and the ego: nature of the soul: evolution of personality: interplay of personalities: self-realization as goal of education: the teacher's lever.

II. (Feb. 11.) *Psychology as an Educational Instrument:* prevalent misunderstanding: Münsterberg's theory: nature of hypostasis: the exploded faculty psychology: distinction between soul and soul content: education as a process of assimilation of and by the external world: apperception: dynamic view of knowledge: Herbert Spencer's view of the educational value of knowledge.

III. (Feb. 18.) *Presentational Processes:* Sensation and the senses: the "preferred sense": practical applications of the theory of preferred sense: the training of the senses: distinction between sensation and perception: meaning and limits of observation and experiment: the "gaping point": the area of observational activity: distinction between observation and inference: the movable inference index.

IV. (Feb. 25.) *Representational Processes:* distinction between gathering and elaborating material: conception: the static and dynamic view of ideas: ideas as forces: changes in the activity of a given idea: copresentation and interplay of ideas: hierarchy of ideas: the fixed idea: marginal and focal ideas: the possibility of the subconscious influence of ideas.

V. (March 4.) *Soul-building:* nature and scope of association: usual limitation to ideas: really of general application: association makes habits possible: advantages and disadvantages of habit forming: the "growing point": accommodation and co-ordination: the old and the new laws of the association of ideas: Paulhan's view: manipulation of association in teaching.

VI. (March 11.) *Memory:* relation to personal identity: physical basis of memory: possibility of improving memory as a natural power: the associative and the rational memory: mnemonics and the *memoria technica:* mediate and immediate recall: temporary and permanent memory: the nature of the memory implied in "cram": rote-learning: relation between memory and general intelligence.

VII. (March 18.) *"The Busy Faculty":* unjustified depreciation of the imagination: differentiation from memory: aesthetic and practical spheres of imagination: "day-dreaming": need to imagine processes as well as results: misleading use of the word "ideal": the need for clearly imaged ends in practical life: application to the teaching of Geography, History, Arithmetic, and Geometry: imagination as a drag on thought.

VIII. (April 29.) *Regulation of Consciousness:* nature of attention: relation to interest: teachers' distrust of interest: confusion with pleasure: interest and attention as cause and effect: various classifications of the kinds of attention: the physiological basis of attention: the alternation between concentration and diffusion: possibility of degrees of attention.

IX. (May 6.) *Reasoning:* technical distinction between judgment and reasoning: both included in popular term *thinking:* fundamentally an adaptation of means to ends on the ideational plane: thinking may be called the purposive aspect of apperception: laws of thought as thought: the most fundamental law of all thinking: induction, deduction, and fallacies.

X. (May 13.) *Feelings and Emotions:* the pleasure-pain tone that accompanies the activities of the soul: unjustified depreciation of the emotions: driving power of spiritual life: relation to ideas: expression of the emotions, and the various theories connected with it: practical applications to school work: control of the emotions: relation between feeling and desire.

XI. (May 20.) *Desire and Will:* activity of desire: relation to possibility of attainment: expectation of success: evolution of will out of desire: nature and function of motive: fallacy of "the strongest motive" theory: subjective and objective aspects of the will: what is meant by training the will and breaking the will: the problem of the free will of educator and educand.

XII. (May 27.) *Temperament and Character:* various meanings attached to the term *temperament* in ancient and modern times: accepted classifications: physical characteristics of the temperaments: permanency of temperament: possible modifications: the time element: influence of temperament on character: character types and their classification: use and abuse of schemes of classifying characters.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

GILL'S
NEW TREATMENT OF GEOGRAPHY.

By GEO. REG. GILL, F.R.G.S.

THE SUBJECT REMODELLED UPON RATIONAL LINES AS:

(*a*) An Aid to Commercial pursuits.
(*b*) A Natural Treatment of Nature's Laws.
(*c*) Evidencing the entire Earth's surface as the abode of man —in a realistic form.

The treatment embodies three necessary forms of material which prove more economical than the out of date methods.

(1) A distinctly new collection of Contour Relief Maps.
(2) Key Demonstration Maps with novel features.
(3) Scholars' Companion Text Books forming adjuncts to the Lecture.

As a knowledge of Euclid is beneficial to the Reasoning powers, so this system of Geographical training is necessary for the realization of up-to-date methods in all branches of commerce.

I. Gill's New Contour Relief Maps.

Size 60 in. × 40 in. (full).

THE NATURE SERIES.

The Mountains, Valleys, Rivers, and Contours stand out as actual facts. They are true to Nature—unbreakable and light—(18 lbs.). The series is reproduced from the original models by

GEO. REG. GILL, F.R.G.S.,

prepared during many years of research and experiment, and from the most recent available material. The effect attained is precisely that which one would expect to find were it possible to view the Earth's surface from a position in space *Nearly Ready—*

AMERICA.	**EUROPE.**	**AFRICA.**
ASIA.	**BRITAIN.**	**AUSTRALIA.**

II. The Sphere Key Maps.

60 in. × 40 in., on Rollers and Varnished, 12s.

This entirely new series forms a Political Commercial Key to the above Nature Maps. Many novel and educational points have been embodied. *Countries as above in the press and ready shortly.*

III. Scholars' Adjuncts to the Lecture.

Illustrated by new Relief and other Maps, designed to record the teaching points made during the lecture. *In the press and ready shortly.*

THE NORMAL PREPARATION AND TEST MAPS

By REGINALD GILL, F.R.G.S., London Chamber of Commerce.

1d. each net.

OUTLINE MAPS SUPERSEDED.

Though not requiring the Pupil to compile the actual outline, the Normal Test Maps supply sufficient data in Art Colours to enable him to do the work correctly. By this means the objection against all other Outline Maps that the Pupil has no practice in drawing the contour, is removed.

British Isles & North Sea.	**Europe.**	**Balkan Peninsula.**	**Africa.**
England and Wales.	**France.**	**Russia.**	**N. America.**
Scotland.	**German Empire.**	**Asia.**	**United States.**
Ireland.	**Italy.**	**India.**	**Australia.**

A Key to the whole of these Test Maps is issued, entitled The Sphere Atlas, **1s. 6d.**

IMPORTANT.—*Those interested who are considering the reconstruction of their former methods of teaching Geography should postpone their decision until these works are issued.*

The approved edition used by the most successful schools entering for the Universities' Local Examinations.

BLACKIE & SON'S LIST

BLACKIE'S LONGER FRENCH TEXTS.

FROM MODERN AUTHORS.

Printed in large type. Cloth limp, **8d.** each. With brief Notes and Questionnaire, Memory List of Useful Phrases, and Vocabulary.

Féval—Le Docteur Bousseau.
Laboulaye—Yvon et Finette.
Desiys—Le Zouave and **La Montre de Gertrude.**
Moreau—Contes à ma Sœur (Jeanne d'Arc, La Souris, Blanche, Les Petits Souliers).
Chateaubriand—Les Aventures du Dernier Abencerage.
About—Le Turco.
About—Le Roi des Montagnes.
Dumas—Le Bourreau de Charles Ier (from "Vingt Ans Après").

***Féval—Anne des Îles.**
***Baudelaire—Le Scarabée d'Or.**
* *In preparation.*

The Educational Times says:—"A new and excellent series of continuous readings from modern French literature, agreeably and substantially got up."

BLACKIE'S LITTLE FRENCH CLASSICS.

"The idea is an excellent one, and admirably carried out."
—*Prof. Saintsbury.*

"A considerable boon to teachers and taught."—*Spectator.*

THIS Series, which is produced under the most competent editorship, embraces all classes of French Literature—Travels, Stories of Adventure, Scenes of Domestic Life, Essays, Letters, Poetry, and Drama—*so graduated in difficulty and so varied in matter as to be suitable for boys and girls of all ages. Many Authors hitherto unobtainable in a suitable form for class reading are represented, as, for example, Bossuet, Balzac, Stendhal, Rousseau, and Pascal.*

The Volumes have already found their way into constant use in most of the leading schools in this country, and Examining Bodies, both at home and in the Colonies, are prescribing the books for study during the coming year.

COMPLETE LIST ON APPLICATION.

Price 4d. or 6d. each book.

RÉCITS TIRÉS DES CLASSIQUES FRANÇAIS.

6d. each. Edited by Mme. C. BAGNALL, of Clapham High School, and Mlle. VIVIER. The Stories of the Great Dramatists told in Simple French. Suitable for Lower and Middle Forms.

Corneille.—Le Cid et Horace.
Racine.—Athalie et Andromaque.
Molière.—L'Avare et Les Femmes Savantes.
Hugo.—Hernani et Ruy Blas.

THE LITTLE GERMAN CLASSICS.

Price **6d.** each Volume. The leading German Authors in Poetry, Story, and Drama.

BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. Nearly 80 volumes. To be used in correlation with the study of **English Literature** and **History.**

Among the leading Authors are:—

Malory.	**Gibbon.**	**Drake.**	**Thucydides.**	**Dickens.**
Froissart.	**Macaulay.**	**Raleigh.**	**Plutarch.**	**Charles Lamb.**
Bacon.	**Carlyle.**	**Anson.**	**Livy.**	**Kingsley.**
Burke.	**Prescott.**	**Hawkins.**	**Marcellinus.**	**Swift.**
Ruskin.	**Josephus.**	**Cook.**	**Lucian.**	**Borrow.**

BLACKIE'S LATIN TEXTS.

General Editor: Dr. W. H. D. ROUSE.

This Series is intended for use during the first two or three years of Latin. Price **6d.** net each Book.

Complete list of Series will be sent free on application.

A General Vocabulary to Vergil.

Prepared under the Editorship of A. GRAHAM, M.A. Crown 8vo, cloth, 1s.

A General Vocabulary to Caesar's Gallic War.

Prepared under the Editorship of A. GRAHAM, M.A. Crown 8vo, cloth, 1s.

These Vocabularies have been prepared for use in schools where the pupils are not at first provided with Latin Dictionaries of their own. They contain all the words that occur in the Aeneid, Bucolics, and Georgics of Virgil, and De Bello Gallico of Caesar. The advantage of these Vocabularies is that they can be used with any edition of these Classics.

THE PLAIN TEXT SHAKESPEARE.

THE GREATER PLAYS. TEXT ONLY. NO NOTES. Strongly bound in cloth. Price 4d. each.

A New Edition of the greater Plays of Shakespeare, presented in a serviceable form, at a cheap price. The Text follows the well-known **Junior School Shakespeare,** which omits everything that might be thought undesirable in class reading.

The Merchant of Venice.	**Coriolanus.**	**Twelfth Night.**	**Macbeth.**
Julius Cæsar.	**King Richard II.**	**Hamlet.**	**King Lear.**
As You Like It.	**King Richard III.**	**King Henry VIII.**	**Midsummer Night's Dream.**
King Henry V.	**The Tempest.**	**King John.**	

The above Plays may also be had in the **Junior School Shakespeare,** with Notes, price **8d.** or **10d.** each.

A NEW ANTHOLOGY FOR SCHOOLS.

THE CALL OF THE HOMELAND.

Selected and Arranged by **R. P. SCOTT, LL.D.,** and **K. T. WALLAS.** In Two Books. Each **1s. 6d.** net. Crown 8vo, cloth boards.

A collection of English Verse, much of it contemporary, designed to illustrate the extended conception of patriotism that is developing in the national literature, both in the mother country and in her scattered family of young nations.

The Poems have been grouped according to their subject:—

Book I.—Echoes from History—Britain Overseas—The Sea—The Changing Year.
Book II.—The English Countryside—Home—Exile—Compatriots—The Call to Serve—The Call to Happiness.

N.B.—EACH VOLUME IS COMPLETE IN ITSELF AND CAN BE USED SEPARATELY.

"We welcome one of the best anthologies of modern English verse that it has been our fortune to meet. It is full of good things culled from little known sources, together with much that has attained to classical rank without always being readily accessible."—*Guardian.*

Messrs. BLACKIE & SON will be pleased to send full lists of Books suitable for Oxford and Cambridge Local Examinations, 1909, post free on application.

The Educational Times.

"For Private Profit."

MARK TWAIN begins one of his books with a pretty eulogy of the ass, but goes on to say: "Instead of being complimented when we are called an ass, we are left in doubt." In Board of Education circulars a certain class of schools are described as being conducted for private profit. It is quite possible that nothing offensive is meant by the phrase, but the private-school masters are in doubt. The time has long gone by when it was considered disgraceful to take fees for giving instruction. Had they lived to-day, the Sophists would not have felt called upon to apologize for accepting the due reward of their labours. None of our modern teachers emulate those of the olden times who, according to J. R. Green, used to think so little about fees as to leave them lying about in the classroom—sometimes to the profit of the less scrupulous pupils who were already in arrears. The teacher of to-day, no doubt, like Brooks, "disdains a vulgar trade," but, unlike that famous club-founder, he no longer "blushes to be paid." This change of attitude marks teachers of all grades; so it is at least ungenerous to select one class and label it as specially given over to the desire for gain. As a matter of fact, many a private teacher would very gladly exchange gains with his public colleague. The teacher under a public authority works quite as much for the sake of money as does the private-school master. Money that comes direct from the parents should carry no stigma, just as money that comes by the more roundabout way of the public purse should carry no prestige. There is a subtle distinction in ordinary speech between a public servant and a servant of the public. The official schoolmaster is too often denied the first title, but this injustice is no excuse for attaching the second title to those who have private schools.

No slur is attached to a medical man because he practises his profession for private profit. He is none the less attentive to the interests of his patients because he insists upon their paying him a reasonable fee. The comparison here has a closer bearing on our subject than would at first sight appear; for there is an increasing tendency for medical men to seek public appointments. The recently instituted system of medical inspection is excellent so far as it goes; but it is unlikely that it will be allowed to remain as it is. It is already being asked: What is the good of inspection unless something is to be done in cases where grave but remediable defects have been discovered? Inspection must be followed by treatment, and, if the treatment is to be in the hands of the public doctor, what is to become of the private practitioner? We shall have circulars from Whitehall penalizing doctors who practise for private profit.

It may be objected that it is somewhat trifling to make so much of a mere phrase, and the contention may be willingly granted if the natural conclusion follows—that, since it is so trifling a matter, there can surely be no objection to remove a phrase that displeases those to whom it is applied and does not specially please those who use it. Why not cut out "conducted for private profit" and substitute "conducted for private enterprise"? Were this change adopted there would not only be no longer any possibility of reading a sinister meaning into the official description, but the new phrase would be really an accurate description of what the private-school master claims to be. Enterprise implies alertness, suggests efficiency, and, above all, calls up ideas of progressiveness and openness to new ideas. It is at least not unreasonable to maintain that the private schools, by the very fact that they are free from official restrictions, are in a better position to initiate new lines of development than those that are under public control. There is at the present moment great danger of the secondary schools of this country being reduced to a very undesirable state of uniformity. Centralized inspection of schools almost inevitably leads to an unwholesome sameness. The Board of Education is fully alive to this danger and is doing all it can to avert it, though it cannot altogether eliminate the levelling tendency. The desirability of considering the special needs of each school area is now generally recognized, and it is, perhaps, in this connexion that the private schools have their strongest claim to public support.

Signs are not lacking to indicate the rise of a demand for a different type, or different types, of school from that which is being stereotyped throughout the country. This is par-

Digitized by Google

ticularly marked in the case of girls' schools. It would almost appear that the high-school type of girl is being produced in greater numbers than there is any demand for. High-school training for girls appears to have fallen into a vicious circle. Girls are prepared at their high school for the University. When they have finished with the University they find that the one thing they are specially fitted for is to be high-school mistresses. So back they go to the schools and train more girls to do as they have done. It will naturally be objected that all the girls trained at high schools do not go to the University, but the trouble is that they are all trained as if they were to go there. The same objection might be raised against the girls' high schools that was formerly raised against the Universities themselves, when it was maintained that their teaching was carried on as if all their students were to become University professors. Parents are getting a little tired of having their girls all brought up in the same way, and are looking about for other types of schools. It is natural that they should turn to the private school, and it is equally natural that the private-school teacher should do all she can to meet the reasonable demands of the parents. This, indeed, is the weakness in the private-school position. It may be said that a teacher who must consult the wishes of parents is no freer than the teacher who must satisfy a hard-hearted Board of Education and a swarm of specialist inspectors. The private-school master may well appeal to actual experience to show that schools such as his have actually shown greater elasticity than those under public control. He might even go the length of arguing that parents are anxious for the true interests of their children and are, after all, not imbeciles. But, as a rule, the private-school master feels the parent difficulty and would be glad of relief.

It is at this point that the compromise, never far from the mind of an Englishman, suggests itself. Why not seek to combine the advantages of both systems? Why not call in the Board of Education to support the private-school master when the parents make *unreasonable* demands? Why not get His Majesty's Inspector to play Mr. Jorkins to the private-school master's Mr. Spenlow? After all, this is what the really efficient private schools demand. The usual defect of the private school is the insufficiency of the accommodation and the inadequacy of the staff and apparatus. If now a given school is able to satisfy the Board of Education that in these essentials it is quite up to the standard exacted from schools under public control, there does not appear to be any just cause to regard it as inferior. But may we not go further? In the case of such a school, why should we stop short at recognizing it as efficient? On what grounds is a public grant to be refused? In the case of residential schools that draw from all parts of the country and the colonies, it may fairly be objected that they do not form a part of the local system of education; but when a boys' or girls' school does for its neighbourhood exactly the same sort of work as is done by a municipal school, the only difference being that it is conducted by private enterprise, there does not appear to be any valid objection to its being aided from the public funds. It provides school places that would otherwise have to be provided for by the Local Authority, and therefore effects a saving on the capital outlay of the district. An educational area ought to welcome any master with enterprise enough to provide a number of school places on the easy condition that he should, under the same conditions of efficiency as the municipal schools, share in the public grants. The exact amount of the fee to be charged might be a matter for arrangement, and a reasonable maximum might be fixed—a maximum that might considerably exceed the fee in the municipal schools. It has to be remembered, in dealing with this matter of fee, that the parents of pupils in such a school as this are among the heaviest contributors to the school rate; and it does not seem fair that they should get no direct benefit from the rates merely because they desire a somewhat different kind of education from that supplied by the local schools under public control.

NOTES.

We are glad that the English Association, in the multiplicity of the subjects within the purview of its operations, is giving attention to the teaching of English in the schools. The examinational results of such teaching appear to be open to considerable improvement. Some blame the teachers—of course; others blame the examiners. Very likely, examiners and teachers do not always operate from the same standpoint, and the pupils fall through between them. Still, we are more inclined to blame the system: the conditions and the methods. It may be simple enough for educated adults to write English with fluency and effect, but it is very far from a simple exercise for school children; they may speak their thoughts on any subject with freedom and clearness, but it is a very different effort to express the same things in writing. We will venture a suggestion or two on the most essential points. From a tolerably wide experience of examinations, we are driven to conclude that the first reform necessary is to insist on distinct and facile handwriting; the hand should write, as it were, automatically, without distracting the attention of the writer from the subject. The grammar of English, strictly regarded, is so insignificant that it need be little insisted upon: indeed, the whole mechanism of English for the purpose of composition—and this, we take it, is almost the sole grammatical purpose that need in general be considered—can be easily taught with the most trifling incidental references to grammar, and without even the mention of any of those technical terms that vex the soul of Prof. Sonnenschein (and others). [The method, with examples and exercises, has been exhaustively illustrated in a little volume—"First Work in English" (Longmans)—which was favourably discussed about a generation ago by the late Prof. Meiklejohn in a course of lectures at the College of Preceptors. The book, we should add, is not intended for direct aid in examinations; it is intended to utilize grammar for composition, and is only indirectly an aid to examinations.] The rest of the task will consist in the judicious selection of subjects for composition, in limiting correction to the more outstanding faults (to obviate discouragement), and in requiring frequent exercises for practice. The necessary practice involves a demand for more time; but this time would be

Digitized by Google

more than compensated in later stages by the acquired grasp of the language. The study of English as literature is a subsequent consideration; but it will be of little avail without a trained discrimination of the good and the less good in composition.

In view of the discussion of the question of a Teachers' Register by the Head Masters and the Assistant Masters at their annual meetings, the *Morning Post* (January 15) reviews the position. "It is before all things desirable to-day," says our contemporary, "that teaching should be fully recognized as one of the liberal professions, and the mark which distinguishes these professions from all others is that they control the qualifications of all their members." The need for a Register was recognized by the Board of Education Act of 1899, "but the history of the Registration question since that date reflects little credit on the Board of Education, which then came into being." Willing co-operation with the teachers' representatives "has never been given." "Instead of doing everything in their power to bring about Registration, the Board have done a great deal to hinder it, and by their action have brought matters to a veritable impasse." Our contemporary concludes:

> The motive behind their action is difficult to discover. It may be that they sincerely desire to prevent the teaching profession from becoming a profession in any proper sense of the word, that they desire the teachers to become mere officials subordinate to a bureaucracy in Whitehall. On the other hand, it may be a matter of purely personal idiosyncrasy. Whatever be the motive, their action hardly tends to enhance the dignity of the Board.

It is anything but agreeable to make or to reproduce such strictures upon the Board of Education, and we should heartily welcome the earliest possible removal of the grounds of dissatisfaction.

In discussing the commercial value of languages it is well to distinguish—as usual. "A knowledge of languages is not necessary to success in business," says a City merchant. "Take a score of men in the City earning £3,000 a year, and you will probably find that scarcely one of them can sustain a conversation in any language but his own. It is breadth of outlook, grit, and adaptability rather than knowledge of foreign languages that make for success in commerce." These qualities, no doubt, must be possessed by the Napoleons of finance and by the Chevaliers of industry and commerce; and it is the anthropologist-biologist that must tell us how to obtain them. Yet it is extremely probable that the best natural equipment would be not inconsiderably aided by a competent knowledge of the languages of commerce—the £3,000 might be turned into larger figures. The school, however, has chiefly to do with the main body—the much more numerous and humbler members—of the commercial army, to whom a knowledge of one or more foreign languages may be the indispensable means of getting and maintaining a post where the Napoleonic qualities have less scope than the routine duty of executing the directions of a superior. It is enough to justify the claims of modern languages if they give the student a footing in the business world and a chance of rising, and about that there is no room for question. One may be an admirable linguist and yet fail in business; but a man with ordinary business qualities will be enormously helped by a knowledge of the languages pertinent to his particular class of business. As a means to an end, linguistic knowledge is all to the good, to say nothing of its value as culture.

Did we not hear something lately of a proposal to have secondary education represented specially in the House of Commons on the analogy of the N.U.T.? It is said that the elementary teachers have derived benefit from the presence of representatives in the House. Why, then, should secondary teachers not reap advantage from a similar arrangement? The question seems to resolve itself into simple elements: to find the money and to find the man (or men). Yet the processes may not prove so very simple in the working out. From Canada we hear of a movement with a similar purpose, but of quite another type. The three great Universities of the Dominion—McGill, Toronto, and Laval (Quebec)—aspire to the privilege of representation on the pattern of University representation in this country; and it is reported as probable "that an Act establishing this new departure will be passed next session." The Universities are within their right in endeavouring to magnify their importance and to look closely after their interests. It is for the Dominion Parliament to consider their claims in the light of the public interest. The special representation of Universities in this country is an anomaly that is not universally regarded as a success. But, if the Canadian Universities gain their point, they will, no doubt, be cited as an argument for the maintenance of the British anomaly when it comes to be assailed, as it is tolerably certain to be assailed, in the next Bill for adjusting electoral conditions. A fancy franchise is not easily to be justified in a democratic country.

The whole of Ireland is in uproar over the place of the Irish language in the economy of the National University, and the Irish journals are filled with reports of meetings, speeches, and letters seething with controversy. The Corporation of Dublin, after one vain attempt to assemble a quorum, has at last voted, 24 to 1, "that the Irish language should be made an essential subject for Matriculation in the new Irish University from its inception, if the University is to be an Irish and national institution in fact as well as in name." The County Councils, and other public bodies, have passed resolutions in the same sense, generally intimating at the same time that, unless Irish be made compulsory, they will "hold the rint." The Standing Committee of the Roman Catholic Bishops, however, while declaring their profound interest in the work of the National University, and "looking forward to the day when the Irish language will again be spoken throughout the country and will in consequence become largely the medium of instruction in the constituent colleges," have pronounced against compulsion and represented that, in order to reach the desired stage, "by far the best means is to set up in the colleges bright centres of Gaelic study that will, by their light and by their rewards, attract young Irishmen within the sphere of their Irish influence." To this the "Sinn Féin" replies that the "credulity of the Bishops has made them the easy

Digitized by Google

victims of English intrigue, and declares that, if the Senate of the National University agree with the Bishops, then the people must treat the new University as an enemy." It is little wonder that an ulterior purpose is sought for in the action of the "Sinn Féin" and Gaelic League, when one considers the unpractical character of the contention in existing circumstances, when only a very small number of matriculants know any Irish, whether spoken or written. Probably the commanding position of the Chancellor, Archbishop Walsh, will settle the question definitely on the Senate. But the movement is undoubtedly significant; and, though Irish may not be made compulsory, it ought to have free scope for development.

SUMMARY OF THE MONTH.

THE Annual General Meeting of the Incorporated Association of Head Masters was opened at the Guildhall under the presidency of the Rev. Dr. A. W. Upcott, Christ's Hospital, on January 12. The Lord Mayor attended in state and welcomed the members of the Association. Dr. Upcott, in his presidential address, said that, whatever views might be taken of the provisions of the Education Act, 1902, it had left an indelible mark upon the history of education in this country—largely, he thought, for good. The Act had aroused an unprecedented amount of real and intelligent, if not always wisely guided, interest in education all over the country. The School Boards did a great deal for elementary education, but the Education Committees, controlling as they did both primary and secondary education and composed of men and women drawn from a wider and more liberal basis than the old School Boards, had done a vast deal more. With regard to the status and character of the teacher, he maintained that no system of education, however sound, would be truly and permanently successful unless they had the right persons to carry it into practice. The question of inspection was at present hardly ripe for public discussion. He believed inspection to be a healthy tonic for both head and assistant masters. With reference to the question of the registration of teachers, Dr. Upcott said he considered that the difficulty was capable of settlement without interfering with the principles of classification which they were now urging upon the Board. A large proportion of teachers of music, drawing, and other technical subjects were actually engaged in work in primary and secondary schools which came already under their proposed classification; those who were not so engaged could be included by the simple extension of their scheme so as to include the technological class now recognized by the Board as forming a third department of education. The following resolutions were adopted after discussion:

That the Association is of opinion that, with regard to the free places (now required to form 25 per cent. of admissions), when the total number of free places in a school amounts to 25 per cent. of the whole number of pupils, it should not be necessary in subsequent admissions to throw open 25 per cent. of the admissions, provided always that the 25 per cent. of free places in the school is kept up; and that, where the percentage approved by the Board of Education is less than 25 per cent., the same principles should be applied to the smaller percentage.

That this Association instructs the Council to take such further steps as may seem good to them to bring about a plan of registration in concert with other educational societies willing and qualified to co-operate; and is of opinion that no efficient Registration Council can be formed which is based on particular subjects of teaching rather than on the general type and grade of the education represented.

That this Association takes steps to secure an adequate scheme for the superannuation of masters in secondary schools, in conjunction with the Association of Education Committees and other bodies.

That this Association is of opinion that the time has come when the representation in Parliament of teachers in secondary schools should be secured.

That this Association welcomes the report of the Classical Association on the pronunciation of Greek.

That, in the opinion of this Association, (*a*) the salaries offered in connexion with head masterships of secondary schools have in several recent cases been utterly inadequate; and (*b*) that the Council be instructed to take action in the matter.

That this Association regards with approval attempts made to remove the inconsistencies of grammatical terminology which confront a young student who has to deal with several languages simultaneously.

Prof. Sonnenschein, D.Litt. (University of Birmingham), spoke on the last subject by special invitation. On the motion of Mr. W. W. Sawtell (Uxbridge), the following rider was added:

That this Association recommends the Council to take steps to meet the Classical Association, the Modern Languages Association, and the English Association to formulate a scheme of common terminological usage on definite lines.

THE Annual General Meeting of the Incorporated Association of Assistant Masters in Secondary Schools was held (January 8) at St. Paul's School, West Kensington, the new chairman, Mr. W. A. Newsome, B.A. (Stationers' School), presiding. The following resolutions were passed:—

1. *Tenure.*—That, in the opinion of this Association, no assistant master shall sign an agreement (*a*) if it provides for the possibility of his dismissal at any time other than at the end of a school term, and after at least two months' notice has been given him, save in cases of grave misconduct; (*b*) or, if it does not provide that before the dismissal takes effect, the assistant master concerned shall be given the opportunity of appearing, with or without the help of a friend, before the governing body in his own defence.

2. *Superannuation Fund.*—That, in the best interests of secondary education, it is imperative that the Board of Education should take all necessary steps for the early establishment of a Superannuation Fund for Teachers in recognized secondary schools. Such a scheme should provide for (*a*) contributions to the fund from the teacher and the governing body; (*b*) the expenses of management being borne by the State; (*c*) the provision by the State of a disablement allowance; (*d*) the possibility of the teacher migrating from school to school without loss of pension rights.

3. *Federal Council.*—That this Association deeply regrets the withdrawal of the Head Masters' Conference from the Federal Council.

4. *Teachers' Registration Council.*—That this Association instructs the Executive to move the Federal Council to take such further steps as may seem good to them to bring about the formation of a Registration Council in concert with duly accredited representatives of other bodies desirous and qualified to co-operate.

5. *Pronunciation of Greek.*—That this Association approves of the scheme for the pronunciation of ancient Greek formulated by the Classical Association; with a preference for pronunciation of $\epsilon\iota$ diphthong and η as close and open *e* respectively, for that of the aspirates ϕ, θ, χ, as *p*, *t*, *k*, followed by a strong breath, and for υ like German modified *ü*.

THE Twenty-fifth Annual Meeting of the Association of Assistant Mistresses in Public Secondary Schools was held on January 9. The chair was occupied by Miss E. M. Bancroft (Redland High School, Bristol), who was declared to have been re-elected President of the Association. Miss C. L. Laurie (The Ladies' College, Cheltenham), in presenting the report of the Federal Council, said the constitution of the proposed Registration Council had occupied much attention during last year, but nothing had been done in the matter. The Associations of Assistant Masters and Assistant Mistresses had agreed on the previous day to ask the Federal Council to convene a conference, as representative as might be possible of the teaching profession, to consider the subject, and that request would come before the Federal Council on an early day. The President, in her address, remarked on the Endowed Schools (Masters) Act: she had received an unhesitating assurance from Mr. Runciman that women teachers were included within the operation of the clause which provided that a master should receive a proper period of notice before dismissal and that there should be a possibility of appeal. The draft scheme for the registration of teachers was not without significance for them in view of its inclusion of women among the members of the proposed Registration Council. Ground for the old reproach against the teaching profession that it lacked organization was ceasing to exist, and of late there had been unexampled signs of union among members of the profession in the pursuit of ideals. The division of work was becoming accentuated, and teachers tended more and more to become specialists. The question, What was an ideal curriculum? was still with them. In an overcrowded curriculum some subject must suffer, and usually that subject was one which had a first claim to consideration—the mother tongue.

Miss Jowitt (Training College, Bristol) initiated a discussion concerning pensions for teachers. The meeting passed a series of resolutions declaring that any pension scheme proposed by the Association should be national, that it should have Government security, and that all teachers should be eligible for it; that the retiring age should be fifty-five years, but the option of continuing work after that age should be granted if the govern-

Digitized by Google

ing body of a school should so desire; that the scheme should be compulsory; that the teacher's contributions towards the pension fund should be on a sliding scale, increasing automatically with increases of salary; that, the scheme being compulsory, contributions, or a certain proportion of them, should be returnable in the event of a teacher's retirement before reaching the age at which a pension would become payable, but that no teacher with less than two years' service should receive any repayment; and that the minimum annual pension should be £50. Miss Laurie, in a paper on the principles that should underlie the planning of the science curriculum in girls' secondary schools, urged that the main reason for teaching science was to make children familiar with scientific method. She pleaded for an historical course of science specially suitable for the last year of school life and for those pupils who had not received any scientific training. Miss Wood (Leeds High School) read a paper outlining a school course of science applied to domestic life in which, she said, she was trying to work out the ideas of Prof. Smithells, of Leeds University. The great object of this new kind of science teaching was to make common things and ordinary phenomena the beginning of scientific instruction, and to develop scientific methods in connexion with the facts of everyday life. The household and, above all, the kitchen abounded in things which could be made objects of scientific investigation, and she outlined the training in science given in the "kitchen laboratory" which has been provided in the new high school buildings at Leeds.

The Annual Meeting of the Association of Public-School Science Masters was held at Merchant Taylors' School on January 12. Sir Clifford Allbutt, Regius Professor of Physic in the University of Cambridge, the President, delivered an address upon "The Function of Science in Teaching." What did they mean by science? They did not contemplate experimental science only: they included the pristine idea of all orderly knowledge, of analysis of concepts of whatever origin, for the construction of systems of affirmative propositions. Science—that was to say, scientific method—penetrated into all the studies of the modern school, as into all life. No doubt action might be "sicklied o'er" by too much thought, too much trust in analysis, and therein was engendered the distrust which the humanist had always felt of the scientist, for he winced to see the flower of literature stiffened into a diagram. Yet supreme creative faculty might be contemporary with analytic power. It was still said that boys were not of an age for natural science, but were they at a stage when imagination could best be nurtured on food more generous than natural science was supposed to be? Abstract science, he would admit, was not a rich food for the imagination, though it imparted to it a scope and virility which preserved it from rhetoric and sentiment. The healthy common boy should be outward bound, busy in the common range of wonderful visible things. Did they seek to foster the boy's seriousness, curiosity, and handiness? Memory had to be cultivated and the duty of drudgery had to be realized. Classics was becoming more of a living subject, thanks to the new history, the new geography, and the like; but he claimed that science had wrought these changes, and that, without leaving other studies undone, natural science would do much to ensure success in the retention of a boy's natural qualities. He had some bias against abstract science for boys, though he admitted that some mathematics must enter into the curriculum. In the upper forms, however, there should be a more extensive differentiation than at present, according to the bents, and perhaps even according to the vocations, of the pupils. At any rate, science was not a hobby, nor even a modern system of utilitarian ingenuity: it was a way of observing and interpreting everything, and he protested that to box off science—or classics either for that matter—artificially on a "modern" or any other "side" was to perpetuate an unnatural schism. An education which was not modern was an anachronism. He did not desire to see head masters more specifically scientific than linguistic, but he who would mould a school should inspire it as a whole and be in full and understanding sympathy with every part and function of it. A vote of thanks was accorded to Sir Clifford Allbutt for his address. Mr. Latter (Charterhouse), Mr. Berridge (Malvern), Mr. J. R. Eccles (Gresham's School, Holt), Mr. R. E. Thwaites (Leicester), the Rev. A. Cortie (Stonyhurst), and Mr. C. J. Gardiner (Cheltenham) generally agreed that both the modern and classical sides of a school should be merged up to the age of fourteen, several of them declaring that in their schools a common curriculum did now obtain. The remainder of the morning session was devoted to an address from Mr. M. D. Hill (Eton) on the anthropometric measurements being carried out at Eton, where, he said, about 400 boys had now been measured. He pleaded for the universal adoption of similar methods in other schools, the chief aims being to investigate the ethnology of Great Britain; to obtain curves of growth for different ages for different parts of the body; to detect any physical irregularities; and to measure the results of courses of gymnasium and the like.

In the afternoon papers on science curricula in public schools were read, followed by a brief discussion. Mr. G. F. Daniell dealt with the report of the British Association upon "The Sequence of Studies in Science"; Mr. W. D. Eggar (Eton) spoke of "Geography, considered as a Science Subject," declaring that the class subject "Geography" had expanded until it had lost all identity. The ideal treatment would be to teach its component parts, as physiography and elementary geology on the one hand and commerce and history on the other; Mr. R. G. Durrant (Marlborough) considered "To what Extent, and at what Stage, should Prevalent Views on the Nature of Solution be taught in Schools?" and Mr. G. H. Martin (Bradford), referring to "Science for the Classical Side," said that the only form of science which seemed to be of real interest to boys who would drop the subject at the end of about three years was one which was not only of immediate application, but which also furnished the basis of a future hobby. Subsequently Mr. C. J. Gardiner (Cheltenham) commented on the refusal of the General Medical Council to recognize public schools as institutions where medical education might be commenced. It was announced that Prof. H. E. Armstrong (City and Guilds Institute) had been elected President for the coming year.

The Private Schools Association (Incorporated) held its Annual General Meeting at the College of Preceptors on January 8. Dr. F. Arthur Sibly, who was elected honorary President for 1909, said that his work had been inspired and sustained by a deep conviction that the fight the Association was waging for freedom, variety, and elasticity in education was a fight of supreme national importance. The confidence reposed in him by the Council during his three years' tenancy of the chairmanship had also been a great inspiration to him in the arduous and anxious work. He was happy to feel assured that the status of the Association itself was now higher than it had ever been and that very great success had attended the work in which it had been engaged. He felt confident of the final victory of the principles for which they contended. The Hon. Secretary (Mr. W. L. Thompson, Newcastle) read the annual report. It had not been thought necessary, he said, to state again their protest against an all-embracing State system of education. That protest and the grounds on which it was based must be perfectly well known by all who had taken the slightest interest in the great problem of educational reform which had during the past few years increasingly exercised the minds of those who were solicitous for the national welfare. The members of the Association were second to none in patriotism, and entertained as sincerely as any the hope that this England of ours might, through educational reform or any other reform, be enabled to maintain its proud position in the forefront of the nations of the world. But, while they recognized the need for avoiding intellectual waste through lack of educational advantages for those who were mentally fitted, but unable through want of means, to profit by those advantages, they regarded the bringing of all secondary education under State control as an experiment of an extremely costly nature, which was as unnecessary as, owing to the very doubtful character of its results, it was unjustifiable. It was also reported that financially the Association was in a sounder condition than it had been for some years past.

At the annual meeting of the Association of Directors and Secretaries for Education, the President (Mr. W. A. Adams, Secretary to the Bristol Education Committee) welcomed the declaration of the Primate in his letter of December 3 to the Minister of Education that "contracting out schools must be the exception and not the rule." If this were not so, a set-back would be given to the cause of national education and an injury done to much of the constructive and unifying work of the last five years. One of the chief hindrances to progress was the financial strain on local authorities, as in the medical inspection of scholars and the feeding of necessitous school-children. There were still many urgent educational reforms that would doubtless be undertaken by local authorities if Whitehall would only bear a fair share of the cost: for example, the reduction of the size

Digitized by Google

of classes, and the replacement of supplementary by certificated teachers. Relief to the rate-payer might be given in several ways. The grants for infants and for older scholars should be made uniform. Mr. McKenna's superior limit of 75 per cent. of the total cost of elementary school maintenance should be accompanied by a condition that the grant should in no case be less than two-thirds of the total cost, including loan charges, medical inspection, &c. And the period of repayment for new school buildings should be extended to fifty years.

Among the important subjects discussed were the medical inspection of children in elementary schools and after treatment. In some areas where there had been medical inspection it was found that after-treatment had not presented much difficulty and had been inexpensive, and that the parents generally had been disposed to pay due attention to the doctor's recommendations, so that the absence of compulsory powers had not presented overwhelming obstacles. One large county had set apart £350 to be spent between now and July, on after-treatment under a scheme to be approved by the Board of Education. Consideration was also given to the Code of Regulations in reference to "special" subjects taught in elementary schools, such as cookery, woodwork, gardening. A resolution was passed suggesting that the Code should be so revised as to give Local Education Authorities more freedom and greateren couragement to organize instruction in handicraft and domestic subjects.

The seventh annual meeting of the North of England Conference was held at Manchester on January 7 to 9, Bishop Welldon (Dean of Manchester) President. The effective business began on January 8, when Dr. Welldon delivered his presidential address, and discussions were held on the incidence of the cost of education, the supply of teachers, the teaching of languages, and the training of girls in domestic subjects. On January 9, the questions treated were the co-ordination of the curricula in primary and secondary schools, the place of the higher elementary school in the scheme of education, the relation of the University to evening teaching in industrial centres, and methods of teaching mathematics. A varied, important, and interesting programme.

The English Association held its annual general meeting on January 15 and 16. The report stated that the central body numbered 432 members—an increase of 148 during the year. The number of local branches in England had increased from three to six, and altogether, with the Scottish Branch, there were 1,291 members and associates—an increase of 313. Prof. Saintsbury was elected President. Prof. W. P. Ker spoke on "Romance." The eighteenth century, he said, was generally considered anti-romantic in literature, but it kept up the supply for its children, while the nineteenth century, which came in with a great romantic revolution in literature, cut off the tradition of romance amongst the simple, unliterary people, took away the Seven Champions from the schoolboy, and the ballads from the country-side. In the nineteenth century almost everywhere the old popular traditions of romance had withered up. The fairy tales which once were English were known, if known at all, mostly through Grimm.

On the question of English in elementary schools, Miss Gill (Head Mistress, L.C.C. Laxton Street School) read a paper summarizing her own experiences in endeavouring to give a taste for literature to girls from poor homes, who entered school at seven and a half and left to go to work at fourteen. The aim was not so much to impart knowledge as to lay a foundation for thought and to give the girls the power to seek knowledge of a right kind for themselves. The pupils took home the knowledge they had gained at school, and there were many instances of parents being interested and the local libraries being visited for books on art and literature. Mr. J. W. Samuel, B A. (Head Master, Millwall Higher Elementary School), observed, in the course of a paper, that only regular practice in reading aloud under skilled teachers could act as an antidote to mispronunciation of vowels and to the vicious elimination of the final consonant so prevalent in North, South, and East London. The double dialect was very prevalent—that was to say, while in school the child would speak decently, but would at once fall into the Cockney idiom when he went into the playing field. A conference on "Examinations in English" was opened by Mr. W. Jenkyn Thomas (Head Master, Hackney Downs Secondary School), who declared himself frankly anti-examiner. The British parent believed in multiplicity of examinations, and schoolmasters had to submit to his belief, either partly or absolutely. He was tired of hearing schoolmasters held responsible for every deficiency in English education, and even in English life. The style of teaching was the result of the way examination questions were set, and in nearly every case the examiners were as much, if not more, to blame. It was generally agreed that English was neither written nor spoken correctly, and a man or woman could obtain the highest University honours in English without being able to speak it correctly.

The Annual General Meeting of the Modern Language Association was held at Oxford on January 12. The Vice-Chancellor of the University (Dr. T. H. Warren, President of Magdalen) delivered an address of welcome to a large representative audience. Lord Fitzmaurice, the President, then took the chair. Prof. Fiedler, of Oxford, presented the annual report. The membership now stood at 730, an increase of forty or fifty on the year. The Master of Caius introduced the report on the training of modern language teachers, in which the Committee expressed the hope that everything was rapidly tending towards rendering compulsory some kind of training for modern language teachers. The Hon. Treasurer (Mr. Allpress) submitted the financial statement, and moved that the life membership be reduced from seven guineas to five, and this was agreed to. On the motion of Mr. Milner-Barry (Berkhamsted), seconded by Dr. Breul (Cambridge), a resolution was carried unanimously welcoming the recent change in the Board of Education regulations for secondary schools, which allowed greater freedom to schools in the choice of languages to be taught, and hoping that the Board would take further steps to encourage the study of German in secondary schools.

Lord Fitzmaurice, in his presidential address, pleaded more particularly for a knowledge of modern languages in their bearing on international intercourse and the amenities of society. "The exaggeration of racial pride and the intensification of racial hatred is one of the modern forms which barbarism has assumed in its war against civilization and progress." So wrote Sir William Ramsay, uttering his warning from among the ruins of the cities of St. Paul in the remote parts of Asia Minor. Now for this exaggeration, which disgraced movements otherwise productive of great deeds and arising out of noble aspirations, the only remedy was a knowledge of languages so that different races and nations might understand each other and not perish in fratricidal contests arising out of a want of mutual comprehension. Did anybody doubt, for example, that the widespread knowledge of the French language and literature in this country was one of the causes of the present good feeling between France and England, rendering as it did extensive international intercourse comparatively easy? If they, as an Association, were urging on the Education Office more extended opportunities for the teaching of German to be given in those secondary schools of which the curriculum came under official influences, they were acting not merely as educational enthusiasts nor as schoolmasters, but as promoters of an international work, who wished to carry the light of peace and goodwill into the obscure regions of mistrust and doubt. On the motion of the Vice-Chancellor, seconded by Mr. H. W. Eve, Dean of the College of Preceptors, a vote of thanks was passed to Lord Fitzmaurice for his address. In the afternoon Prof. Lanson, of the University of Paris, speaking in French, delivered an address on the subject of "How Voltaire wrote his Letters on England"; Prof. Fiedler gave an address in German on Goethe's "Faust."

Next day Mr. O. Siepmann (Clifton) read a paper on "Some Aspects of German Education," comparing German and English schools and deprecating the rigidity of parts of the German system. The Rev. H. J. Chaytor (Plymouth College) introduced a lively discussion on "The Teaching of French and German to Middle and Higher Forms." Personally he thought German best to begin with, and, where only one language was taught, it should be German. At the afternoon session Mr. H. A. L. Fisher (New College) read a brilliant paper on "Our Insularity": "England indeed was an island, but of all islands the least insular."

The Annual Report of the Geographical Association records a large increase of members during 1908. While 91 members have been lost by death or resignation, 241 members have been added to the roll, making the total membership 793—a record annual increase. The membership now includes teachers of every grade, school inspectors, and others interested in geographical education, both at home and abroad. During the first term of the year a series of six lectures on "Methods of Geo-

Digitized by Google

graphical Instruction" were delivered in the Botanical Lecture Theatre of University College, London; and it has been decided to hold monthly meetings of the Association chiefly in London for the purpose of lectures by geographical experts and for the reading of papers by practical teachers and others. At the request of many members a lending library of geographical books has been formed. The *Geographical Teacher* has been issued regularly. The series of articles on counties or natural regions of the British Isles is being continued. The lectures given in London in the spring of 1908 have appeared in it. One of the most important activities of the Association is the answering of letters from members about books, maps, apparatus, &c.—a work that has increased considerably.

The Board of Education has issued as a Blue book (Cd. 4440) the reports from those Universities and University colleges in Great Britain which participated in the Parliamentary grant for University colleges in the year 1906–7. The present volume is the first of a series in which all the reports in any one volume relate to the same academical year. It is much to be regretted (as *Nature* justly remarks) that the Board of Education makes no attempt to collate the particulars provided concerning the seventeen institutions participating in the annual grant, which now amounts to £100,000. It is at present a long and tedious process to compare, say, the income, the endowments, number of staff, and students of one institution with those of another. The arrangement of the volume, in fact, compares very unfavourably with the similar report of the United States Commissioner of Education published at Washington. The Board of Education may earn very easily the gratitude of students of the progress of higher education in this and other countries by including in the report of next year a series of tables summarizing and comparing the educational condition of things in the Universities and University colleges here concerned. It would then prove possible to understand more precisely why certain institutions are selected to receive a Treasury grant while others are precluded.

The Visual Instruction Committee, appointed by the Secretary of State for the Colonies, has issued for various parts of the Empire a series of seven lectures on the United Kingdom, illustrated by lantern slides. The edition, which was prepared for the Indian Government, is now made available for use in this country. The lectures, written by Mr. H. J. Mackinder, have been published on behalf of the Committee by Messrs. Waterlow & Co., and may be obtained with or without the illustrative slides from Messrs. Newton & Co., 32 Fleet Street, E.C., from whom particulars can be obtained on application. The lectures on the Colonies and India, for which a special fund was raised by a committee of ladies presided over by Lady Dudley and under the patronage of H.R.H. the Princess of Wales, are in active preparation, and it is hoped that the first series will be issued in the coming year.

The total attendance at the Teachers' Guild Modern Languages Holiday Courses in 1908 was 112; at Tours, 24; at Honfleur, 56; at Neuwied, 26; and at Santander 6. This was a somewhat smaller total than in 1907, owing to a considerable reduction of entries at Tours and Neuwied, not entirely counterbalanced by the increased bumhers at Honfleur and Santander. Of the students, 44 were men and 68 women. This year, for the first time, Certificates of Proficiency on examination by the Teachers' Guild were awarded; hitherto, the certificates have been given by the local teachers on their own responsibility. The courses will be repeated in the same four centres in August, 1909. A new course, which will be of a specially practical and commercial character, will also be started at Lübeck, under the local guidance of Dr. Sebald Schwarz, Director of the Realschule.

There were 233 candidates for the Cambridge Higher Local Examination held in December. The class list now published shows that in Group B (for Latin, French, spoken French, German, and spoken German) 6 candidates gained First Class, 14 Second Class, and 52 Third Class. In Group C (for Arithmetic and Mathematics) 1 candidate gained First Class, 6 Second Class, and 79 Third Class. In Group D (for Logic, Psychology, Political Economy, and History of Education) no candidates gained First Class, 4 got Second Class, and 5 Third Class. In Group H (for English History, European History, Greek History, and Roman History) 7 candidates were placed in the First Class, 29 in the Second Class, and 28 in the Third Class.

The Rev. A. G. Butler, Fellow of Oriel College, Oxford, died at Torquay. He was an assistant master at Rugby under Dr. Temple, and he was the first Head Master of Haileybury College. He was the Butler of "Butler's Leap" at Rugby, head of the Rugby eleven in 1848, and winner of the racquet pairs at Oxford in 1855.

Much regret will be felt for the death of Prof. H. G. Seeley F.R.S., Professor of Geology at King's College. He was educated at Cambridge, where he became assistant to Prof. Sedgwick and did valuable original work in Palæontology. He was a cousin of the late Sir John Seeley. He conducted for many years Saturday excursions from London to study geological phenomena locally.

The Rev. D. W. Simon, D.D. Edin., died at Dresden on January 17 in his seventy-ninth year. He was chief agent for Germany of the British and Foreign Bible Society, 1863–69; Principal of Spring Hill College, Birmingham (now Mansfield College, Oxford), 1869–84; Principal of the Theological Hall of the Scottish Congregational Churches, Edinburgh, 1884–92; and Principal of Yorkshire United Independent College, 1893–1907. He translated several important German theological books, notably Dorner's "History of the Doctrine of the Person of Christ," and wrote numerous theological works.

UNIVERSITIES AND COLLEGES.

(*From our own Correspondent.*)

Oxford.

Though the Lent Term, when there is rather a dearth of interests, is often selected by reformers or firebrands (as they are termed by their opponents), we do not seem at present to be above the crater of anything very volcanic: possibly the movement for the reform of Congregation might, in the view of some, be described as that. The idea of the reformer is that now Oxford has become such a "residential town" the Masters of Arts who are qualified by residence as members of Congregation without being Professors or College teachers may well become a powerful outside party and have a large influence on University questions: so it is proposed to limit Congregation to those who are intimately connected with University or College work. It may be urged on the other side that, in the first place, those who would be disqualified have, in many cases either as coaches or schoolmasters, a considerable interest in many subjects which come before Congregation; that, secondly, the point of view of those who live detached from caucuses or college jealousies is in itself a valuable asset; and, lastly, that those who do not take an interest—and an active interest—in University questions are not often to be found in Congregation, and so that a removal of these from the register would be to do an injustice to the others. After all, the election to the Boards of Faculties is now limited to teaching members of the University in the different subjects.

As your correspondent failed to supply you with notes at the end of last term, it is well here to refer to the appointment of Mr. D. G. Hogarth to succeed Mr. Evans as Keeper of the Ashmolean. Mr. Hogarth, after a successful career as a Demy of Magdalen, settled down first as a Tutorial Fellow in his own College; but his interests lay elsewhere, and he was elected, (I think) the first Craven Fellow under the new system. Since then, with Mr. Evans or "on his own," he has been engaged in archæological investigation in Asia Minor and elsewhere. Some of his earlier experiences of the less esoteric kind he gave to the world some years ago in that very readable book, "A Wandering Scholar in the Levant." His new appointment will not debar him from journeys "cognoscendae antiquitatis."

Another appointment in a different field is that of Mr. Selbie to succeed Dr. Fairbairn at Mansfield. Mr. Selbie is not a stranger to the place, as he was a tutor at Mansfield in the days of its infancy, but he has not been in Oxford for a good many years. It is not an easy task to succeed Dr. Fairbairn, who, after patient years of struggling with a considerable amount of jealousy and suspicion, gradually won himself a position as a leader and teacher in this home of conservative tradition.

Our new Greek Professor delivered his inaugural lecture on January 27, the subject being "The Interpretation of Ancient Greek Literature." He is also taking part in what may be said to be "teaching for the schools" by delivering a course of lectures on Homer.

Moreover, he is, with Mr. Cyril Bailey, of Balliol, taking a

Digitized by Google

leading part in the production or reproduction of the "Frogs" of Aristophanes by the O.U.D.S. The Society, as on the previous occasion (when Mr. Bailey, Mr. Godley, and Mr. Hogarth gave advice), is calling in external and expert assistance not merely to ensure correctness of details, but also to secure actors who know Greek. We can all remember one unfortunate Greek play. With the exception (we hear) of one scene which was excused in the previous production, the play will be much on the same lines as on the first occasion (and the music of Sir Hubert Parry will again be used), though the translation will be not that of Mr. Godley and Mr. Hogarth, but Prof. Murray's own.

Though the river is full of boats, it is too early to say much of the prospects either of the Varsity crew or of the Torpids. It is high time that we won the Boat Race again. Our prospects for the sports and the Association match are said not to be particularly bright, but the hockey team is reported to be well above the average and to be unusually strong in the half-back line. It is remarkable, when one looks at the names of the hockey teams (South, West, East, &c.) selected for the various trial matches, to see how the pendulum has swung, and whereas a few years ago University players were not considered first class, the reverse is now the case.

East London.

An era in the history of the East London College was marked by the session which came to a close with August last. The work of the College became an integral part of the University of London. Two matters remain to be settled: the rearrangement of the Committees, which should include a provision for the representation of the staff on the governing body, and a conference with the other schools of the University on the question of the fees to be charged to students. Every hope is entertained that, before the conclusion of the session 1908–9, the College will have received full recognition of its position as the University College for East London from the Senate of the University, from the Local Education Authority, and from His Majesty's Treasury.

Leeds.

The Annual Report of the University Textile Department shows that great progress has been made in the session 1907–8. A feature of the past session has been the carrying out of inventions in warp-shedding mechanism. During the session the classes were attended by 137 students. In the technological examinations of the City and Guilds of London Institute, Leeds students proved very successful. In the four subjects in which they competed, they won five first prizes out of a total of eight awarded, two second prizes, and one third prize; and they carrried off all the prizes in the subject of Coal-tar Products.

Glasgow.

A resolution of the Scottish Modern Languages Association was submitted to the University Court, suggesting the earliest possible reform of the Bursary Examination, so as to give equal chances to modern languages candidates with candidates in other subjects, and the reorganization of the Modern Language Honours School, so as to allow of honours being taken in French and German separately. The Principal stated that these matters were under the consideration of Committees of the Senate.

Joint Matriculation Board.

The Joint Matriculation Board of the four Universities of Manchester, Liverpool, Leeds, and Sheffield has just issued its Report for the year 1908. The Board conducts the matriculation examination on behalf of the four Universities, and in the past year, for the first time, the examination has been held under the supervision of education authorities at eight local centres, at which 127 candidates presented themselves. The examination was also taken as a form examination at 28 schools. The total number of candidates at the July examination was 1,695 against 1,294 in the previous July, while in September the number was 519 against 438 in the previous year. As many candidates take the examination a year before they leave school, those who hold the certificates are now allowed to present themselves in a few subjects at the higher standard for supplementary certificates. On behalf of the Education Committees of Lancashire and Cheshire, the Board has conducted examinations for the award of Senior Exhibitions and Intermediate Scholarships offered by these Committees. It has also formulated a scheme, which has been accepted by the four Universities, for the inspection and examination of schools.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, Bart.
Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,351,137. Annual Income, £471,097.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS. LARGE BONUSES. Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES. Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

1. **WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

2. **PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

ANNUAL PREMIUMS FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

Note.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

Professor Meiklejohn Series.

PRELIMINARY ANNOUNCEMENT.

Messrs. MEIKLEJOHN & HOLDEN beg to announce that they have in preparation a series of PHYSICAL WALL-MAPS in Contour. These Maps have been prepared on entirely new and ingenious lines, and the Publishers feel certain that this method of presenting the Physical Features of a Country will certainly supersede any system hitherto devised. The first Map of the series, viz., SOUTH AMERICA, will be ready early in February, and the Publishers will be glad to answer any queries in regard to them.

BOOKS SUITABLE FOR

COLLEGE OF PRECEPTORS AND OTHER EXAMINATIONS.

ENGLISH.

A NEW GRAMMAR OF THE ENGLISH TONGUE. With Chapters on Composition, Versification, Paraphrasing, and Punctuation. With Exercises and Examination Questions. **Twenty-third Edition. (120th Thousand.)** Crown 8vo, 284 pp. ... ... **2s. 6d.**

THE ART OF WRITING ENGLISH. A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A. **Sixth Edition.** Crown 8vo, 340 pp. ... ... **2s. 6d.**

A NEW SPELLING BOOK ON THE COMPARATIVE METHOD. With Side Lights from History. **Fifteenth Edition.** Crown 8vo, 152 pp. ... ... **1s.**

THE SPELLING LIST (10,000 Difficult Words). For Civil Service and other Examinations. With a Key to Correct Spelling. By Professor MEIKLEJOHN. **Eighth Edition.** Crown 8vo, 104 pp. ... ... **1s.**

COMPOSITION FOR SCHOOLS AND COLLEGES. Based on Outline Essays, with Exercises in Style. By C. H. MAXWELL, B.A. **Third Edition.** Crown 8vo, 138 pp. ... ... **1s.**

GENERAL INFORMATION QUESTIONS (with Answers and Index). By A. B. COWAN. Crown 8vo, 200 pp. **1s. 6d.**

"This seems a useful idea—it would certainly be a godsend to an examiner setting a 'general paper' for boys."—*The Times.*

GEOGRAPHY.

THE COMPARATIVE ATLAS. By J. G. BARTHOLOMEW, F.R.G.S., and edited by Professor MEIKLEJOHN. Containing 64 Plates, a General Index, and a Chapter on Map Drawing. **New Edition (Revised)** ... ... **2s. 6d.**

A SCHOOL GEOGRAPHY. With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. **Sixth Edition (Revised).** Crown 8vo, 410 pp.... ... ... **2s. 6d.**

TEST QUESTIONS IN GEOGRAPHY. Selected from Public Examination Papers. By A. T. FLUX. Crown 8vo, 82 pp. **1s.**

HISTORY.

A SCHOOL HISTORY OF ENGLAND. With Maps and Vocabulary of Historical Terms. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. **Fifth Edition.** Crown 8vo, 470 pp. ... ... **2s. 6d.**

This book is intended to stand midway between Professor Meiklejohn's New History and his Short History.

OUTLINES OF THE HISTORY OF ENGLAND AND GREAT BRITAIN TO A.D. 1902. Seventh Edition. Crown 8vo, 84 pp. ... ... **6d.**

TEST QUESTIONS IN HISTORY. Selected from Public Examination Papers. Arranged by A. T. FLUX. Crown 8vo, 80 pp. **1s.**

MATHEMATICS.

A NEW ALGEBRA. As far as the Binomial Theorem. **Including Chapters on Graphs.** By G. COLLAR, B.A., B.Sc. (Joint-Author of "A NEW ARITHMETIC"). Crown 8vo, 438 pp. ... ... **4s. 6d.**

"Special attention is called to the early chapters, which give improved methods of working—for example, complementary addition, contracted multiplication and division: also to the chapters on Factors and Graphs, and to the special care with which the theory has been treated throughout the book."

A SHORT ARITHMETIC. By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. **Third Edition.** Crown 8vo, 196 pp. (With Answers, **1s. 6d.**) ... ... **1s.**

A Complete Catalogue will be sent post free to any address.

MEIKLEJOHN & HOLDEN, 11 Paternoster Square, London, E.C.

COLLEGE OF PRECEPTORS' CERTIFICATE EXAMINATIONS, 1909.

Caesar.—Gallic War, Books III., IV. By A. H. Allcroft, M.A., F. G. Plaistowe, M.A., and others. 1s. 6d. each. Vocabulary, 1s. each. Translation, 1s. each. In One Volume, 3s. each. [*Juniors and Seniors.*

"Ably maintains the standard of the series, text and notes being alike excellent."—*Journal of Education.*

Chaucer.—Prologue to the Canterbury Tales. By A. J. Wyatt, M.A. 1s. [*Seniors.*

"The notes and the glossary are in each case well and carefully written; and the introduction tells us all else that we need to know. The edition is a good one."—*Journal of Education.*

Cicero.—Pro Milone. By F. G. Plaistowe, M.A., and W. F. Mason, M.A. 3s. 6d. Vocabulary, 1s. Translation, 2s. In One Volume, 5s. 6d. [*Seniors.*

Euripides.—Hecuba. By T. T. Jeffery, M.A. 3s. 6d. Translation, 1s. 6d. In One Volume, 4s. 6d. [*Seniors.*

"Scholarly and useful. There is a good introduction, and the notes are careful and to the point."—*Guardian.*

Horace.—Odes, Book IV. By A. H. Allcroft, M.A., and B. J. Hayes, M.A. 1s. 6d. Vocabulary, 1s. Translation, 1s. In One Volume, 3s. [*Seniors.*

"All that the student requires will be found within its boards."—*Schoolmaster.*

Shakespeare.—Julius Caesar. By Prof. W. J. Rolfe, D.Litt. 2s. 6d. [*Juniors and Seniors.*

"Gives the student helps and hints on the characters and meanings of the plays, while the word-notes are also full and posted up to the latest date."—*Academy.*

Shakespeare.—The Tempest. By A. R. Weekes, B.A. 2s. [*In the press. Juniors and Seniors.*

Vergil.—Aeneid, Book III. By A. H. Allcroft, M.A., and W. F. Mason, M.A. 1s. 6d.* Vocabulary, 1s. Translation, 1s. In One Volume, 3s. [*Juniors and Seniors.*

"Long experience has enabled the Editors of this edition to produce an almost ideal text-book. There is sound scholarship displayed in the very ample notes."—*School Guardian.*

Vergil.—Aeneid, Book XI. By A. H. Allcroft, M.A., and W. F. Mason, M.A. 1s. 6d.* Translation, 1s. [*Juniors and Seniors.*

* This Volume contains a complete Alphabetical Lexicon.

Arithmetic, The Junior. Adapted from "The Tutorial Arithmetic." By R. H. Chope, B.A. With or without Answers. 2s. 6d.

"Excellent."—*Educational Times.*

Book-keeping, Junior. By Thomas Chalice Jackson, B.A., LL.B., Lond. 1s. 6d.

"The book is an excellent one."—*Accountants' Magazine.*

Chemistry, Junior. By R. H. Adie, M.A., B.Sc., Lecturer in Chemistry at St. John's College, Cambridge. 2s. 6d.

French Course, Junior. By Ernest Weekley, M.A. Lond. and Camb. *Second Edition.* 2s. 6d.

"The execution is distinctly an advance on similar courses."—*Journal of Education.*

French Reader, Junior. With Notes and Vocabulary. By Ernest Weekley, M.A. *Second Edition.* 1s. 6d.

"A very useful first reader, with good vocabulary and sensible notes."—*Schoolmaster.*

Latin Course, Junior. By B. J. Hayes, M.A. *Second Edition.* 2s. 6d.

"Better than most grammars that we have seen."—*Secondary Education.*

Latin Reader, Junior. By E. J. G. Forse, M.A. Lond. 1s. 6d.

"A well graded and carefully thought-out series of Latin selections. The vocabulary is worthy of very high praise."—*Educational News.*

Mechanics, Junior. By F. Rosenberg, M.A., B.Sc. 2s. 6d.

"The general style of the book is eminently calculated to teach in the clearest manner possible."—*Electrical Review.*

Trigonometry, Junior. By Wm. Briggs, LL.D., M.A., B.Sc., F.R.A.S., and G. H. Bryan, Sc.D., F.R.S. 2s. 6d.

"Is intended for students preparing for the College of Preceptors' examinations, but is suitable for any one of that standard."—*School World.*

THE BEST BOOKS FOR LONDON UNIVERSITY MATRICULATION

English.

English Course, Matriculation. Containing Grammar, Analysis, Composition, Précis-Writing, and Paraphrase. By W. H. Low, M.A. Lond., and John Briggs, M.A. Camb., F.Z.S. **3s. 6d.**

English History, Groundwork of. By M. E. Carter, First Class Honours in Modern History, Oxford. With Coloured Maps. **2s.**
Contains the "salient facts" required by the University Regulations.

Geography.

Geography, Text-Book of. By G. C. Fry, M.Sc., F.I.C. **4s. 6d.**

Science.

Botany, The New Matriculation. By A. J. Ewart, D.Sc., Ph.D., F.L.S. **3s. 6d.**

Chemistry, The New Matriculation. By G. H. Bailey, D.Sc. Edited by William Briggs, LL.D., M.A., B.Sc., F.C.S. *Fourth Edition.* **5s. 6d.**

Heat, The New Matriculation.
Light, The New Matriculation.
Sound, The New Matriculation.
By R. W. Stewart, D.Sc. Three Volumes, each **2s. 6d.**

Hydrostatics, The Matriculation. By William Briggs, LL.D., M.A., B.Sc., F.R.A.S., and G. H. Bryan, Sc.D., F.R.S. *Second Edition.* **2s.**

Magnetism and Electricity, The School. By R. H. Jude, M.A., D.Sc. **3s. 6d.**

Mechanics, The Matriculation. By Wm. Briggs, LL.D., M.A., B.Sc., F.R.A.S., and G. H. Bryan, Sc.D., F.R.S. *Second Edition.* **3s. 6d.**

Mathematics.

Arithmetic, The Tutorial. By W. P. Workman, M.A., B.Sc. With or without Answers. *Second Edition.* **4s. 6d.**

Algebra, The New Matriculation. With a Section on Graphs. By Rupert Deakin, M.A. Lond. and Oxon. *Fourth Edition.* **3s. 6d.**

Euclid.—Books I.-IV. By Rupert Deakin, M.A. With a Preliminary Course of Drawing and Problems in Practical Geometry. **2s. 6d.**

Geometry, Matriculation. By W. P. Workman, M.A., B.Sc., and A. G. Cracknell, M.A. **3s. 6d.**

Modern History.

Modern History, Matriculation. Being the History of England, 1485-1901, with some reference to the Contemporary History of Europe and Colonial Developments. By C. S. Fearenside, M.A. **3s. 6d.**

Main Landmarks of European History By F. N. Dixon, B.A. *Second Edition.* **2s.**

French.

French Course, The Matriculation. By Prof. E. Weekley, M.A. Lond. and Camb. *Third Edition.* **3s. 6d.**

French Reader, The Matriculation. Containing Prose, Verse, Notes, and Vocabulary. By J. A. Perret, Examiner in French at the University of London. **2s. 6d.**

Latin.

Latin Authors, Matriculation Selections from. By A. F. Watt, M.A. Oxon., and B. J. Hayes, M.A. Lond. *Second Edition.* **2s. 6d.**

Latin Construing Book, Matriculation By A. F. Watt, M.A. Oxon., and B. J. Hayes, M.A. Lond. and Camb. **2s.**

At the Members' Meeting of the College of Preceptors on February 17, Prof. J. J. Findlay will read a paper on "School Rewards and Punishments."

* * *

On February 4, Prof. Adams will commence at the College of Preceptors a course of twelve lectures to teachers on "The Psychological Bases of Teaching and Education." The course will be helpful to students who are preparing for the Diploma Examinations of the College.

* * *

Mlle. Th. de Mayol de Lugré will address the Société Nationale des Professeurs de Français en Angleterre on "Une Femme du Second Empire" at the College of Preceptors on February 27, at 4 p.m.

* * *

Following are some of the Courses of Advanced Lectures arranged by the University of London for the current term: (1) Six lectures on "Roman Municipal Institutions," by Dr. J. S. Reid, M.A., LL.M., Litt.D., Professor of Ancient History in the University of Cambridge, at University College, on Thursdays, at 4.30 p.m. (began January 21); (2) three lectures on "The Spanish Drama," by Dr. James Fitzmaurice Kelly, Litt.D., F.B.A., at King's College, on Tuesdays (February 9, 23, March 9), at 4.30 p.m.; (3) eight lectures on "The Principles of Illustration, with special reference to Class Teaching," by Prof. Adams, at the London Day Training College, on Saturdays, at 11.30 a.m. (began January 23); (4) Lectures on "Composers of Classical Songs" (continued), by Prof. Sir Frederick Bridge, M.V.O., D.Mus., M.A., at the University, on Fridays (February 12, March 5, April 2), at 5 p.m.; (5) eight lectures on "Physical Chemistry and its Bearings on Biology," by Dr. James C. Philip, M.A., Ph.D., D.Sc., at the Imperial College of Science and Technology, on Mondays, at 5 p.m. (began January 25). (1), (2), (5) admission free, without ticket. (3) open without fee to teachers; admission cards from Prof. Adams (give full particulars —name, address, school).

* * *

The following courses of lectures at the University of London, University College, have been arranged in conjunction with the Education Committee of the London County Council:—(1) Ten lectures on "Minnesang und Höfisches Epos" (in German), by Prof. R. Priebsch, Ph.D., on Saturdays, at 10 a.m. (commenced January 16); (2) ten lectures on "The Illustration of Fundamental Principles of Botany by the Study of Simple Types of Vegetable Organisms," by F. E. Fritsch, D.Sc., Ph.D., on Saturdays, at 11 a.m. (commenced January 23); (3) ten lectures on "The Structure and Natural History of Common Animals" (followed by practical work), by W. N. F. Woodland, D.Sc., on Saturdays, at 10 30 a.m. to 1 p.m. (commenced January 23); (4) twelve lectures on "Tudor Prose—More to Bacon," by R. W. Chambers, M.A., on Saturdays, at 10.30 a.m. (commenced January 16); and (5) eight lectures on "National Eugenics," by Prof. Karl Pearson, F.R.S., David Heron, M.A., and Miss Ethel Elderton, on Tuesdays,

Digitized by Google

February 23, March 2, 9, 16, 23, May 4, 11, 18, at 5 p.m. Tickets to course (5) half-price (10s. 6d.) to members of the University, to school teachers, and to charitable and social workers.

* * *

THE School Nature Study Union will hold its Annual Conference and Exhibition of Nature Study Work at the London Day Training College, Southampton Row, W.C., on February 27, at 3 p.m.

* * *

AT the Child Study Society, London (Parkes Museum, Margaret Street, W.), there will be a reception of American teachers on February 11, at 8 p.m.; and Mr. W. H. Winch, M.A., will discourse on "The Age of Entry into School in its relation to Progress," on February 18, at 8 p.m.

* * *

AT a meeting of the Geographical Association, to be held at the North London Collegiate School, Sandall Road, N.W., on February 26, at 8 p.m., papers will be read (1) on "Pictures as an Aid to the Development of the Geographical Imagination," by Miss Sophie Nicholls, M.A., and (2) on "The Correlation of Instruction in Physics and Geography," by W. Maclean Carey, M.A., B.Sc.

* * *

MR. J. W. ALLEN, M.A., will give a course of six lectures on "English Medieval Architecture," on Fridays, at 4.30 (beginning February 5), at Bedford College for Women. Free to London University students and to teachers. Apply to the Principal.

Honours.

THE memorial to the late Prof. George Pixie, M.A., LL.D., is to take the form of a stained-glass window in the ante-chapel of King's College, Aberdeen University.

* * *

PROF. GILBERT MURRAY, M.A., LL.D., formerly Fellow of New College, Oxford, has been elected an Honorary Fellow of the College.

* * *

THE Geological Society has awarded the Lyell Medal and Fund to Prof. P. F. Kendall, of the University of Leeds, in recognition of his "important contributions to the science" of geology.

Scholarships and Prizes.

A GILCHRIST Studentship, £100 for one year, is open to women graduates in honours of the University of London of not more than three years' standing from their first graduation. Winner must take a course of study in an approved institution in preparation for some profession. Apply to the Principal (with three testimonials and three references) by February 28.

* * *

DOWNING COLLEGE, CAMBRIDGE, offers Minor Scholarships in Natural Science and Mathematics. Examination begins March 2.

Endowments and Benefactions.

SERAMPORE COLLEGE, Calcutta, wants £250,000, to erect suitable buildings, to establish seventeen professorships, and to create two hundred exhibitions. In 1827 Frederic VI. of Denmark gave the College a University charter, with the power of conferring theological degrees, but this has hitherto been in abeyance from lack of funds.

* * *

SIR JULIUS WERNHER has promised a donation of £200 for ten years to raise the stipend of the Taylorian Professor of German from £500 to £700 a year.

THE German Emperor has presented his portrait to the University of Oxford. It is painted by Alfred Schwarz, and represents the Emperor in the red robes and holding the velvet cap of the Oxford D.C.L.

* * *

THE late Mrs. C. E. Warr has left £5,000 to the University of Cambridge for a Fellowship or Scholarship for Classical Research, to commemorate her late husband, Prof. G. C. Warr.

* * *

THE late Lady Louisa Goldsmid, widow of Sir F. H. Goldsmid, Bart., has left (under contingencies) £25,000 to Girton College; £15,000 between University College and University College Hospital; £3,000 to the Jews' Infant School, Commercial Street; and £3,000 to the London School of Medicine for Women.

* * *

MR. ALEXANDER ELDER, of Southport, formerly of Elder, Dempster, & Co., has given £12,500 for the foundation of a Chair of Naval Architecture in Liverpool University.

* * *

THE Churton Collins Memorial Fund is to be devoted to prizes for literature at the Universities of Oxford, Cambridge, London, and Birmingham—at the three first-named Universities in connexion with their extension work; at Birmingham, as Birmingham shall decide.

* * *

THE Goldsmiths' Company have added to the Economic Library of the University of London a large number of manuscripts, maps, and plans relating to inland navigation and the early days of railway enterprise in this country—mostly from the collections of John Urpeth Rastrick, an eminent contractor, and of his son, Henry Rastrick, who were prominent among the earliest pioneers of railway traffic.

* * *

THE REV. DR. FAIRBAIRN, on retiring from the Principalship of Mansfield College at Easter, will hand over, as a gift to the College, the whole of his theological and philosophical library.

* * *

THE late Mr. Thomas McKie, LL.D., Advocate, Edinburgh, has left (subject to his widow's life interest) a very considerable sum to the University of Edinburgh to develop and encourage in the University (1) scientific, medical, and surgical research; (2) the teaching and study of the English language and literature; and (3) the teaching and study of modern languages, especially French, German, and Italian.

* * *

THE Glasgow City Educational Endowments Board have given £500 to the Technical College towards the establishment of a Nautical School or College.

* * *

GLASGOW UNIVERSITY has been presented by a private donor with the valuable library of Celtic literature belonging to the late Dr. Macbain, of Inverness.

* * *

THE sons of the late Dr. George Macdonald, the novelist, have presented to the University of St. Andrews a collection of Gaelic MSS. of the late M'Intosh Mackay, LL.D.

* * *

AT Bangor University College, the Eyton Williams bequest of £10,000 is to be disposed of in one scholarship of £30, two of £20, two of £15, and two of £10, each tenable for three years.

* * *

PROF. GUSTAV S. OPPERT, Professor of Indian Tongues in Berlin University, formerly Under Librarian of Windsor Castle Library and Professor of Sanskrit in Madras University, has left the residue of his property to the Institution

digitized by Google

for the Teaching of Judaic Science, Berlin, to be known as the "Professor Gustave Oppert Endowment," for a Chair for the Teaching of Languages and for Oriental Research, and, after adequate provision for one chair (including a pension fund to the holder and, if necessary, provision for his widow and children), the balance of the income is to be accumulated until there is sufficient to endow two such chairs, which will be maintained in perpetuity.

* * *

MR. G. M. LAUGHLIN has bequeathed £20,000 to Washington and Jefferson College.

Appointments and Vacancies.

MR. GEORGE H. LOCKE, for the past two years Dean of the School for Teachers and Professor of the History and Principles of Education in Macdonald College, McGill University, has accepted the invitation of the City of Toronto to be the Chief Librarian of the Muncipal Libraries of the city. Mr. Locke was formerly Dean of the School of Education of the University of Chicago and for seven years editor of the *School Review*.

* * *

THE REV. W. B. SELBIE, M.A. Oxon., of Emmanuel Church, Cambridge, has been offered the Principalship of Mansfield College, Oxford, in succession to Dr. Fairbairn.

* * *

PROF. ABBOTT LAWRENCE LOWELL, Professor of the Science of Government in Harvard University, has been elected President of the institution, in succession to President Eliot.

* * *

DR. BENJAMIN IDE WHEELER, President of the University of California, has been selected as this year's American "exchange" professor at Berlin. He will lecture on Greek and Philology.

* * *

THE REV. GERALD S. DAVIES, a house master at Charterhouse School, 1874–1905, has been appointed Master of Charterhouse, in succession to the late Rev. Dr. Jelf.

* * *

MR. W. MORGAN has been appointed Professor of Motor-Car Engineering at the Merchant Venturers' Technical College, Bristol.

* * *

THE REV. R. M. GWYNN, M.A., Fellow and Tutor of T.C.D., has been appointed Warden of St. Columba's College, Dublin.

* * *

MR. J. TANQUEREY, Assistant Lecturer in French, Manchester University, has been appointed Lecturer in French in University College, Dundee (University of St. Andrews).

* * *

CAPTAIN H. G. LYONS, R.E. (retired), Director-General of the Survey Department of Egypt, has been appointed Lecturer in Geography in Glasgow University.

* * *

THE REV. A. C. KNIGHT, B.A. Oxon., assistant master and assistant Chaplain, Royal Masonic School, Bushey, has been appointed Head Master of Derby School.

* * *

MR. A. PLUGGE, B.Sc. Leeds, has been appointed Head Master of Dilworth School, New Zealand.

* * *

MISS M. DAVIE, B.A. Lond., Head Mistress, Truro County School for Girls, has been appointed Head Mistress of the Ripon Secondary School for Girls.

MR. T. O. COUPE, B.A. Cantab., has been appointed Tutor in St. Paul's Missionary College, Burgh.

* * *

CAPTAIN J. E. MIGNON, late of the Leicestershire Regiment, has been appointed Superintendent of Physical Training for the Surrey Education Committee.

* * *

MR. R. F. CHOLMELEY, M.A. Oxon., assistant master, St. Paul's School, has been appointed Head Master of Owen's School, E.C.

Literary Items.

MR. FISHER UNWIN is publishing a cheaper edition of Mr. Thomas Marshall's "Aristotle's Theory of Conduct"—a very helpful introduction to the "Ethics."

* * *

THE Selborne Society has revived the old title of its magazine, which will henceforth be called *The Selborne Magazine* (*and Nature Notes*) and will be published by Messrs. George Philip & Son, Fleet Street, E.C.

* * *

THE "Treatise on Zoology," edited by Sir E. Ray Lankester and published by Messrs. A. & C. Black, is now nearing completion. Five volumes have already been issued and two more will appear immediately.

* * *

MESSRS. J. M. DENT & CO. announce an important serial in sixteen parts (1s. net each) on "Trees and Shrubs of the British Isles, Native and Acclimatized," by C. S. Cooper, F.R.H.S., and Mr. Percival Westell, F.L.S.

General.

THE Royal Female School of Art, Queen Square, has been absorbed by the London County Council and transferred to the new Central School of Arts and Crafts.

* * *

A PROFESSORSHIP of Astrophysics (without salary—*pessimo exemplo*) is to be established at Cambridge; a Professorship of Gas Engineering is to be established at Leeds in memory of Sir George Livesey; the Merchant Venturers have appointed a Professor of Motor-Car Engineering in anticipation of the creation of a Bristol University; and the University of Göttingen has started a Chair of Aeronautics, which has been entrusted to Prof. Prandtl, the Professor of Applied Mechanics in the University.

* * *

THE Council of the Dublin Chamber of Commerce has unanimously passed a resolution requesting the Royal Commission on University Education in Ireland to inquire into the operation of Chairs of Commerce in Great Britain, "with a view, if advisable, to the foundation and endowment of a Chair of Commerce in the Dublin College of the new University."

* * *

THE University of Cambridge will celebrate the centenary of the birth of Charles Darwin and the jubilee of the first publication of "The Origin of Species" towards the end of June. Already some two hundred delegates have been appointed to represent institutions of learning in all parts of the world.

* * *

AT a meeting of the General Council of the Daly College, Indore, the Begum of Bhopal outlined a scheme for the foundation of a special University to which the Chief's Colleges in the various provinces would be affiliated, and which might be expected to raise generally the educational standard of these institutions.

COLLEGE OF PRECEPTORS.
HALF-YEARLY GENERAL MEETING.

The ordinary Half-yearly General Meeting of the members of the Corporation was held at the College on Saturday, January 23.

The Secretary having read the advertisement convening the meeting, Professor Adams was appointed Chairman.

The Report of the Council was laid before the meeting and was taken as read, a copy having previously been sent to every member. It was as follows:—

Report of the Council.

The Council beg to lay before the members of the College the following Report of their proceedings during the past half-year:—

1. The Thirty-sixth Annual Series of Lectures for Teachers, which commenced on the 13th of February and ended on the 17th of December, comprised a Course of Twelve Lectures on "The Application of Psychology to the Work of the School," and a Course of Twelve Lectures on "The Practical Teacher's Problems." Both Courses of Lectures were delivered by Prof. J. Adams, M.A., B.Sc., F.C.P.

2. At the Summer Examination of Teachers for the College Diplomas, which was held in the first week in September, the number of candidates who presented themselves was 343. For the Christmas Examination 568 candidates have entered. During the past half-year the Diploma of Licentiate has been conferred on 20 candidates, and that of Associate on 76, who have satisfied the prescribed conditions.

3. For the Christmas Certificate and Lower Forms Examinations, which were held in the second week in December, the number of entries was about 6,700. The Professional Preliminary Examination for Certificates recognized by a number of professional bodies was held in the first week in September, and was attended by 204 candidates.

4. The Council have conducted during the past half-year the Examination of 4 schools by Visiting Examiners.

5. At the Members' Meetings held during the past half-year the following Lectures have been given:—"The Teacher's Imperfections, and how to deal with them," by Prof. J. Adams; "The Experimental Study of Instruction," by Prof. J. W. Adamson. Reports of these Lectures have been published, as usual, in *The Educational Times*.

6. During the past twelve months about 1,500 volumes have been issued to members. Considerable additions have been made to the Library by purchase and gift.

7. During the past half-year thirteen new members have been elected, including five honorary members; one name has been removed from the list, and notice has been received of the withdrawal of two. The Council regret to have to report the death of the following members:—Mr. W. J. Blanchard, L.C.P.; Mr. E. Clough; Mr. K. A. Federer, L.C.P.; Rev. L. Graham, L.C.P.; Mr. G. Heppel; Rev. J. Stewart, F.C.P.; Mr. T. Wild.

8. During the past half-year accumulated interest on the Teachers' Training Fund and the Benevolent Fund has been invested in the purchase of Stock: viz., £88 Great Eastern Railway Four per Cent. Debenture Stock on account of the Teachers' Training Fund, and £100 Consols on account of the Benevolent Fund.

9. The Council have had their attention drawn to the use of the expression "conducted for private profit," in publications issued by the Board of Education, to describe private schools. They have made a representation to the Board on the subject, and have pointed out that it is not the custom in the case of the members of other learned professions to distinguish in this way between those who are employed in the public service and those who are not so employed.

10. The proposals for the constitution of a Registration Council, which were referred to in the last Report, have been submitted to the Board of Education, who have suggested modification in certain respects, but Dr. Gow's Committee have urged that such modifications should be initiated by the Board itself. The Council greatly regret the delay that has occurred in the establishment of a new Registration Council.

11. The Federal Council have held two meetings during the past half-year, and have been mainly occupied with the Registration question. They have also considered questions relating to the assessment of income-tax in respect of school premises, and other matters.

In reference to paragraph 10, the Rev. Canon Bell stated that there was to be a meeting of Dr. Gow's Committee in February, which would include a large number of representatives of educational bodies, to press forward the subject of Registration. Members would probably be aware of the negotiations of Dr. Gow's Committee with the Board of Education and Sir Robert Morant. In that the Federal Council had its part, and members of it were represented on Dr. Gow's Committee.

The Report of the Council, with the accompanying Statement of Accounts, was adopted.

The Dean then presented his Report, which had been printed and circulated among the members attending the meeting. It was as follows:—

The Dean's Report.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Christmas Examination of candidates for Certificates took place on the 8th to the 12th of December at 182 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Aldershot, Aylesbury, Balham, Bamford, Bangor, Bath, Belper, Bewdley, Bideford, Biggleswade, Birmingham, Blackpool, Bognor, Bournemouth, Braunton, Brentwood, Bridlington, Brighton, Bristol, Cardiff, Carlisle, Carmarthen, Cheadle Hulme, Cheltenham, Chepstow, Chertsey, Chiswick, Clapham, Clevedon, Congleton, Cork, Cowes, Crewe, Croydon, Devizes, Doncaster, Dublin, Durham, Ealing, Eastbourne, Edinburgh, Exeter, Fakenham, Fareham, Farnworth, Folkestone, Fraserburgh, Frome, Grantham, Gravesend, Harlow, Harrogate, Hastings, Hayle, Hereford, Herne Bay, Holsworthy, Huddersfield, Hulme, Hutton (Preston), Inverurie, Jersey, Kilfinane, Kington, Leeds, Liskeard, Liverpool, Llandudno, London, Longton, Lytham, Maidstone, Manchester, Margate, Market Drayton, Middlesbrough, Morecambe, Newcastle Emlyn, Newcastle-on-Tyne, Newport (Mon.), Newquay, Newton Abbot, Northampton, Norwich, Nottingham, Ongar, Penketh, Peterborough, Plymouth, Portsea, Portsmouth, Reading, Redditch, Richmond-on-Thames, Ripley (Surrey), Saham, St. Leonards-on-Sea, Sale, Sandwich, Scarborough, Selby, Sheffield, Shirley, Shoreham, Southampton, Southend, South Molton, Southport, Spalding, Stamford (Lincs), Stoke-on-Trent, Stokesley, Stonyhurst, Stratford-on-Avon, Sunderland, Swindon, Taunton, Thrapston, Walton (Liverpool), Warminster, Wellington (Salop), West Norwood, Weston-super-Mare, Weymouth, Whitchurch (Salop), Wisbech, Woodford, Workington, Worthing, and York. The Examination was also held at Gibraltar; Batticaloa and Colombo Ceylon); Stewart Town (Jamaica); Georgetown and New Amsterdam (British Guiana); St. George's (Grenada); St. Lucia and St. Vincent (B.W.I.); Port of Spain (Trinidad); Bulawayo, Cala, Grahamstown, Irene, Johannesburg, Klerksdorp, Ladysmith, Lydenburg, Oakford, Port Elizabeth, Potchefstroom, Pretoria, Uitenhage, and Umzinto (South Africa); Cape Coast; Lagos; Allahabad (India); and Lomas de Zamora (Argentine Republic).

The total number of candidates examined (not including 510 examined at Colonial and Foreign Centres) was 4,328, of whom 3,123 were boys and 1,205 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined for Certificates during the year (not including those who attended the Supplementary Examinations in March and September) was 9,050.

The following table shows the proportion of the candidates at the recent Examination who passed in the class for which they were entered:—

	Entered.		Passed.		Percentage.
First Class (or Senior)	429	...	203	...	47
Second Class (or Junior).....	1,743	...	988	...	57
Third Class	1,807	...	1,194	...	66

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (349 in number) who entered only for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination (not including 240 examined at Colonial and Foreign Centres) was 1,479—810 boys and 669 girls. Of these 1,287 passed, or 87 per cent.

At the Supplementary Examination for First and Second Class Certificates, which was held on the 8th to 10th of September in London and at the following Provincial Centres—viz., Birmingham, Bristol, Leeds, Liverpool, and Manchester—198 candidates presented themselves. The number of candidates examined at these Supplementary Examinations during the year was 490.

The Summer Examination of Teachers for the College Diplomas took place on the 31st of August and five following days in London and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Plymouth; and at Bombay and Vepery (India); Trinidad; and Beterverwagting (British Guiana). It was attended by 323 candidates—195 men and 128 women. On the results of this Examination, 19 candidates obtained the Diploma of Licentiate and 79 that of Associate.

The Christmas Examination of Teachers for the College Diplomas took place on the 28th of December and five following days in London and at the following Local Centres:—Banchory, Belfast, Birmingham, Bolton, Bristol, Dublin, Kyle, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Plymouth; and at Mannheim (Germany); Calgary (Canada); Jubbulpore, Ootacamund, and Pondicherry (India); Prome (Burma); Capetown; Umzinto (Natal); Georgetown and New Amsterdam (British Guiana); and Anking (China). It was attended by 529 candidates—357 men and 172 women.

Practical Examinations to test Ability to Teach were held in February, May, and October. At these Examinations 10 candidates presented themselves, and 9 obtained Certificates.

The number of schools examined and inspected during the year under

Digitized by Google

the Visiting Examination and Inspection Schemes (A), (B), and (C) was 7.

The Council have conducted, on behalf of the Newfoundland Council of Higher Education, the Associateship, Intermediate, Preliminary, and Primary Examinations of the Newfoundland Council. The examinations were held at 100 Centres in Newfoundland on the 22nd to 29th of June, and the numbers of candidates who were examined in the several grades were as follows:—Associateship, 62; Intermediate, 375; Preliminary, 871; Primary, 989.

The Council have conducted, on behalf of the Grenada Board of Education, an examination of teachers for Second Class and Third Class Certificates in School Management.

Mr. WALDEGRAVE commented on the unusual difficulty of the Second Class Arithmetic paper, to which he had already drawn attention in a letter to the Secretary. He was strongly of opinion that the standard of the paper should not have been raised without notice to the schools.

The DEAN said he was not aware that there had been any alteration in the standard of the paper, and the percentage of failures on that paper was not higher than usual.

The report was adopted.

The meeting then proceeded to the election of twelve members of the Council to fill the places of the twelve retiring by rotation, and three auditors.

Dr. MAPLES desired to record his protest against the form in which the voting paper had been prepared, as he contended that no mark should appear on the paper to distinguish between those candidates who were retiring from the Council by rotation and other candidates.

Mr. WALTERS asked whether any, and if so which, of the candidates nominated for the Council were non-subscribing members of the College, and the Chairman, after having ascertained the wish of the meeting on the subject, gave the required information.

Mr. KING called attention to the fact that the names of two of the members nominated as auditors also appeared on the list of nominations for the Council. He thought the names should not appear on both lists at the same time.

Mr. WILSON said that it was quite irregular that the same candidates should be proposed both for election on the Council and as auditors. The duties of an auditor were such that they could not be properly discharged by a member of the Council. The auditors were, in fact, the servants of the general body of the members, and not of the Council *quâ* Council, and were appointed for the precise purpose of protecting the members of the Corporation from errors, innocent or otherwise, in the statement of accounts annually presented by the Council to a General Meeting of the members. It seemed to him, therefore, that the right course to pursue, in respect of voting papers that contained the names of candidates for both offices, would be to reject them as bad on the ground of uncertainty.

The CHAIRMAN directed that the election for members of the Council should be taken first, and that, after the result had been declared, the election of the auditors should be proceeded with.

The SECRETARY read a letter from Mr. MOORE, withdrawing his nomination, which had been made without his consent.

The CHAIRMAN having appointed Mr. CHANDLER and Mr. WALLIS to act as scrutators, the voting papers were distributed and the election was proceeded with. On the scrutators presenting their report, the following were declared to be elected:—

MEMBERS OF COUNCIL.

A. W. Bain, B.A., B.Sc., F.I.C., Fairlight, Muswell Rise, Muswell Hill, N.
J. L. Butler, B.A., The Douglas School, Cheltenham.
E. M. Eagles, M.A., Enfield Grammar School, Enfield.
J. Easterbrook, M.A., Owen's School, E.C.
H. W. Eve, M.A., F.C.P., 37 Gordon Square, W.C.
Rev. R. Lee, M.A., Southcote, Elm Grove Road, Ealing Common, W.
Sir Philip Magnus, B.A., F.C.P., B.Sc., M.P., 16 Gloucester Terrace, W.
E. F. Marx, M.A., 11 Woodgrange Avenue, Ealing Common, W.
C. Pendlebury, M.A., 40 Glazbury Road, West Kensington, W.
W. G. Rushbrooke, M.A., LL.M., St. Olave's Grammar School, Southwark, S.E.
A. P. Starbuck, B.A., St. John's College, Green Lanes, N.
W. Vincent, Loughton School, Loughton, Essex.

AUDITORS.

John Bell, M.A., LL.D., 34 Redbourne Avenue, Finchley, N.
H. Chettle, M.A., Stationers' School, Hornsey, N.
A. E. C. Dickinson, M.A., LL.D., L.C.P., Grove House, Highgate.

The DEAN moved the following resolution:

"That the Council be requested to urge the Board of Education to proceed as soon as possible to the formation of a Registration Council representative of the teaching profession."

From time immemorial the College had been connected with the proposal for the formation of a Registration Council, and had promoted more than one Bill in Parliament for this purpose. The question was at present at a deadlock, and, unless at the meeting which was to be held in February, some further steps could be made, it was likely to remain at a deadlock. He thought the Council should do all they could to press the matter on the attention of the Board of Education.

Mr. BARROW RULE, in seconding the resolution, said the registration question had been before the College for fifty years, before any of the present Associations of teachers had come into existence. The College, having initiated the proposal, had worked continually at it, had introduced Bills into Parliament, and done all that they could for the furtherance of this object, and they should not allow other efforts to supersede or annul their own. They welcomed the co-operation of all Associations and bodies who might be willing to help them in this matter; but the question was peculiarly their own, and, concerning as it did the interests of private-school masters, it behoved them to do all they could to promote it.

Mr. ADDIS proposed that the resolution should read as follows:—"That the Council be requested to urge the Board of Education to advance the formation of a Registration Council representative of the teaching profession."

A member pointed out that the Board of Education had not had the necessary power given to it by Parliament to deal with the question. This had been very clearly stated by the Secretary of the Board of Education, and, therefore, while it was quite competent for the College to pass any resolution in favour of registration, it was desirable to put it in such a form that it should not be open to the legal objection he had mentioned. The Board of Education Act did assign to the Board of Education, acting under the Orders of the King in Council, the duty of forming a Registration Council; but the Education Act of 1907 did away with that obligation, and in the clause relating to Registration no mention was made of the Board of Education.

Mr. RUSHBROOKE suggested as an amendment: "That the Council be requested to urge the Board of Education to use what powers are at their disposal for the formation of a Registration Council representative of the teaching profession."

The DEAN having expressed his willingness to accept an amendment in the sense suggested, the resolution was adopted in the following amended form:—

"That the Council be requested to urge the Board of Education to use all the influence at its disposal to promote the formation of a Registration Council representative of the teaching profession."

Dr. MAPLES then moved the following resolution:

"That the Council be requested to consider, and report to the next Half-yearly Meeting, whether, by means of an alteration in the Charter of the College or otherwise, the work and usefulness of the College may be increased."

During the sixty years of its existence the College had, under able leadership, been enabled to do a great work for the advancement of secondary education. The conditions had, however, been entirely altered by the Act of 1902, and the work of the College in all its branches now appeared to be steadily diminishing, while its sphere of action was being more and more contracted. After having given, in support of this view, a number of particulars which had been collected from the official reports of the College, Dr. Maples went on to suggest that the College should adopt one of two courses. The first was to devote itself to the interests of private enterprise in education, and to appeal for support only to masters and mistresses of private schools. The other course was to endeavour to make the College really representative of all sections of secondary teachers; and he believed that such a course would result in a great extension of the work and influence of the College. For this purpose it would probably be necessary that the Charter should be altered so as to provide for the representation on the College Council of the various Associations among which secondary teachers were now distributed. An organization reconstituted in this way should be a

Digitized by Google

powerful influence for the preservation of individualism in education. He would point to the National Union of Teachers as a striking example of the power which might be attained by a concentration of forces.

Mr. ORCHARD, without associating himself with all that Dr. Maples had said, thought a case for inquiry had been made out, and he therefore seconded the resolution.

The DEAN said he fully recognized the force of the arguments that Dr. Maples had advanced. The most important thing for the College was to secure a large increase in the number of its members; but he confessed that he doubted the practicability of making the College the centre of all the Associations connected with secondary education. A short time back, proposals for amendment of the Charter had been brought before the members of the College. The Council took the best legal opinion they could get, and they were advised that the scheme was impracticable. He was constrained, therefore, to demur to the reference in the resolution to alteration of the Charter, and he hoped that Dr. Maples would not press his motion to a division.

Mr. WILSON, while expressing his reluctance to place himself in opposition to any well considered scheme for advancing the interests of the College, was by no means sure that an attempt to reconstitute the College on the lines suggested by Dr. Maples, involving as it would the surrender of the Charter, would be likely to improve the position of the College. As Dr. Maples had pointed out, the College had achieved conspicuous success in the past, in spite of restraints which were imposed by provisions of the Charter. If it were desired to effect a great union of secondary teachers, the simplest solution of the problem would be for them all to join the College, and he knew of no reason why they should not do so. It appeared to him that Dr. Maples had inverted the right order of procedure, and that he ought to have brought his proposal before the Council in the first instance and had it there threshed out. He did not think that even the members of the Council had any adequate appreciation of the difficulties involved in surrendering or amending the Charter.

Mr. BARROW RULE said he regretted that the mover of the resolution should have tied the Council down to a period of six months, which he deemed to be inadequate for such a review, and, secondly, that he should not have laid his proposals before the Council and waited to have them discussed by his colleagues before bringing the matter before the General Meeting.

Mr. WALDEGRAVE expressed his surprise that there should be any opposition to this resolution. As the mover had pointed out, the position of the College was gradually deteriorating, and it would not be wise to wait till things got worse before devising means of revival. It had been suggested that they were discussing a scheme; but they were merely requesting the Council to consider the situation.

Mr. MILLAR INGLIS said that what Dr. Maples had tried to do was to interest the members in the affairs of the College. It was still possible for the Council to do a good deal to develop the resources of the College, though the time for some reforms had gone by.

Mr. ADDIS proposed, as an amendment, that the reference to the Charter be omitted from the resolution, and that the Council be requested simply to consider and report to the next General Meeting whether, by any methods, the work and usefulness of the College might be increased. For instance, it might be useful to organize a series of meetings for the discussion of questions of practical interest to teachers, including legislative measures dealing with secondary education. He would throw such meetings open to non-members as well as members.

Dr. MAPLES said that the reason why he had brought this resolution before the General Meeting, and not before the Council in the first instance, was that, in his opinion, it would not have been right for the Council to consider a question of this nature without having previously consulted the members of the College.

The amendment, on being put to the vote, was carried by a considerable majority, and the resolution, as amended, was adopted as follows:—

> "That the Council be requested to consider, and report to the next Half-yearly Meeting, whether, by any methods, the work and usefulness of the College may be increased."

A vote of thanks to the Chairman concluded the proceedings.

In the evening fifty-four members and friends of the College dined together at the Hotel Cecil, under the presidency of the Rev. Canon Bell. The company included Prof. Adams, Prof. Adamson, Mr. Addis, Mr. Andrade, Dr. and Mrs. Armitage-Smith, Mr. and Mrs. Bain, Mr. Barlet, Mr. and Mrs. Bateman, Rev. J. B. Blomfield, Colonel H. F. Bowles, Mr. Campbell Brown, Rev. J. S. Bruce, Mr. and Mrs. E. A. Butler, Mr. Charles, Rev. A. J. Church, Mr. Chalmers, Miss Clarke, Mr. Curran, Dr. and Mrs. Dickinson, Mr. and Mrs. Eagles, Mr. and Miss Eve, Mlle. Fleurmann, Mr. Felkin, Mr. Hawe, Mr. and Miss Hodgson, Mr. Hopkins, Mr. Johnson, Mr. Kelland, Mlle. de Mayol de Lugré, Dr. and Mrs. Maples, Mr. Mardling, Mr. Marx, Mr. and Mrs. Mathieson, Dr. and Mrs. Moody, Mr. and Mrs. Nicol, Mr. Rushbrooke, Mr. Ruf, Miss Smith, Mr. Southee, Mr. Starbuck, and Miss Steele. Colonel Bowles proposed the toast of "The College of Preceptors," which was responded to by the Chairman, and Mr. Eve proposed "The Visitors," which was responded to by Mr. Felkin. An attractive programme of vocal and instrumental music and recitations was much appreciated by the guests.

ADJOURNED MEETING OF THE COUNCIL.

AN adjourned meeting of the Council was held on January 23. Present: Prof. Adams, Vice-President, in the chair; Prof. Adamson, Dr. Armitage Smith, Mr. Bain, Mr. Barlet, Mr. Baumann, Rev. Canon Bell, Rev. J. B. Blomfield, Mr. Brown, Mr. E. A. Butler, Mr. J. L. Butler, Mr. Charles, Miss Crookshank, Mr. Eve, Mr. Hawe, Miss Jebb, Mr. Kelland, Miss Lawford, Prof. Lyde, Dr. Maples, Mr. Marx, Dr. Moody, Mr. Pendlebury, Mr. Pinches, Mr. Rule, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Starbuck, and Rev. J. Twentyman.

The Secretary reported the death of Mr. W. H. Harris, the Rev. J. H. Newnum, and Prof. H. G. Seeley, three members of the examining staff of the College, and it was resolved that letters expressing the deep regret of the Council at their decease should be sent to their relatives.

He reported that the Institute of Actuaries had decided to recognize the First Class Certificate of the College as evidence of general education.

It was resolved that, on the voting papers to be used at the General Meeting for the election of members of the Council and of auditors, the names of the retiring members of the Council and auditors should be indicated by asterisks.

Applications for grants from the Benevolent Fund were referred to the Finance Committee for consideration and report.

The report of the Examination Committee was submitted, and was referred back to the Committee for the consideration of suggestions offered by members of the Council.

THE EDUCATIONAL LADDER.

CAMBRIDGE UNIVERSITY.—Seatonian Prize: C. H. A. Field, M.A., formerly of Corpus Christi College. Member's Prize for an English Essay: C. W. P. Orton, B.A., Scholar of St. John's Subject: "Political Satire in English Poetry." Norrisian Prize (for prose essay on a sacred subject): E. A. Edghill, M.A., formerly of King's, and J. K. Mozley, B.A., Fellow of Pembroke, equal.

Corpus.—Fellowship: E. G. Selwyn, B.A., formerly Scholar of King's and Classical Lecturer of Corpus; Bell Scholar, 1905; Porson Prizeman, 1905; Porson Scholar and Browne Medallist, 1906; Waddington Scholar, 1907; Chancellor's Medallist and Winchester Reading Prizeman, 1908. Entrance Scholarships for Mathematics: W. Butterworth, King William's College, Isle of Man, £50; F. Sandon, Owen's School, Islington, £40; for Classics: W. M. Askwith, Bedford Grammar School, £40; R. M. Kirkpatrick, Marlborough College, £40; for Natural Science: P. C. L. Thorne, Berkhamsted School, £40. Exhibitions:—for Mathematics: W. H. Murray-Watson, Monkton Combe School, £25; for Classics: F. N. Harston, Eastbourne College, £30.

Queen's.—Entrance Scholarships:—Mathematics: E. M. Dultroff, Owen's School, Islington; F. W. Gardner, King's School, Chester. Exhibitions: L. W. Wood, Merchant Taylors'; G Rigby, Blackburn Grammar School; A. E. Bell, William Ellis School, St. Pancras. Classics:—Scholarships: J. R. Wade, Westminster; G. M. Wylie, High School, Nottingham; A. E. P. Sloman, Bradfield College. Exhibitions: P. A. Tharp, St. Paul's; A. E. Wild, Bury Grammar School, Natural Science:—Scholarships: G. Storey, King William's College, Isle of Man; R. H. Atkinson, North-Eastern County School, Barnard Castle. Exhibitions: J. T. Scott, St. Olave's School, Southwark; C A. Herapath, Royal Masonic School, Bushey; R. Taylor, Wolverhampton Grammar School. Hebrew:—Exhibition: A. Jephcott, Merchant Taylors'.

St. Catharine's.—Scholarship for History: C. C. Taylor, Latimer Upper School. For Mathematics: E. M. Dultroff, Owen's School, Islington. Exhibitions:—Mathematics: E. M. Atkins, Wellingborough Grammar School. Classics: C. L. Tasker, St. John's School, Leatherhead; J. S. Purvis, Bridlington Grammar School; E. B. Hall, St. Paul's. History: H. Horrox, Bradford Grammar School; R. D. Milner, Weymouth College.

St. John's.—MacMahon Law Studentship: W. F. Sword, B.A., LL.B. Scholarships on the Casberd Foundation: A. J. Woolgar and Vyvyan Hope. Casberd Exhibitions: T. Owen Thompson, S. P. Lissant, H. S. Breakspear, and R. D. Middleton.

London University.—Passed in Pedagogy (external students): A. F. Allen, B.Sc., London Day Training College; R. Ashworth, B.A.; E. C. Childs, B.A.; H. A. Clayborn, B.Sc.; Ethel Emily Cox, B.A., London Day Training College; E. C. Cull, B.Sc., Hartley University College; C. B. Evans, B.A.; *J. M. Forster, B.A.; R. A. Jones, M.A., Royal Albert Memorial University College, Exeter; Jessie Parsons, B.A., Madras, London Day Training College; *Mary Passmore, B.A., St. Austell County School; L. H. W. Sampson, B.A., Oxford; Mary Kathleen Sladden, Mathematical Honours School, Oxford, St. Mary's College, Paddington; F. W. Tickner, M.A., B.Sc. (Econ.); †Charlotte Mary Waters, B.A.; †Mary Eleanor Whitaker, B.A.; Hilda Wilson, M.A., St. Mary's College, Paddington; and Alice Maud Wright, B.A. (*Excelled in the written examination. †Excelled in the practical examination.)

Oxford University.—Senior Mathematical Scholarship: Jonathan Hodgkinson, B.A., Scholar of Jesus; hon. mention, J. R. Pound, B.A., Scholar of St John's. Junior Mathematical Scholarship: A. L. Atkin, Honorary Scholar of St. John's. Exhibition: H. Coates, Scholar of Corpus. Distinguished in the Examination: J. Snow, Scholar of New College; F. J. Webb, Scholar of Brasenose.

Jesus.—Classics:—Open Scholarship: J. G. W. Fergusson, St. Andrews University: Open Exhibitions: W. J. Foote, University of Melbourne and non-collegiate student; A. B. Jordan, Nottingham High School. Meyrick Exhibitions: F. S. Purchas, Monmouth Grammar School; A. J. S. Hart, Monmouth Grammar School. Mathematics:—Open Exhibition: R. F. Wilkinson, St. John's School, Leatherhead. Meyrick Exhibition: C. R. Stephens, Manchester Grammar School. History:—Open Exhibition: H. R. Hardie, Mill Hill School: Welsh Scholarship: J. G. Edwards, Holywell County School. Theology:—Open Exhibition: S. H. Hooke, Commoner of Jesus College; Meyrick Exhibition: W. F. Phillips, University College, Cardiff, and Aberystwyth Theological College. Meyrick Graduate Scholarship for Research in Celtic Language and Literature: T. H. Parry-Williams, University College, Aberystwyth.

New.—Winchester Scholarships: R. H. Hutchison, T. K. Bewley, R. P. Hankinson, and W. Sheepshanks. Exhibition: A. W. Fagan.

Diplomas in Education (Secondary): John H. Baines, B.A., University College; George T. Kelland, B.A., Balliol; Lionel H. W. Sampson, B.A., Hertford; Francis J. Terry, non-collegiate; Richard M. Morgan, B.A., Aberystwyth. Ethel M. Barke, M.A., Girton; Ellen I. Benham, B.Sc., Adelaide; Henrietta E. T. Christie, Somerville; Jeannie Dow, Royal Holloway; Margaret F. Moor and Grace G. T. Muir, Somerville; Margaret E. Sale, B.A., Dublin; Ethel Stafford, B.A., Manchester; and Mary C. Thompson, B.A., Manchester.

Shaw Philosophical Fellowship (about £148 a year for five years, open to graduates in Arts of any of the four Scottish Universities of not more than 5 years' standing at the time of the competition): John Laird, M.A. Edin. *Proxime accesserunt*, A. A. Bowman, M.A. Glas.; H. A. Reyburn, M.A. Glas.; Leonard J. Russell, M.A. Glas.

OPEN COURT.

Thay haif said . . .
Quhat say thay?—Lat thame say!

A BUDGET OF CONTROVERSIES: MAINLY OVER MORAL EDUCATION.

By Dr. F. H. Hayward.

(*Continued from page* 26.)

3. When, if ever, Direct and Systematic?

We are inconsistent people, we English, susceptible to the call of "justice" or "mercy" from one quarter, deaf to a similar call from another quarter; "temperate" in one respect; "intemperate" in another. The foreigner, in consequence, calls us "hypocrites" and traces our moral blemishes to the perversity of our wills.

Bernard Shaw knows us better. The trouble with us is that our minds are foggy. John Bull's "blessed old head" has "all its ideas in watertight compartments, and all the compartments (are) warranted impervious."*

"John Bull's Other Island," Act I.

The middle-class code of ethics, which condemns "priggishness" as cousin to conscious hypocrisy is at least a century out of date. Ibsen has been among us, and, though he knew every cranny of the modern middle-class soul, he never once drew a conscious hypocrite. He knew Helmer and Ekdal and Peer Gynt; he knew men "with all their ideas in watertight compartments"; he knew men with Sunday consciences and class consciences and business consciences; he knew men with apperception masses in isolation from each other, and therefore "functioning independently," as Mr. Keatinge says. But he knew nothing of Pecksniff or Tartuffe, and little even of Iago and Parolles. And, consequently, Ibsen's plays do not at first attract us. We miss our conventional heroine, our conventional hero, and our conventional villain; and, worst of all, we miss the "hypocrite" and "prig." We have been taught to hate him; we have raised up barriers against his intrusion into our secondary schools. "The commandment, 'Don't be a prig,' has almost taken its place in the Decalogue," as Mr. Benson says; and now behold the greatest of all dramatists of modern human nature gives us never the prig, but constantly the man who has "all his ideas in water-tight compartments."

Now it is precisely against the defects of this latter man that some, at least, of the advocates of moral instruction would fain wage war. It is against lack of moral lucidity and imagination, against inaccessibility to ideas, against persistent and yet unconscious inconsistency of conduct, against the perfectly well intentioned "scoundrelism" which, in Bernard Shaw's opinion, is normal with "every man over forty"; against the moral "colour-blindness" which is the first stage towards the said "scoundrelism," and is alleged by public-school teachers to be characteristic of middle-class boys.

And yet, when advocates of moral instruction state their case for lucidity and system, they are met by a parrot cry against encouraging the *conscious* hypocrisy known as "priggishness"! Outside the ranks of the professional cadger I doubt whether a hundred conscious hypocrites exist in England. Of unconscious hypocrites there are some fifteen millions—almost the entire adult population; and twenty of the remaining millions—now children—are in process of arrival at the same goal.

Direct, systematic moral instruction? An attempt to introduce lucidity, continuity, and consistency into our moral ideas? An attempt to make our moral terminology effective, so that we may no longer deceive ourselves at every hour of the day or remain blind to countless duties? Anything but that! Morality must not be systematic! For ever and for ever it must be a series of scraps!

Accordingly Mr. Keatinge writes a book called "Suggestion in Education," and proves to his own satisfaction that haphazard "suggestion" is the best mode of moral instruction. In the course of reading the "Gallic War" or the "Ode on the Death of the Duke of Wellington," a few moral ideas of an isolated character may chance to enter insidiously into the boy's mind; and in this way he will best acquire a knowledge of moral truth. Such is "suggestion in education"! The teacher must be *for ever* "reticent," "discreet," and especially fragmentary and incidental.

Did ever the world see the like stated before in cold print? Do any of us need to be told of the value of such chance moral suggestions as spring out of fine books? Have we not urged that humanistic study should take a high place in every school? Is this not the best way to familiarize the boy with noble ideas and noble terminology? Who doubts it? Who has ever doubted it? But is there *never* to be system in our moral ideas? Are we to go on with "suggestions" and "scraps" for ever and ever?

The weakness of Mr. Keatinge's book is that it recognizes no necessity for system at *any* epoch of life. Not even when we marry, not even when we see our sons or daughters marry, not even when we totter on the verge of eternity, will our moral ideas be systematic. Let me interrogate.

Shall we introduce system into the moral ideas current in our *elementary* schools? The children are young; their experience is slight; their reading is limited; their reason is undeveloped; they have not reached the stage of adolescence, when sundry altruistic instincts begin to reach maturity. Surely *childhood* is not the best time for very systematic methods. The secondary schools? No; contrariant ideas are the obstacle there. Colleges and universities? Contrariant ideas are still the difficulty; besides, only a fraction of our people attend colleges and universities. Twenty years of life have now slipped away—the plastic years, apparently the predestined years for educational influence. Perchance the period from twenty to thirty is the

Digitized by Google

one for systematization? Or that from thirty to forty? Mr. Keatinge does not say; and our only conclusion must be that John Bull's moral ideas must never be made systematic at all; his head must have its "impervious" and "watertight" compartments, with consequent "scoundrelism," for ever.

Prof. Findlay is a good deal wiser. His attack upon the employment of direct moral instruction applies only to the years before sixteen; and the attack, I admit, would be cogent if modern society were different from what it is, and if direct *im*moral instruction (or its equivalent) did not assail the primary-school child so early. I suspect that when Utopia has been attained Prof. Findlay's view will be recognized as true. In any case, he knows that in the later teens reason and conscience and personality are finally awake, and that now, if ever, is the time for direct methods. So I leave Mr. Keatinge to Prof. Findlay, assuring him that when he concedes* a place for direct moral instruction in primary schools, while discounting its efficacy in secondary schools, modern pedagogics, whether starting from the psychological notion of apperception or from the ascertained facts of adolescence, would exactly reverse his verdict.

I conclude this section with two questions: "Are moral ideas *ever* to be made approximately coherent or systematic? If they are, at what period of life?"

4.—"Doing, not Talking."

Mr. Paton has more than once expressed the opinion that "talks" about moral matters are of infinitely less importance than moral *action*. "What we want for English boys is not that they shall talk about these things (diligence, &c.), nor write essays about them, but that they shall love these things and live them . . . that they shall be big, generous, open-hearted, frank" —[What does "frank" mean? Does it imply "talking"?] . . . "with strong self mastery."† In the algebra lesson—a fine field for exercising will power, in Mr. Paton's belief—"the better the class and the better the master, the less will be said" [about honesty or temptation]. "It is by practice, not by precept, that we become perfect."

These words are normal, orthodox, and inevitable whenever the public-school master is called on to discuss moral education. He has them on the tip of his tongue; they echo in the chambers of his memory; and they are themselves (like the horror of "priggishness") a concrete illustration of the fact that in one case, at any rate, words possess an almighty power. Add to them the other copy-book maxim that "example is better than precept"; and the platform platitude—true, like most platitudes, and also fundamentally useless—that "the most important moral influence is the personality of the teacher" —and the armoury of the public-school man is almost complete.

It almost makes one despair to find that the fallacy underlying this phraseology is not seen at once by an educated man. "Every boy knows what it is to be diligent and thorough in his work, what it means to be truthful, honest, and pure." The reader will note the narrowness and conventionality of the catalogue—so reminiscent (*pace* Mr. Paton) of the headings of the old-fashioned moral lesson book ("Overcome obstacles by perseverance," "Honesty is the best policy," &c.); the apparent absence of any imaginative grasp of the fact that new moral duties, eugenic, æsthetic, civic, &c., may be dawning on the race and beckoning us forward. But, accepting the catalogue as it stands, can we truly say that every boy *knows* these virtues? It is not even true that Mr. Paton *knows* them; he constantly implies that diligence in performing mere drudgery is a virtue; and he never refers to the fact, pointed out years ago in the fifth chapter of Prof. Adams's "Herbartian Psychology," that the bad man may be as diligent as the good. As for the "boy," certainly he "knows," in a verbal sort of way, the meaning of "diligence"; and if Mr. Paton is attacking the giving of purely verbal knowledge (such as the slum-child's knowledge of "meadow" and "forest") he does well; moral knowledge, to be effective, must be *apperceptive*, as every Herbartian has urged; it must be verbal, certainly (for a reason presently to be assigned), but it must be linked up to a mass of ideas, traceable to experience and instruction. That "every boy" *knows* (really *knows*) what "diligence" means in this sense, is as far from the truth as was Macaulay's famous statement about "every boy's" historical omniscience; if Mr. Paton consent, I shall be glad to set a few questions on "diligence" for his Manchester boys, in order to put the matter to the test.

My own conviction is that deep ignorance is at the root of almost or quite all the moral evils of the day. I will go so far as to say that few *adults* "know" what it is to be diligent, thorough, truthful, honest, and pure; in the realm of *honesty*, for example (commercial, international, &c.), there is notorious fog and confusion; while, as to Mr. Paton's favourite virtues of diligence, thoroughness, &c., he will find, in "A Modern Utopia" of Mr. Wells, some indications that the significance of these virtues is perhaps rather different from what he imagines. If we were dumped down among the lotus-eaters, or in certain other situations not unknown to readers of Greek and oriental history, these strenuous virtues would be regarded as forms of vice or lunacy. And I am not at all sure that my "diligence" and "perseverance" in the present controversy are striking the readers of this journal with admiration.

Let us, however, make the amazing admission that every boy *knows*, in a measure, and even appreciates, the cardinal virtues; the question arises, How did he get to know and appreciate them? Mr. Paton must at once fall back either upon a "faculty doctrine" (there is a "faculty" of conscience) or upon an admission that moral knowledge comes from the environment.

Now modern sociology rejects the former view; "the old conception of a special faculty of moral intuition . . . was the third of a trio of false psychological assumptions," says the most recent writer on the subject*; and Dr. Stanley Hall regards as an "old superstition" the notion that "children have innate faculties of such a finished sort that they flash up and grasp the principle of things by a rapid sort of first intellection."† But this "old superstition," he adds, "persists in full force in moral and religious training," and Mr. Paton appears to be an example of its persistence ("every boy knows" . . .), unless, of course, he choose to admit that the boy's moral knowledge and appreciations come from the environment.

But if they come from the environment they will be limited by the environment; what the boy "knows" will be much or little, true or false; virtues outside the environment, or uncongenial to it, will be unknown or unappreciated; and perhaps certain virtues will be called vices, or the reverse. Mr. Paton's everlasting stress upon the "school virtues"—as if these constituted, or at least summarized, the whole duty of man—is itself significant; and I may say, once again, that no advocate of moral instruction asks for the old-fashioned and pedantic reiteration of what is already obvious or inevitable (what "every boy knows"); nor for dull hectoring of a class for sundry faults (possibly caused by pedagogical arbitrariness or ignorance); but for something far finer, something rational and alluring, something that "every boy" does *not* know.

Once admit that the conscience is no ready-made faculty, but a dynamic process involving memories, ideas, and suggestions, all derived from the environment and possessing all the limitations and perversities of that environment, the teacher will be compelled (unless he is morally bankrupt and hopelessly unimaginative) to give moral instruction or to organize some equivalent of moral instruction. He will commence a process of elucidating, refining, completing, or correcting, and then, to the extent that he finds moral terminology thin, artificial, or perverse, he will be compelled to reorganize his curriculum and to enrich it more particularly on the side of history, biography, and literature, so that indirect moral instruction may adequately supply the apperceptive needs of direct moral instruction.

And I do not see how all this is to be done without "talking." Educationists will never realize how immensely significant in all matters of morality is the spoken word, which Mr. Paton regards as relatively unimportant, until their imaginations have been touched by the great and broadly true doctrine associated with the name of Weissmann.

They must picture the chain of germ-cells stretching backwards into the vanished past and forwards into the shadowy future; and, attached to that immortal chain, the clusters of somatic cells which constitute the bodies of individual men. We appear as the offspring—or, rather, the by-products—of the germ-plasm—not the makers of its living links; we take what it gives us, and we can give nothing to it.

The vision, when it first rises before us, is little short of appalling. We feel like Macbeth as the ghostly series stretch on to the crack of doom. The continuity of the germ-plasm spells the worst confirmation of our fears. Science has closed the doors of hope, and heredity is, indeed, omnipotent. We are

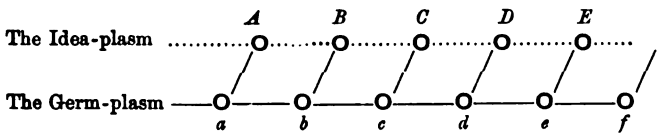
† "Youth."

Digitized by Google

offshoots from the trunk of the mighty being, congenital parasites which it periodically disgorges, appendages with rootlets fixed desperately and precariously in its substance, and with no single tentacle feeling upwards.

This, apparently, would be a true, if gloomy, picture of human life except for the factors which Mr. Paton would have us despise. Man's is the gift of speech, and man's, pre-eminently, is the gift of writing. "Talking about" morals and "writing essays" about morals happen to be the two and the only means by which man has been lifted out of bondage to the germ-plasm. An ethical tradition, handed down by word of mouth and through books, is another "plasm" in which our life is rooted, and there is no third. These quaint champions of orthodoxy and *laissez-faire*, these confident opponents of moral instruction are—though they do not know it—the only fatalists, the only materialists, the only cynics in the educational world. Possibly the diagram that follows may serve to change their verdict upon the folly of "talking about" and "writing about" morals.



a, b, c, d, e, f, . . . the germ cells.
A, B, C, D, E, . . . the somatic cells.

[Germ cells and somatic cells together, $a+A$, $b+B$, constitute an individual being; all links with past or future are through the germ cells, which are "continuous" from generation to generation.]

Such, diagrammatically (minus the dotted line), would be the history of the human race *apart from the factors which Mr. Paton depreciates*. Everything human would be locked up in the chain of germ cells; no bridge would join the individual A with the individual B except the round-about bridge of physical heredity; and upon the quality and durability of that bridge the fate of humanity would depend.

But, luckily, there is another bridge between A and B; a fragile one of words and phrases and maxims; of records of humble efforts and heroic deeds; of legends, of poems, of novels; of works on citizenship and philosophy. Neglect this bridge, or despise it, or destroy it, and the human race will sink back to what it once was—a chain of appendages strung on to the germ-plasm and dependent wholly upon it. This other bridge is shown in the diagram by the dotted line.

Dropping all metaphors, I would urge that our schools are called upon to hand down a moral tradition embracing those best elements of the past which are likely to be the most helpful elements for the future. The genius of the great has to be made the heritage of the humble. Otherwise, one only result is possible. What was missing in the primitive savage who had accumulated no imposing moral tradition—who had no time to "talk about" morals or "write essays" about morals—will be missing in the modern boy from whom that tradition is ostentatiously withheld. The missing factor will be moral vision, moral perception, moral apperception. And, curiously enough, this factor is actually alleged to be missing by men who have good reason to know. The public-school boy is said to be "morally colour-blind." And, still more curiously and significantly, he is said to be a "savage" or "barbarian," the witnesses here showing a knowledge of sociology deeper than they themselves would claim. Lastly, he is alleged to have "low moral admirations," an allegation which at once provokes from the Herbartian the inquiry, "How can you expect to awaken 'high moral admirations'—identical with 'apperceptive interest' in moral truth—unless you provide the boy with apperceptive resources?"

The only answer open to the public-school master is a demonstration that his favourite dogma of "formal training" or "faculty training" is true; and that, by a series of school activities (games, classical drill, &c.), the boy acquires all necessary apperceptive resources.

One word more, however, upon the notion that "talking about" morals and "writing essays" on morals are things *tabu*.

If the schoolmaster refuse to set in use a dignified moral terminology, he will still have to employ, in his serious moments, a terminology of some kind, and to aid its currency among boys. What will it be? He dare not speak of "justice"; such language savours of the "prig," and perhaps of the "puritan"; but he can safely speak of "playing the game." He must, in fact, borrow his terminology from the world of sport.

> God give us bases to guard or beleaguer,
> Games to play out, whether earnest or fun;
> Fights for the fearless and goals for the eager,
> Twenty and thirty and forty years on.

The situation is saved! So long as the master's phraseology is that of the playing field, he can exhort and reprove to his heart's content. He can bid his boys be "sportsmanlike"; and even "essays" on pseudo-moral topics may be possible, provided the terminology is sufficiently and triumphantly trivial.

Moral metaphors borrowed from the playing fields may be as legitimate as religious metaphors borrowed from the Greek race-course; but they are neither dignified nor numerous enough to support a complete and progressive system of moral ideas. And yet the public school will have to make this desperate and despicable attempt if in "talking about" serious topics it refuses to employ a terminology worthy of the theme.

5.—Conclusion.

The main controversy must, however, range over the dogma of "formal training." If it can be shown that the volitional qualities demanded by school games and school pursuits do not (as Sir Arthur Hort recently admitted) flow over appreciably into life as a whole; and that "accuracy," "thoroughness," "observation," and the other faculties or processes are similarly recalcitrant, *apart from some process of instruction or elucidation*, our case is proved and our opponents' case is lost. And "formal training" is, indeed, apparently a lost cause.

AMERICAN NATIONAL EDUCATION ASSOCIATION.

Declaration of Principles at Cleveland, Ohio, 1908.

The National Education Association, now holding the forty-sixth annual convention in Cleveland, and representing teachers and friends of education in every state in this Union, makes the following declaration of principles and aims:—

1. Fully realizing that trained and skilled labour is a primary essential to the industrial and commercial welfare of the country, we cordially endorse the establishment by municipal Boards of Education of trade schools, industrial schools, and evening continuation schools; and further recommend that the instruction in these schools be practical and efficient, and have the advice, and the approval, of the trade interested to the end that graduates of these schools may at once become advanced apprentices or journeymen.

2. We recommend the subordination of highly diversified and overburdened courses of study in the grades to a thorough drill in essential subjects; and the sacrifice of quantity to an improvement in the quality of instruction. The complaints of business men that pupils from the schools are inaccurate in results and careless of details is a criticism that should be removed. The principles of sound and accurate training are as fixed as natural laws and should be insistently followed. Ill considered experiments and indiscriminate methodizing should be abandoned and attention devoted to the persevering and continuous drill necessary for accurate and efficient training; and we hold that no course of study in any public school should be so advanced or so rigid as to prevent instruction to any student who may need it in the essential and practical parts of the common English branches.

3. We assert that the individuality of the pupil should be carefully considered, to the end that he may be instructed in the light of his limitations and capacity; and commend to all Local Authorities the necessity of greater care in the arrangement of courses of study, that they may be adapted to the pupils to be instructed, rather than that pupils should be adapted to fixed courses of study and inflexible systems of grading.

4. There is concededly a grave moral depression in our business and social atmosphere. The revelations of the financial and legislative world for the past two years denote a too general acquiescence in questionable practices and standards. We earnestly recommend to Boards of Education, principals and teachers, the continuous training of pupils in morals, and in business and professional ethics, to the end that the coming generation of men of affairs may have a well developed abhorrence of unfair dealing and discrimination. The establishment of the honour system in schools, the ostracism of the dishonest or unfair pupil, the daily exemplification in the routine life of the school of the advantage of honest and truthful methods, are commended to the especial attention of teachers as a partial means to this end.

5. The Bureau of Education at Washington should be pre-

Digitized by Google

served in its integrity and the dignity of its position maintained and increased. It should receive at the hands of Congress such recognition and such appropriation as will enable it not only to employ all expert assistants necessary, but also to publish in convenient and usable form the results of investigations, thus making that department of our government such a source of information and advice as will be most helpful to the people in conducting their campaigns of education. We are of the opinion that the importance of the subject under its control, and the dignity of this country require that this bureau be maintained as an independent department of the Government.

6. The National Education Association notes with approval that the qualifications demanded of teachers in the public schools are increasing annually, and particularly that in many localities special preparation is demanded of teachers. The idea that any one with a fair education can teach school is gradually giving way to the correct notion that teachers must make special preparation for the vocation of teaching. The higher standard demanded of teachers must lead logically to higher salaries for teachers, and constant efforts should be made by all persons interested in education to secure for teachers adequate compensation for their work.

7. It is the duty of the State to provide for the education of every child within its borders and to see that all children obtain the rudiments of an education. The constitutional provision that all tax-payers must contribute to the support of the public schools logically carries with it the implied provision that no persons should be permitted to defeat the purposes of the public-school law by forcing their children at an early age to become bread-winners. To this end the child labour and truancy laws should be so harmonized that the education of the child, not its labour, is made the chief concern.

8. The National Education Association endorses the increasing use of school buildings for free vacation schools and for free evening schools and lecture courses for adults and for children who have been obliged to leave the day school prematurely. We also approve of the use of school grounds for playgrounds and the use of school gymnasiums and bath-rooms for the benefit of children in the crowded districts during summer.

9. Local taxation, supplemented by State taxation, presents the best means for the support of the public schools and for securing that deep interest in them which is necessary to their greater efficiency. State aid should be granted only as supplementary to local taxation, and not as a substitute for it.

10. The National Education Association observes with great satisfaction the tendency of cities and towns to replace large School Committees or Boards which have exercised through Sub-Committees executive functions, to salaried experts.

11. We cannot too often repeat that close, intelligent, judicious supervision is necessary for all grades of schools.

12. The rapid establishment of rural high schools and the consolidation of rural district schools are most gratifying evidences of the progress of education. We believe that this movement should be encouraged until the children of rural communities enjoy the benefits of public education to an extent approximating as nearly as practicable the education furnished in urban communities.

13. The National Education Association wishes to record its approval of the increasing appreciation among educators of the fact that the building of character is the real aim of the schools and the ultimate reason for the expenditure of millions for their maintenance. There are in the minds of the children and youth of to-day a tendency toward a disregard to constituted authority, a lack of respect for age and superior wisdom, a weak appreciation of the demands of duty, a disposition to follow pleasure and interest rather than obligation and order. This condition demands the earliest thought and action of our leaders of opinion and places important obligations upon School Boards, superintendents, and teachers.

14. The National Education Association wishes to congratulate the secondary schools and colleges of the country that are making an effort to remove the taint of professionalism and other abuses that have crept into students' sports. This taint can be removed only by leading students, alumni, and school faculties to recognize that inter-school games should be played for sportsmanship and not merely for victory.

15. It is apparent that familiarity with the English Bible as a masterpiece of literature is rapidly decreasing among the pupils in our schools. This is the direct result of a conception which regards the Bible as a theological book merely, and thereby leads to its exclusion from the schools of some states as a subject of reading and study. We hope for such a change of public sentiment in this regard as will permit and encourage the reading and study of the English Bible as a literary work of the highest and purest type, side by side with the poetry and prose which it has inspired and in large part formed.

16. It is important that school buildings and school grounds should be planned and decorated so as to serve as effective agencies for educating not only the children, but the people as a whole in matters of taste. The school is becoming more and more a community centre, and its larger opportunities impose new obligations. School buildings should be attractive as well as healthful, and the adjourning grounds should be laid out and planned with appropriateness and beauty.

17. The highest ethical standard of conduct and of speech should be insisted on among teachers. It is not becoming that commercialism or self-seeking should shape their actions, or that intemperance should mark their utterances. A code of professional conduct clearly understood and rigorously enforced by public opinion is being slowly developed, and must one day control all teachers worthy of the name.

18. In teaching, as in other kind of work, the best service is secured by finding the individual best fitted to the particular place as indicated by training, experience, and meritorious service; the National Education Association therefore heartily approves a merit system of promoting teachers and filling vacancies. We assert, furthermore, that the grounds upon which a teacher may apply for a position are preparatory training, experience, and meritorious service—in a word, professional fitness alone; and that the use of other personal and political arguments is deplorable in the teacher and a serious menace to a high professional standard.

Resolved also, That public high schools should not be chiefly fitting schools for higher institutions, but should be adapted to the general needs, both intellectual and industrial, of their students and communities, and we suggest that the higher institutions might wisely adapt their courses to this condition.

And we also suggest to School Boards and superintendents the importance of securing for their high-school teachers who have not only abundant scholarship but also successful experience in teaching or efficient and practical training in pedagogy.

The foregoing principles and aims and the subsequent resolutions have been fully considered by the committee and unanimously adopted.

SCIENTIFIC METHOD IN THE STUDY OF EDUCATION.

By Prof. J. J. Findlay, M.A., Ph.D., and P. Sandiford, M.Sc.

(Summary of a paper read before the British Association at Dublin, a sequel to a paper read at the York Meeting of the British Association. *Vide* "Transactions," 1906, page 793.)

In the paper presented at York, Mr. Findlay confined his attention to experimental studies in school *teaching*, and indicated the lines on which he and others were at work in demonstration schools,* associated with Departments of Education or training colleges. The time now seems ripe for a wider review of methods for the improvement of education which, in a broad sense, may be described as "experimental" or "scientific": experiments in teaching form only one section of a large field which is being tentatively worked in many parts of the world.

1. A first group consists of investigations which do not directly raise questions of education at all, but are concerned solely with the physical powers of childhood and their development; they are really questions of physiology and hygiene—a branch of anthropometry. To these may be added inquiries into feeding, clothing, sleep, &c. It must be borne in mind that while such inquiries are invaluable as material for educational proposals, they are not of themselves directly of service, and the interpretations put upon them are often wide of the mark; for the school is a social organization which has to do its work under complex social conditions.

2. Allied to the above may be placed investigations into school appliances and the physical conditions under which children live while at school. This is a branch of public sanitation rather than distinctively a matter for pedagogics.

3. The third group is concerned with the organs of sense,

* Some of the results of the work in Manchester, as well as an account of the methods employed, are to be found in the *Demonstration School Record*, No. 1. (University Press, Manchester, 1908.)

Digitized by Google

eyesight, hearing, &c.; and we are still in regions where the physiologist and the physician are at home rather than the teacher. Their results need to be handed over for the use of schools, but the methods and processes of research are not a distinctive concern for the teacher.

4. A fourth group carries us forward to experimental psychology, to research in which the methods of the psychological laboratory are applied to the features of the growing organism as distinguished from the adult.

A large mass of very suggestive research has been undertaken, of which the work on "Fatigue" may be taken as typical. The most recent results show the grave difficulties encountered in endeavouring to interpret physical conditions in terms of mind (see Ellis and Snipe, *American Journal of Psychology*, 1903, page 232).

Experimental psychology, when the subjects of an experiment are children, undoubtedly would appear to have a close bearing upon the problem of the teacher, and a good deal of the work undertaken in Germany under the title of "Experimentelle Pädagogik" (see Schwarz in *School Review*, Chicago, January to September, 1907) shows that many investigators would desire to see stations for research in genetic psychology established as part of the equipment of Departments of Education.

It would appear, however, as if the methods of the psychological laboratory are too specialized, and too remote from the positive functions of the school, to be introduced as part of the pedagogical equipment of a University. Rather one would say that such a laboratory ought *to be at hand* wherever advanced work in the study of education is set on foot; and the psychologist ought to be asked to pay special attention to genetic studies in view of the practical importance of any results which he may reach. It is certain that if the laboratory can arrive at new conceptions of the mental life of the young, these results will find an immense field for application in the teaching profession.

5. Of an entirely different order are the numberless investigations conducted under the name of child study, especially in America by Stanley Hall and Earl Barnes, and more recently in Germany by Kerchensteiner and others. Here the investigator deals with experience, with mental "content" in ideas and feelings, or output in expression, rather than with mental qualities or faculties. These investigations, when conducted with real scientific ability, have greatly influenced the schools, for the teacher's business is directly concerned with the child's output—the fundamental difficulty felt by the psychologist as to the nature of mind process is largely avoided when attention is confined to achievement.

6. All the above groups are conducted on well recognized lines of control experiments, with quantitative measurements. But they only bring us to the threshold of the school; experiments which touch directly the business of the teacher encounter several difficulties—(1) they need a long period of time for their completion; (2) disturbing and qualifying factors are always presented, and cannot easily be reckoned with; (3) methods for estimating results have scarcely as yet been seriously considered. Such methods must obviously vary for each branch of instruction or school management. Both in the selection of the material of a curriculum, in methods of teaching, and in the corporate life of school a great amount of experimental work is being undertaken, but it can seldom hope to be placed on the same footing as regards exactness such as is attained in the earlier groups. Further, such work can seldom be undertaken without some *a priori* bias of general principles as to the underlying aim and function of the school.

It is, however, in this group that the proper business of a Department of Education centres; and it is here that the scientific attitude is most urgently needed by demonstrators and instructors. Material, Method, Corporate Life—each of these three sections—can be treated from the standpoint of scientific method. One of the pressing problems for investigation is to consider the principles on which results can be tested: here we should refer to a remarkable inquiry conducted in American cities by Dr. Rice (published in the *Forum*, from January, 1901, to 1902). Our English examining bodies collect every year a large mass of material which could be utilized to capital advantage for research, if means were at hand.

8. This leads us to a final group which takes the student outside the school walls—the administration and control of educational institutions. Here we have a field in which the methods of political science offer the model.

This cursory sketch serves to indicate the vast field that lies before the teaching profession when the time comes for the teacher to be trained on lines which demand an approach to scientific method. There are some signs that the Government, which controls so intimately the training of teachers, is beginning to realize its responsibility to take the lead in this work, by affording means to Universities and training colleges to make a beginning; the Education Bill of 1906 contained a clause on behalf of Demonstration Schools. But a fully equipped Department of Education in a University would be at least as costly to maintain as a medical school. It may be worth while for this Association to set on foot some means for collecting information as to the extent to which work is being attempted (either in Departments of Education or in schools) of a quality that can make pretensions to be regarded as scientific.

REVIEWS.

SECONDARY INSTRUCTION: STUDIES AND PROCESSES.

Principles of Secondary Education. A Text-book. By Charles De Garmo, Professor of the Science and Art of Education, Cornell University. Vol. I.: *The Studies.* (5s. net.) Vol. II.: *Processes of Instruction.* (4s. 6d. net.) (Macmillan.)

Prof. De Garmo here presents "an initial statement" of "the fundamental principles of American secondary education," discussing the curriculum in the first, and the problems of method in the second, volume. "The Processes of Training" are reserved for a third volume. The appendixes to the first volume, covering 79 pages are exceedingly instructive to the student of curricula, who will find in them material for the prosecution of inquiries outside the author's limits. They include many typical courses of study, both European and American; and it is interesting to note the large proportion of time devoted to literary subjects by the American secondary schools, here termed "Manual Training High Schools." In both volumes there is a liberal provision of "Topics for Discussion," which are intended to be treated as exercises performed in class. This excellent feature of a college text-book is occasionally marred in the present case by a certain pretentiousness in some of the topics proposed: a thorough, or even a fruitful, discussion of these would be beyond the knowledge and ability of the persons for whom most of the book appears to be written.

Judging it from a purely British point of view, the book must be pronounced disappointing; there is a lack of proportion in treatment, in consequence of which some parts are needlessly inflated and others unduly contracted. The "Introduction—Presuppositions underlying American Secondary Education," raises the thorny questions which centre round the mutual relations of the individual and the community; these problems are fundamental, yet they are dismissed in fourteen pages. Such compression not only courts defeat, but plays into the hands of that numerous and most mischievous class of "educationists" who are ever on the look-out for generalizations that cost them nothing for the making. One would have preferred in this "Introduction" a reasoned statement at some length of the principles which the author conceives to lie at the base of all courses of study pursued for strictly educational purposes. Such a statement is not supplied, either as a set of deductions *a priori* or as the outcome of a minute study of some sufficiently well established curricula. Accordingly, when we come to chapter v., "The Organization of Studies and Curricula," the treatment is elusive and unconvincing, because it wants the guidance of a few master principles clearly formulated. We are told that the pupil "must recapitulate in a brief time at least an epitome of the acquisitions of the race" (II. 69), but we are left to wonder why he must, and no notice is accorded to the objection that he can't.

The greater part of the first volume is occupied in considering the educational value of the branches of study followed in the secondary schools of America. While the author is willing to concede a restricted and not very considerable value to "mental discipline" or "formal training" as a factor in the worth of any given study, he takes what seems to be the thoroughly sound position that it is specific content which makes any branch of human attainment valuable or not as a school "subject." Studies are classified under the three great heads: Natural Sciences, Humanities, and Economic Science—the last being an *omnium gatherum* betokening a breakdown in the classification. With reference to the first two groups, Prof. De Garmo's position will perhaps be fairly described as being in the "left centre" of

Digitized by Google

orthodoxy: he assigns a much greater value to the study of foreign languages, ancient as well as modern, than is commonly conceded by American writers on education. With admirable courage, he quotes the opinion of the Prussian Commissioner who saw the outcome of transatlantic Latin teaching in "the proud inscription, 'Per Pacem ad *Libertas*' (*sic*) in one of the principal rooms of the Philippine exhibit at St. Louis."

Prof. De Garmo's third or "Economic" group of studies includes commercial geography and history, "economic physics, chemistry, and biology," mechanical drawing, manual training, housewifery, book-keeping, typewriting, shorthand. Whereas the studies of the former groups are canvassed at great length, the specific values of this economic group are considered in less than ten pages. It is commonly understood that America is rapidly and successfully developing the more educational side of "bread studies," thus establishing what is styled "vocational education." Brevity on such a matter is particularly disappointing to the foreign student of the process. The inclusion in secondary-school courses of some of the so-called "bread studies" is a necessity of modern life, justified not only by material advantage, but also by the principle that a school course ceases to educate when it gets out of touch with life beyond the school walls. But their inclusion is surrounded by very real difficulties. While the studies themselves are in most cases not yet sufficiently defined and systematized to serve as instruments of education, the men and women who can employ them in that capacity are few in number. There is therefore a demand for a broad and deep discussion of the principles which must govern the educational use of this economic group of studies; but the author does not give it attention. It will not do to accept these studies as "of course": the consequence of that attitude is the plethoric curriculum so familiar in Europe.

Save for a much needed and most useful statement discriminating between the positions of the researcher and the schoolboy (pages 67–78), the second volume is little more than a reiteration of what is found in any modern text-book of inductive logic. One sympathizes with the desire to reinstate logic in that high place in method from which so many books on teaching have tried to depose it. But, if educational method is no more than can be found in the logical text-book, why the volume under review? It is extraordinary to find no specific presentment of mental processes as such in a book bearing the title "Processes of Instruction." The author's own statements *passim* lead us to expect some notice from him of the psychological side of the instructor's problem. Thus he speaks of "the mastery of a system of thought" (II. 158), but devotes no space to the consideration of the nature and growth of such a system. He insists that every study has a twofold aspect—first, as "knowledge," which gives insight, and second as "technique," or practical application, which gives efficiency. He deprecates the consideration of any studies as being specifically forms of skill, on the ground that such a conception of them would "obscure the organic nature of the curriculum" (I. 139), and "would wholly fail to account for its modern developments" (165). But this is little to the point so long as these very developments lack that full consideration of whose absence we have complained above. We look in such a book as the present for some treatment of the psychological questions which the instructor must answer, whether he is helping his pupil to acquire insight or efficiency. It does not avail to say (II. 152 ff.) that the psychologist is interested in the individual, whilst education is primarily social or sociological. Prof. De Garmo himself declares, on his very first page, that "in education what is best for the individual is also best for society." The instructor, therefore, must have an eye to the individual pupil, and to do this he must take into account factors other than the logical. While this is true both in teaching which aims at knowledge and in teaching whose purpose is skill, it is especially necessary in the latter case. Possibly the psychological treatment of the processes of instruction is reserved for the third volume. If so, the order of presentation appears to us to be faulty.

The press-work and general "get-up" of these volumes are very good. We have noted a few misprints, in proper names chiefly—some of them not readily excusable.

Mr. Hall Caine's Reminiscences.

My Story. By Hall Caine. (6s. Heinemann; for Collier & Co., 2 Tudor Street, E.C.)

In this volume Mr. Hall Caine does not present a regular and complete account of his career. He speaks of the work as an "autobiographical fragment." It is mainly concerned with his literary relationships during the earlier half of his life, and especially with D. G. Rossetti. The first part contains a sketch of his childhood and youth in the Isle of Man, "partly for the sake of the picture it must needs present of a curiously self-centred little community that was strangely out of touch and harmony with the rest of our kingdom as recently as half a century ago, and partly, perhaps, for such interest as it might possibly possess for some of the readers of the novels with which my name is associated." It contains also a slight account of his early days in Liverpool (where the home of his parents was) and of his first literary friends (among them Ashcroft Noble and William Watson), and of the steps leading up to his acquaintance with Rossetti. The main interest of the book is centred in the second part, which recounts pretty fully his association with Rossetti—"the story of that friendship, the greatest, the most intimate, the most beautiful that has ever come to me," and probably the most painfully trying. It is a pitiful story indeed, and one that need not have been told at all but for the prevalence of other versions less creditable to the author's friend. It appears, then, that Rossetti's gloomy solitude was not "the result of morbid brooding over the insults of adverse critics," but of "a deep-seated and wholly unnecessary sense as of a curse resting on him and on his work, whereof the malignancy of criticism was only one of many manifestations." It was, in fact, the result of "remorse, not perhaps for any unkindness, any want of attention, still less any act of infidelity on his part, but for the far deeper wrong of failure of affection for the one being to whom affection was due." To Mr. Hall Caine's mind, this revelation

> lifted him [Rossetti] entirely out of the character of the wayward, weak, uncertain, neurotic person, who could put up a blank wall about his existence because his wife had died by the accident of miscalculating a dose of laudanum; who could do a grave act and afterwards repent of it and undo it [that is, the burial of the manuscript poems in his wife's coffin]; who could finally shut himself up as a hermit and encourage a hundred delusions about the world because a rival poet resented his success. Out of this it raised him into the place of one of the great tragic figures of literature—one of the great lovers whose lives as well as their works speak to the depth of their love or the immensity of their remorse.

It will not be easy for every reader to enter into this view of the matter. The drugs have much to account for, and the absence of fresh air and of a circle of non-worshipping friends. In any case, the description presented by Mr. Hall Caine is sufficiently painful and repulsive. The Third Part consists of fragmentary notes about Ruskin, Buchanan, Blackmore, and Wilkie Collins, and about the author's first essays in journalism, in fiction and drama, his visits to America, and his general reflections on the literary life. The substantial part of the book is the detailed account of the author's association with Rossetti; the rest does little more than fill out the proportions of the volume. The style is generally simple and agreeable, and, though the author writes in the first person and of himself, he is not by any means unduly self-regarding.

A Mathematical Miscellany.

A Scrap Book of Elementary Mathematics. By William F. White, Ph.D. (5s. net. Chicago: Open Court Publishing Company. London: Kegan Paul, Trench, Trübner, & Co.)

Beneath a modest title, which, however, in a great measure, accurately defines the nature of the materials of Dr. White's work, the volume before us contains a wealth of interesting facts, some serious and of great educational value, others useful and suggestive and culled from the stores of the history of mathematics; others, again, are scraps dealing with the science in its lighter vein, as it appears in the form of puzzles. Those readers are many and of varied tastes who may take up the volume and expect to meet with what each, in turn, will find personally attractive. The opening sections deal with topics calculated to interest students of the higher arithmetic and the theory of numbers. We give one example only in mentioning that the author, in one of his chapters, draws attention to numbers that, when multiplied, by successive integers reproduce, in general, the same series of digits arranged in cyclic order: *in general*, for the multipliers giving exceptional results, together with the reason of the peculiarities observable, are duly indicated. In connexion with this portion of his subject, the author expresses indebtedness to a mathematician whose name is well known to some of our readers, namely, Prof. E. B. Escott.

Excellent sections treat of the trends of arithmetic at the

Digitized by Google

present time, amongst others the gradual, but sure, tendency in our day towards decimalization in Arithmetic. The author, however, does not fail to comment on the intrinsic superiority of 12 over 10 as the radix of notation, if only some mighty intellect, far in advance of his time, had been present to influence our forefathers when making and developing their choice. The chapter avowedly on *multiplication* of decimals, but dealing also with *division*, is interesting both in its educational and in its historical aspect, whilst, from the historian's point of view, the pages which touch on the arithmetic of the Renaissance are valuable, though confined to a few notes. Teachers will probably be helped by Dr. White's investigation of the true relation which exists between axioms regarding equality and algebraic equations, and some, perhaps, will be grateful to him for the illustrative examples by which he proves the truth of his tenets: further, his notes on the true principle of useful checking and on other important points in elementary work are worthy of careful attention. The sections on pure geometry touch on the postulates connected with the theory of parallels, on various puzzles of a geometrical character, and on the celebrated problems of antiquity, namely, the trisection of an angle or arc, the duplication of the cube, and the squaring of the circle. Also, there is a brief reference to the geometry of the triangle and its allied points and circles. It is impossible to accompany Dr. White through all his sections in the course of a brief review, but no study of his book would be complete that did not point out the following pages and chapters. Historically interesting is the page of reproductions of specimens of the autographs of famous mathematicians. Educationally valuable is the consideration of "Mathematical Recitation as an Exercise in Public Speaking." Deeply inspiring notes are struck in the chapter on the nature of mathematical reasoning, whilst the sequel to Alice's Adventures in Wonderland as told by Dr. White in "Alice in the Wonderland of Mathematics" is graceful, imaginative, and delightful. In conclusion, the book is well worth reading, and many who read it will, we think, wish to possess it for the sake of some at least of its pages.

GENERAL NOTICES.

CLASSICS.

The Comedies of Terence. Edited by Sidney G. Ashmore, L.H.D., Professor of Latin in Union College, Schenectady, N.Y. (6s. Oxford University Press, American Branch.)

Prof. Ashmore adopts substantially Prof. Tyrrell's Clarendon Press text ("Scriptorum Classicorum Bibliotheca Oxoniensis"), not merely because the publishers naturally desired to have their own text annotated, but "owing chiefly to the conviction that Dziatzko's text is, on the whole, inferior." Dziatzko did great things for the text, and it is no discredit to him if a successor make further improvements; what is more surprising is that an American scholar should stand clear of his colleagues "who imagine that no good critical text of an ancient classic can come out of England"—which is nowadays to imagine a vain thing. Prof. Tyrrell's brief critical apparatus is given at the foot of the page, and is very usefully supplemented by Prof. Ashmore's critical appendixes. An extensive introduction explains and discusses in every important aspect the history of ancient comedy, with special attention to Terence—a very instructive and convenient essay. In the notes, Prof. Ashmore makes Terence his own commentator, as far as possible; but he has, of course, availed himself of the current literature on Terence, as well as of much of the literature on Plautus. In the explanation of the Latin, the notes are usually concise and pointed; the legal expressions miss treatment from a scholar that knows the familiar original sources—a strangely common failing in editions of literary classics. Thus, "hanc mi in manum dat" (Andr., ii. 3 [i. 4]) is slurred over, and the technical expression (which is not in question here at all) is treated inadequately, and even misleadingly. The references to American grammars and journals constitute a certain drawback to the utility of the edition on this side of the water, but that may be got over easily. The treatment is sincere and capable (with the limited exception indicated), and the work will be very welcome in schools where Terence is read. The typography of the Riverside Press needs no commendation.

Select Epigrams of Martial: Spectaculorum Liber and Books I.–VI. Edited from the text of Prof. Lindsay by R. T. Bridge, M.A., and E. D. C. Clarke, M.A., Assistant Masters at Charterhouse. (Clarendon Press.)

The editors have done well in accepting the text prepared by Prof. Lindsay, apart altogether from its place in the publishers' series of Oxford Classical Texts. The introduction furnishes a connected account of features of Roman life that are constantly emerging in the epigrams

Digitized by Google

—patron and client, legacy-hunting, recitations, books, &c.—as well as a sketch of Martial's life and of his handling of the epigram, and an account of the public spectacles. The notes are concise: they are mainly directed to elucidation of the thought and point of the epigrams, but real difficulties in the Latin are not left unexplained. Proper names are fully dealt with in a special index. The volume is very carefully and ably edited, and will be welcomed in the upper forms of schools. We noticed the second volume—Books VII.–XII. —in April, 1907.

The Year's Work in Classical Studies, 1908, edited by W. H. D. Rouse, M.A., Litt.D., Head Master of the Perse Grammar School, Cambridge (2s. 6d. net, John Murray), furnishes a very convenient and most useful record. There are eighteen chapters dealing with the progress of classical study in as many different spheres: classical work in the schools, excavations in Greece and Italy, archæology, history, grammar, palæography, sculpture, numismatics, religion, literature, New Testament, &c. The only subject conspicuous by its absence is Law—not the least important of classical subjects, though too often unsatisfactorily treated in editions of classical texts. Much of the matter is very condensed, indicative rather than explanatory; but the foot-note references come to the rescue, and we hope that the editor will be encouraged, before many more annual issues (this is the third only), to allow his contributors to be more expansive.

MATHEMATICS.

A New Geometry for Middle Forms. By S. Barnard, M.A., and J. M. Child, B.A., B.Sc. (3s. 6d. Macmillan.)

We have in the past had occasion to notice very favourably the treatise written by the above-named writers and entitled "A New Geometry for Schools"—a work subsequently divided and issued, together with a treatment of the subject of solid geometry, in two volumes, namely "A New Geometry for Junior Forms" and "A New Geometry for Senior Forms." The present publication contains all that is to be found in the text-book for junior pupils and also a portion of what is included in the volume for the senior forms. Hence the treatise now before us is medium in its character. Including as it does the subjects treated by Euclid in his first four Books, it may be used as an excellent text-book for examination purposes by candidates reading for University of London Matriculation or preparing for the Oxford and Cambridge Junior Locals and examinations of like standard. The work is published in very serviceable form.

Geometry, Theoretical and Practical. Part II. By W. P. Workman, M.A., B.Sc., and A. G. Cracknell, M.A., B.Sc., F.C.P. (2s. Clive.)

Part I. of this publication came before our notice a considerable time ago, and, as a text-book which combined some of the best features of the old and the new systems of teaching geometry, the work attracted very favourable notice. Part II. of the treatise is a fitting sequel to the more elementary volume and deals (1) with the theory of areas which forms the subject of Euclid's Second Book and the end of his Third Book, (2) with the principal propositions on regular polygons, (3) with the theory of ratio, proportion, and similar figures, and (4) with more modern topics: *e.g.*, inversion, harmonic section, and centres of similitude. The subject of rectangular areas is treated both by pure geometry and by algebraic methods, and, although the discussion by either is in itself sufficient, the writers strongly recommend that those who use the text-book should study both. Euclid's treatment of ratio and proportion gives place to a consideration based solely on the arithmetical definition of a ratio and its application to commensurable quantities; but, for the sake of completeness, a chapter on irrational numbers is introduced at the close of the volume. The demonstrations are clear and satisfactory and are fully illustrated by neat diagrams.

Preparatory Mathematics. By A. Clement Jones, M.A., Ph.D., and C. H. Blomfield, M.A., B.Sc. (1s. 6d. Nelson.)

The ideas that form the basis of this little volume of exercises are useful and practical. The main subject treated is arithmetic, but a first introduction to algebra and elementary geometry finds place here also, and supplies the teacher with the means of co-ordinating in his lessons the various branches of preliminary mathematics. Whilst providing a general syllabus in accordance with which the course of instruction may be arranged, the authors have grouped the exercises as far as possible with respect to difficulty, and with little regard for definite order of study. The plan has been adopted with a view to training the pupil to be thoughtful and self-reliant, and not to judge what rule is required for the working out of a particular exercise from the position of the latter in his book. A valuable principle also underlies the endeavour to lead up informally to a fresh subject, so that the pupil may not approach his serious work on new material without having first become more or less familiar with its ideas and its terminology. The lines on which the volume is written agree with rather than follow the suggestions of the British Association Special Committee, since the reader learns from the preface that the work was well in hand before the Report of the Committee was issued.

SCIENCE.

Examples in Elementary Mechanics: Practical, Geographical, and Theoretical. By W. J. Dobbs, M.A., sometime Foundation Scholar of St. John's College, Cambridge. (5s. Methuen.)

The volume is "designed to cover the ground of an elementary course without the use of an accompanying text-book." The text-book is dispensed with by the insertion of brief and pointed explanations and of fully worked examples. The examples are abundant and varied and they are very carefully graduated. The practical exercises requiring the use of apparatus (of the simplest description) are designed "either for the purpose of driving home some definite principle or as requiring the use of such a principle for their interpretation." The work has been compiled with great labour and care, and cannot fail to be most valuable in practice, whether with or without a text-book. Answers are appended, and there are fifty-two diagrams.

The Principles of Mechanics. For Students of Physics and Engineering. By Henry Crew, Ph.D., Fayerweather Professor of Physics in North-Western University. (6s. net. Longmans.)

Prof. Crew assumes a previous course of general physics and a course (either concurrent or antecedent) in the Calculus. Confining the treatment to such part of the subject as is common ground for the physicist and the engineer, he "builds the discussion upon a few simple experiments and upon definitions which convey at once the physical meaning of the quantities defined"; and, to reduce the inherent difficulties to a minimum, he "treats dynamics in two analogous parts, rotational and translational, such that if either one is given the other may be immediately deduced." A very interesting chapter is devoted to some applications of general principles to special problems. The last chapter treats of "Fluid Motion." The handling is simple and perspicuous; problems and exercises are furnished; and there are 110 figures.

First Course in Biology. Part I., Plant Biology. By L. H Bailey. Part II., Animal Biology, and Part III., Human Biology. By Walter M. Coleman. (Macmillan.)

This volume does not seem to fit into English school biological teaching so well as into the newer American arrangements for which it is primarily designed. "In the natural science field," we learn, "the tendency is to attach less importance to botany and zoology and physiology as such, and to lay greater stress on the processes and adaptations of life as expressed in plants and animals and men This tendency is a revolt against the laboratory method and research method of the college as it has been impressed into the common schools." The treatment accordingly reverts, in the main, to descriptive and observational methods, with a constant purpose of applying the lessons to daily life. "The very reason for knowing plants and animals is that one may live with them, and the reason for knowing oneself is that he may live his daily life with some intelligence." Hence in the third part there is a good deal of matter that one usually finds in books on hygiene. "The book stands between the unorganized Nature study of the intermediate grades and the formal science of the more advanced courses," and certainly it contains a large amount of very useful information and suggestion. There are 302 + 408 + 132 figures.

The Young Engineer; or, Modern Engines and their Models. By Hammond Hall. (5s. net. Methuen.)

Mr. Hall mostly leaves to Dr. Smiles and other popular writers the story of the early years of the steam engine, and restricts himself as closely as possible to giving a clear outline of the principles of modern engine practice. Having set in order the workshop and its furniture, he describes the steam engine in its various forms and the locomotive engine; shows how to make and run model locomotives ("the most fascinating" of all branches of model engineering, "and the one requiring the greatest amount of skill and technical knowledge"); and then deals with marine engines (the designs for which "illustrate the most remarkable applications of the inventive genius of the mechanic, the greatest talent of the designing engineer, and the best work of the engine builder"), the steam turbine, steam generators, models, and so forth. A boy with a mechanical turn will catch Mr. Hall's enthusiasm and get absorbed in his patient and lucid description of machinery and its working. There are eighty-five illustrations.

HISTORY.

The Development of Modern Europe: an Introduction to the Study of Current History. By James Harvey Robinson, Professor of History, and Charles A. Beard, Adjunct Professor of Politics, in Columbia University. Two volumes. (6s. 6d each. Ginn.)

The authors believe that, "in general, Europe of to-day can be quite well understood if the wonderful achievements since the opening of the eighteenth century are properly grasped." Accordingly, they start from Louis XIV. and the reconstruction of Europe at Utrecht; and the first volume goes down to the reconstruction at the Congress of Vienna, the second continuing the history to the present day. The standpoint is the present, and the past is treated so as to furnish the explanation of how the present has been evolved out of it. Occurrences that appear to have been of merely temporary prominence have been omitted as not relevant to the specific purpose of the work. The dependence of the nineteenth century upon the eighteenth is emphasized: "it was the eighteenth century which set the problems of progress and suggested their solutions, leaving to its successor the comparatively simple task of working them out in detail and making fuller application of them." There is somewhat of strain in this way of characterizing the two periods, but in any case it is well to lessen the break between the centuries that has usually been made by the date 1789. The political and military events are allotted a markedly reduced space, in order to make room for a more generous treatment of the more fundamental economic matters: "the industrial

Digitized by Google

revolution, commerce and the colonies, the internal reforms of the European States, even the general advanced science, have all, so far as possible, been given their just due." In such a large field the selection and the handling of topics must be severely limited, but the authors rely for amplification and enlivenment upon the current use of "Readings in Modern European History," a collection that "follows the narrative chapter by chapter and furnishes examples of the stuff of which history is made." We have not seen these "Readings," but no doubt they are analogous to certain volumes of representative extracts that are familiar to us—extremely useful adjuncts to historical study in schools. Here and there the narrative suffers from compression, and sometimes one feels that the outlook is not exactly from the English standpoint; but these are trifles in view of the clear and fluent presentation generally characterizing the work, which is very ably and judiciously executed. The maps constitute a valuable feature: the first volume has 22 and the second 15. There are 21 illustrations (6 in the first volume and 15 in the second), a dozen of them being full-page portraits of men of eminence in various departments of public usefulness. The volumes are well printed and strongly bound.

Messrs. Hodder & Stoughton issue a very handy and agreeable popular edition of *A Short History of Social Life in England*, by M. B. Synge, F.R.Hist S. (3s. 6d.). It is a most interesting "sketch of the material conditions in which our ancestors lived. It is pre-eminently a book of detail: it presents a brief glimpse of "their houses, their food, clothes, manners, punishments, of their wives and children, of their gardens, their education, with some account of the social changes that have taken place throughout the ages." The volume, though of independent interest, should be read in conjunction with the ordinary history, the outlines of which it, of course, presupposes.

RELIGIOUS AND MORAL.

The Century Bible.—(1) *Deuteronomy; Joshua.* By the Rev. Prof H. Wheeler Robinson, M.A. (2) *Proverbs, Ecclesiastes, and Song of Solomon.* By the Rev. Prof. G. Currie Martin, M.A., B.D. (2s. 6d. net each. Jack.)

(1) The Book of Deuteronomy "can claim a unique place in the literature of the Old Testament, both on intrinsic and extrinsic grounds," which Mr. Robinson clearly explains. As to its date, "the most convincing proof that the book belongs to an age much later than the Mosaic lies in the cumulative force of the reconstruction of the history of Israel's religion, afforded by many independent data": Mr. Robinson concludes that the central part of it must have been written either in the long reign of Manasseh or in the earlier part of the reign of Josiah (637–608), the latter date being perhaps the more probable. The sections of the Introduction dealing with the Deuteronomic legislation and the Deuteronomic religion are very able and instructive. On the former subject constant reference is made in the notes to the laws of Hammurabi, "which are of the greatest importance for the interpretation of Hebrew law, with which they are closely related, if not as direct source, yet certainly as developed from a common origin and amongst a related people." The treatment of "Joshua" is also remarkably capable and illuminating. The volume will rank among the very best of the excellent series.

(2) The three books of Mr. Martin's volume exemplify "the lighter side of Jewish literature": "two of them are strictly poetic in form, while the third contains many passages of exquisite poetic prose." The introductions handle discreetly and shrewdly the very difficult questions of the origin, character, and purpose of the books; and the notes contribute immensely to the proper understanding of the text, a special feature being liberal illustration from widely different literary sources. Mr. Martin has done his work with great ability and resourcefulness in the face of multiplied difficulties. His volume will be most welcome to all serious students of the books.

Select Readings from the Psalms for family and private use, by Joseph B. Mayor (3s. 6d. net, Murray), have been compiled on the principle of "the exclusion of whatever is not in harmony with the higher revelation of the New Testament." The principle is fully explained and illustrated in an able and charming preface. The Readings are given in two forms, the Prayer Book Version and the Revised Version being placed on opposite pages. The type is large and agreeable.

MISCELLANEOUS.

The "Knowledge" of the Circular Slide-Rule Calculator, designed by Major B. Baden-Powell and published from the office of *Knowledge* (27 Chancery Lane, W.C.), is a simple appliance enabling one "very rapidly to obtain approximate results, even with large figures, in multiplication and division," and to find promptly the equivalents of English and foreign measures. One can readily appreciate the difficulty of producing the apparatus in such a simple and practical form. (3s. 6d.; postage, 2d.)

Messrs. George Philip & Son issue a *Graphic Globe* (1s. 6d. net), carefully designed, fully and clearly lettered and turning on a tilted axis fixed on a brass tripod. Also a *Slate Graphic Globe* (1s. 6d. net), without lettering, but with black-slated surface like a blackboard (the land in white), on which chalks or pencils may be used. Mounted on a black polished stand. Both forms may be very usefully applied in the teaching of elementary geography.

FROM GINN & COMPANY'S LIST.

GOOD HEALTH.

By F. G. JEWETT.

Revised for use in English Schools by **ALICE RAVENHILL**, F.R.San.I., Lecturer London University Extension Board.

Designed for pupils from ten to twelve years of age, treating of hygiene rather than anatomy or physiology, special emphasis being laid upon personal hygiene.

Fully Illustrated. 171 pages. Price 1s. 6d.

THE MOTHER TONGUE.

By G. L. KITTREDGE and S. L. ARNOLD.

BOOK I.—Specially revised for use in English Schools by **JOHN W. ADAMSON, B.A.**, Professor of Education, King's College, London. **LESSONS IN SPEAKING, READING, AND WRITING ENGLISH.** xiv + 294 pages. Illustrated. Price **1s. 6d.**

Opinions of His Majesty's Inspectors:

"I should be very glad to see it in use in all our schools."

"I do not know of any better method of teaching English than that so carefully developed in 'The Mother Tongue.'"

"The most practical text-book I know for teaching the Mother Tongue."

BOOK II.—ELEMENTARY ENGLISH GRAMMAR, WITH LESSONS IN COMPOSITION. xxii + 417 pages. Price **3s.**

BOOK III.—ELEMENTS OF ENGLISH COMPOSITION. xx + 431 pages. Price **4s. 6d.**

SELECTIONS from STANDARD FRENCH AUTHORS. Edited by O. G. GUERLAC. Selections from the works of such writers as Molière, Pascal, La Fontaine, Victor Hugo, Bossuet, Voltaire, Rousseau, and Renan. With Notes, Vocabulary, and Biographical Sketches. 220 pages. Price 2s. 6d.

DIX CONTES MODERNES. Edited by H. A. POTTER. Specimens of current French with English Paraphrases at end of book for retranslation. 95 pages. Price 1s. 6d.

GLÜCK AUF. A First German Reader. By M. MÜLLER and C. WENCKEBACH. Intended primarily for beginners. The central idea of the book is to introduce the student at once to facts, ideas, and sentiments, which are in close relation to German life. 235 pages. Price 3s.

FIRST YEAR GERMAN. By W. C. COLLAR. The aim of this book is to lay out in orderly progression for beginners, having not less than four lessons a week, one year's work in speaking, reading, and writing German. The facts and usage of the language are exhibited first in each lesson; then follow observations, rules, and practice. Selections in prose and poetry are freely interspersed, and at the end of the book are massed to the amount of forty pages. 336 pages. Price 4s. 6d.

MATERIALS FOR PRACTICAL GERMAN CONVERSATION. Edited, with Introduction, Notes, and Vocabulary, by L. FOSSLER. An attempt to surround the pupil with an atmosphere of everyday German as actually spoken. 255 pages. Price 3s.

ELEMENTARY GERMAN FOR SIGHT TRANSLATION. By R. C. FORD. Planned for use as soon as classes are able to take up easy reading. 43 pages. Price 1s.

THE BLAISDELL PHYSIOLOGIES.

THE CHILD'S BOOK OF HEALTH. A First Book of Hygiene, presenting easy lessons for Junior Classes. 1s.

A SUPERVISOR OF SCHOOLS says: "A book to be read by every boy and girl of ten years and upwards."

HOW TO KEEP WELL. Simple, teachable, and replete with Suggestions for Teachers. Price 2s.

OUR BODIES, AND HOW WE LIVE. Simple in style, with no attempt at scientific discussion. Adapted for the Higher Standards. Price 3s.

HOW TO TEACH PHYSIOLOGY. Handbook for Teachers. Price 6d.

GINN & COMPANY, 9 St. Martin's Street, W.C.

FIRST GLANCES.

Classics.

Latin Prose, An Introduction to. By George W. Mitchell, M.A., Assistant Professor of Latin and Greek, Queen's University, Kingston, Ontario. 3s. 6d. Macmillan.

[Presents a method "by which the student may be trained from the very beginning to look beyond *words* to *ideas*." "Constructions and idioms are introduced as rapidly as the average student is capable of mastering them, and grammatical forms are reduced to a minimum." Abundance of exercises. Practical.]

Latin Reader, A. By W. King Gillies, M.A. Glas., B.A. Oxon., Senior Classical Master in the High School of Glasgow, and Hector J. Anderson, M.A. Edin., B.A. Oxon., Inspector of Training Colleges, Cape Colony. 2s. Bell.

[Verse and prose; good matter chosen from wide area. Provides "easy and interesting reading for the second and third years." Some pertinent notes added; vocabulary. Very useful.]

Latin Reading Book, A, "in usum Tironum." By the Rev. E. D. Stone, formerly Fellow of King's College, Cambridge, and Assistant Master at Eton. 1s. 6d. Macmillan.

[Prose (52 pieces) and poetry (34). Interesting matter in sufficiently idiomatic Latin; some verse passages are translations of English poems, placed opposite; selections from Virgil partly given by reference. Very attractive and practically serviceable collection.]

Mathematics.

Arithmetic, A Complete. By M. Eastwood, B.Sc., formerly Lecturer in Education in the University of Liverpool, and J. Lightfoot, D.Sc., M.A. 4s. net. Ralph, Holland, & Co.

[Abundant exercises; answers.]

Arithmetic, Correlated, Pitman's. By T. W. Trought, B.A., Head Master, Camden Street Council School, Birmingham, formerly Lecturer in Mathematics, &c., at Chester Training College. Book IV., 3½d. Book III., Answers, Notes, Oral work, &c., 1s. 3d. net,

Arithmetic, Girls', McDougall's. Book I. (Teachers')—for Class IV., 1s. 3d. net.

[Exercises oral and mental; practical problems. Answers.]

Arithmetic, Practical, Examples in: based upon Consterdine and Andrew's "Practical Arithmetic." Compiled by J. L. Martin. Part II., 6d. Murray (School Library).

[Varied, practical; serviceable.]

Arithmetic, Short Methods in. By M Eastwood, B.Sc., and J. Lightfoot, D.Sc., M.A. 1s. 3d. net. Ralph, Holland, & Co.

[Compiled by Mr. J. E. Dean, on the basis of the authors' "A Complete Arithmetic" (see above).]

Arithmetic, Special Method in. By Charles A. McMurry, Ph.D. 3s. net. Macmillan.

[Explains purpose of teaching arithmetic, outlines fully a course of study, and discusses and illustrates the method of handling some of the chief topics.]

Calculus, Differential and Integral. By Daniel A. Murray, Ph.D., Professor of Applied Mathematics in McGill University. 7s. 6d. Longmans.

[Matter mainly from Prof. Murray's "Infinitesimal Calculus," with additions, and considerably altered treatment.]

Geometry, Intermediate: Experimental, Theoretical, and Practical. By Alexander Leighton, M.A., B.Sc., F.E.I.S., Senior Mathematical Master, Morgan Academy, Dundee. 1s. 6d. Blackie.

[For beginners; "such a course as would form a suitable curriculum in elementary geometry in higher-grade or secondary schools." Examples numerous and good; answers.]

Geometry, Projective, An Introduction to. By L. N. G. Filon, M.A., D.Sc., Fellow and Lecturer of University College, London, Examiner in Mathematics to the University of London. 7s. 6d. Edward Arnold.

[Theory of conic sections on modern lines.]

Logarithms, A B C Five-Figure, for General Use. By C. J. Woodward, B.Sc. 3s. net. Spon.

[Second edition. Explanatory introduction; elaborately contrived for convenience; substantially got up.]

Mathematics, Pure, A Course of. By G. H. Hardy, M.A., Fellow and Lecturer of Trinity College, Cambridge. 12s. net. Cambridge University Press.

[Primarily for first-year University students of "scholarship standard." Considerable space given to discussion and application of fundamental ideas of the calculus. "Really elementary."]

French and German.

German Reader, Historical. By J. E. Mallin, Assistant at Strand School, King's College, London. 2s. George Bell.

[Interesting passages representing the various periods of German history. Brief notes; vocabulary; illustrations. Very useful.]

Le Français Parlé et Ecrit: Livre des Commençants. By A. Stallworthy, M.A., Royal Grammar School, Newcastle-on-Tyne. 3s. 6d. Murray (French Course).

["For the lower forms of the ordinary secondary school." Combines a progressive conversation course with a graduated grammar course. "Aims at laying a solid foundation of cultured colloquial French." Phonetics made auxiliary to the lessons. Immense scope for practice. Excellent.]

Plays, French, for Children. (1) Dans le Royaume des Fées: a second series (4 plays) by Violet Partington, Brevetée, French Mistress at the Queen's College School, &c. Horace Marshall. (2) La Belle au Bois Dormant. By Ellen C. Hainsselin, Blackheath High School. Music by R. Waddy, A.R.C.O. (3) Le Chalet Poucinet. By Mrs. J. G. Frazer. (4) Le Chevalier du Guet. By E. Magee, Edgbaston High School for Girls, Birmingham. With Music. (5) Le Petit Grand-Père et la Petite Grand'-Mère. Par Käte Weber, Diplômée de la Sorbonne et de la Guilde Internationale, Paris (traduction française par A. Bourdass, Diplômée de la Sorbonne et de la Guilde Internationale, Paris). (6) Cendrillon. By E. Magee. (7) Fleur de Neige. By Ellen C. Hainsselin. (8) Le Petit Chaperon Rouge. By Ellen C. Hainsselin. Music by R. Waddy. (9) Le Petit Poucet. By Ellen C. Hainsselin. Music by R. Waddy. 4d. each. Blackie (Little Plays for Acting or Class Reading).

[Very engaging and effective.]

Sprache und Literatur, Das Wissenschaftlische Studium der deutschen: ein Wegeiser für Studirende. Von Dr. Phil. Heinz Hungerland, z.z. Lektor der deutschen Sprache an der Universitat zu Lund. 1 kr. (or 1.12 M.). Möller (Lund).

[Brief guide to students in all departments—much too brief. Reprinted from the "Skandinavisk Månadsrevy för Undervisning i de tre hufudspråken."]

Religious and Moral.

Bible Lessons for Schools: (1) Genesis; (2) Exodus. By E. M. Knox, Principal of Havergal College, Toronto. 1s. 6d. each Macmillan.

["Each lesson contains the story of one or more chapters, together with the moral and spiritual truths most clearly to be deduced from them." Thoughtful, careful, simple. Broad treatment of Exodus specially noteworthy; seven illustrations.]

Bible Narrative, The Child's. Cassell.

[Broad outline; in the words of the Authorized Version. Illustrated. Very suitable for children.]

Children, The Religious Education of. By the late Rev. James Cranbrook, Edinburgh. 2d. Watts.

Christ, A Child's Life of. By Mabel Dearmer. 6s. Methuen.

[Simple and attractive. 8 coloured illustrations.]

Domesticated Workers, Facts concerning. By E. M. W. Printed by G. Russell, 77 Fleet Street, E.C.

["Majority are not treated in a Christian-like way."]

Eucharistic Congress, The. What does it Mean? By the Rev. E. W. Moore, M.A. 1d. South Africa General Mission (17 Homefield Road, Wimbledon). Booklet Series, No. 35.

Ezra, Nehemiah, and Esther. Edited by George Carter, M.A., F.R.G.S., Head Master of New College School, Oxford. 1s. 6d. Relfe Brothers.

[Introductions and notes careful and useful.]

Father's Hints to his Son. By Arthur Ryder. Jersey: Bigwood. Wholesale: Bartlett (Warwick Lane, E.C.).

[Brief, pointed, and sensible.]

Israel in the Bible and in History. By William Pumfrey. Preface by the Rev. A. Herbert, M.A. 8d. net. Banks (Racquet Court, Fleet Street, E.C.).

["559 verses from the Bible, with introductory remarks."]

Josephus. Edited by S. E. Winbolt, M.A. 1s. 6d. Blackie.

[The "Autobiography" and selections from the "Jewish War."]

Man: the Prodigy and Freak of Nature; or, An Animal run to Brain. By Keridan. 6d. net. Samurai Press (Cranleigh, Surrey).

[New edition, revised and enlarged. The author (if we mistake not) is Head of a large school and M.C.P. Shrewd points; latter part on education.]

Methuen's Junior School Books. (1) The Gospel according to Luke, edited by W. Williamson, B.A. (2) The First Book of Kings, edited by A. E. Rubie, D.D., Head Master of Eltham College. 2s. each.

[Judicious and instructive introductions, notes, and appendixes 3, and 4, maps. Very useful.]

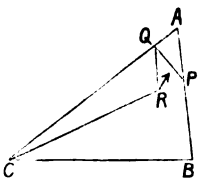
Old Testament History, narrated for the most part in the words of the Bible. Selected and arranged by George Carter, M.A., Head Master of New College School, Oxford. 2s. Clarendon Press.

[Very well done; tendency conservative. Useful notes; half-a-dozen maps. Good summary of the Hebrew legislation appended.]

Digitized by Google

MATHEMATICS.

16471. (V. Daniel, B.Sc.)—A line CPQR ... is drawn from one angle of a triangle, as in the figure, each $(n+2)$-th portion terminated by the n-th portion, and is such that the ratio in which each portion of the line divides the angle from which it starts is alternately $\tan^2\alpha$ or $\cot^2\alpha$, α being a constant. If θ_n denote the n-th angle so divided, and ϕ_n its complement, show that



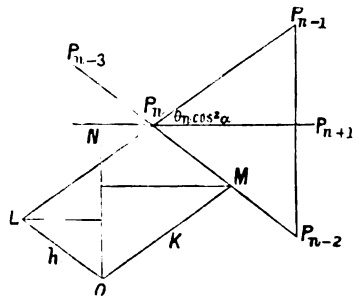
(1) $\phi_x = 0$,

(2) $p_n \sin\theta_n = p_{n-1}\sin(\theta_n\cos^2\alpha) - p_{n-3}\sin(\theta_n\sin^2\alpha)$,

where p_n is the perpendicular from C on the n-th portion of the line. Will any solver contribute a method of determining the co-ordinates of the limiting point?

Solution by M. T. Naraniengar, M.A.

Let P_nP_{n+1} be the n-th portion of the line. Draw OL, OM parallel to the lines containing θ_n, and ON perpendicular to P_nP_{n+1}. Then, obviously,



p_n = ON = sum of the projections of OM, MP_n

$= K\sin(\theta_n\cos^2\alpha) + h\sin(\theta_n\sin^2\alpha)$.

But $p_{n-1} = h\sin\theta_n$

and $p_{n-3} = K\sin\theta_n$.

Hence

$$p_n\sin\theta_n = p_{n-3}\sin(\theta_n\cos^2\alpha) + p_{n-1}\sin(\theta_n\sin^2\alpha).$$

With a convention of signs as regards the perpendiculars (as in Statics), we see that $p_{n-1} = +$, $p_n = -$, and $p_{n-3} = -$; therefore the above relation may be written

$$p_n\sin\theta_n = p_{n-3}\sin(\theta_n\cos^2\alpha) - p_{n-1}\sin(\theta_n\sin^2\alpha).$$

Note.—The Question requires modification accordingly.

The following Solution is due to the Proposer.

(1) Abbreviating $\cos^2\alpha$ and $\sin^2\alpha$ to c^2 and s^2, we have by external angle property $\pi - \theta_n = \theta_{n-1}c^2 + \theta_{n-2}s^2$

alternating c^2 and s^2 for odd and even values of n.

Therefore $\phi_n + \phi_{n-1}c^2 + \phi_{n-2}s^2 = 0$,

$\phi_{n-1} + \phi_{n-2}s^2 + \phi_{n-3}c^2 = 0$,

$\phi_{n-2} + \phi_{n-3}c^2 + \phi_{n-4}s^2 = 0$;

therefore $\phi_n + (1-c^2s^2)\,\phi_{n-2} + c^2s^2\phi_{n-4} = 0$;

therefore $\phi_n - \mu\phi_{n-2} = \lambda(\phi_{n-2} - \mu\phi_{n-4})$,

$\phi_n - \lambda\phi_{n-2} = \mu(\phi_{n-2} - \lambda\phi_{n-4})$,

where μ and λ are the roots of $x^2 + (1-c^2s^2)\,x + c^2s^2 = 0$;

therefore $\phi_n - \mu\phi_{n-2} = \lambda^{\frac{1}{2}n}(\phi_0 - \mu\phi_{-2})$, taking n even,

$\phi_n - \lambda\phi_{n-2} = \mu^{\frac{1}{2}n}(\phi_0 - \lambda\phi_{-2})$, ,, ,,

therefore $(\mu-\lambda)\,\phi_{n-2} = \mu^{\frac{1}{2}n}(\phi_0 - \lambda\phi_{-2}) - \lambda^{\frac{1}{2}n}(\phi_0 - \mu\phi_{-2})$.

Since $\mu - \lambda \neq 0$ and μ and λ are proper fractions, we deduce

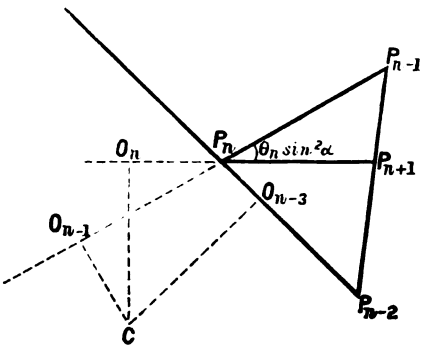
$$\text{Lt}\,[\phi_{n-2}]_{n=\infty} = 0.$$

(2) Let the "perpendicular" equations of three co-intersecting lines at P_n be $x\cos\omega_n + y\sin\omega_n - p_n = 0$, $x\cos\omega_{n-1} + y\sin\omega_{n-1} - p_{n-1} = 0$,

$x\cos\omega_{n-3} + y\sin\omega_{n-3} - p_{n-3} = 0$.

The eliminant is

$$p_n\sin(\omega_{n-1} - \omega_{n-3}) - p_{n-1}\sin(\omega_n - \omega_{n-3}) - p_{n-3}\sin(\omega_{n-1} - \omega_n) = 0.$$



Interpreting this result with the help of a figure showing the perpendiculars drawn from any origin C, we get

$$p_n\sin\theta_n - p_{n-1}\sin(\theta_n\cos^2\alpha) - p_{n-3}\sin(\theta_n\sin^2\alpha) = 0.$$

This agrees with Mr. Naraniengar's first equation, and (2) must be restated thus in the Question:

$$p_n\sin\theta_n = p_{n-1}\sin\begin{Bmatrix}\theta_n\cos^2\alpha\\ \theta_n\sin^2\alpha\end{Bmatrix} + p_{n-3}\sin\begin{Bmatrix}\theta_n\sin^2\alpha\\ \theta_n\cos^2\alpha\end{Bmatrix},$$

$\sin^2\alpha$ and $\cos^2\alpha$ being interchanged for odd and even values of n.

16524. (Professor Morley.)—A triangle sets up in its plane a Cremona transformation by taking the polar line of any point. Given in a plane a Desargues configuration (the complete figure of two perspective triangles), prove that there are ∞^2 such transformations which will send the ten points of the configuration into the ten lines on five points.

Solution by Professor Nanson.

A Desargues configuration is determined by the meets with a fixed plane ϖ of the lines and planes joining five fixed points 1, 2, 3, 4, 5 in space. Denote the point in which the join of p, q cuts ϖ by pq. Then the four points tp, tq, tr, ts and an arbitrary point L in ϖ determine a conic S_t. If x, y, z; u, v, w are the sides of the triangle 41, 42, 43; 51, 52, 53, the conics S_1, S_2, S_3 are clearly given by

$$\begin{Vmatrix} ux' & vy' & wz' \\ u'x & v'y & w'z \end{Vmatrix} = 0,$$

where dashes denote values at L. The form of these equations shows that S_1, S_2, S_3 have three points in common. Similarly, S_1, S_2, S_4 have three points in common. These two sets of common points must be identical because both are on S_1, S_2, whilst 12, one of the four points common to S_1, S_2, is not on either S_3 or S_4. Thus S_1, S_2, S_3, S_4 have three points in common, and similarly S_1, S_2, S_3, S_5 have three points in common, and as before, the two sets of common points must be identical, so that S_1, S_2, S_3, S_4, S_5 have three points in common.

Taking these three points as reference points the quadric transformation or triangular inversion

$$x' : y' : z' = yz : zx : xy$$

sends the conics S_1, S_2, S_3, S_4, S_5 into five straight lines. An interchange of point and line co-ordinates now sends these five lines into five points, and therefore sends the ten points pq into the ten lines joining five points. The two transformations make up the Cremona transformation specified, and since the point L can be taken anywhere in the plane ϖ there are ∞^2 such transformations.

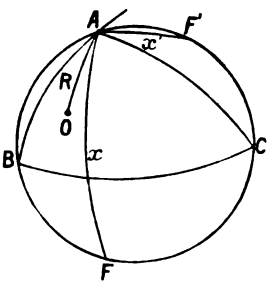
16527. (Professor Sanjána, M.A.)—The small circle described about a spherical triangle ABC meets the great circles bisecting internally and externally the angle A in the points F, F'. Prove that

$$\cot\tfrac{1}{2}FF' = \sqrt{[\cot^2 R + \tfrac{1}{4}\tan^2 R\sin^2(B-C)]},$$

and give the analogous result *in plano*.

Solution by W. Rigby, M.A.

Let O be the centre of the circum-circle of triangle ABC.



Then $\angle OAF = \tfrac{1}{2}A - (S-C)$

$= \tfrac{1}{2}A - \tfrac{1}{2}A - \tfrac{1}{2}B + \tfrac{1}{2}C$

$= \tfrac{1}{2}(C-B)$,

and $\angle OAF' = \tfrac{1}{2}(C-B) + 90°$.

Let $AF = x$ and $AF' = x'$.

Then, from triangle OAF,

$\cot R\sin x = \cos\tfrac{1}{2}(C-B)(1+\cos x)$;

therefore

$\tan\tfrac{1}{2}x = \cos\tfrac{1}{2}(B-C)\tan R$.

Similarly from triangle OAF', $\tan\tfrac{1}{2}x' = \sin\tfrac{1}{2}(B-C)\tan R$.

From triangle FAF', $\cos FF' = \cos x\cos x'$;

therefore $\cot\tfrac{1}{2}FF' = \sqrt{\left(\dfrac{1+\cos FF'}{1-\cos FF'}\right)} = \sqrt{\left(\dfrac{1+\cos x\cos x'}{1-\cos x\cos x'}\right)}$

$= \sqrt{\left(\dfrac{1+\tan^2\frac{1}{2}x\tan^2\frac{1}{2}x'}{\tan^2\frac{1}{2}x + \tan^2\frac{1}{2}x'}\right)}$

$= \sqrt{\left(\dfrac{1+\sin^2\frac{1}{2}(B-C)\cos^2\frac{1}{2}(B-C)\tan^4 R}{\tan^2 R}\right)}$

$= \sqrt{[\cot^2 R + \tfrac{1}{4}\sin^2(B-C)\tan^2 R]}$.

The analogous theorem *in plano* is $\tfrac{1}{2}FF' = R$, where F, F' are the points of intersection of the bisectors of the angle BAC with the circum-circle of the triangle ABC.

10525. (Professor Wolstenholme, M.A., Sc.D.)—The pedal of the parabola $y^2 = 4ax$ is taken with regard to the point (X, Y): prove (i.) that the three inflexions of the pedal lie on the straight line

$$x(3a+X) - yY + X(a-X) = 0;$$

Digitized by Google

also (ii.) that, if from each inflexion P be drawn a straight line Pp touching the pedal in p, a conic can be drawn touching the pedal in the three points p, and this conic will touch the nodal tangents.

Solution by G. N. WATSON, B.A.

(i.) The equation of any tangent to the parabola is

$$y = mx + a/m \quad \ldots\ldots(1).$$

The perpendicular from (X, Y) on this line is

$$(Y-y)\,m + (X-x) = 0 \quad \ldots\ldots(2).$$

Solving (1) and (2), we get

$x = [m\,(mY+X) - am]/[m\,(1+m^2)]$. $y = [m^2(mY+X)+a]/[m\,(1+m^2)]$,

as the co-ordinates of any point on the pedal; the pedal is, accordingly, a unicursal cubic; it has a node (not a cusp, unless $Y^2 = 4aX$).

Now, if $x = V/U$, $y = W/U$, U, V, W being any functions of m, the condition $d^2y/dx^2 = 0$ can be written in the form

$$\begin{vmatrix} U, & V, & W \\ \dot{U}, & \dot{V}, & \dot{W} \\ \ddot{U}, & \ddot{V}, & \ddot{W} \end{vmatrix} = 0,$$

dots denoting differentiations with respect to m. Hence the parameters of the points of inflexion on the pedal are the roots of

$$\begin{vmatrix} m\,(mY+X)-am, & m^2\,(mY+X)+a, & m\,(1+m^2) \\ 2mY+X-a, & m\,(3mY+2X), & 1+3m^2 \\ 2Y, & 6mY+2X, & 6m \end{vmatrix} = 0.$$

This reduces to

$$m^3\,(X^2+Y^2-aX) - 3am^2Y + 3a\,(a-X)\,m + aY = 0 \quad \ldots\ldots(3).$$

The parameters of the points where $Lx+My+N=0$ cuts the cubic are the roots of the equation

$$m^3\,(MY+N) + m^2\,(LY+MX) + m\,(N+LX-aL) + aM = 0 \ldots\ldots(4).$$

(3) and (4) are identical if

$$M = Y, \quad L = -3a-X, \quad N = X\,(X-a).$$

Hence the inflexions lie on the line

$$x\,(3a+X) - yY + X\,(a-X) = 0.$$

(ii.) This is a descriptive property and is unaltered by any number of projections. It is true for all nodal cubics.

Any nodal cubic can be conically projected into $y^2 = x^2\,(x+c)$. And this can, by two orthogonal projections, be projected into

$$y^2 = x^2\,(x+1) \quad \ldots\ldots(5).$$

The inflexions of this curve are at $[-\frac{4}{3}, \mp(4i/3\sqrt{3})]$, infinity. The tangent to (5) at $[(m^2-1),\ m\,(m^2-1)]$ is $2my - x\,(3m^2-1) + (m^2-1)^2 = 0$. This passes through one of the finite inflexions if $m = \mp i\sqrt{3}$.

Hence the projections of the points p_1, p_2 corresponding to the finite inflexions are $(-4, \pm 4i\sqrt{3})$, and the tangents to the cubic thereat are

$$5x \mp i\sqrt{3}\,y + 8 = 0 \quad \ldots\ldots(6).$$

The projection of the third point p_3 is $(-1, 0)$ and the tangent to the cubic thereat is $x+1=0$.

Now consider the conic $y^2 = 2\,(x+1)\,(ax+b)$. It passes through p_3 and the tangent there is $x+1=0$. It touches the nodal tangents, $y = \pm x$, provided that $(a+b)^2 + 2b = 0 \quad \ldots\ldots(7)$.

It passes through p_1, p_2, provided that

$$b - 4a = 8 \quad \ldots\ldots(8).$$

And the tangents at p_1, p_2 are those given by (6), provided that

$$\tfrac{1}{4}\,(7a-b) = -5, \quad \tfrac{1}{4}\,(4a+2b) = -8 \quad \ldots\ldots(9).$$

The four conditions (7), (8), and (9) are all satisfied by taking $a=-4$, $b=-8$, which proves the theorem; the conic required for the cubic $y^2 = x^2\,(x+1)$ being $y^2 + 8\,(x+1)\,(x+2) = 0$.

16510. (Professor E. HERNÁNDEZ.)—l nombres $a, b \ldots k, l$ étant donnés, si on forme le tableau

$$\left.\begin{matrix} a, & 2a, & 3a \ldots la \\ b, & 2b, & 3b \ldots lb \\ \ldots & \ldots & \ldots \ldots \\ k, & 2k, & 3k \ldots lk \end{matrix}\right\} \quad \ldots\ldots(1)$$

il y aura autant de colonnes dont tous les nombres sont des multiples de l qu'indique le plus grand commun diviseur des nombres $a, b, c \ldots l$.

Solution by the PROPOSER.

d étant le plus grand commun diviseur de $a, b \ldots l$, on a

$$a = dg_1,\ b = dg_2 \ldots k = dg_{l-1},\ l = dg_l.$$

Or, on a que

$$\begin{matrix} lg_1, & 2lg_1 & \ldots\ (d-1)\,lg_1, & dlg_1, \\ lg_2, & 2lg_2 & \ldots\ (d-1)\,lg_2, & dlg_2, \\ lg_{l-1}, & 2lg_{l-1} & \ldots\ (d-1)\,lg_{l-1}, & dlg_{l-1} \end{matrix}$$

sont des nombres qui se correspondent, en formant d colonnes dans le tableau (1), car il est facile de voir, qu'en remplaçant l par dg_l on a

$$\begin{matrix} g_la, & 2g_la \ldots (d-1)\,g_la, & la, \\ g_lb, & 2g_lb \ldots (d-1)\,g_lb, & lb, \\ \ldots & \ldots\ \ldots\ \ldots\ \ldots & \ldots \\ g_lk, & 2g_lk \ldots (d-1)\,g_lk, & lk. \end{matrix}$$

Notes on the Division of Decimals.

I. *By* J. HARTLEY FUDGE, M.A. (Lond.).

Mr. Bell's method of division of decimals in your December number admits, I think, of being made more easily intelligible to the youngest pupil than he has left it. What objection can there be to the preliminary step of multiplying divisor and dividend by a sufficient number of tens to make the divisor a whole number? The use of the phrase "shifting the point so many places" I would not allow; but when the pupil is allowed, in dividing by $5\frac{1}{2}$, to reduce both numbers to halves first, why deny him this particular short cut?

Mr. Bell says that the division is proceeded with as in simple division, but with a very important saving clause, the awkward explanation of which may well be spared the pupil. Were he dividing by short division he would expect to put his *quotient* figure down first, thus:

$$385\ )\ 28{\cdot}9905$$
$$\cdot 07$$

But, as he needs the space beneath to show the working, the master has only to suggest that the quotient be written above, and the position of the first figure needs no further explanation.

II. *By* B. C. WALLIS, F.C.P., B.Sc. (Econ.).

The note by Mr. A. H. Bell, B.Sc., on the teaching of division of decimals seems to me to be but a variant for the mechanical process usually employed; *i.e.*, it depends upon artificial placing of the figures. May I suggest that it is equally easy to separate the two essential parts of division of decimals; (i.) the significant figures, (ii.) the place value of those figures?

This is done by training the pupils to find a first approximation to the answer, an operation which settles the question of place value.

Consequently, the decimal point disappears from the division process, which can be carried as far as is convenient.

The method prepares the way for later work and trains the child to a habit of first approximation which tends to accuracy.

E.g., to divide 4·0875 by 0·075.

Step 1.—(Mental). Roughly $408 \div 7$, *i.e.*, over 50; therefore the answer is roughly 50.

Step 2.—

$$75\ )\ 40875$$
$$\underline{545}$$

or

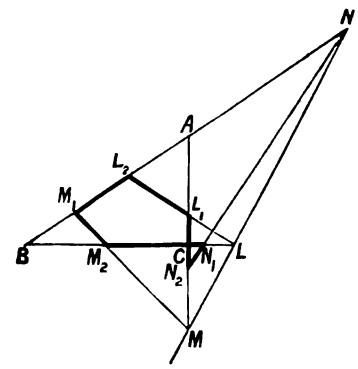
$$3\ )\ 40875$$
$$25\ )\ 13625$$
$$\underline{545} \quad \text{Ans. } 54{\cdot}5$$

or by long division.

Note by Professor SANJÁNA, M.A.

In *The Educational Times* for December, 1908, my solution, marked (II.), of Question 16449 requires a separate figure, which I give below. Also, "L," at end of first line, should be "L_2."

The hexagon is shown in thick lines.



16514 [& **16550** which is identical with 16514]. (R. F. DAVIS, M.A.)—Factorize algebraically

(1) $4x^6 + 2a^3x + a^6$, (2) $x^7 - 2a^2x^5 + a^7$;

and thence write down the factors of 4,000,021 and 9,800,001.

Solutions (I.) *by* T. STUART, M.A., D.Sc., *and* Prof. E. B. ESCOTT; (II.) *by* Lt.-Col. ALLAN CUNNINGHAM, R.E., *and* JAMES BLAIKIE, M.A.; (III.) *by* W. RIGBY, M.A., *and* T. K. VENKATARAMAN, M.A.

(I.) (i.) $4x^6 + 2a^3x + a^6 \equiv (2x^3 + a^2x + a^3)^2 - (ax)^2\,(2x+a)^2$
$\equiv (2x^3 + 2ax^2 + 2a^2x + a^3)(2x^3 - 2ax^2 + a^3)$.

This gives for $x = 10$, $a = 1$, $4{,}000{,}021 = 1801 \cdot 2221$.

Digitized by Google

(ii.) $x^7-2a^2x^5+a^7=(x-a)(x^3+ax^2+a^3)(x^3-a^2x-a^3)$,

giving for $x=10$, $a=1$,

$$9,800,001 = 3^3.367.989 = 3^3.23.43.367.$$

Note.—These are only two of an infinite number of similar trinomial expressions which can be algebraically factorized. A list of binary trinomial forms $(2^n\pm 2^q\pm 1)$ which can be algebraically factorized appeared in the *Messenger of Mathematics* (New Series, No. 437, September, 1907). More general forms (from which these are deducible) are :—

(1) $x^5+xy^4+y^5=(x^2+xy+y^2)(x^3-x^2y+y^3)$,

(2) $4x^5-x^3y^2+y^5=(2x^2+xy+y^2)(2x^3-x^2y-xy^2+y^3)$,

(3) $8x^5+2x^2y^3+y^5=(2x^2-2xy+y^2)(4x^3+4x^2y+2xy^2+y^3)$,

(4) $8x^6+2xy^5-y^6=(2x^2-2xy+y^2)(4x^4+4x^3y+2x^2y^2-y^4)$,

(5) $16x^4-x^2y^2+y^4=(4x^2-3xy+y^2)(4x^2+3xy+y^2)$,

(6) $4x^{12}+8x^4y^8+y^{12}=(2x^6-4x^5y+4x^4y^2-2x^3y^3+y^6)\times(2x^6+4x^5y+4x^4y^2+2x^3y^3+y^6)$,

(7) $x^8-8x^2y^6+4y^8=(x^4+2x^3y+2x^2y^2-2y^4)(x^4-2x^3y+2x^2y^2-2y^4)$,

(8) $16x^8-4x^4y^4+y^8=(4x^4-4x^3y+2x^2y^2-2xy^3+y^4)\times(4x^4+4x^3y+2x^2y^2+2xy^3+y^4)$,

(9) $4x^8+x^4y^4+4y^8=(2x^4-2x^3y+x^2y^2-2xy^3+2y^4)\times(2x^4+2x^3y+x^2y^2+2xy^3+2y^4)$, ...

(II.) It will suffice to express each number (N) in the form $N=P^2-Q^2$, whereby at once $N=(P-Q)(P+Q)$.

(1) $N=4x^6+2a^3x+a^6=(2x^3+a^2x+a^3)^2-[ax(2x+a)]^2$.

Ex. $4000021=4.10^6+2.1^5.10+1^6=2011^2-210^2=1801.2221$.

(2) $N=x^7-2a^2x^5+a^7=(x-a)\{x^6+x^5a-x^4a^2-x^3a^3-x^2a^4-xa^5-a^6\}$
$=(x-a)\{(x^3+\frac{1}{2}x^2a-\frac{1}{2}xa^2)^2-(\frac{1}{2}x^2a+\frac{1}{2}xa^2+a^3)^2\}$
$=(x-a)(P^2-Q^2)$.

Ex. $9800001=10^7-2.1.10^5+1^7=9(1045^2-56^2)$
$=9.989.1101=9(23.43)(3.367)$.

To Dr. Stuart's interesting collection might be added :

(α) $x^4+x^2y^2+y^4=(x^2-xy+y^2)(x^2+xy+y^2)$.

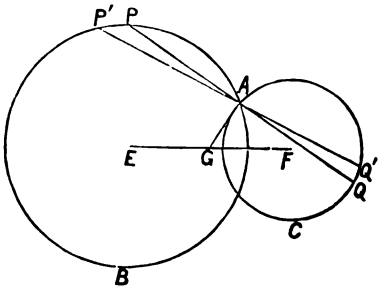
(β) $x^4-3x^2y^2+9y^4=(x^2-3xy+3y^2)(x^2+3xy+3y^2)$.

(γ) $x^8+17x^4y^4+4y^8=(x^2-2xy+2y^2)(x^2+2xy+2y^2)(2x^2-2xy+y^2)\times(2x^2+2xy+y^2)$.

[Rest in *Reprint*.]

16544. (C. E. Youngman, M.A.)—Across two given circles B, C, through the point A common to both, draw that chord PAQ which makes the area PBCQ maximum.

Solution by W. F. Beard, M.A.



Let P'AQ' be a position adjacent to the position PAQ of maximum area.

Then

area PAP' = area QAQ'

ultimately, and

$\angle PAP' = \angle QAQ'$;

therefore AP = AQ

in the maximum position.

To draw such a chord join the centres E, F. Bisect EF at G.

Draw PAQ perpendicular to GA, and the proof is obvious.

N.B.—The Proposer meant to denote the centres as well as the circles by B, C; it makes a different question to the one solved.

16458. (C. M. Ross.)—Prove that the value of the determinant

$$\begin{vmatrix} 1+x^2, & x, & 0, & 0, & \dots \\ x, & 1+x^2, & x, & 0, & \dots \\ 0, & x, & 1+x^2, & x, & \dots \\ \dots & \dots & \dots & \dots & \dots \end{vmatrix}$$

of the mth order is $1+x^2+x^4+\dots+x^{2m}$.

Additional Solution by Prof. Nanson.

Denoting the determinant by u_m, we have

$$u_m=(1+x^2)u_{m-1}-x^2u_{m-2};$$

therefore $$u_m-u_{m-1}=x^2(u_{m-1}-u_{m-2})=x^{2m};$$

therefore $$u_m=1+x^2+x^4+\dots+x^{2m}.$$

QUESTIONS FOR SOLUTION.

In Question 16581 (see *Educational Times*, January, 1909), note that $n\not<1$.

16584. (A. Thompson.)—A gravitating mass of density ρ is bounded by the planes $y=\pm\theta x$, $x=\pm a$, $z=\pm c$. Find the components of attraction at a point (ξ, η, ζ), the squares and higher powers of θ being negligible, especially considering the cases (i.) when a becomes infinite, (ii.) when c becomes infinite, (iii.) when both a and c become infinite.

16585. (*Communicated by* "François.")—From a balloon which is travelling horizontally eastward at the rate of 12 ft. per second at a vertical height of 500 ft., a ship is observed due south of the balloon, the angle of depression being 45°. One minute later the same ship is observed to be due south-east of the balloon, the angle of depression being 30°. Find the velocity and direction of motion of the ship. (Univ. of London, B.Sc. Ex., 1908, Pure Maths.)

16586. (Professor Neuberg.)—Intégrer l'équation

$$xyy''+xy'^2-yy'=0.$$

16587. (Professor E. B. Escott.)—Factorize

$$14^8+14^5+1,\quad 7^8+2.7^5+1,\quad 7^{16}+2.7^9+1,\quad 7^8+7^5.2^{17}+2^{32}.$$

16588. (Professor Sanjána, M.A.)—Show how to obtain solutions of equalities of the form $(x+a)(x+b)(c+x)=\square$, for given numerical values of a, b, c. Exs. $(x+3)(x+12)(13-x)$ and $(3-x)(x+12)(x+13)$.

16589. (Professor E. Hernández.)—On donne la suite des nombres 1, 2, 5, 12, 29, ..., dont $u_n=2u_{n-1}+u_{n-2}$, est la loi de formation. On aura : (1) Deux termes consécutifs et au plus trois, auront toujours le même nombre de chiffres. (2) La somme des $n-2$ premiers termes augmentée de la somme des $n-1$ premiers termes plus 1, est égal au terme de rang n. (3) Le carré d'un terme de la suite est égal au produit augmenté ou diminué de 1, du terme qui précède par celui qui suit. (4) Le terme u_{2p+1} est égal à la somme des carrés des termes consécutifs u_{p-1} et u_p. (5) Si des restes obtenues dans la recherche du plus grand commun diviseur de a et b, par la méthode abrégée, c'est à dire, en faisant toujours que chaque reste soit plus petit que la moitié du diviseur, on en trouve deux consécutifs, compris entre u_{n+1} et u_n, on n'en trouve point entre u_{n-1} et u_n. (6) Dans la recherche du plus grand commun diviseur de a et b, par la méthode abrégée, on aura à effectuer un nombre de divisions au plus égal à trois fois le nombre de chiffres du plus petit des nombres donnés.

16590. (C. M. Ross.)—If

$a_1yz+b_1(y+z)+c_1=0$, $a_2yz+b_2(y+z)+c_2=0$, $a_3yz+b_3(y+z)+c_3=0$,

are true for an infinite series of values for x, y, z; prove that in general

$$a_2c_3+a_3c_2=2b_2b_3,\quad a_3c_1+a_1c_3=2b_3b_1,\quad a_1c_2+a_2c_1=2b_1b_2.$$

16591. (Professor Nanson.)—A disc of given radius moves with its centre on a circle with given centre and radius. If the aspects of the disc and circle are assigned, the edge of the disc traces out a surface. By varying the aspects, but so that each remains parallel to a fixed line, we get a system of surfaces. Required the envelope of these surfaces.

16592. (T. Stuart, M.A., D.Sc.)—Prove that the sides of the six self-conjugate triangles of four conics, taken in pairs, all touch a net of conics $\lambda\phi+\mu\psi=0$, $\phi=0$ and $\psi=0$ being the tangential equations of two conics of the net.

16593. (S. Narayana Aiyar.)—Prove that every conic inscribed in a triangle passes through at least three pairs of real points which are isogonal conjugates with respect to the triangle, but never more than four pairs. Also give a geometrical construction to determine these points. Hence show that the inscribed (or an escribed) circle of a triangle passes through three and only three pairs of real points which are isogonal conjugates with respect to the triangle.

16594. (A. M. Nesbitt, M.A.)—If, within the angle A of a triangle ABC, two lines be drawn AL, AL', equally inclined to AB and AC respectively, and meeting BC in L, L'; and if the same be done for the other angles, prove (1) that a conic S will pass through the six points L, L', ...; (2) that a conic S' will touch the six lines AL, AL', ...; (3) that a conic may be drawn through the four intersections of S, S', which shall also touch the sides of ABC; (4) that a conic may be drawn touching the four common tangents of S and S' which shall also circumscribe ABC.

16595. (F. G. W. Brown, B.Sc., L.C.P.)—ABC is a triangle having a right angle at C; from a point D in AB, DF is drawn parallel to BC, and DE to AC. If AB = 13·75 cms., DE = 5 cms., DF = 4·5 cms., find by the methods of *simple* quadratic equations, the length of AC.

16596. (I. Arnold.)—Construct a quadrilateral having its sides equal to four given right lines, and its area equal to a given rectangle, specifying under what conditions the problem becomes impossible.

16597. (C. E. Youngman, M.A.)—Two confocal hyperbolas, with centre O, one with an angle 30° between its asymptotes, the other rectangular, have a triangle ABC circuminscribed; show that in ABC one of the ex-circles is equal to the circum-circle and subtends 60° at O, and

Digitized by Google

that the in-circle and the other ex-circles subtend 120° at O; prove also that the second point at which these last three subtend equal angles lies on the Brocard axis of ABC.

16598. (M. T. Naraniengar, M.A.)—A is a fixed point. P is any point on a fixed circle. Show that the inverse of the fixed circle with respect to a circle of radius PA and centre P envelopes another fixed circle.

16599. (W. F. Beard, M.A.)—The inverses of the circum-circle of a triangle ABC with regard to A, B, C, and with radii of inversion BC, CA, AB respectively, meet BC, CA, AB respectively at X, Y, Z. Prove (1) that AX, BY, CZ meet at a point P on the circum-circle of ABC; (2) that BZ.CY = AB.AC; (3) that, if G, K are the centroid and symmedian point of ABC, then HK is the axis of perspective of the triangles XYZ, ABC.

16600. (W. Gallatly, M.A.)—If $A+B+C=180°$; prove that

$$(\sin B+\sin C)(1+2\cos B)(1+2\cos C)+\ldots$$
$$=4(\sin B+\sin C)(\sin C+\sin A)(\sin A+\sin B).$$

16601. (R. F. Davis, M.A.)—If A, B, C are the angles of a triangle, factorize:— $\cos^2 B+\cos^2 C+2\cos 3A\cos B\cos C$.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

11884. (Capt. de Rocquigny.)—Aucun nombre triangulaire ne peut être cube parfait.

11898. (Professor Bhattacharya.)—Observations give results 4·1, 4·23, 4·55, 4·56; find the probable error of the average.

11900. (Professor Orchard.)—Given that $(x+y)/(x-y)$ varies as $(y+z)/(y-z)$, and that $x=1$ when $y=2$ and $z=3$, prove that

$$12y^4+y^3(7x+z)+y^2(x^2+4xz-z^2)-8xyz^2-16x^2z^2=0;$$

and interpret geometrically.

11910. (D. Biddle.)—A square disc has its centre fixed, but the normal pointing to any part of the heavens. A particle falls from a position which is over the square when the latter is horizontal. Find the probability that it strikes the square.

11948. (Capt. P. A. MacMahon, R.A.)—A tangent to a parabola inscribed in a triangle is inclined at an angle δ to the axis; find the envelope, and also the locus of the centres of the series of envelopes obtained by varying δ.

11956. (Professor Sylvester, F.R.S.)—If $x, y, z, \ldots$ are positive integers, such that $x+2y+3z+\ldots=n$, where n is any given integer greater than 2; prove that the number of times that $1-x+xy-xyz+\ldots$ exceeds zero is greater than the total number of times that it is equal to or less than zero.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss Constance I. Marks, B.A., 10 Matheson Road, West Kensington, W.

Vol. XIV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, Francis Hodgson, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, January 14th, 1908.—Sir W. D. Niven, President, in the Chair.

Prof. H. F. Stecker was elected a member.

Mr. W. H. Salmon was admitted into the Society.

The President announced the death of Mr. G. Heppel, who was a member of the Society from 1883 to 1907.

The following papers were communicated:—

"The Canonical Form of a Linear Substitution," Mr. H. Hilton.

"On Octavic and Sexdecimic Residuacity," Lieut.-Col. A. Cunningham.

"On Change of the Variable in a Lebesgue Integral," Dr. E. W. Hobson.

"On Abel's Extension of Taylor's Series," Rev. F. H. Jackson.

"Note on the Evaluation of a certain Integral containing Bessel's Functions," Prof. H. M. Macdonald.

Mr. J. Hammond gave an account of some "Researches connected with the Solution of the Quintic Equation."

BOOKS FOR TECHNICAL STUDENTS.

THE PRINCIPLES OF ALTERNATING CURRENTS. For Students of Electrical Engineering. By EDGAR T. LARNER, A.I.E.E., of the Engineering Department, G.P.O., London. 144 pp., with 69 Illustrations. Crown 8vo. [*Just published.* *Net* **3/6**

FIELD TELEPHONES FOR ARMY USE; including an Elementary Course in Electricity and Magnetism. By Lieut. E. J. STEVENS, D.O., R.A., Instructor in Electricity, Ordnance College, Woolwich. With Illustrations. Crown 8vo. [*Just published.* *Net* **2/-**

THE ELEMENTS OF ELECTRICAL ENGINEERING. A First Year's Course for Students. By TYSON SEWELL, A.M.I.E.E., Lecturer and Demonstrator in Electrical Engineering at the Polytechnic, Regent Street, London. 4th Edition, Revised, with Additions. 460 pp., with 278 Illustrations. Large crown 8vo . . . . . *Net* **5-**

PRACTICAL COAL-MINING. An Elementary Class-Book for the use of Students preparing for Examinations, or Qualifying for Colliery Managers' Certificates. By T. H. COCKIN, Lecturer on Coal-Mining at Sheffield University College. With Map of the British Coal-fields and over 200 Illustrations. 440 pp., crown 8vo . . . . . *Net* **4/6**

ORIENTAL MANUALS AND TEXT-BOOKS. — Messrs. CROSBY LOCKWOOD & SON will forward on application a Catalogue of Text-Books and Manuals for Students in Oriental Languages, many of which are used as Text-Books for the Examinations for the Indian Civil Service and the Indian Staff Corps; also as Class-Books in Colleges and Schools in India.

London: CROSBY LOCKWOOD & SON,

7 Stationers' Hall Court, E.C., and 121a Victoria Street, S.W.

SARLL'S EXAM. BOOK-KEEPING.

SARLL'S Text-book Sales nearly 250,000.

SARLL'S MODERN BOOK-KEEPING.

Founded on Sarll's DOUBLE ENTRY. Consists of *four* GRADUATED COURSES —Introductory, Theory, Practice, Trial Balances—followed by *forty* EXAM. PAPERS with *full* or *outline* KEYS. An Elementary and Intermediate Text-Book for ALL EXAMS. The results of a LIFETIME. 410 pp., 3s. 6d. [*Now ready.*

SARLL'S BOOK-KEEPING FOR NEW CODE.

Stage I., Introductory; II., Practical; III., Theory or Journalising. Each 48 pages. Price 4d. **Outline Keys.** MS. Books, 2d. each.

SARLL'S PRACTICAL BOOK-KEEPING.

Fourteenth (greatly improved) Edition. *Teachers' Aid* says: "There is no *cheaper and safer* guide." Consists of GRADUATED EXERCISES with *full*, and Exam. Papers with *outline*, **Keys.** 128 pages, 1s. MS. Books, superior, 1s. Cheap, 4d.

SARLL'S DOUBLE-ENTRY BOOK-KEEPING.

Fifteenth Edition. 256 pages. 2s. Consists of GRADUATED EXERCISES with *full*, and Exam. Papers with *outline*, **Keys.** *Practical Teacher* says: "We heartily recommend it as the best and cheapest manual we have seen." **A School Edition, without Keys.** 128 pages, 1s. Superior MS. Books, 1s. Cheap, 4d.

SARLL'S TWENTIETH CENTURY EXAM. BOOK-KEEPING.

Containing Papers by the *leading* **Examining Boards**, with *outline* **Keys.** In Two Parts, at **6d.** each. Part I., **Junior Papers**, College of Preceptors, University Local, Scotch Leaving Certificates, &c. Part II., **Senior Papers**, Society of Arts, London Chamber of Commerce, Lancashire and Cheshire Union, West Riding, &c.

Sarll's Supplementary Keys.

1. TO SARLL'S PRACTICAL and to NEW CODE, Stages I. and II. All the Exercises **fully** worked, 2s.
2. TO SARLL'S DOUBLE-ENTRY; to NEW CODE, Stage III.: and to Exam. Papers, 1 to 25 in **MODERN.** All the Exercises **fully** worked, 3s.

FROM DENT'S LIST.

ENGLISH LITERATURE.

THE TEMPLE ENGLISH LITERATURE SERIES FOR SCHOOLS.

ENGLISH POETRY. Selected with an Introduction and Notes by ARTHUR BURRELL, M.A., Principal of the Borough Road Training College, Isleworth. 1s. per Vol.
I. Lyrical. II. English Heroic Verse. III. Selections from Shakespeare.

BALLADS, ANCIENT AND MODERN. Selected with Introduction and Notes by OLIPHANT SMEATON, M.A. 1s.

GRAY'S ELEGY IN A COUNTRY CHURCHYARD. With an Introduction and Notes by E. BOLUS. Limp cloth, 4d.

GOLDSMITH'S TRAVELLER AND THE DESERTED VILLAGE. With an Introduction and Notes by W. LANGBRIDGE. Limp cloth, 4d.

COLERIDGE'S ANCIENT MARINER. With Introduction and Notes by R. M'WILLIAM. Limp cloth, 4d.

WORDSWORTH'S SIMPLER POEMS. With Introduction and Glossary by EDWARD HUTTON. Limp cloth, 4d.

MACAULAY'S LAYS OF ANCIENT ROME. With Introduction and Notes by OLIPHANT SMEATON, M.A. 1s.

LONGFELLOW'S HIAWATHA. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s.

LONGFELLOW'S EVANGELINE. Edited, with Introduction and Notes, by JOHN W. COUSIN, F.F.A. Cloth boards, 8d.

LONGFELLOW'S SHORTER POEMS. Selected, with Introduction and Notes, by G. C. DENT, B.A. Limp cloth, 4d.

STORIES FROM SPENSER'S FAERY QUEENE. By Miss N. G. ROYDE-SMITH. 1s.

STORIES FROM LE MORTE D'ARTHUR AND MABINOGION. By Miss BEATRICE CLAY. 1s.

THE ADVENTURES OF ODYSSEUS. By J. G. MAYOR, F. S. MARVIN, and F. M. STAWELL. 1s.

SOUTHEY'S LIFE OF NELSON. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s.

SIR ROGER DE COVERLEY PAPERS. By ADDISON and STEELE. Edited, with Introduction and Notes, by R. G. WATKIN, M.A., Ph.D. 1s.

SCOTT'S TALISMAN. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s.

PRESCOTT'S CONQUEST OF MEXICO AND PERU. Selections put into a Continuous Narrative, and edited by OLIPHANT SMEATON, M.A. 1s.

TALES FROM BROWNING. By the Rev. G. LACEY MAY, M.A. 1s.

STORIES FROM CARLYLE. By D. M. FORD. 1s.

VOYAGES OF FAMOUS BRITISH SEAMEN. Selected from DAMPIER, HAKLUYT, and COOK. By R. BRIMLEY JOHNSON. 1s.

FRENCH AND GERMAN.

DENT'S MODERN LANGUAGE SERIES.

EDITED BY WALTER RIPPMANN, M.A.

DENT'S NEW FIRST FRENCH BOOK. By S. ALGE and WALTER RIPPMANN. Extra fcap. 8vo, 2s.
"We know of no better book to start French on."—*The Journal of Education.*

DENT'S WALL PICTURES OF THE FOUR SEASONS. From Drawings specially prepared by J. A. SYMINGTON. Printed in Colours. Size 55 by 35 ins. Unmounted, 2s. 6d. net each; Mounted on Linen and Eyeleted, 3s. 6d. net each; Mounted on Linen, with Rollers, 6s. net each.

DENT'S NEW SECOND FRENCH BOOK. By S. ALGE and WALTER RIPPMANN. Extra fcap. 8vo, 2s.

PREMIÈRE GRAMMAIRE FRANÇAISE. By H. E. BERTHON, Taylorian Lecturer in French at the University of Oxford. Extra fcap. 8vo, 2s.

EASY FREE COMPOSITION IN FRENCH. By Miss L. M. BULL. Extra fcap. 8vo, 1s. 4d.

FREE COMPOSITION AND ESSAY WRITING IN FRENCH. By A. PRATT and ANTOINE PHILIBERT. Extra fcap. 8vo, 1s. 4d.

NEW SHORT FRENCH READERS.

The following volumes are now ready:—

Second Year French Readers—
Contes de Perrault. Vol. I. — **Ditto. Vol. II.**
Yvon et Finette. — **Poucinet.**

Third Year French Readers—
L'Eléphant Blanc. — **Un Episode sous la Terreur.**
Contes Choisis. — **Le Monde où l'on se Bat.**
Each 48 pp. 4d. per vol.

Fourth Year French Readers—
Le XIXme Siècle. — **La Révolution Française.**
Un Merle Blanc. — **Télémaque.**
Each 64 pp. 6d. per vol.

DENT'S NEW FIRST GERMAN BOOK. By WALTER RIPPMANN, S. ALGE, and S. HAMBURGER. Extra fcap. 8vo, 2s. 6d.

DENT'S GERMAN READER. By S. ALGE and WALTER RIPPMANN. Extra fcap. 8vo, 3s.

DER GOLDENE VOGEL AND OTHER TALES. A Second Year German Reader. Edited by Prof. RIPPMANN, M.A. Extra fcap. 8vo, 1s. 4d.

EISENHANS AND OTHER TALES. A Second Year German Reader, with Exercises. By WALTER RIPPMANN. Extra fcap. 8vo, 1s. 4d.

NATURE STUDY, BOTANY, & AGRICULTURAL SCIENCE.

NATURE STUDY.

By Professor J. R. AINSWORTH DAVIS, Author of "The Natural History of Animals," &c., &c.

Profusely Illustrated with a remarkable series of well-chosen subjects. Crown 8vo, 2s. 6d.

This Nature Study Reader describes the adaptations to surroundings of common native plants and animals together with others that are familiar. Beginning with the wild geranium (Herb Robert), the structure, life-functions, and life-histories of typical plants are dealt with in succession. A similar method is pursued with regard to animals. The elements of classification are embodied, but subordinated to the ecological plan of the book.

THE RUSKIN NATURE READERS.

FOR SENIOR, INTERMEDIATE, AND JUNIOR STUDENTS.
Selected and edited by G. R. BENNETT, D.Sc. (Lond.).
Numerous Full-page and Line and Text Illustrations. Small crown 8vo, 1s. 9d.

The first of this Series, namely, the Senior Book, is now ready, and contains descriptive passages from Ruskin, Lamb, R. L. Stevenson, and Dickens. Izaak Walton and Sir Edward Grey, whose affection for the river-side has produced the two English Classics relating to angling; eminent scientists such as Hugh Miller, Charles Darwin, and Prof. Tyndall; keen observers, who also have proved themselves brilliant men of letters, such as Gilbert White, Richard Jefferies, Thoreau, and W. H. Hudson, have all been put under contribution.

PLANTS AND THEIR WAYS.

An Introduction to the Study of Botany and Agricultural Science.

By ERNEST EVANS, Natural Science Master, Technical School, Burnley; Author of "Botany for Beginners," "How to Study Geology," &c.
Many Illustrations, 1s. 4d.

The book is especially a practical one, and it contains instructions how to perform numerous experiments with different parts of plants. These can be carried out with very simple apparatus, and in the open air or schoolroom. All the specimens required can be easily obtained, and examined either with the naked eye or with the aid of a hand lens. The portion of the book which deals with the structure and functions of plants, and the soil in which they grow, is treated in simple language and very few technical terms are introduced. It is illustrated by numerous drawings, and can be recommended as a suitable book for use in Secondary Schools, Evening Continuation Schools, Technical Schools, and by Private Students.

The Publishers invite Application from Principals of Schools for Specimen Copies with a view to introduction.

London: J. M. DENT & CO., Aldine House, Bedford Street, W.C.

London: Printed by C. F. HODGSON & SON, 2 Newton Street, Kingsway, W.C.; and Published by FRANCIS HODGSON, 89 Farringdon Street, E.C.
[Entered at the New York Post Office as Second Class matter.]

Cambridge University Press

Sir Walter Scott. Tales of a Grandfather. Being the History of Scotland from the earliest period to the battle of Flodden in 1513. Edited, with Introduction and Notes, by P. GILES, M.A., LL.D.

Foolscap 8vo
1s. 4d. each.

This is a volume of **English Literature for Schools,** a new series of reading books for the upper and middle forms of Secondary Schools. The books are printed in a bold, clear type and are strongly bound in cloth boards. The following have already been published, and several other volumes are in active preparation:—

Daniel Defoe. Memoirs of a Cavalier. Edited, with Introduction and Notes, by ELIZABETH O'NEILL.

Captain John Smith. True Travels, Adventures and Observations in Europe, Asia, Africa, and America: and the General History of Virginia, New England, and the Summer Isles, Books I-III. Edited with Introduction and Notes, by E. A. BENIANS, M.A., Fellow of St. John's College, Cambridge.

William Cobbett. Rural Rides. Selected and edited by J. H. LOBBAN, M.A., Lecturer in English Literature, Birkbeck College, London.

William Hazlitt. Characters of Shakespeare's Plays. Edited, with Introduction and Notes, by J. H. LOBBAN, M.A.

"Four volumes, well chosen for the purpose in view, and each furnished with a simple and spirited introduction and a serviceable, but judiciously limited, set of notes."—*Pall Mall Gazette.*

"An admirable series of reading books. . . . In themselves interesting far beyond the common run of school books, they make excellent class-books for young students of English."—*Scotsman.*

Balzac. Le Médecin de Campagne. Edited, with Notes and Introduction, by DE V. PAYEN-PAYNE.

Foolscap 8vo
3s.

"No book of Balzac's is healthier, or better expresses the charm and innocence of country life, the simplicity and the cunning of the peasantry, while the chapter on Napoleon is at one and the same time an epic of the ranks and a splendid bit of art."—EXTRACT FROM INTRODUCTION.

Gautier. Voyage en Italie, Selections from. By the same Editor.

Foolscap 8vo
3s.

"We are sure that many a student of the French language will be glad to have this little volume in his pocket for frequent reference."—*School.*

The Epistles to the Galatians and to the Romans. The Revised Version. Edited, with Introduction and Notes, for the use of Schools by H. W. FULFORD, M.A., Fellow of Clare College, Cambridge.

The First and Second Epistles to the Corinthians. The Revised Version. Edited, with Introduction and Notes, for the use of Schools by S. C. CARPENTER, M.A., Warden of the Caius College Mission, Battersea.

With Maps,
Foolscap 8vo
1s. 6d. net each.

Uniform with volumes previously published in the **Revised Version for Schools,** the aim of the series being to draw attention to the importance of some of the changes made in the Revised Version as well as to present in clear and intelligible form the best and most approved results of recent theological work on these books.

Cambridge County Geographies. General Editor: F. H. H. GUILLEMARD, M.A., M.D. Each volume contains Maps, Physical and Geological, Diagrams, and numerous Illustrations.

The following are the first six volumes and others are in active preparation:—

Foolscap 8vo
1s. 6d. each.

KENT. By G. F. BOSWORTH, F.R.G.S.
SURREY. By G. F. BOSWORTH, F.R.G.S.
ESSEX. By G. F. BOSWORTH, F.R.G.S.
SUSSEX. By G. F. BOSWORTH, F.R.G.S.
NORFOLK. By W. A. DUTT.
SUFFOLK. By W. A. DUTT.

Algebra for Secondary Schools. By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham.

Crown 8vo
One Vol., 6s.;
Two Vols.,
3s. each.

This work, which was published in September last in one volume, price 6s., may now also be had in two volumes: volume I., To Quadratic Equations, and Volume II., From Quadratic Equations.

"This course of Algebra carries the reader up to the theory of infinite series, as illustrated by the binomial theorem, the exponential theorem, and by the logarithmic series. A refreshingly scholarly treatment characterizes the whole volume. Although many text-books on these lines have been issued in the last few years, we have seen nothing which can compare with Dr. Davison's treatise."—*Guardian.*

"The work is very thorough, the examples plentiful, and the matter well arranged. . . . The text-book strikes us as being a thoroughly satisfactory one, and we are specially glad to note the place taken by graphs as an illustration and not an end in themselves."—*The Journal of Education.*

Italy from 1494 to 1790. By Mrs. H. M. VERNON (K. Dorothea Ewart), Author of "Cosimo de' Medici" in the Foreign Statesmen Series.

Crown 8vo
Four Maps,
5s. 6d. net.

The history of Italy in the period treated in this volume divides itself naturally into two parts, 1494-1559 and 1559-1790. Since the events of the earlier years are fully described in numerous accessible works, the author deals with them briefly, in spite of their importance, treating them rather as an introduction to the later and neglected period, about which it is difficult for the ordinary reader to obtain information.

THE CAMBRIDGE SCHOOL HISTORY OF ENGLAND

History of England for Use in Schools. By ARTHUR D. INNES, M.A. Complete in One Volume, or in Three Parts.

Part I., To 1509 A.D. | Part II., 1509–1714 A.D.
Part III., 1689–1901 A.D.

A separate Part is also issued containing the period "From the Wars of the Roses to the Death of Elizabeth."

Crown 8vo
with 13 Maps
and 8 Plans,
4s. 6d.;
Parts, 2s. each.

"Mr. Innes writes more especially for the middle and upper forms of schools, and he covers the whole space of English history, with a vigilant regard to proportion and to the educational value of historical teaching. He writes with great spirit and vividness, as well as with simplicity and lucidity, and he is remarkably well furnished with the latest results of historical inquiry. Appended are six admirable summaries—constitutional, ecclesiastical, Scottish, Irish, Indian, and Colonial; half-a-dozen careful genealogical tables; a glossary of technical terms, political phrases, &c.; a chronological summary, and an index. The work is exceptionally capable and useful."—*Educational Times.*

London, Fetter Lane: CAMBRIDGE UNIVERSITY PRESS WAREHOUSE: C. F. CLAY, Manager.

CLASS LISTS

OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—CHRISTMAS, 1908.

The list of successful candidates at the Colonial Centres will be published in the March number of "The Educational Times."

[*Throughout the following Lists, bracketing of names implies equality.*]

PRIZES.

General Proficiency.

FIRST CLASS [or SENIOR].

1. Dodson, F. K. (*Isbister Prize.*) — Hutton Grammar School.
2. Bennell, Miss M. (*Pinches Prize.*) — Crouch End High School, Hornsey.
3. Jewell, J. — Devonport High School.
4. Woodhouse, R. A. — Hutton Grammar School.

SECOND CLASS [or JUNIOR].

1. Spendelow, C. W. — Humberstone Foundation School, Grimsby.
2. Flew, L. W. — Weymouth Pupil-Teacher Centre.
   Nokes, Miss C. M. — Crouch End High School, Hornsey.
4. Marsden, H. M. — Hutton Grammar School.

THIRD CLASS.

1. Biggs, Miss C. M. — Crouch End High School, Hornsey.
2. Thomas, A. E. — Froebel House, Devonport.
3. Du Heaume, H. G. — Boys' Collegiate School, Aldershot.
4. Whipp, P. S. — Grammar School, Shoreham.

English Subjects.

1. Bennell, Miss M. — Crouch End High School, Hornsey.
2. Jewell, J. — Devonport High School.

Mathematics.

1. Mercer, F. — Oakes Institute, Walton, Liverpool.
2. Taylor, F. C. C. — New College, Herne Bay.

Modern Foreign Languages.

1. Chattin, A. E. — The High School for Boys, Croydon.
2. Welsh, L. — Mercers' School, E.C.

Classics.

1. Jackson, W. — The Cusack Institute, Broad Street Place, E.C.
2. Hargrave, D. H. — Merchant Taylors' School, E.C.

Natural Sciences.

1. Mercer, F. — Oakes Institute, Walton, Liverpool.
2. Blackman, W. — Oakes Institute, Walton, Liverpool.
   Caunce, A. E. — Oakes Institute, Walton, Liverpool.

Taylor Jones Prize for Scripture History.

Gieve, Miss G. M. — Crouch End High School, Hornsey.

Soames Prize for Scripture History.

Nokes, Miss C. M. — Crouch End High School, Hornsey.

Pitman Medals for Shorthand.

1. Fish, F. J. (*Silver Medal.*) — The Cusack Institute, Broad Street Place, E.C.
2. Smee, H. G. (*Bronze Medal.*) — Mercers' School, E.C.

The following is a List of the Candidates who obtained the FIRST and SECOND PLACES in each Subject on FIRST CLASS PAPERS. (Only those who obtained Distinction are included.)

Scripture History.

1. Bennell, Miss M. — Crouch End High School, Hornsey.
   Gieve, Miss G. M. — Crouch End High School, Hornsey.

English Language.

1. Bennell, Miss M. — Crouch End High School, Hornsey.
2. Dodson, F. K. — Hutton Grammar School.
   Mynott, A. F. — Brentwood High School.
   Rowtcliff, Miss A. G. — Holsworthy Middle School.
   Tylcoat, Miss L. — Private tuition.

Geography.

1. Fassnidge, W. — Private tuition.
2. Bennell, Miss M. — Crouch End High School, Hornsey.
   Newman, A. N. — Holloway College, N.

Arithmetic.

1. Mercer, F. — Oakes Institute, Walton, Liverpool.
2. Dodson, F. K. — Hutton Grammar School.

Algebra.

1. Saggerson, E. J. — Canning Street School, Newcastle-on-Tyne.
2. Jewell, J. — Devonport High School.
   Mercer, E. — Oakes Institute, Walton, Liverpool.

Geometry.

1. Saggerson, E. J. — Canning Street School, Newcastle-on-Tyne.
2. Caunce, A. E. — Oakes Institute, Walton, Liverpool.
   Rogers, W. T. — Brentwood High School.

Trigonometry.

1. Blackman, W. — Oakes Institute, Walton, Liverpool.
   Ferraro, R. — Devonport High School.
   Mercer, F. — Oakes Institute, Walton, Liverpool.

Mechanics.

1. Lampard, L. A. — Devonport High School.
2. Charoen, M. L. — Arnold House School, Chester.

Book-keeping.

1. Bennell, Miss M. — Crouch End High School, Hornsey.
   Rahtkens, G. A. — Grammar School, Shoreham.

Mensuration.

1. Taylor, F. C. C. — New College, Herne Bay.
2. Ferraro, R. — Devonport High School.

French.

1. Le Montais, Miss L. R. de L. — St. James' Ladies' School, Jersey.
2. Chattin, A. E. — The High School for Boys, Croydon.

German.

1. Chattin, A. E. — The High School for Boys, Croydon.
2. Welsh, L. — Mercers' School, E.C.

Spanish.

1. Walsh, T. C. — Private tuition.

Welsh.

1. Roberts, J. — Private tuition.

Latin.

1. Dodson, F. K. — Hutton Grammar School.
   Hargrave, D. H. — Merchant Taylors' School, E.C.

Greek.

1. Jackson, W. — The Cusack Institute, Broad Street Place, E.C.

Light and Heat.

1. Lovell, E. R. — Whitchurch Grammar School.
2. Bennell, Miss M. — Crouch End High School, Hornsey.
   Fassnidge, W. — Private tuition.
   Whitfeild, B. W. — Private tuition.

Magnetism and Electricity.

1. Dodson, F. K. — Hutton Grammar School.
2. Mercer, F. — Oakes Institute, Walton, Liverpool.
   Montgomerie, W. G. — Hutton Grammar School.
   Woodhouse, R. A. — Hutton Grammar School.

Chemistry.

1. Bramer, J. D. S. — Atherstone Grammar School.
   Cunningham, L. — Hutton Grammar School.
   Dodson, F. K. — Hutton Grammar School.

Natural History.

1. Harper, V. H. — Cliftonville College, Margate.
2. Newell, Miss E. M. — Pengwern College, Cheltenham.

Drawing.

1. Bisiker, A. M. — Tollington Park College, N.
2. Jensen, Miss E. M. — Westbank School, Dulwich.
   Jewell, J. — Devonport High School.
   Williams, P. G. — Froebel House, Devonport.

Music.

1. Le Breton, T. V. — Jersey Modern School, St. Helier.

Political Economy.

1. Bennell, Miss M. — Crouch End High School, Hornsey.
2. Leslie, P. W. L. — Private tuition.

Shorthand.

1. Fish, F. J. — The Cusack Institute, Broad Street Place, E.C.
2. Smee, H. G. — Mercers' School, E.C.

Domestic Economy.

1. Turner, Miss A. V. — Private tuition.
2. Cheatle, Miss H. B. — Milton House School, Atherstone.

PHILIPS' NEW GEOGRAPHICAL PICTURES.

Series I.—LAND FORMS: CLIMATE AND VEGETATION. A Series of 24 Pictures on 20 Plates, enlarged from Photographs direct from Nature, illustrating Geographical Features, with Notes and Questions.
Edited by P. H. L'ESTRANGE, B.A., Author of "A Progressive Course of Comparative Geography on the Concentric System."
Size 24 in. by 20 in. Price **1s. 3d.** each net; the Set complete in Case, **21s.** net.
Prospectus, with full List, on application.

Third Edition. Demy 4to, cloth, **6s.** net.

A PROGRESSIVE COURSE OF COMPARATIVE GEOGRAPHY ON THE CONCENTRIC SYSTEM.

By P. H. L'ESTRANGE, B.A., Assistant Master at Malvern College.

Teachers of Geography should send for full descriptive Prospectus, with details of various forms and prices of this important Text-book.

In use at Rugby, Charterhouse, Marlborough, Malvern, Repton, Blundell's (Tiverton), Felsted, and many other Public Schools.

"Teachers who adopt the method here presented may have the satisfaction of knowing that it is not only really educational, but also admirably calculated to make a boy 'score' in examinations."—Professor LYDE, University College, London.

A RATIONAL GEOGRAPHY.

By ERNEST YOUNG, B.Sc., Head Master of the Lower School of John Lyon, Harrow. In Three Parts, with numerous Maps and Diagrams. Cloth, crown 8vo, **1s. 6d.** each.

Part I.—CLIMATE, THE BRITISH ISLES, EUROPE.
Part II.—TIDES, WINDS, CURRENTS, LATITUDE AND LONGITUDE, AMERICA, AFRICA.
Part III.—MAP DRAWING, MAP PROJECTION, SURVEYING, FLORA AND FAUNA, ASIA, AUSTRALASIA.

In each Part directions are given for the use of various instruments used in the study of Geography.

MACKINDER'S ELEMENTARY STUDIES IN GEOGRAPHY

By H. J. MACKINDER, M.A., Reader in Geography in the University of London. Large crown 8vo. With numerous Coloured Plates and Illustrations.

Book I.—OUR OWN ISLANDS. Third Edition. **2s. 6d.**
Or, in Two Parts, each **1s. 3d.**
Book II.—LANDS BEYOND THE CHANNEL. 1s. 9d.

Professor LYDE, University College, London, says:—"The selection of material is just as admirable as the treatment; it is infinitely the best book on Europe for school use that I have ever seen; and I cannot imagine anything better for the training of a child's outlook faculty."

PHILIPS' NEW CLEAR PRINT 19-INCH GLOBE.

Entirely of British Manufacture. For Class Demonstration this new Globe is unrivalled.
Prices from **£2. 2s.** net, according to style of mounting.

COMPANION GLOBES FOR PUPILS' USE.
Prices from **1s. 6d.** net.

PHILIPS' MODEL TEST MAPS.

A New Series for Class Demonstration.

An unrivalled Series of Photo-Relief Maps reproduced from carefully constructed Models.

THE SCHOLARS' ATLAS TO ACCOMPANY THE MODEL TEST MAPS.

PHILIPS' MODEL ATLAS.

Containing 18 Photo-Relief, 20 Political Maps, and 12 Diagrams in Colour.
Prices from **6d.** net.

PHILIPS' ELEMENTARY ATLAS OF COMPARATIVE GEOGRAPHY.

36 Plates, containing over 80 Maps and Diagrams, with Introductory Letterpress. Stiff covers, **1s.**

PHILIPS' MODERN SCHOOL ATLAS OF COMPARATIVE GEOGRAPHY.

64 Plates, containing 136 Maps and Diagrams, with Introductory Letterpress and complete Index. Cloth boards, **3s. 6d.**

PHILIPS' COMPARATIVE SERIES OF LARGE SCHOOLROOM MAPS.

Physical Features specially prominent. Political Boundaries clearly shown.
"Can be thoroughly recommended. There can be no hesitation in advising teachers to select this series."—*The Geographical Teacher.*

A companion series of Test Maps is issued without Names.

PHILIPS' NATURE CALENDAR, 1909.

A Guide to Natural Observation throughout the Year.
With New and Interesting Features. Price **6d.** net; by post, **7d.**

Detailed Prospectuses or Catalogue of Educational Publications sent on application.

MAR 12 19

THE

EDUCATIONAL TIMES,

AND

Journal of the College of Preceptors.

Vol. LXII.] New Series, No. 575. MARCH 1, 1909.

Published Monthly, price, to Non-Members, 6d.; by Post, 7d. Annual Subscription, 7s.

COLLEGE OF PRECEPTORS.

(INCORPORATED BY ROYAL CHARTER.)

MEMBERS' MEETING.

The next Monthly Meeting of the Members will take place on Thursday, the 25th of March, at 7 p.m., when J. L. PATON, Esq., M.A., will read a Paper on "The Educational Value of Play."

A discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

LECTURES FOR TEACHERS.

The First Course of Lectures (Thirty-seventh Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on **The Psychological Bases of Teaching and Education,"** commenced on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods. The Fee for the Course is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C. *For Syllabus, see page* 104.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 30th of August, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in May, 1909.

Certificate Examinations.—The Midsummer Examination for Certificates will commence on the 29th of June, 1909.

Lower Forms Examinations.—The Midsummer Examination will commence on the 29th of June, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Autumn Examination in 1909 will commence on the 7th of September.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

Bloomsbury Square, W.C.

UNIVERSITY OF ST. ANDREWS.

A.—EMPLOYMENT DEPARTMENT.

(i.) **ASSISTANT MASTERS & TUTORS.**

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) **ASSISTANT MISTRESSES.**

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) **LADY MATRONS AND HOUSE-KEEPERS.**

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, LONDON, W.C.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL BASES OF TEACHING AND EDUCATION.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The First Course of Lectures (Thirty-seventh Annual Series) commenced on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods.

SYLLABUS.

I. (Feb. 4.) *The Data of Psychology*: unique character of consciousness: generic consciousness: insulation of the individual consciousness: polarity of consciousness: the objective and the subjective: the self and the ego: nature of the soul: evolution of personality: interplay of personalities: self-realization as goal of education: the teacher's lever.

II. (Feb. 11.) *Psychology as an Educational Instrument*: prevalent misunderstanding: Münsterberg's theory: nature of hypostasis: the exploded faculty psychology: distinction between soul and soul content: education as a process of assimilation of and by the external world: apperception: dynamic view of knowledge: Herbert Spencer's view of the educational value of knowledge.

III. (Feb. 18.) *Presentational Processes*: Sensation and the senses: the "preferred sense": practical applications of the theory of preferred sense: the training of the senses: distinction between sensation and perception: meaning and limits of observation and experiment: the "gaping point": the area of observational activity: distinction between observation and inference: the movable inference index.

IV. (Feb. 25.) *Representational Processes*: distinction between gathering and elaborating material: conception: the static and dynamic view of ideas: ideas as forces: changes in the activity of a given idea: copresentation and interplay of ideas: hierarchy of ideas: the fixed idea: marginal and focal ideas: the possibility of the subconscious influence of ideas.

V. (March 4.) *Soul-building*: nature and scope of association: usual limitation to ideas: really of general application: association makes habits possible: advantages and disadvantages of habit forming: the "growing point": accommodation and co-ordination: the old and the new laws of the association of ideas: Paulhan's view: manipulation of association in teaching.

VI. (March 11.) *Memory*: relation to personal identity: physical basis of memory: possibility of improving memory as a natural power: the associative and the rational memory: mnemonics and the *memoria technica*: mediate and immediate recall: temporary and permanent memory: the nature of the memory implied in "cram": rote-learning: relation between memory and general intelligence.

VII. (March 18.) "*The Busy Faculty*": unjustified depreciation of the imagination: differentiation from memory: æsthetic and practical spheres of imagination: "day-dreaming": need to imagine processes as well as results: misleading use of the word "ideal": the need for clearly imaged ends in practical life: application to the teaching of Geography, History, Arithmetic, and Geometry: imagination as a drag on thought.

VIII. (April 29.) *Regulation of Consciousness*: nature of attention: relation to interest: teachers' distrust of interest: confusion with pleasure: interest and attention as cause and effect: various classifications of the kinds of attention: the physiological basis of attention: the alternation between concentration and diffusion: possibility of degrees of attention.

IX. (May 6.) *Reasoning*: technical distinction between judgment and reasoning: both included in popular term *thinking*: fundamentally an adaptation of means to ends on the ideational plane: thinking may be called the purposive aspect of apperception: laws of thought as thought: the most fundamental law of all thinking: induction, deduction, and fallacies.

X. (May 13.) *Feelings and Emotions*: the pleasure-pain tone that accompanies the activities of the soul: unjustified depreciation of the emotions: driving power of spiritual life: relation to ideas: expression of the emotions, and the various theories connected with it: practical applications to school work: control of the emotions: relation between feeling and desire.

XI. (May 20.) *Desire and Will*: activity of desire: relation to possibility of attainment: expectation of success: evolution of will out of desire: nature and function of motive: fallacy of "the strongest motive" theory: subjective and objective aspects of the will: what is meant by training the will and breaking the will: the problem of the free will of educator and educand.

XII. (May 27.) *Temperament and Character*: various meanings attached to the term *temperament* in ancient and modern times: accepted classifications: physical characteristics of the temperaments: permanency of temperament: possible modifications: the time element: influence of temperament on character: character types and their classification: use and abuse of schemes of classifying characters.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

16 PALL MALL EAST, LONDON, S.W.

Write for Illustrated Prospectus.

London: GEORGE BELL & SONS, York House, Portugal St., W.C.

GILL'S NEW TREATMENT OF GEOGRAPHY.

By GEO. REG. GILL, F.R.G.S.

THE SUBJECT REMODELLED UPON RATIONAL LINES AS:

(*a*) An Aid to Commercial pursuits.
(*b*) A Natural Treatment of Nature's Laws.
(*c*) Evidencing the entire Earth's surface as the abode of man —in a realistic form.

The treatment embodies three necessary forms of material which prove more economical than the out of date methods.

(1) A distinctly new collection of Contour Relief Maps.
(2) Key Demonstration Maps with novel features.
(3) Scholars' Companion Text Books forming adjuncts to the Lecture.

As a knowledge of Euclid is beneficial to the Reasoning powers, so this system of Geographical training is necessary for the realization of up-to-date methods in all branches of commerce.

I. Gill's New Contour Relief Maps.

Size 60 in. × 40 in. (full).

THE NATURE SERIES.

The Mountains, Valleys, Rivers, and Contours stand out as actual facts. They are true to Nature—unbreakable and light—(18 lbs.). The series is reproduced from the original models by

GEO. REG. GILL, F.R.G.S.,

prepared during many years of research and experiment, and from the most recent available material. The effect attained is precisely that which one would expect to find were it possible to view the Earth's surface from a position in space *Nearly Ready—*

AMERICA.	**EUROPE.**	**AFRICA.**
ASIA.	**BRITAIN.**	**AUSTRALIA.**

II. The Sphere Key Maps.

60 in. × 40 in., on Rollers and Varnished, 12s.

This entirely new series forms a Political Commercial Key to the above Nature Maps. Many novel and educational points have been embodied. *Countries as above in the press and ready shortly.*

III. Scholars' Adjuncts to the Lecture.

Illustrated by new Relief and other Maps, designed to record the teaching points made during the lecture. *In the press and ready shortly.*

THE NORMAL PREPARATION AND TEST MAPS

By REGINALD GILL, F.R.G.S., London Chamber of Commerce.

1d. each net.

OUTLINE MAPS SUPERSEDED.

Though not requiring the Pupil to compile the actual outline, the Normal Test Maps supply sufficient data in Art Colours to enable him to do the work correctly. By this means the objection against all other Outline Maps that the Pupil has no practice in drawing the contour, is removed.

British Isles & North Sea.	**Europe.**	**Balkan Peninsula.**	**Africa.**
England and Wales.	**France.**	**Russia.**	**N. America.**
Scotland.	**German Empire.**	**Asia.**	**United States.**
Ireland.	**Italy.**	**India.**	**Australia.**

A Key to the whole of these Test Maps is issued, entitled The Sphere Atlas, 1s. 6d.

IMPORTANT.—*Those interested who are considering the reconstruction of their former methods of teaching Geography should postpone their decision until these works are issued.*

The approved edition used by the most successful schools entering for the Universities' Local Examinations.

The Oxford and Cambridge Edition.

RELIGIOUS KNOWLEDGE. **ENGLISH.**

THE CAMBRIDGE HISTORY OF ENGLISH LITERATURE

Edited by A. W. WARD, Litt.D., Master of Peterhouse, and A. R. WALLER, M.A.

Now Ready. **Volume III.—RENASCENCE AND REFORMATION.**

Royal 8vo. Buckram, 9s. net: half-morocco, 15s. net.

The contents of this volume include chapters on English Universities, Schools and Scholarship in the Sixteenth Century, by Mr. W. H. Woodward; Englishmen and the Classical Renascence, by the Rev. Principal Lindsay; Reformation Literature in England, by the Rev. J. P. Whitney; Reformation Literature in Scotland, by Dr. P. Hume Brown; The Poetry of Spenser, by Dr. W. J. Courthope; The Elizabethan Sonnet, by Dr. Sidney Lee; The Language from Chaucer to Shakespeare, by Professor J. W. H. Atkins.

"The supreme merit of the volume is the discrimination and judgment with which it brings to a focus the gradual evolution of a language, and the wonderful outburst of creative achievement in letters under the Tudors. . . . We have no hesitation in saying, in full view of its predecessors, that 'Renascence and Reformation' reaches a level of literary excellence and critical discernment which surpasses anything that 'The Cambridge History of English Literature' has yet given us."—*Standard.*

PRESS NOTICES OF VOLUMES I. AND II.

Volume I.—From the Beginnings to the Cycles of Romance.

"The volume as a whole deserves unstinted admiration."—*English Historical Review.*

"We give a very hearty welcome to the new scheme of the Cambridge University Press, the History of English Literature. . . . This work, when completed, will be as notable a monument of industry and scholarship as the History planned by Lord Acton."—*Pall Mall Gazette.*

Volume II.—The End of the Middle Ages.

"The editors of this volume . . . have produced a book which is indispensable to any serious student of English literature. The individual articles are in several instances contributions of great value to the discussion of their subjects, and one of them is of first-rate importance in English literary history."—*Athenæum.*

"The second volume proves that the Cambridge History of English Literature is thriving; full of matter and not lacking in spirit."—*Times.*

Subscription Terms. **The work will be completed in fourteen volumes. There are special subscription prices for the complete work of £5. 5s. net in buckram or £8. 15s. net in half-morocco, payable in fourteen instalments of 7s. 6d. net or 12s. 6d. net respectively on publication of the separate volumes.**

An Introduction to the Study of Integral Equations. By MAXIME BÔCHER, B.A., Ph.D., Professor of Mathematics in Harvard University.

Demy 8vo 2s. 6d. net

In this tract, which forms No. 10 of *Cambridge Tracts in Mathematics and Mathematical Physics*, the author presents the main portions of the theory of integral equations, following roughly the lines of historical development, with the hope of furnishing the student with a firm foundation which will serve as a point of departure for further work in this subject and its applications.

The chief purpose of this series of mathematical tracts is to assist in the maintenance of a high standard in English mathematical teaching, by the continued infusion of new methods and more accurate modes of treatment, and by the extension of knowledge of recent mathematical research. The following tracts have already been published and others are in preparation:—

No. 1.—**Volume and Surface Integrals used in Physics.** By J. G. LEATHEM, M.A. 2s. 6d. net.

No. 2.—**The Integration of Functions of a Single Variable.** By G. H. HARDY, M.A. 2s. 6d. net.

No. 3.—**Quadratic Forms and their Classification by means of Invariant Factors.** By T. J. I'A. BROMWICH, M.A., F.R.S. 3s. 6d. net.

No. 4.—**The Axioms of Projective Geometry.** By A. N. WHITEHEAD, Sc.D., F.R.S. 2s. 6d. net.

No. 5.—**The Axioms of Descriptive Geometry.** By A. N. WHITEHEAD, Sc.D., F.R.S. 2s. 6d. net.

No. 6.—**Algebraic Equations.** By G. B. MATHEWS, M.A., F.R.S. 2s. 6d. net.

No. 7.—**The Theory of Optical Instruments.** By E. T. WHITTAKER, M.A., F.R.S. 2s. 6d. net.

No. 8.—**The Elementary Theory of the Symmetrical Optical Instrument.** By J. G. LEATHEM, M.A. 2s. 6d. net.

No. 9.—**Invariants of Quadratic Differential Forms.** By J. EDMUND WRIGHT, M.A. 2s. 6d. net.

The Rhetoric of Aristotle. A Translation by the late Sir RICHARD JEBB. Edited, with an Introduction and with Supplementary Notes, by J. E. SANDYS, Litt.D.

Demy 8vo 6s. net

This translation, left in manuscript by Sir Richard Jebb and not hitherto published, has been revised by the Editor, who has supplied a few accidental omissions and a brief analysis partly founded on the Translator's own memoranda.

Aristotle. Nicomachean Ethics. Book VI. With Essays, Notes, and Translations, by L. H. G. GREENWOOD, M.A., Fellow of King's College, Cambridge.

Demy 8vo 6s. net

In spite of the manifest importance of the Sixth Book of the Nicomachean Ethics, probably no book of the whole ten has received so little attention from Aristotelian students, no separate edition of it having ever been undertaken. The present volume is introduced by an examination of the evidence for and against Aristotle's authorship, followed by a full discussion of the doctrine of the Sixth Book and its relation to the whole treatise.

Latin and English Idiom. An Object Lesson from Livy's Preface. By H. DARNLEY NAYLOR, M.A., Trinity College, Cambridge, Professor of Classics in the University of Adelaide.

Crown 8vo 2s.

This book aims at giving the schoolboy and the undergraduate assistance in acquiring Livian style. The Author believes that "in these days of elaborate editions, where 'notes' on points of archæology, history, philology, orthography, textual criticism, &c., are heaped before the unhappy examinee, there is a real danger of his missing the language itself," and he has endeavoured in this work "to treat Livy as he should be treated—as a fine writer of Latin prose. Livy is neither an ideal historian nor antiquarian nor lawyer: but he is master of his own language, and the more closely one studies him the more one realizes how magnificently he used his instrument."

The Educational Times.

The Circulation of Teachers.

THE training colleges of the country are at present greatly exercised over the problem of the placing of students who have completed their training. When the administrative changes were going on in 1902 there was an outcry throughout the country that certificated teachers were not to be had. There was a teacher famine. Local Authorities were called upon to do their share in the training of teachers. The existing colleges, it was affirmed, were unable to cope with the situation and would require to be supplemented by new colleges provided by the public Authorities. Several of the Education Committees throughout the country took the matter up; but London took things more seriously than most. She has now seven training colleges doing work in more or less permanent buildings, and is turning out several hundred teachers a year.

For the past two or three years, however, it has been increasingly difficult for the newly fledged teachers to find posts. The difficulty is not confined to London. There is a general complaint from all the training colleges, and the Training College Association and the National Union of Teachers are seriously considering the whole question. The dearth of teachers is certainly past, and the problem is what is to be done with regard to the output of teachers. It would appear that there has been a miscalculation somewhere. At first the complaint was that certain Local Authorities were not doing their duty and were waiting till other Authorities trained teachers in order (by the offer of slightly increased salaries) to entice away those teachers from the district that trained them. But now, though many Authorities have taken no share in providing training colleges, there is already a plethora of trained teachers. The case of the London-trained teachers is regarded as particularly hard, since the students of the London colleges are informed that they must compete with the students from all the provincial colleges for London posts. That is to say, since London is much sought after by teachers as a place to carry on their professional work, there is a keen competition for posts there; and the County Council have, not unreasonably, made up their minds that they are going to employ only the best candidates who come forward, whether they have been trained in London or in the provinces. The result is that a large number of London-trained teachers are unable to obtain posts. These students are unwilling to leave London, and it appears that some of them, rather than go to the provinces, are accepting the salaries of non-certificated teachers under certain of the Committees on the outskirts of London. These Committees, we are told, congratulate themselves on thus profiting by the extremity of the unemployed to obtain certificated teachers below their market value.

It is suggested in certain quarters that the obvious solution is for the County Council of London to train fewer teachers. But the reply of the Council is that they have two duties to perform in this matter. They have, first of all, to take their share in training the number of teachers necessary for the country. But they have also to see that the London boys and girls get their fair chance of entering the teaching profession. From its peculiar circumstances London can depend upon a regular supply of provincially trained teachers. But, if she trains no more than are necessary to supplement the provincial supply, she will make it impossible for London children to have anything like the same chance of becoming teachers as the children in provincial towns possess. The solution of the difficulty would therefore seem to be that there should be a circulation of teachers. If London is the most attractive centre for teachers, it is only right that London should get the best teachers. Of the London-trained teachers there will be a certain proportion able to win posts in competition with the best from the provinces. The remainder must then fare forth to the provinces. Unless the young Londoners have sufficient energy to seek their fortune elsewhere, they must pay the penalty of unemployment. It has to be noted that, though the difficulty occurs in its worst form in London, it is not confined to the capital. In all the great provincial cities young teachers, especially girls, are so unwilling to leave home that they are prepared to accept salaries below their value in the open market.

So far, then, as the circulation of teachers is concerned, there does not seem to be anything seriously wrong, though,

Digitized by Google

of course, it is natural that the newly certificated teachers should grumble at having to leave home. But what if they cannot get posts even by going afield? This is much more serious, and indicates that there is something wrong with the national organization for the training of teachers. So far as elementary education is concerned (and now the same will soon hold for the secondary—the money has been already allocated), the training of teachers is not left to the regulation of a natural reaction between supply and demand. The Board of Education interferes in the matter, and must therefore accept the responsibility when anything goes wrong. At the present moment it is not maintained that there are too many teachers, but only that a large number of *certificated* teachers cannot get posts. It is assumed that certificated teachers are better than uncertificated. In the meantime, our schools contain a large number of uncertificated teachers. The time has obviously come when the number of uncertificated teachers in our schools should be reduced. Hitherto the Board of Education might quite well reply that there was no use in making a regulation that a higher proportion of the teachers in the schools should be certificated, since the necessary certificated teachers were not forthcoming. It may be that the Board of Education has only been waiting till there were enough certificated teachers to warrant it in making the required regulation. If so, the time has now come. The change can be made without hardship to any one, as, of course, it would in no way interfere with the present teachers. Our secondary teachers should observe very carefully what action the Board takes in this matter. Their turn will come later.

NOTES.

The appointment of a Royal Commission to inquire into higher education and research in London, actual and desirable, will be warmly welcomed. The University will naturally be the centre of investigation and reference. If it is to fulfil the hopes of those that wish to see it a really great national, or at least metropolitan, institution, and not a loose formal connexion between a congeries of multifarious schools; if it is to exercise due influence upon the schools of advanced education of all classes (general, professional, and technical) outside its direct control; if its various faculties are to challenge comparison with Berlin, Paris, and Harvard; if it is to provide anything like adequate means for even the most urgent departments of research,—then obviously the recommendations of the Commission will be of a startling character. It is significant of much, we take it, that Mr. Haldane has been appointed Chairman: it means, at least, that the inquiry will be comprehensive and thoroughgoing, and that the recommendations will be based on a full recognition of immediate necessities and a generous regard to the probable requirements, and the reasonable possibilities, of the near future. A practical organization and an adequate equipment will demand a very large sum of money; and, as the wealthy people of London have been less touched with the spirit of generosity—not to say duty—that animates so many of the well-to-do citizens of provincial University towns (to say nothing of the amazing liberality that nourishes the Universities of America), evidently a considerable claim will be presented to the Chancellor of the Exchequer. And that claim, we have no doubt, will be frankly admitted: it will be an investment of the highest class. The constitution of the Commission seems open to criticism; one half is as weak as the other half is strong. But probably, in practice, that will make no appreciable difference. The opportunity is great, and it is reassuring to know that Mr. Haldane is in command.

Mr. Benson has contributed a series of three weighty articles to the *Church Family Newspaper*, and, perhaps, the weightiest of the three is the second, in which he considers the education of the average boy. The importance of the matter is that the average boy is the most common kind of boy. Now what are you to do for your average boy? "The urgent necessity," says Mr. Benson, "is the simplification of the curriculum"; "the only chance is to arrive at what may be called an irreducible minimum of subjects," say English, French, Arithmetic, History, Geography, Elementary Science, and Biblical Instruction. "The point would be to get an education which should be really modern and liberal, should open a boy's eyes to the existing conditions of the world, stimulate his intellectual curiosity, and, what is most important of all, really equip him for practical life." We need not follow Mr. Benson's remarks upon the several subjects of his provisional minimum curriculum. There are obvious difficulties—for example, in the teaching of "quite modern history," to say nothing of "simple and straightforward Bible teaching"; but, with sensible teachers, these difficulties ought practically to vanish. No doubt "there should be more variety of types of schools rather than variety of subjects at each school"; but that is certainly—not merely "perhaps"—"looking too far ahead." What is meantime more essential is that the boy should always understand what he is doing. In most subjects the average boy is dragged along with the superior boy, and, being ignorant of his whereabouts, inevitably loses interest, "with the result that such intellectual energy as there is, is dissipated rather than concentrated." There is hardly any average boy that would not take to his work with zest if only he could understand each step in his progress. But the first thing is to conquer "the urgent necessity." "This point is entirely in the hands of head masters." Let them get out of the mist of the ideal and see in the clear light of facts what is necessary for the average boy, and frame measures for the attainment of that end. "It is mainly parental indifference, or, perhaps, parental helplessness, which tends to perpetuate the present unsatisfactory conditions"; but such indifference and helplessness merely demonstrate how easy it would be for the head masters to control a wide-reaching and beneficent reform. Their responsibility is by no means light.

It is about time that some scientific genius were calculating for us the elasticity of a school curriculum. New subjects are pushed forward and old subjects are strenuously defended; but there must be a bursting point somewhere. In the lower ranges, manual training is increasingly making way; and, in the higher, science and modern languages are pressing severely upon the classical subjects. And here is Mr. Town, with the London Chamber of Commerce at his

Digitized by Google

back, insisting "that provision be made in the curricula of higher elementary and secondary day schools for a commercial education, and that encouragement be given and adequate grants paid for the teaching of commercial subjects." To be sure, these subjects have their importance; and the London Chamber of Commerce has done yeoman's service since it commenced systematic operations in 1890, though Mr. Town does not overestimate the work done in day, and especially in evening, schools elsewhere. However, he does well to push commercial education on the attention of educationists and of the public. He certainly brings forward a striking array of statistics (which we set out in another column), showing the activity of America, the Continent, and the Far East in developing institutions of commercial training. If the subject has not received the same amount of attention or encouragement in this country, but has been practically left to private effort, one can only say that this is the common history of all subjects, and that the promoters of a new subject must simply push its way to public recognition, as the champions of other subjects have done before them. And this reminds us of Sir Norman Lockyer's lament that education is not taken in hand with the same broad outlook as military organization, and of Mr. A. C. Benson's desideratum of a clear understanding of what it is that we are driving at and of a clear principle of action to get at our essential object.

THE scholarly and suggestive discourse with which Dr. Gilbert Murray read himself into the Regius Chair of Greek at Oxford has been published at the Clarendon Press (1s. net). "The Interpetation of Ancient Greek Literature" is a subject on which he had already earned a very special right to deliver an authoritative opinion. How to ascertain the meaning of the documents that have come down to us from the great Greek writers?

> The palæographer and the grammarian must help us to get the words right. And, when we have got them, their meaning will depend upon all kinds of other questions: the daily lives those men lived, the houses and cities they dwelt in, the historical changes through which they passed—above all, on the beliefs and ideas which they received unconsciously from tradition or built up by the labour of their own brains. The professor of Greek, it is evident, must depend at every turn upon the discoveries or the special knowledge of other workers in the wide field of Hellenic study.

This brief enumeration indicates how immensely the task of understanding has changed since the days of Porson or Elmsley; and Prof. Murray humorously drives home the point by imagining "how greatly out of his depth Elmsley would have felt if he were plunged without preparation into one of our present advanced courses of Greek history." In these days of demand for short cuts to a knowledge of Greek (or other) literature, it is refreshing to hear from a Regius Chair this caution:

> We have need to take great care that, amid the wide additions to our knowledge that come from archæology, history, philosophy, comparative anthropology, and the like, we do not lose our close grip of the minutiæ of the language which formed the great boast of the old English school; still more that, in the reading of learned periodicals and modern books about the Greek writers, we do not forget to read the Greek writers themselves; for, without the foundation of a clean [? clear] and definite understanding of the language and a real knowledge of the books, no superstructure can be sure.

"The letter is the road to the spirit, and it is only through the exactitudes of the letter that the spirit can be made visible."

WHERE is the good of educational experts? The *Times* tells us (February 11) that, though "there has been, and there is, plenty of educational ferment and unrest," yet it is "still mainly a ferment among experts, by which public opinion at large is only slightly affected." "The average Englishman has nothing like the same interest in or knowledge of educational matters as the average German; still less has he the same belief in public education, the same willingness to pay for it, as the average American." He remains a Philistine. Undoubtedly, "the lack of an instructed and really interested public opinion has very much hampered—and will, it may be feared, still hamper—the course of public education in England." "Could the great public schools," says the *Times*, "be convicted of far worse educational inefficiency than can be laid to their charge, not one parent in a hundred who hopes to send his son to any of them would withdraw his boy's name." "The general public," says the *Times*, "seems satisfied with the Universities as they are, and feels no interest in remodelling them." Well, well; "reform will, no doubt, in time touch both secondary schools and Universities." But, meantime, some one may be prompted to ask whether the *Times* is not a somewhat prominent instructor of this obdurate and self-satisfied public, and whether, instead of a Laodicean and rather cynical survey and chronicle of the facts, it might not be expected to do something to stir up this "lukewarm and silent" public opinion? Let the *Times* take the experts by the hand and expound to the public the importance of their deliverances. If the experts have prevailed in Germany and in America, they will probably prevail here—"in time." But that time might be indefinitely shortened if the experts were properly backed up by the journals that influence public opinion. Moreover, if the public is so quiescent, there is a grand opportunity for a discerning and enterprising press—and for an enlightened and courageous Government.

ANTHROPOLOGICALLY, we believe, Glasgow is markedly at variance with the general characteristics of the rest of Scotland. Whether this scientific fact has any bearing upon the remarkable results of the recent examination in English for entrance to the University we will not undertake to decide. "Out of 227 candidates who entered for English, only 28 passed, showing a percentage of passes of 12·33, while the percentages in the other Universities were—St. Andrews 43·75, Aberdeen 29·85, Edinburgh 48·25, or an average pass for these three Universities of 40·62, upon the same papers." The Edinburgh district has an historical affinity with England; St. Andrews' golf links are much frequented by Southrons; and Aberdeen has the reputation of granitic hard-headedness: but such explanations may still be inadequate. In any case, the Glasgow University Court is much aggrieved. A Committee appointed to communicate with the Joint Board on the subject got no satisfactory reply to their request for a scrutiny of the papers, and "could only reiterate their dissatisfaction with the decision of the Joint Board." Dr. M'Vail, however, infused courage into the Court in a fighting speech, in which he pointed out that, according to the ordinance in that behalf, the examination papers should not have been set by the Joint Board at all, but by the examiners in

Digitized by Google

the University; and at last he brought the members to assent unanimously to a motion "that the whole question be remitted back to the Committee to consider the whole procedure, to ascertain how far the ordinance had been complied with, and to endeavour to get the examination papers from the Board." In due course, the Glasgow papers will return to the custody of the convener of the Joint Board, who happens also to be the Secretary of the University Court; and then another interesting situation will arise, for, as Principal Macalister said, "the Secretary of this Court cannot coerce the convener of the Joint Board." If the Secretary-Convener do not succeed in coercing himself, who shall coerce him? The tangle is a beautiful tangle as it stands, and it would be a pity to spoil it. But 12·33 per cent. is not easy to bear. Pity the faithful examiner!

SUMMARY OF THE MONTH.

THE King has been pleased to appoint a Royal Commission on University Education in London. The terms of the reference are:

To inquire into the working of the present organization of the University of London and into other facilities for advanced education (general, professional, and technical) existing in London for persons of either sex above secondary-school age.

To consider what provision should exist in the Metropolis for University teaching and research.

To make recommendations as to the relations which should in consequence subsist between the University of London, its incorporated colleges, the Imperial College of Science and Technology, the other schools of the University, and the various public institutions and bodies concerned.

To recommend as to any changes of constitution and organization which appear desirable.

In considering these matters, regard should also be had to the facilities for education and research which the Metropolis should afford for specialist and advanced students in connexion with the provision existing in other parts of the United Kingdom and of his Majesty's Dominions beyond the seas.

The Chairman of the Commission is Mr. R. B. Haldane, K.C., M.P., and the members are: Viscount Milner, G.C.B., G.C.M.G., Sir Robert Romer, G.C.B., Sir R. L. Morant, K.C.B., Mr. Laurence Currie, M.A., Mr. W. S. M'Cormick, M.A., LL.D., Mr. E. B. Sargant, M.A., and Mrs. Creighton. The joint secretaries to the Commission are Mr. J. Kemp and Mr. H. F. Heath.

THE third annual dinner of the University of London Graduates' Association was held (February 11) at the Waldorf Hotel. Mr. Justice Walton, the President, was in the chair. Dr. Russell Wells proposed the toast of "The University." He said that it was not an institution that arose in 1900 with the findings of a Royal Commission. It had an ancient and honourable history. When the University was reconstituted it was predicted by some that its old work would come to a standstill, that the old open portals of the University would be closed. He for one thought that, if that had been the result, it would have been little short of a disaster, but in actual practice he was happy to say that that prediction had not been fulfilled. Last year they had more graduates on the external side than there were graduates in the University in the last year before the reconstitution. In addition they had a large number of internal graduates. The association did not make a distinction between the two sets of graduates. On the whole, he thought the University was steadily going forward and would take a larger part in the educational equipment of this country. They were, however, shortly going through the throes of a Royal Commission. He believed that the findings of that Royal Commission would be such as would increase their powers and responsibilities. He saw growing up in London a great centre of learning—a University which would be an Imperial University. He saw London becoming the seat and the centre of one of the greatest institutions of learning in Europe. He believed that they had the power of making the University of London the greatest institution that the world had ever seen. But, in order to do that, they needed the devotion of every one of its members, and, above all, they wanted money. Sir Philip Magnus, M.P., who responded, said that the London University was the first University in this country to give encouragement to the teaching of science. He believed that whoever had to write the history of education during the latter half of the last century would undoubtedly say that the prominence which had been given to science teaching in our secondary schools and in our Universities was the great feature of that history. The Faculty of Engineering was destined to become one of the most important faculties of the whole University. The Imperial College of Science and Technology should not grow up as a rival to the University. They felt that, if that institution was to be located, as it was located, in the metropolis, it must not be a rival, but must form an integral part of the University.

THE Annual General Meeting of the Association of Technical Institutions was held at Grocers' Hall on February 5 and 6. The business meeting on the first day was preceded by a luncheon at which members of the Association were entertained by the Grocers' Company. In proposing the toast of "The Association of Technical Institutions," Sir William White said he does not believe in the truth of the statements as to the decadence of England; but he is sure that, if we are to keep the position we hold, we must, as a nation, lose no opportunity of developing the technical institutions of the country. Sir Norman Lockyer responded, and during the course of his remarks said, if Mr. Haldane had gone to the Education Office instead of the War Office, we should have had a Board of Education responsible for all education from top to bottom instead of the truncated body we have at present. There would be a general staff, full of knowledge, directing everything, so that in a few years' time, by this organization and the administrative conditions it brought about, we should have such a peace army as Mr. Haldane is endeavouring to give in the shape of a war army. At the subsequent meeting, Dr. George T. Beilby, F.R.S., was elected President for 1909, and proceeded to deliver his address. If, he said, the members of the Association are possessed by the belief that the industrial future of the nation must largely depend on the spread of education in science and in the application of its laws to the affairs of daily life, then they cannot escape from the conclusion that it is their particular duty to see to it that they are taking a leading part in this vitally important work. If, he pointed out, the training in technical institutions is to be modelled on the lines of the best professional standards, it is necessary to secure the active co-operation of representative men from those industries for which it is proposed to train the students. With the help of such representatives, courses of instruction, practical as well as theoretical, must be organized. The same kind of reality must be given to the practical side of the work as is found in the clinical teaching of medical students, and it must be made compulsory for all who desire to obtain the full diploma of the college. On the second day, Principal F. C. Forth, of Belfast, read a paper on the management of the entrance examinations giving admission to the evening classes of a technical institute, and Mr. Sidney Webb opened a discussion on compulsory attendance at evening classes.

AT the distribution of prizes and certificates at the Newry Technical Institution, Mr. C. E. Town, Deputy-assistant Secretary for Commercial Education of the London Chamber of Commerce, delivered an interesting address on the growth of commercial education. It had always (he said) been a matter of great surprise to him that the Technical and Commercial Education Act had been so unequally administered. While technical education had received the utmost consideration and support, commercial education had been left more or less to look after itself. When one considered the commercial progress which, during the last twenty years, had been made by America, Germany, France, Austria, Belgium, and many of the less important countries of Europe, and at the same time made a careful study of their education systems, it was at once seen that such progress was coincidental with the special attention they had given to commercial education. In New York State alone there were no less than 500 business training colleges, many of which were established fifty years ago, while throughout the whole of the United States of America there were a very large number of similar institutions. In Germany some twelve years ago there were 112 commercial schools, but now there were upwards of 430. Germany was also paying special attention to the commercial education of women: in 1892 there were three schools established for women, and now there were over eighty. The

Digitized by Google

Germans were giving special attention to the teaching of commercial subjects, and had formulated a system so complete that there were no less than five distinct grades of commercial schools established throughout the German Empire. In Japan commercial education had for some years received special attention, and at Tokyo there was a higher commercial school, with upwards of 500 students in daily attendance. This school was maintained by the Japanese Government and cost, for site and building, no less than £28,000. Here students could obtain a complete course of commercial training at a cost of about £2. 10s. per annum, for which sum they received about thirty-two hours' instruction weekly. A significant fact in the curriculum of this and other commercial schools in Japan was that English was a compulsory language.

Turning to home, Mr. Town said they did not find, after eighteen years of strenuous work, that commercial education was receiving the same amount of attention or encouragement as in other countries. It had practically been left to private effort, and in this the London Chamber of Commerce, as the pioneers, and others Chambers of Commerce throughout the Empire had rendered a great and valuable service to commerce. Of recent years the Board of Education for England and Wales had incorporated the teaching of commercial subjects, for which they paid small grants, in the regulations for technical schools, schools of art and other schools and classes (both day and evening) for further education, but did not conduct examinations in commercial subjects or issue certificates of proficiency to those so trained. It was in this respect that the scheme of commercial education examinations of the London Chamber of Commerce met an educational and a commercial demand. When the London Chamber of Commerce commenced its work in 1890 little or no commercial teaching was given, except in a few proprietary schools, which, amongst other subjects, gave instruction of a very inferior quality in handwriting, shorthand, typewriting, book-keeping, with either French or German. To-day, as far as evening work was concerned, there were throughout the Empire greater facilities now than formerly for the teaching of commercial subjects suited to the requirements of all positions in commercial houses, no matter whether it be as a junior or senior, or correspondence clerks, cashiers, book-keepers, accountants, representatives, managers, secretaries, or principals. What was needed, however, was that provision be made in the curricula of higher elementary and secondary day schools for a commercial education, and that encouragement be given and adequate grants paid for the teaching of commercial subjects. When the Board of Education incorporated in its regulations for higher elementary and secondary day schools commercial courses as alternatives to courses in science and art, there would be little need to fear what our friends on the Continent or on the other side of the Atlantic might be doing in this direction. Once the public had become convinced of the necessity and value of commercial education and facilities were provided for acquiring it, we should soon make up much of the leeway of the past.

To commemorate the centenary of the birth of Charles Darwin Prof. Vines, Prof. Poulton, and Prof. Bourne gave an "At Home" (February 12) to the University in the Examination Schools, Oxford. There was a large and distinguished gathering, including many heads of houses and four of Charles Darwin's sons—Mr. William Darwin, Prof. Sir George Darwin, F.R.S., Mr. Francis Darwin, and Major Leonard Darwin (President of the Royal Geographical Society). Prof. Poulton delivered an address on "Fifty Years of Darwinism," in the course of which he said the enthusiasm inspired by science in large part depended on the onward rush into the unknown. The call of the future was so imperative that there was little temptation to listen to the past. Yet there were occasions when the scientific man would gain most inspiration and guidance and hope by pausing and looking back. And, if ever this was true, it was true to-day on the hundredth anniversary of the birth of Charles Darwin. Looking back on the controversy which immediately followed the publication of "The Origin of Species," the contrast between the maturity of the new views and the crudity of the attacks which were directed against them was remarkable in the history of science. On the one side were the twenty years of reflection and investigation by the greatest of naturalists; on the other, the impressions of those who received the new views for the first time and very imperfectly understood them. Comparing the effects produced upon thought by our two greatest scientific men (Newton and Darwin), Prof. Poulton observed that the world of 1686 which received the "Principia" was a very different world from that to which, in 1859, was given "The Origin of Species." Newton's sublime discoveries were for the students of physical science and mathematics, and were slow in penetrating even these. It was far otherwise with the teachings of "The Origin." Every new creative thought which cut deep into "the general heart of humankind" must bring, when it came, division and pain—not peace, but a sword. And now that the battle of evolution had long been over, the dominant feeling, as they looked back upon the past half-century, was of pathos even more than of triumph. In all the boundless realm of philosophy and science there was no thought which had carried with it so much of pain, but in the end not long delayed, so much of the joy which came of intellectual activity and effort, as the doctrine of organic evolution, which must always be associated, first and foremost, with the name of Charles Darwin. Sir George Darwin and Mr. Francis Darwin also briefly addressed the gathering.

The distribution of prizes awarded by the National Society of French Masters in the twenty-fourth competition among English colleges and schools took place (February 6) at the Mansion House. The French Ambassador said he was happy to have a new opportunity of thanking the Lord Mayor and Lady Mayoress for the hospitality and kindness which had always been manifested towards the Society of French Masters by the representatives of the City of London. Since 1899, when he first attended a distribution of the prizes gained in the competitions in the French language in London, the number of examinees of both sexes had increased in truly extraordinary proportions. In 1899 the number of competitors was 240. In 1903 the number rose to 2,400, and this was attributable to the fact that the King of England then paid his first official visit to Paris, and that the President of the French Republic, M. Loubet, made an official visit to London. From the day that cordial relations were established between the two Governments, the understanding between the two peoples became more and more intimate, and the youth of the two nations became interested, so that the study of French was taken up with enthusiasm by the English schools and the study of English assumed very large proportions in France. He trusted that that would continue, and that the love for his country's language and literature would find an echo in the minds of the youth of France. It was good that they should think the same in France as the people in England, because the two countries were the most powerful factors to spread throughout the world the interests of peace, of civilization, and of liberty. M. Albert Barrère presented the report of the committee on the competitions of 1908. The level of French teaching and study did not, he said, seem to have declined, and the taste for the French writers was apparently on the increase. The total number of candidates at the examinations was 4,950, or 548 more than in 1907.

At the annual meeting of the Mathematical Association, the retiring President (Prof. Bryan) expressed doubt as to whether the members fully realized the serious danger that was imminent at the present time—namely, the extinction of the English mathematical specialist. They were told that mathematicians must take off their coats and work. He would say that English mathematicians must take off their coats and fight for their lives. At present no one in England had a good word to say for the mathematical specialist, though in other countries he was exercising an ever growing influence on the destinies of the nation The nation that tried to do without the mathematical specialist was like the foundry where they tried to drive rivets into boiler plates with a pair of nut-crackers. He believed that the hard things which were said about mathematicians in England were due to the fact that people in general could not distinguish—it was impossible that they should distinguish—between a Wrangler and a mathematician. By a Wrangler he meant not only a Cambridge Wrangler, but any man who underwent a rigid course of mental training to enable him to pass a difficult examination in mathematics. He maintained that the most successful teacher required his ideas to be enlarged in some direction beyond the syllabus of the typical B.Sc.'s examination if he was not to run in blinkers all his life. If that were done, they would train up a body of teachers each of whom was a specialist in his own little little way. The want of practical elementary experience in calculating and measuring was everywhere apparent. The mathematician of the future, if he was to save himself from destruction, must be a fighting man, and must convince the British public that he was a power in the country, that he wished to use his

Digitized by Google

power for the benefit of the country, and that the country could not get on without him.

The Friends' Guild of Teachers held its fourteenth annual meeting at Tunbridge Wells, January 4 to 6. The President (Lucy F. Morland) discussed some problems of elementary education from the administrative standpoint. Francis E. Pollard, speaking on "Educational Peace Work," desiderated a positive policy instead of the merely negative one of objecting to military drill and the like in schools: the real object was to lead on to a broad conception of life as the service of humanity. A discussion of reports upon the International Moral Education Congress did not reach a definite point through lack of time. Prof. Findlay spoke on co-operation between school and home; and there was a very interesting discussion on the scope of art teaching in schools. The attendance, though considerable, was comparatively small, "but want of numbers seemed more than counterbalanced by the vigour and efficiency of the few."

The total number of candidates entered for the Cambridge Local Examinations held in December last was 12,548, exclusive of 2,831 candidates examined at Colonial centres. In the Senior Examination 1,009 boys and 1,195 girls passed, 82 boys and 14 girls being placed in the First Class. Sufficient merit was shown by 545 boys and 220 girls to entitle them to exemption from one or both parts of the Previous Examination. Of the junior candidates, 2,234 boys and 1,785 girls passed, the number placed in the First Class being 194 and 24 respectively. In the Preliminary Examination 1,476 boys and 1,033 girls satisfied the examiners. The awards of scholarships and prizes, the examiners' reports, the tables showing the success or failure of the individual candidates in each section, and the class lists for the Colonial centres will be published during the current month.

The Oxford delegates for the training of secondary teachers express in their report the hope that "the conditions, both financial and general, of the delegacy's work are about to be greatly improved by the recent intervention of the Board of Education, which announced at the end of July that it was prepared to consider an application from the delegacy for recognition and grant under the new regulations for the training of teachers for secondary schools, 1908." Under present conditions the work of the delegacy is carried on at an annual loss of over £200. The number of students reading for the diploma increased from seventy-one (thirty-one men and forty women) in 1907 to eighty (forty-two men and thirty-eight women) in 1908.

The Carnegie Trustees are also concerned about the new regulations for the preliminary education, training, and certification of teachers. They consider that the funds of the Trust are not chargeable with providing the students in training any part of the instruction required for a general certificate in terms of the regulations for the preliminary education, training, and certification of teachers whether the Provincial Committees arrange for the supply of such instruction in University classes or in classes instituted by themselves. They hold that that is properly a charge upon the grants voted by Government for the purpose. The trustees continue to insist so far as possible that all students, on whose behalf University class fees are paid by the Trust, shall have ample time and opportunity to devote themselves to the work of those classes, and in the case of students under training, the trustees would not feel justified in assisting them, for instance, to attempt to compress into three years both the special instruction intended to fit them for their professional career and the wider studies required for a complete degree curriculum.

In the new Arts ordinance passed for the Universities of Glasgow, Aberdeen, and Edinburgh, and in that under preparation by the University of St. Andrews, regulations have been or may be framed removing the necessity of attendance on qualifying classes in Latin (or Greek) and mathematics (or natural philosophy), and this change has or will have the incidental effect of lowering the minimum University requirements as to the Preliminary or Entrance Examination for a full curriculum in Arts unless it be guarded against by further ordinance or regulation. In these circumstances the executive committee of the Carnegie Trust desire to know whether it would be possible for students who had entered the University for the first time at the beginning of the current session, and who had passed the Arts Preliminary Examination without a pass in higher Latin or intermediate mathematics, as the case might be, to graduate in Arts without any further examination. At the beginning of the current session the committee received many applications from such students, more especially in the University of Edinburgh, where curricula under the new ordinance had already been approved, and in consideration of the wording of the regulation of the Trust as it then stood they had no alternative but to offer those students a conditional promise. Though the committee hoped, if necessary, to be able to meet this unforeseen call upon the funds of the Trust, they did not see their way to be satisfied in the future with a lower requirement of preliminary education than had hitherto been demanded. On the other hand, they were not desirous of insisting on a higher preliminary standard in the particular subjects of Latin or mathematics than the Universities might see fit to require. They proposed to alter their regulation thus:—"Applicants qualified in the two previous regulations will be eligible for payment of University class fees if they have obtained the leaving certificate of the Scotch Education Department, bearing evidence of such preliminary education as is required by the Universities for entrance upon their respective graduating curricula. Applicants who have not obtained the aforesaid leaving certificate may be considered eligible upon production of evidence of a preliminary education of equivalent standard." The committee believe, apart from the immediate circumstances of the case, that that regulation would, among other advantages, tend to a closer co-ordination of the Universities and the secondary schools of Scotland, from which almost all the beneficiaries of the Trust were drawn.

It is in the highest degree desirable (says the *Statist*) that the Catholic youth of Ireland should find in the new National University a congenial and a sound system of education, and therefore that the whole Catholic community should, as soon as may be, be leavened by the enlightened minority. There is, however, a higher and a more important argument for the encouragement by every legitimate means of the study and cultivation of the Gaelic language. Gaelic is one of the oldest of spoken languages. It is probably coeval with Sanskrit. It certainly is one of the oldest of the Aryan tongues. It is, therefore, one of the very few remaining original sources of knowledge of the long buried past. If ever we are to gain a truer and a completer view of the early history of civilization, it must be sought in the oldest languages that remain to us. One of the most serious charges against the two older English Universities is that while Gaelic and Cymric—the two surviving branches of the Celtic speech—are still spoken in the United Kingdom, nothing has been done by them to encourage and assure the proper study of these tongues. It is a still stronger condemnation of Trinity College. When that institution was founded Gaelic was the language practically of the whole Irish people. But Trinity has done nothing to promote the study of the language and enable the world to derive benefit from the study. The language since then has gradually decayed, and, as already said, it is now spoken only by a small minority. Still it lives, and while it does live it is of the greatest importance that it should be studied adequately and thoroughly, so that we may derive from its remains all the information that can be gathered regarding times and customs of which we have no other means of getting a knowledge.

At a meeting of the Sutherland Branch of the Educational Institute of Scotland, Mr. James A. Macdonald, H.M.I.S., delivered an address on "The Teaching of Grammar." He said that about eighteen months ago teachers were asked for an expression of opinion as to the need or otherwise for formal grammar. The result of that inquiry was embodied in the memorandum of the Department, and teachers were now freed from the chains of formal grammar, which had bound them so long. He quoted expressions of opinion from a number of teachers in different classes of schools, and replied to their statements. While informal grammar should be constantly taught, the arguments in favour of formal grammar were insufficient. Mr. Macdonald's conclusions were that the old formal parsing, with most of its terminology, must go; terms used must be justified; it must be recognized that grammar will not keep young people from making mistakes. It was only to a limited extent useful in interpreting literature. The lecturer then explained the terms which he would retain and which he would discard.

THE Paris correspondent of the *Standard*, discussing the result of the system of establishing canteens in the primary schools of Paris, so that the children might have a warm midday meal, says:—The system has been tried, but has given rise to grave abuses, and the Municipal Council has named a Commission of Economies, which has been examining the methods of administration of the school canteens. These have hitherto been left entirely to the care of the local committees of each quarter of Paris, the city merely furnishing the funds asked for. The Commission of Economies has discovered, in the first place, that the number of children receiving free meals in certain parishes is altogether out of proportion to the really indigent population, and the cashiers of the school funds have been the more generous since it costs them nothing, and it was always the Municipal Council that made up the deficit. Second, in most of the canteens the price of the food is lower than its actual cost, which is a piece of gratuitous charity, since the poor children have their meals for nothing, and those who can pay could afford the cost price. The Commission of Economies proposes that free food should be given only to children whose parents are demonstrably unable to pay, and that a half-price course should be provided for those whose families, without being absolutely destitute, are not at all well off. It also cites the example of the twentieth *arrondissement*, which is one of the poorest, and where a meal is taxed at 15 centimes, or about three farthings, which costs a fraction of a farthing less, and thinks that this example might with advantage be followed universally. As a result, it calculates that an economy of £18,000 a year would be effected in the subventions given by the city of Paris to the school canteens, which is a sum worth saving if it can be done as suggested without damaging anybody's interests.

THE Cambridge correspondent of the *Times* writes:—While tracing in the dynastic histories of China the numerous allusions to a curious chariot in which there was an arrangement for registering the distances traversed, strongly suggestive of the modern taxicab, Dr. Giles, Professor of Chinese, has recently unearthed a complete specification of its mechanism, according to which it is quite possible to reconstruct such a vehicle. It appears that these taxicabs, to use a convenient term, were first mentioned under the Chin dynasty (A.D. 255–419); and from that time down to the middle of the fourteenth century frequent allusions to such vehicles known as "measure-mile-drum-chariots," are to be found in the dynastic histories. Under the year 1027 A.D., and again under the year 1107 A.D., full particulars are given as to their construction, the number of wheels, their positions, the number of cogs on each wheel, &c., being all definitely stated. On completing a translation of the specification, Prof. Giles placed it in the hands of Prof. Hopkinson, of the Engineering Laboratory, with the satisfactory result that, from a specification recorded by the Chinese some nine hundred years ago, Prof. Hopkinson has constructed a model of a wheeled vehicle which accurately registers the distances traversed. At each *li*, or Chinese mile, which is about one-third of an English mile, a drum is struck; while at every tenth *li* a bell is rung. A full translation of the specification is shortly to be published, with illustrations of the mechanism.

REFERRING to the late Mr. Arthur Butler, of Oriel College, the *Oxford Magazine* says:

Oxford owes him two great debts. It was he who mainly brought about the appointment of Archbishop Lang, as he now is, to be Vicar of St. Mary's, giving him thereby a University position in addition to that he held in his College; and it was he who, more than any one else except Mr. Rhodes himself, was the cause of the Rhodes Scholarships. The great gift was arranged after a hasty, perhaps too hasty, meeting between Rhodes and Arthur Butler at Oxford. Mr. Butler himself was very modest about his share in the matter, but did not deny, when pressed, that it was due to their old friendship and his encouragement that the idea came to the birth when it did. Oriel, then, owes him much and Oxford much, and, through Oriel, England and the Empire not a little.

UNIVERSITIES AND COLLEGES.

(*From our own Correspondent.*)

Cambridge.

A NEW Professorship is to be created, and we are to be congratulated thereon. The history of the matter is interesting and instructive. In 1889 the late Mr. R. S. Newall bequeathed to the University his large refracting telescope, and the sole charge of this instrument devolved upon his son, Mr. H. F. Newall, who for the past eighteen years has not only given his services to the University, but has also contributed to the stipend of his own assistant. Much excellent work in the domain of stellar physics has been done at the Newall Observatory, assisted by the McLean bequest of £5,000, to provide improved instruments. Finally, the Royal Society have generously offered to the Observatory the whole of the instruments formerly used by Sir William Huggins. The investigations of the late Sir George Stokes into the nature of the Frauenhofer lines in the solar spectrum first identified this branch of science with the University of Cambridge, and now the edifice will be completed by the creation of a Chair of Astrophysics. It goes without saying that the first occupant of the chair will be Mr. Newall. No stipend is to be paid, so that the generosity of the University will not be severely taxed, while some slight honorary return will be made to Mr. Newall for years of patient and valued work.

It never rains but it pours; no sooner has the new Professorship been established than another generous benefactor comes forward. Major E. H. Hills, C.M.G., R.E., has offered to the Observatory the spectroscopic instruments used by him in observing the eclipse of 1898. The collection includes a four-prism quartz spectroscope, which is probably the best instrument of its kind in existence.

Candidates for the Mechanical Science Tripos have now to pass a qualifying examination in Mathematics which is held twice a year, in June and at the end of November. This may be necessary, but it is an evil, as it interferes with the routine of the first year's work. It is now proposed to change the date of the second examination to the beginning of the October term and to throw it open, like the Little-go, to candidates who have not yet matriculated. This is a step in the right direction. There is an increasing tendency to discourage candidates entering the University until they are in a position to benefit by the facilities for advanced work that Cambridge affords. The elements of Latin, Greek, and mathematics are better learnt at school or in the country; and, though there are persons who come up here unlettered and unlearned, they are rapidly being made to see that they are exceptions and that the working man is the one for whom the University exists. The honest poll man has his place here, but every year he finds life harder for him.

In my notes for January I spoke of the appointment of Mr. J. P. Whitney to a Professorship at King's College, London. This entailed his resignation of the living of St. Edward's, which he has held with such acceptance for the last few years. The authorities of Trinity Hall, in whose gift the preferment lies, have been fortunate enough to find as Mr. Whitney's successor one of the most remarkable preachers of the English Church, Canon Thornton, late Vicar of Newquay, Cornwall. The new incumbent is certain to make his influence felt in Cambridge; possessing as he does abnormal strength and vigour, he attracts congregations irresistibly. St. Edward's, the pulpit of which has been filled by men like Harvey Goodwin, Lumby, Lias, Watson, and Whitney, will show no decline from its high standard of preaching.

The Syndicate appointed to consider possible alternatives to the General Examination has at length reported. The movement originated in a suggestion by Archdeacon Cunningham that the poll man should, if he liked, substitute for the general courses of lectures on miscellaneous subjects. Many members of the Senate signed a memorial for the appointment of a Syndicate, and this body at length has given us its conclusions. The original proposal was thrown over absolutely, but a new proposition was put forward as a suggestion by the majority—that two special examinations should be taken as an alternative to the general and one special, as at present. In the words of one of the speakers at the debate in the Senate, the Syndicate presented us with twins, one of which was strangled at birth, while the obsequies of the survivor were being celebrated in the Senate House. It was also remarked that, if the Syndicate thought their effort was a joke, it was an insult to the Senate; if it was meant to be a report, it was an insult to themselves. Not one word of argument did the report contain in favour of the startling change suggested, except the entirely banal remark that "some men are not sufficiently interested in the subjects of the General Examination."

The criticism evoked was of the most damaging character. Though the onus of proof lies upon those who advocate change, not one serious argument was raised in favour of such a course.

It was pointed out by one speaker, and no contradiction could possibly be forthcoming, that, low as is the minimum standard both on the literary and on the scientific side of the present examination, the new proposals would sweep away all irreducible minima and enable the fourth-form boy who has successfully crammed the subjects of the Little-go to specialize forthwith. This is not all. The poll man would be allowed to specialize (?) not in one but in two subjects, and, if that were not enough, probably in three! The Cambridge degree would be obtainable by a candidate who, after passing the Little-go, crammed the necessary work for the "specials" in Music and Agriculture. Some of the speakers seemed to realize that mental training of some sort is necessary before the mind is ready for special work.

There is one fact that is borne in upon all those who deal largely with Cambridge men—a fact of which the University and the Colleges appear to be genuinely ignorant. It is that the faculty of intelligent expression is here practically dormant, and that little is done in some of the Triposes and less in the poll course to wake the sleeping powers. Many of our Cambridge reformers are too anxious to give men knowledge, to pour facts into empty heads with a funnel if necessary. But the whole question of the future of the poll man will soon settle itself; the Triposes will stretch out willing arms to rescue those whom the increasing demands of the poll examinations will frighten from the fold.

My prognostications as to the composition of the University boat proved to be fairly correct. Stuart is rowing bow, though the present writer believes that it is only through a sense of chivalry that he abandons the stroke thwart to one who, good as he is, has no pretensions to be of the same class as our President, the most consummate tactician and the most brilliant racing stroke of the past twenty-five years. Four at least of the men in the crew are his pupils from their rowing infancy, and it seems a pity that he allows his own judgment to be set aside by that of coaches who have not a tithe of his skill or experience.

Great activity prevails in military circles here. Thanks to the organizing powers of Colonel Edwards, ably seconded by Major Heycock (late Colonel commanding the Cambridge Volunteers), much has been done to render the outdoor work useful and attractive, while the teaching ability of Colonel Dyke, the military instructor, ensures thoroughness in the scientific training of all members of the corps. It is being rapidly recognized that the University offers a pleasant and profitable avenue to the Army.

The fact that Mr. James R. M. Butler, of Trinity, son of the venerable Master, has annexed the Craven Scholarship and the Browne Medal for the Greek Ode must duly be noted in these columns. There seems to be no limit to the possibilities of this meteoric young scholar of eighteen, who, absolutely unspoilt by success, is trying to rival the combined achievements of his two brilliant parents.

We were glad to see Dr. Jackson, the Regius Professor, back again with us once more, though still showing some traces of his severe illness.

Mr. Boughey, of Trinity, is giving up some of his college work to succeed Archdeacon Cunningham as Vicar of St. Mary's.

We have had a meeting of the Suffragists, but all was quiet. The politicians on both sides are preparing for the fray, and peaceable householders pray that no Dissolution will come before the undergraduates have left Cambridge and the May week behind them.

Manchester.

The Mining Department of the Manchester University has become associated with a number of the larger and more important collieries within easy reach of Manchester, and has acquired the privilege of introducing students who may not otherwise have facilities for access to collieries. Ten companies have consented to receive at their respective collieries, as articled pupils or apprentices to mining engineering, students recommended by the University. The two and three years' courses for coal mining students are so arranged that part of the time each week, during the second and third years, will thus be spent in the University and part at a colliery. Students of metal mining will spend at least three months in the summer of each year at a metal mine, for which purpose the department has similarly associated itself with metal mines in the Isle of Man and elsewhere.

ON THE GOVERNMENT OF CHILDREN.

WITH SPECIAL REFERENCE TO THE PLACE OF REWARDS AND PUNISHMENTS.

At the Evening Meeting of the members of the College of Preceptors on Wednesday, February 17, Professor Adams in the chair, Professor J. J. Findlay read the following paper:—

Every teacher knows that there is a perpetual conflict in our profession—in every country and in all grades of schools—on the topics which are to engage our attention this evening. And yet I may encounter reproach from some of my friends for proposing to discuss such a topic at all; for some of our educational reformers offer a very simple solution for the difficulties of school government. Children, they say, are only disobedient because they are ill taught. Feed them with food convenient for them; place them in the charge of well trained, experienced teachers; direct all your attention to improve the curriculum and the appliances for teaching; and then all those embarrassing and humiliating difficulties connected with school discipline will disappear of themselves.

Now I feel sure that we shall so far agree with this view as to admit that in the bad old days our calling was degraded by the excessive attention paid to deterrents. The very titles employed for our office—master, mistress, dominie—indicated a false conception of our relationship to the young: gradually the more honourable epithet of "teacher" is taking its place.* But, while sharing fully the humaner sentiment of a new generation, we should be doing grave wrong—wrong to our children, most of all—if we allowed these sentiments to obscure the truth. I, for one, cannot accept a conception of school government and of the teacher's function such as Tolstoy has mirrored for us in his famous experiment. I will readily grant that our chief attention must always be directed towards to the positive improvement of our methods; but in the most enlightened schools, and with the ablest and most kindly teachers, the problem of government still abides, and it merits the same careful analysis which is demanded by every aspect of our professional task. Nor is it solely a school problem: it is a family problem. Consciously or unconsciously, the heads of every household are bound to work out principles of control on which the child is to be trained: even the beasts of the field instruct us that the survival of the race depends upon discipline and order.

Hence I make no apology for asking you to spend an evening in attempting to analyse the conditions under which the child is governed.

§ 1. Let us, then, assume that the teacher has chosen employment for his scholars which is adapted to their stage of development and is congenial to their nature, which is calculated readily to secure their attention without distaste. Even then you may not succeed, for the child is so constituted that he has an imperfect mastery over his impulses: he wants to do *many* things; he is full of interests; and, at the moment when you desire him to attend to the chosen occupation, he may be otherwise engaged—engaged, perhaps, in a pursuit which may be not only congenial, but stimulating. Nevertheless, he has to be induced to respond to the particular employment which you indicate.

Furthermore, the child is a growing, developing creature; but at every moment there is a danger that this growth may be arrested on a low level. For one feature of growth is a growth in self-control, in concentration of purpose, in effort. Now in every worthy employment, whether it be doing sums or sawing wood, there is a point where the attention begins to flag, where the volatile child mind tends to relax. If on the first signs of wandering attention the teacher yields, in a fond belief that he is adapting his methods to the tender nature of the child, he is simply arresting the normal development and functioning of the creature; he is keeping the child back from attaining the powers, the habits towards which he ought to grow.

Thus, then, the problem of government† resolves itself into a problem of attention. When voluntary attention flags, how can we

* Although for sixty years the name of "preceptor" has made a gallant effort—crystallized in the title of the Society which meets under this roof—to supplant both of the others.

† I prefer the term "government" to "discipline," because the term "discipline" not only has a forbidding air about it, but it is used in a variety of senses.

Digitized by Google

induce the scholar to make effort, to give involuntary attention, to inhibit his instinctive impulses to distraction, and thus to establish what the psychologists call secondary voluntary attention? I propose that we seek the answer to this question by an analysis of the *tendencies* at work in the scholar's mind which induce him to follow our lead. Thereupon these tendencies will indicate means by which we can secure our end.

(*a*) To begin with, every youngster is *instinctively* dependent and helpless, and thus "ready to do as he is told." This instinct has commonly been cultivated into a habit in the home environment, and will readily be transferred to the artificial environment created for his benefit at school or in private tuition. Thus the means for stimulus to effort are afforded by the simple fact of the situation: the teacher's presence is the indication that effort may be demanded and that distractions must be overcome. Our scholars know this, and in normal circumstances are disposed to the accustomed response. (Young teachers, when first handling a class, do not grasp the situation; if they could only behave as old hands, and count upon this normal response, they would usually get it. Here is eminently a situation where the beginner should "assume a virtue if you have it not.")

We assert that the normal procedure is to reinforce the primary instinct of submission by the force of habit, both at school and at home. Let us, however, not be misled by a crude psychology: in some instances the habit may operate at every hour of the day and in every classroom, but in others we may find habits of obedience remarkably specialized. A lad may be "as good as gold" at home, while he is quite a pickle at school; or he may be uniformly submissive to one teacher and yet give no end of trouble when transferred to the care of a colleague. Hence, while the resultant habit has to become mechanical, the means by which it is obtained are not mechanical, and every teacher has to see to it that his own disposition and attitude do their share to reinforce the instinct.

(*b*) This general habit of submission becomes identified with various *routine* performances which reduce the effort of attention to a minimum. Just as a normal person gets out of bed, takes his meals with a minimum of conscious effort, so the normal school child becomes used to the routine; the recurrent time-table, the tidy desk, the neat handwriting are all examples of the value of routine. The value reaches beyond the act itself, for it helps to reinforce the general idea of accepting the situation in which the scholar finds himself. Here the means towards good government are again indicated without difficulty. Regularity, machine-like repetition are indispensable. Everything that can safely be brought under the sway of automatism without injury to personal development should be so brought; and the teacher's influence, both in exercising uniform control and by the suggestion of his example, is paramount.

(*c*) As soon as we speak of suggestion, we see that the social sense of our scholar, the influence exerted upon him by his fellows, may be as powerful as that of the teacher. Indeed, the beneficent influence of comrades is so great that we rarely find competent experts preferring private tuition for a normal child. Since his social nature enables him to learn control more from the suggestion of his equals than from the precepts of an instructor, the teacher uses this means by indirection. At the outset of his association with a group of scholars, he aims to establish a tradition—a style and tone, a common feeling for control. Once established, the machine will run of itself with a minimum of effort on his part.

(*d*) Finally, in any large society, control has to be systematized by formulating positive rules and regulations. (I do not pause to consider the mode in which rules should be devised or administered—much can be done, I am convinced, by inviting the co-operation of the governed with the governors: the experiments in the self-government of schools which are being conducted here and there both in England and America are full of interest, but it would lie beyond our present purpose to consider them.) The habit of obeying formal regulations is an outgrowth of the primary instinct of submission: it implies an intelligent recognition of law as an inevitable part of life's scheme. Routine and social suggestion have relied upon the infant helplessness which first induced submission, and these in turn afford support to the judgment which leads the growing youth to a concurrence in the settled rules and requirements of an authority.

(*e*) I said "finally" just now; but it may be inquired whether another motive—and another means—are not at hand: for we observe that children are highly sensitive beings; their conduct is largely influenced by their affections or antipathies. Hence they may often be led to obey from feelings of like or dislike to their teacher: fear will depress tendencies to distraction; affection may stimulate and energize tendencies to self-control. Hence some text-books on education encourage us to adopt an attitude which relies upon the force of sentiment; and in the schools one may find cases where this theory is translated into most vicious practice. A teacher who believes in his own "personality" will establish intimate relationship with a few scholars, and, in consequence, will be unjust to those who fail to respond to these special bonds of sympathy. There are teachers who wish to be liked, who court popularity, who congratulate themselves on exercising a suggestive influence to which their colleagues cannot attain. In extreme cases this leads to favouritism and open partiality.

At the other extreme you witness the harsher failing: a teacher prides himself on belonging to the "old school"; he boasts of bearishness as a virtue; he is the man who "stands no nonsense"; he secures, oftentimes, the best immediate "results" because of his strong adult force which depresses the scholars' vivacity and compels the obedience of a slave to the dictates of a master.

Now, since children are, as we have seen, so characteristically emotional, these influences will always be playing their part in the classroom. However much we de-humanize ourselves, we cannot expect our scholars to act such a part. But I urge that it is improper for us, *under normal conditions*, to rely upon such motives to secure our ends. Personal regard is not a relationship which the teacher should foster, and the cultivation of affection, either positive or negative, as a motive to effort weakens the character of both parties. In the teacher it leads to the besetting vice of our calling—the lust of power and influence; the scholar is weakened, since his attention is centered on persons rather than on the pursuit to which the school invites him. It is only in abnormal situations, with exceptional scholars who are not amenable to ordinary motives, that a teacher can be safely suffered to resort to personal influence. A difficult child or a difficult class may sometimes be definitely assigned to a teacher whose personal qualities are marked. Weak natures may be drawn to make effort by appeals to affection. Stubborn natures may be constrained by the forceful rule of a tyrant; but, I repeat, these considerations should be dismissed from recognition in the ordinary relations of teacher and scholar. Whatever claim we may make in these degenerate days to serve as substitutes for the failure of family life, we must not intrude our personality into those intimate relationships which are sacred to the home.

§ 2. Thus, in brief outline, we have surveyed the situation under favourable normal conditions. And what a "good"—what a dull and stupid!—place school would be if all our boys and girls uniformly reacted on this simple happy scheme of things! —always behaving as "little gentlemen." Far be it from me, a grave professor of pedagogics, to hint that we should sympathize with sinners, or even, in holiday time, discover a sneaking regard for naughty children. Still, even the best of dishes want a flavour of salt, and we are not wholly disappointed when further investigation shows that there are instincts and tendencies which complicate the situation.

Over against each of the motives that we have discussed we have to set a *contrary* motive—which leads to *dis*order just as the first set of motives lead to order. Opposing that primary instinct of dependence, there emerges a growing impulse to *in*dependence, to self-assertion, equally valuable and ultimately more valuable for the race if not for the individual. And then a mood of contrariance* prevails; our very presence may be a stimulus to strengthen it; even routine, for a time, is experienced as an oppression instead of a relief to attention. When, further, the influence of companions reinforce disorder the trouble spreads, and the aid of suggestion on which, under other circumstances, we rely to save ourselves from active interference, proves a broken reed; for it is equally potent to distribute an atmosphere of independence or lawlessness. Then, finally, an individual, or a group of scholars, if unchecked, may be found (with a greater or less consciousness) ready to defy rule, to dissent from the established order.

Before proceeding to discuss means adapted to deal with this altered situation, let us pause to make sure of our own attitude: let us not conclude that there is reasonable ground for censuring this self-assertive scholar. Naughty children are not necessarily

* We have, I believe, to thank Mr. Keatinge for this term ("Suggestion in Education." A. & C. Black, 1907).

Digitized by Google

vicious: the fact that our scholar wishes to attend to other matters instead of to his lesson is an obstruction to the teacher; but, when the momentary annoyance is past, we may be glad to have active spirits placed in our charge rather than insipid and placid jelly-fish. Such fine spirits present a problem to the teacher that is worth his handling: unless he can make an adequate response to their display, unless he can either control their will or satisfy their impulses, they will master him. For such vigorous natures, a weak teacher, a dull routine is simply "not good enough." In current slang, they "have no use for" such people. A stupid adult, of tyrannical habit, rapidly condemns such scholars as evil-doers and resorts at once to deterrents. Now, although, as we shall see, punishment has its proper place, we must keep the rod *in* pickle until it is really needed.

Here, then, is the situation which, in a thousand shapes, comes before daily experience: in every scholar, even the most patient and willing, there are conflicting tendencies—desires to break away as well as to conform; willingness to make effort, to accept the yoke and concentrate attention, crossed by centrifugal and dissipating tendencies, leading to distraction and rebellion. Are we at liberty to resort to other means which will help the scholar to solve this conflict, which—before he loses self control, before he has committed himself to active disorder—will reinforce the tendencies that make for obedience?

§ 3. Thus we arrive at the vexed question of rewards and punishments, which we may group together under the technical term *Incentives*. All that I can hope to do in this paper is to direct our attention to some of the general principles underlying their employment.

An incentive is a novel end or aim, more or less remote, offered to the mind to induce it to action which otherwise would not be performed. We note that the incentive is *in the mind*—within the scholar's experience, ready if need be to rise above the threshold of consciousness. The lesson in geography, let us say, is not in itself attractive, and the scholar is not induced to master it by habits of submission or by the example of his fellows. Incentives then play their part. Some pleasure will be attained if this disagreeable geography is attended to; some pain may ensue if it be neglected. With the very young it is evident that these ends must not be *very* remote, for the young mind cannot picture an injury or a benefit in the distant future; but with added years the range of vision extends

It is evident that, whatever may be our practice in our schools as regards a systematic regime of rewards and punishments, every one, scholar or adult, *is* influenced by incentives, of high or of low degree. And yet there are many who deprecate any express resort by the teacher to such means. Children, they say, should not be "bribed" by the stimulus of a reward; work for work's sake should be our only motto; both promises and threats, they say, will tend to lower the moral ideal. This protest sounds very attractive; he who employs such language can take a lofty attitude, and readily wins the applause of all kindly folk who wish well to children. If, however, the argument of this paper be taken from start to finish, we defend the practice on precisely the same grounds that the physician, whether allopath or homœopath, defends the use of drugs. They are only resorted to when it is found that the normal procedure of motives and means has failed; they are a temporary expedient adapted to the temporary, developing nature of the organism. Applied with discretion, with caution, with definite relation to an end, we hope to create a situation in which they are superfluous. Applied habitually on every occasion, they lead to disaster, for the patient falls a victim to the habit of living on incentives, just as some medical patients form opium habits or alcohol habits.

Thus we have in our class two scholars: one enjoys his arithmetic and finds it easy to give his whole attention (primary passive attention, as the psychologists call it); another finds it most irksome; he cannot concentrate his mind to the requisite extent. We thereupon apply the drug, the stimulus of a pleasure incentive; he controls his will (active involuntary attention); thus aroused, and with repeated efforts, reinforced by the memory of the incentive, he finally attains an acquired interest in arithmetic; he attends now without stimulus (secondary passive attention). If, however, after repeated applications of the incentive, this interest is not acquired, if no amount of effort enables the scholar to think in terms of number, we drop the treatment and confess failure.

§ 4. Again, incentives differ greatly in quality, and our judgment as to their moral value depends upon the kind we select. Those who vaguely denounce rewards or punishments are commonly found to be objecting not to incentives in general, but to particular forms which they regard as immoral. The medieval heaven and the medieval hell are not ours, but it appears that the most modern philosophy discovers a heaven and a hell of its own. Incentives are always at work: they are effective not only as regards their temporary function, but as regards their adaptation to the *stage of moral development* in the subject. Our ultimate hope is to substitute for a low incentive something loftier, which we call an ideal. But children are not idealists; they are only on the way to a higher life: if they were already fit to respond to the highest motives, our occupation as teachers would be gone.*

Hence the law as regards selection: to our little ones we should offer crude material stimulants to be quickly realized in pleasure or pain; but as the creature develops, offer him more distant, loftier prizes or sterner penalties until, finally, the grown man, fully formed, reaches out towards ideal ends. The good and faithful servant first receives praise, "Well done" (and this is an incentive which appeals to young and old alike), and then as guerdon the privilege of more responsible service, "ruler over many things." His counterpart, the slothful servant who had failed to respond either to the fear of a hard task-master or to the hope of reward—he, too, has passed beyond the stage of incentives; he goes forth to "weep in idleness." However far we adults have advanced in moral experience, can we presume to have reached a platform where the Parable of the Talents makes no claim upon us?

It is on such a line of argument, at once ethical and psychological, that I would defend the careful adoption in any school society of a guarded, but systematic, use of rewards and punishments—with one caution added. The physician always prescribes the *minimum dose* necessary to effect a cure, and the teacher needs rigidly to adhere to this law of economy. Any excess, whether of pain or pleasure, tends to focus the attention on the incentive and away from the object. If this occur, then a craving for the drug will be the result, and the double failure will ensue. Such considerations show that this field of operations constitutes the most delicate part of a teacher's business and demands all his skill and care.

§ 5. Hitherto we have discussed indifferently reward or punishment, pleasure incentive or pain incentive, as if either could be chosen at will. Both are available. Is the selection a matter of indifference?

Let us note the contrasted effect. A negative incentive depresses—fear chills the blood, damps the ardour; whereas the positive incentive is buoyant and exhilarating—hope rouses all our energies.† Clearly, on a first examination, the incentive that urges the subject forward should be preferred, and there are some who hold that, while rewards are to be approved, punishment of every kind is to be condemned. And yet, in other social spheres, we find a large place given to deterrents. The State holds that such incentives are in place, for it proclaims warning and threat to all offenders. But, since the incentive is *in the mind*, this warning is not a real incentive except to an offender—to the evil-minded person who intends crime, but has not yet found his opportunity. No one in this lecture hall intends to burgle or disturb the peace; hence the negative incentives of the police court are not incentives to us. Threats, in fact, are only appropriate to those who are already, in intention, wrong-doers. The positive incentives, the rewards for virtue, have all been in operation in their case and have failed. Now they are warned to "depart from evil" by a "wholesome fear of the Lord."

How, then, does the case stand as regards children? Unless we interpret the theological doctrine of original sin as stamping all children with intentional depravity, we must credit them—at first and in normal circumstances—with good disposition. Hence, then, the teachers' duty is clear: the positive incentive must be in the foreground; the deterrent must be kept out of sight and only used in emergencies. Praise is preferable to blame: our scholars achieve much under a regime where generous approval, new opportunity, and scope are offered in return for effort;

* Here I may notice in passing the remarkable studies made by Prof. Earl Barnes on "Children's Attitude toward Punishment" in his "Studies in Education," Vol. I). His investigation confirms one's own experience that, while the sufferer at the moment objects, as we all do, to the pain of the moment, the childish mind does not, on principle, deny either the justice or the value of punishment.

† See especially Bagley, "Class Management" (Macmillan, 1907).

Digitized by Google

little can be looked for in an atmosphere charged with pains and penalties.

One difficulty, however, is often felt. We saw just now that an incentive might appear to be in operation whereas, to you or me, it is no incentive at all. In fact, there are often subtle difficulties in determining to which pole any given stimulant appeals. In a certain girls' school there is a custom of giving a prize on leaving the school to each scholar who has passed six years in the place without receiving a bad conduct mark. Now Lilian X. had achieved this reward, being a model stupid person; her fond father, thereupon, told Mabel X., the lively younger sister, that she must in due course achieve the same proud distinction. This stimulus has proved an intolerable punishment to poor Mabel: she goes in fear day by day of receiving a bad mark for some impish outbreak; her happy, genial nature is depressed. What the teachers devise as a stimulus becomes a decisive and chilling deterrent.

I need not point the moral: the effect of a stimulant to the mind is harder to trace than the effect of drugs upon the body. If incentives need to be applied, let us be sure that they do operate *in the mind* of the subject as we anticipate and that the stimulus arouses the response that we intend.

It would be easy to enlarge from this point and observe that many punishments (and rewards, too) are only such in name. It is a commonplace that many school punishments, such as detention, corporal chastisement, when inflicted repeatedly, lose their effect, simply because the offender has become habituated to their action; and, on the contrary, many children are mostly severely punished by a word of reproach, by a slight threat if they are of a sensitive nature or are only punished on rare occasions. It is a part of skilful school management so to contrive that when a pain incentive is required it shall, as often as possible, achieve its results with a minimum of effort to the teacher, a minimum of loss in power to the scholar, but a maximum of immediate arresting effect. But to undertake a discussion into forms of punishment would take us too far beyond our present purpose.

§ 6. Our comparison between the State and the school may yield a further point. The school makes much greater demands upon its scholars than the State upon its citizens: the State (at any rate, under present social conditions) does not require you to improve your mind or to cultivate your estate; you may make much of yourself or little—that is no concern of the commonwealth, and it neither praises nor blames your choice; it only interferes (with deterrents) when you disturb your neighbour.

But the school has a double function: (1) as a social institution, it has a duty similar to that of the State in securing the common order, in exacting an obedience from all for the good of the entire school society; but (2) it has to see to it that each scholar improves himself and really profits by the experience which each school day affords. Now it may be admitted that, as in the State so in the school, negative incentives are in place to aid in achieving the first function. For the normal procedure of the schoolroom, as regards attendance, regularity, decent behaviour, is matter of routine and habit which the ordinary scholar can easily obey without great effort of attention. He should not, even in early childhood, require the stimulus of reward to induce him to fulfil such early obligations, any more than the adult citizen looks to be rewarded for ordinary civic behaviour. If, then, an incentive be needed, the threat of punishment is in place. (We have only time, in passing, to note the extraordinary perversion of this principle in our English elementary-school system. Prizes for attendance are still awarded in all parts of the country.) But what of the second function of the school? (This is its real function, for the first is only a means to the end.) What sort of incentives are in place when we urge our scholars to improve themselves? In other words, what sort of associations are we to set up in our scholars' minds as between incentive and achievement? If, for example, I want my young friend to draw a good design, and his inclination is otherwise, am I to threaten or to encourage? The classic instance is that of Dr. Keate, of Eton—of enduring fame as a flogger. Keate is teaching the New Testament on a Sabbath morning, and reads the beatitude, "Blessed are the pure in heart." "Now, boys," says the genial pedagogue, "you must be pure in heart. If you won't I'll flog you till you are."

The conclusion is evident. If our purpose in teaching be to secure a formal external result, we may secure it by fear and threat; but the association thus established between school study and school penalty makes the memory of those studies a hateful memory. You cannot drive any man, young or old, to scholarship, to taste, to virtue. The more intimate and personal the culture you wish to offer him, the less can you hope to *make* him take his share through your superior power. This explains why all the educational reformers, from John Colet, of St. Paul's, to John Dewey, of Chicago, have no use for punishment. The ends which they have in view can simply not be attained by such means.

"But," it will be protested, "are children never to be punished if they neglect their lessons? If they are idle and inattentive at their sums, are they to remain so for fear of getting a dislike to mathematics?" Our analysis supplies the answer to this question. If the scholar's failure is due to general habits of idleness and carelessness, then to cure these a pain incentive *may* be in place. But if failure is due to a specific defect in his mastery of number, then a pleasure incentive *must* be preferred. Or, to put it in another way: you may punish a dog for running away, but not for refusing to eat his dinner. It is true that the school is provided to enable the scholar to improve himself, and every effort should be made to help him to that end. But, after all, school is not life: there are some to whom scholastic pursuits do not appeal; such natures have their right, and if the horse, being led to the water, declines to drink, let Nature have her way. Even in medicine, physicians meet with patients, now and again, whom they cannot cure: we, too, may be permitted a percentage of failures.

§ 7. And we will carry our argument one point further. We saw that the only apology for the employment of incentives was to enable the subject to recall his attention to the matter in hand. Now, are we sure that the suggestion of an incentive at the moment *does* always succeed in its purpose? We must here be very careful, for the mind is not so easily controlled. To achieve a new thought in geometry, to plan a new route in geography, to translate a passage of Latin, requires complete isolation of the mind from external influence. Now if, while the mind is thus endeavouring to get the data clear, or to call up the appropriate apperceiving material, I suggest the prospect of a good mark for success, or of any other incentive, do I not run the risk of disturbing the whole machine?

I have of late years narrowly observed this problem, and am convinced that teachers often fail by not recognizing the need for favourable emotional calm as a condition for intense mental activity. I do not allude solely to methods, such as place-taking, which are now discredited, but to the more subtle danger incurred by stirring up personal feeling while endeavouring to solve a problem. Under the most favourable conditions, children find it difficult to suppress feeling: hence, one important element in class management is to secure an undisturbed process. The suggestion of *any* incentive thus appears to be out of place. If such a stimulus lie in the background of consciousness, affording a diffused sense of support to effort, it may do no harm, but any plans which thrust the incentive in the foreground must be deprecated.

You will see that this caveat only applies to work in which the scholar is concentrating his mind on a new field; but there is a good deal of activity in school which is not of this nature: when rules have to be practiced by repetition, when mechanical accuracy has to be attained with steady drudgery, then the incentive may be allowed to operate with greater freedom.

I am very conscious that I have carried my hearers over a rather dull survey of principles, and I may properly be charged with putting into psychological jargon the plain common sense of wise teachers. I shall plead guilty to this charge, but must ask you to bear in mind that there is no branch of our professional work in which there is so much superficial dogmatism or in which we are liable to be overborne by outside opinion. All I have attemped to do is to show what considerations are to hand in *the nature of our children's minds* to serve as a guide to our practical work in the classroom. In writing this paper many illustrations out of my own experience, and not a few experiments in testing the value of incentives, have come back to my memory; but I felt that I might be of more service if I confined our attention to the more prosaic field of general principles.

Prof. BONSOR thought the most valuable incentive to discipline was a sense of duty on the part of the pupils. In the earlier stages the emotion of fear might be employed as an incentive to the formation of habits which would finally grow into a sense of duty. The element of

Digitized by Google

interest might be extensively used, but care must be taken not to allow this element to predominate, or the result would be disorder instead of discipline. This was, he thought, the experience of Dr. Bagley, of whose work he knew something, and who, in his earlier days, attached too much importance to the element of interest.

Mr. ANSTEY thought that the effect of praise or blame depended largely on the personality of the teacher.

Mr. B. C. WALLIS said that in teaching mathematics he had found that there was little need of incentives when the media in which a subject was taught were changed to suit particular classes under a definite systematic presentation of the subject.

Mr. BATEMAN said that one of the greatest difficulties with which the teacher had to contend was the objection of parents to the punishment of their children, however well deserved such punishment might be. There was a very prevalent impression that disgrace was inherent in the punishment and not in the offence.

Miss WESTON said that, after trying many things, she had come to the conclusion that the greatest incentive to study was the desire for discovery, and especially of self-discovery. Teachers should address all their efforts towards the encouragement of this desire. If a child could be induced to believe that there was something in him which he did not realize, he would work very diligently without fear of punishment. In cases of failure in particular studies it was important to impress the pupils with the idea of their own ability. It was difficult to lay down rules as to rewards and punishments. In every case the question must be determined by the attendant circumstances, and a practical teacher would find no difficulty in coming to a decision.

Mr. BUNTING said that parents' objections to punishment disappeared when once it was realized that the punishment was logical. Penalties must be adjusted to circumstances. In the case of a class of 120 pupils there must be more punishment than in a class of only 20. In slum schools, where rewards were looked upon as weakness on the part of the teacher, an endeavour must be made to approximate to the home conditions. At first the only thing that appealed to the child was this similarity, but afterwards he recognized that the punishment was just. The aim of the teacher should be to reduce both reward and punishment to a minimum. Incentives must come into play, but as soon as the child could be taught that duty was the highest incentive, other means of stimulating mental activity could be dispensed with.

Mr. ORCHARD agreed that it was desirable to have some system of rewards and punishments, but care should be taken that the rewards were suited to the character of the pupil and also to the character of the work, and they should not be made too prominent.

Prof. FINDLAY having replied to the various speakers, a vote of thanks to the lecturer concluded the proceedings.

THE COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, on February 13. Present: Sir Philip Magnus, President, in the chair; Prof. Adams, Prof. Adamson, Dr. Armitage-Smith, Mr. Bain, Mr. Barlet, Rev. J. O. Bevan, Rev. J. B. Blomfield, Rev. A. W. Boulden, Mr. Brown, Mr. E. A. Butler, Mr. Charles, Miss Crookshank, Mr. Eagles, Mr. Eve, Mr. Ladell, Rev. R. Lee, Dr. Maples, Mr. Marx, Mr. Milne, Dr. Moody, Mr. Morgan, Mr. Pendlebury, Mr. Pinches, Mr. Rule, Rev. Dr. Scott, Mr. Vincent, and Mr. White.

The minutes of the last meeting were read and confirmed.

Diplomas were granted to the successful candidates at the Christmas Examination of Teachers (see list, page 127). The prize of £10 for Theory and Practice of Education was awarded to Mr. J. H. Brown, and the prize of £5 for Natural Sciences was divided between Mr. M. H. A. Galbraith and Mr. W. D. Hambly, who were bracketed equal.

In accordance with the resolution adopted by the General Meeting on January 23, it was referred to a Special Committee to consider "whether by any methods the work and usefulness of the College may be increased."

A report of the Finance Committee, which included a recommendation that the gratuitous issue of books of examination papers to members of the College should be discontinued, was adopted.

The Examination Committee submitted a report recommending the following modifications in the syllabus of the Certificate Examinations for the year 1910:—

I. In the subject of Drawing, the syllabus to be amended as follows:—

Third Class.—(*a*) Drawing from the Flat, *or* (*b*) Simple Model Drawing.

Second Class.—(*a*) Model Drawing (from groups of common objects), and (*b*) *either* Memory Drawing, *or* Drawing from the Flat.

First Class.—(*a*) Model Drawing (from groups of common objects), and (*b*) *either* Memory Drawing, *or* Linear Perspective and Mechanical Drawing.

II. In the subject of Geography, the syllabus for the Third Class and the general part of the Second Class to be amended as follows:—

Third Class.

Explanation of simple geographical terms (as "isthmus," "peninsula," &c.). (*a*) The British Isles (with a map of some portion), including the chief rivers, the general distribution of highland and lowland, of wet and dry regions, of coal and iron, of the chief occupations, the situation of the most important towns, with simple reasoning thereon. (*b*) The Continent of Europe on similar lines to the above, the position of the chief countries and their capitals, the situation of the most important towns, the courses of the Rhine, Rhone, Danube, and Volga.

As alternative to (*b*)—simple questions on the British Empire, the position and characteristic features of the several parts, and lines of communication with the mother country.

An alternative paper, on the Geography of South Africa, will be set for South African candidates only.

Second Class (General).

The distribution of land and water. General notions of climate. Wind belts and chief ocean currents. Day and night. The seasons. Time. Meaning of latitude and longitude. The boundaries of the several continents. The general distribution in each continent of highland and lowland, of wet and dry regions, of the chief minerals, of occupations. The source, general direction, and outflow of the main rivers. The position of the most important countries and their capitals.

The report was adopted.

The Report of the *Educational Times* Committee was submitted, and was referred back to the Committee for further consideration.

Sir Philip Magnus, M.P., was elected President of the Council, and Prof. Adams, the Rev. Canon Bell, and Mr. E. A. Butler were elected Vice-Presidents.

Mr. H. W. Eve was appointed Dean, and Dr. Armitage-Smith Treasurer of the College.

The Moderators, Examiners, Inspectors, and Revisers for the year 1909 were appointed.

The four Standing Committees were appointed, with their respective chairmen.

The following persons were elected members of the College:—
Mr. H. H. W. Brice, A.C.P., The Hollies, Castle Cary, Somerset.
Miss E. E. H. Gawdery, Lyndale College, Shelley Road, Worthing.
Mr. A. Robson, B.A. Lond., L.C.P., 2 Lance Road, Harrow.
Mr. H. Ames, A.C.P., 20 Hemington Avenue, Friern Barnet, N.

The following books had been presented to the Library since the last meeting of the Council:—

By DR. G. T. MOODY.—Betts's Patent Portable Globe.
By E. ARNOLD.—The Sesame Poetry Books I.-VII.
By BLACKIE & SON.—Blackie's English Texts (Bede's History of the Church of England, and Macaulay's Essay on Sir William Temple).
By the CAMBRIDGE UNIVERSITY PRESS.—Higher Local Examination Class List, Papers, &c., December, 1908.
By W. B. CLIVE.—Matriculation Directory, January, 1909; University Correspondent, 1908.
By MACMILLAN & Co.—Brett's Representative English Poems; Bruton's Selections from White's Natural History of Selborne.
By METHUEN & Co.—Methuen's Simplified German Texts (Der Müller am Rhein, Die Nothelfer, and Undine und Huldbrand); Terry's Teacher's Handbook to Elementary Latin.
By the OXFORD UNIVERSITY PRESS.—Oxford Plain Texts (6 parts); Bué's Berthet's Le Donanier de Mer; Herodotus, I.-IV.; Lauvrière's De Vigny's Chatterton; Paterson's School Algebra, Part II.; Sargeaunt and Raynor's Famulus of Terence; Walpole's Gospel of St. Mark.
By RELFE BROS.—Fudge's Vivid Pictures from Carlyle's French Revolution; Haynes's Preliminary Geography of British Isles and India.
By RIVINGTONS.—Hillard and Botting's Elementary Greek Exercises.
Calendar of Trinity College of Music, London.
Calendar of University of Wales.
Calendar of University College, Nottingham.
Calendar of University of Liverpool.
Calendar of Pharmaceutical Society of Great Britain.
Register of Graduates of Victoria University of Manchester.
Register of Members of the General Council of the University of Glasgow.
Register of Veterinary Surgeons.

THE Report for 1908 of the President of Yale University states that plans for the immediate future at the University involve the development of courses in regional geography until there are instructors who are authorities on the geography of each of the continents. This will eventually necessitate the erection of a separate department of geography, which will not only offer courses, but will also conduct explorations in the less known parts of the world, particularly those parts where the character of the physical features has been a prominent factor in the life of a race, such expeditions being in charge of officers of the department and including advanced students.

BLACKIE'S LIST

INTRODUCTION TO THE NATURAL HISTORY OF LANGUAGE.

By **T. G. TUCKER, Litt.D. (Camb.), Hon. Litt.D. (Dublin)**, Professor of Classical Philology in the University of Melbourne.

Demy 8vo, cloth, 10s. 6d. net.

A new treatise which gathers together the results of the great amount of philological work that the last quarter of a century has produced. It is intended to fulfil to-day the purpose which was served in its time by Max Muller's "Science of Language."

The Teaching of English.

By **A. E. ROBERTS, M.A.**, Principal Lecturer in English at the Islington Day Training College; and **A. BARTER L.L.A.**, late Head Mistress of the Braintree Pupil-Teacher School. 2s. 6d. net.

A Book of Comparative Prose.

Being Typical Essays arranged for Comparative Study. With Notes and Exercises. By W. MACPHERSON, M.A., English Master in the County Secondary School and Pupil Teachers' Centre, Beckenham, Kent. 1s. net.

A Book of Comparative Poetry.

Being Typical Poems arranged for Comparative Study. With Notes and Exercises. By W. MACPHERSON, M.A. 1s. net.

A School History of English Literature.

From CHAUCER to COWPER. By ELIZABETH LEE. With Introduction by EDMUND K. CHAMBERS, M.A.

Vol. I.—**Chaucer to Marlowe.** 1s. 6d.
Vol. II.—**Shakespeare to Dryden.** 2s.
Vol. III.—**Pope to Cowper.** 2s.

The Call of the Homeland.

A Collection of English Verse. Selected and Arranged by R. P. SCOTT, LL.D., and KATHARINE T. WALLAS, M.A. In Two Volumes. 1s. 6d. each net.

Book I.—**Echoes from History—Britain Overseas—The Sea—The Changing Year.**

Book II.—**The English Countryside — Home — Exile — Compatriots — The Call to Serve — The Call to Happiness.**

Each volume is complete in itself and may be used separately.

Also a Presentation Edition, handsomely bound in cloth gilt, price 4s. 6d. net.

Combined Course of Literary Reading and Composition.

Illustrated from Famous Paintings. Edited by LOUIS MARSH, M.A. Carefully chosen Readings from English Literature, with Graduated Exercises, forming a Complete Course of Instruction in English. 2s.

GEOGRAPHY.

STRUCTURAL—PHYSICAL—COMPARATIVE.

A TEXT-BOOK FOR SENIOR STUDENTS.

By **J. W GREGORY, D.Sc., F.R.S.**, Professor of Geology in the Glasgow University.

With Series of specially constructed Coloured Maps and Sketch Maps and Plans in Black and White. Large 8vo, 6s. net.

A FIRST GEOGRAPHY.

By **C. A. E. RODGERS, M.A., F.R.G.S.**, Assistant Master, Bradford Grammar School; and an Examiner in Geography to the College of Preceptors.

With Coloured Pictures and Diagrams on every page. Small 4to, cloth, 1s.

Elementary Geometry of the Straight Line, Circle, and Plane Rectilineal Figures.

By CECIL HAWKINS, M.A., Senior Mathematical Master at Haileybury College. Crown 8vo, cloth, with or without Answers, 3s. 6d.

Systematic Inorganic Chemistry from the Standpoint of the Periodic Law.

A Text-Book for Advanced Students. By R. M. CAVEN, D.Sc., and G. D. LANDER, D.Sc. Crown 8vo, cloth, 6s. net.

A Text-Book of Organic Chemistry.

English Translation from the German of A. BERNTHSEN, Ph.D. Edited by J. J. SUDBOROUGH, Ph.D., D.Sc., F.I.C. New Edition, Revised to date. 674 pp. Crown 8vo, cloth, 7s. 6d. net.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.
Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,351,137. Annual Income, £471,097.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS. LARGE BONUSES. Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES. Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

1. **WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

2. **PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

ANNUAL PREMIUMS FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.

30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

EARLY IN THE EASTER VACATION

(Three times a year only)

USE **The "DUST-ALLAYER" CO.'S**

ODOURLESS or powerful GERMICIDAL

FLORIGENE

(A REGISTERED NAME suggested by FLOOR-HYGIENE)

Unequalled for the Hygienic, Labour-Saving, and Anhydrous cleaning of all

SCHOOL, LABORATORY,

Art Gallery, Library, Museum, and other Floors—

Either Wood, Concrete, Stone, or Polished; also Linoleums, Cork-Mattings, &c.

"Florigene"

LAYS THE DUST

(As recommended in the Education Department Blue Book).

Purifies atmosphere, aids prevention of diseases and throat irritations, preserves floors, greatly reduces labour.

Economical, easily used by the unskilled—each application lasts for 2 to 4 months, according to wear.

Scrubbing (unless preferred), **also injurious wet and other sprinkling of floors are entirely dispensed with,** therefore no moisture.

Not sticky—floors are only impregnated with "Florigene" and **can be cleaned daily with an ordinary broom alone—the sweepings being "weighted"** are not distributed.

BOOKS, FURNITURE, APPARATUS, &c., are less likely to soil, and seldom require dusting or cleaning.

The "DUST-ALLAYER" CO.'S "Florigene" (Awarded the Bronze Medal of the Royal Sanitary Institute) is extensively used in Government (Royal Colleges, Science and Art and other Departments) and Municipal Buildings, also Schools, Laboratories, Libraries, Museums, Offices, &c., with highly satisfactory results.

*Send for particulars, **Bacteriological, Medical,** and other Reports and Testimonials to the Sole Manufacturers*

* * *

A Competitive Examination, to fill about sixteen studentships at the Duke of York's Royal Military School, Chelsea, the Royal Hibernian Military School, Dublin, and the Queen Victoria School, Dunblane, will be held June 15–18. Candidates must be between sixteen and nineteen on May 31 next. Applications to be admitted as candidates should be made not later than May 31, in writing (in unstamped letter), to the A.A.G., Army Schools, War Office, London.

Endowments and Benefactions.

Oxford University, by establishing an Honour School of Engineering, becomes entitled to the reversion of a legacy of £1,000 and a collection of books on engineering, left by the late Mr. L. F. Vernon Harcourt, C.E.

* * *

The Skinners' Company have renewed, for a further period of five years, their annual grant of £500 to the Leather Industries Department of the University of Leeds.

* * *

Lord Winterstoke has given £15,000 towards the proposed University of Bristol, in addition to a previous contribution of £20,000.

Mr. Edward Channing Wills has given £10,000 to the Bristol University Fund.

* * *

An appeal is made for £50,000 for Girton College, to pay off the debt on the new buildings, and to leave a margin for scholarships and for the endowment of research.

* * *

The University of Glasgow has been left the reversion of one-fourth of the residuary estate of the late Dr. Francis Elgar, to be applied to the John Elder Chair of Naval Architecture.

It has received £1,000 from Sir Thomas Glen Coats towards the acquisition of a new recreation ground.

* * *

Heidelberg University has received a gift of £6,500 for the foundation of a Radium Institute.

* * *

Mr. John D. Rockefeller has made a further gift of £250,000 to Chicago University.—Messrs. David B. Jones and Thomas D. Jones, of Chicago, have given £40.000 to Palmer Physical Laboratory Endowment Fund at Princeton University.—The Alumnae Association of Bryn Mawr College has presented to the College £20,000: the first instalment of the sum of £200,000, which the alumnae have undertaken to raise for the further endowment of the Chairs.—The £20,000 needed for the D. K. Pearson Building and Endowment Fund of Middlebury College has been all but fully contributed.—The James Millikin University, Decatur, will get some £20,000 under the will of Dr. James G. Wheeler.—Mr. R. T. Scott, Cadiz, has sent £2,000 to the Ohio State University for the aid of poor students.

Appointments and Vacancies.

The Rev. George Edmundson, M.A., late Fellow of Brasenose College, has been elected Ford's Lecturer for 1909–10 in Oxford University.

* * *

Dr. Herbert Lister Bowman, M.A., D.Sc., New College, has been appointed Waynflete Professor of Mineralogy in the University of Oxford.

* * *

An examination for the Reid Professorship of Penal Legislation, Constitutional and Criminal Law, and the Law of Evidence, in Dublin University, will be held in Trinity College on June 8–10.

* * *

Prof. Strong will resign the Chair of Latin in Liverpool University in September next, after twenty-five years' service.

* * *

In Manchester University, Dr. W. H. Lang, M.B., D.Sc., Lecturer in Botany, Glasgow University, has been appointed to the new Chair of Cryptogamic Botany; Miss Maria C. Stopes, D.Sc., Ph.D., Special Lecturer in Palæobotany; Mr. Edgar Prestage, Corresponding Member of the Lisbon Royal Academy of Sciences, &c., Reader in Portuguese; and Mr. T. H. Pears, B.Sc., of University and King's College, London, Lecturer in Experimental Psychology.

* * *

Sir Thomas H. Holland, K.C.I.E., D.Sc., F.R.S., Director of the Geological Survey of India, has been appointed Professor of Geology in Manchester University, in succession to Prof. Boyd Dawkins.

* * *

Mr. George F. Shirras, Fellow of the Royal Economic Society, Assistant District Commissioner for Southern

Digitized by Google

Nigeria, has been appointed Professor of Economics at Dacca, Eastern Bengal.

* * *

THE Principalship of Saltley Training College will be vacant at Midsummer through the retirement of the Rev. Canon Burbidge.

* * *

* * *

THE St. Andrews Provincial Education Committee has appointed Mr. J. W. Williams, M.A., F.R.Hist.S., of Exeter College, Oxford, to the Lectureship in History at the Dundee Training College; and Mr. J. P. Day, M.A., F.R.G.S., Bournemouth, Lecturer in Geography for one year.

* * *

THE Girls' Public Day School Trust have appointed Miss C. W. Matthews, M.A. Dub. (Med. and Mod. Lang. Trip., Newnham College), to be Head Mistress of Dulwich High School; and Miss A. S. Barratt, second mistress, Wimbledon High School, to be Head Mistress of East Liverpool High School.

* * *

MR. PERCY MORTON, M.A. Oxon., Science Master and House Master, Christ College, Brecon, has been appointed Head Master of Brecon County Intermediate School for Boys.

* * *

MR. RALPH J. RITTENBERG, B.A. Lond., Senior Mathematical Master, Guildford Grammar School, has been appointed Head Master of the County School, Bude.

* * *

MR. THOMAS H. KNIGHT, M.A. Cantab., assistant master, City of London School, has been appointed Head Master of Wilson's Grammar School, Camberwell, in succession to the Rev. F. McDowell, D.D., retired.

* * *

MR. HENRY E. ATKINS, M.A. Cantab., assistant master, Wyggeston School, Leicester, has been appointed Head Master of College Municipal School, Huddersfield.

* * *

MR. NORMAN L. FRAZER, B.A. Cantab., M.A. Lond., Master of Modern VI., Whitgift Grammar School, Croydon, has been appointed Head Master of Batley Grammar School.

* * *

MR. ALBERT B. HOLMAN, M.A. Cantab., Chief Assistant Master, has been promoted Head Master, of Nuneaton Grammar School.

* * *

MR. ROBERT IVOR JONES, M.A. Oxon., assistant master, Epsom College, has been appointed Head Master of the Intermediate School, Newtown, Montgomeryshire.

* * *

MR. HAROLD KITTO, M.A. Oxon., Assistant Master and House Master, St. Lawrence College, Ramsgate, has been appointed Head Master of Faversham Grammar School.

Literary Items.

MESSRS. METHUEN are publishing "The Last King of Poland and his Contemporaries," by Mr. R. Nisbet Bain, and "The Conflict of Religions in the Early Roman Empire," by Mr. T. R. Glover, who attempts to treat Christian and Pagan with equal fairness.

A NEW edition of Craik's "Manual of English Literature," thoroughly revised and brought up to date by Mr. Ernest Rhys and Mrs. Podmore, is to be included in an early issue of "Everyman's Library."

General.

A FEDERATION of University Women for Liverpool and District has been formed, after the example of Manchester. The objects are: (1) To facilitate the intercommunication and co-operation of University women; (2) to express the united opinion of University women on subjects which are of special interest to them; (3) to promote women's work on public bodies; (4) to work for the removal of sex disabilities.

* * *

THE Italian Minister of Education, Signor Rava, has pledged himself to the complete restoration of the University of Messina. Italy has sixteen other State Universities, two of them in Sicily (Palermo and Catania).

* * *

IN July the University of Geneva will celebrate its 350th anniversary and the 400th anniversary of the birth of John Calvin.

* * *

A ROYAL COMMISSION has been appointed by the Government of Western Australia to consider the question of the establishment of a Western Australian University.

LOCAL AUTHORITIES AND PRIVATE SCHOOLS.

WITH regard to the action of Local Authorities in respect of private schools (says the annual report of the Private Schools Association) there seems little to add to what has been said in former years. A few Local Authorities are making use of private schools for the education of scholarship pupils, but there is no evidence of any likely development in this direction. On the other hand, there is plenty of evidence that the Administration of the Education Act of 1902 continues adversely to affect private schools. Some Authorities, bent on superseding instead of supplementing the existing supply of education, have shown themselves unreasonably hostile to private schools, and, in their anxiety to win over rate-payers, who show an inclination to resent any increase to the burden of the rates, have publicly proclaimed that they propose to give them for £9 a year what cost £17, thus practically making them a free gift of £8 a year towards the education of their children. The plausibility of such an argument is alluring, but its fallacy is self-evident.

To the spreading revolt against the burden of the rates—to what has been called "The Bitter Cry of the Towns"—consideration for the interests of private schools has contributed nothing. Their cruel position will remain materially and essentially what it is so long as funds are forthcoming, whether from local rates or from the Imperial Exchequer, to supply secondary education at less than cost price to those who are pertectly well able to pay the full cost of such education.

In connexion with the question of the action of Local Authorities, some mention must be made of the survey of private schools in London. The work was undertaken by a Committee with Mr. Maxwell as chairman, and with the help and advice of Mr. H. R. Beasley acting in an honorary capacity, and was the outcome of a request for particulars of the private schools of London made by the L.C.C., who are about to make further provision for secondary education. From the returns sent in it is estimated that, in the 468 private schools which are known to exist, there are 26,985 pupils being educated, nearly 42 per cent. of which are twelve years of age and over. A return was made to the L.C.C. giving a classification of pupils according to age and giving tables for the different L.C.C. districts. This return has been published in the latest Report of the L.C.C. Education Committee.

Clough's Correspondence College.

A.C.P. EXAMS.

Remarkable Successes of Clough's Students.

At the August, 1908, A.C.P. Exam.

THE MOST DISTINGUISHED STUDENT,

Was Mr. R. A. Wright, a Member of Clough's A.C.P. Class, who obtained Honours in Three Subjects.

35 Victoria Road, Runcorn,
November 10th, 1908.

Dear Mr. Clough,—Enclosed please find formal receipt for **your cheque of £10,** *kindly awarded as Prize re A.C.P. Examination. I was agreeably surprised to find myself so distinguished, and further surprised to find myself the recipient of your cheque, for I had not dreamt of such success. I received invaluable help from your Classes in the Scholarship Examination, and knew that I could rely on your Classes pulling me through first time, and I have not been disappointed. In fact, I don't know who would be, provided that they worked systematically through your Course. Thanking you, and wishing your Classes every success.*

Yours faithfully, ROBERT A. WRIGHT.

At the above Examination

ALL THE HONOURS IN ENGLISH

were gained by Clough's Students.

At the August, 1908, and January, 1909, Examinations, Miss M. A. Curling, a Member of Clough's A.C.P. Classes for these Examinations, obtained

HONOURS IN THREE SUBJECTS.

45 Brunswick Square, Herne Bay,
February 6th, 1909.

Dear Mr. Clough,—I cannot tell you how pleased and surprised I was to find myself in possession of a **£10 cheque** *which I received from you this morning as the result of obtaining* **Three Honours** *at the recent A.C.P. Examination. I can only add, in expressing my thanks to you, that no student who works through your Course conscientiously can fail to be quite satisfied with the results at the final examination. Will you please accept my sincerest thanks for all the pleasure which your unfailing attention and interest have afforded me?*

Yours gratefully, MARY A. CURLING.

IMPORTANT FEATURE OF CLOUGH'S A.C.P. COURSES.

Complete Model Answers to all questions on Psychology, Physiology, and Hygiene, and the Practice of Teaching. These Answers are models in point of style, and in the amount and arrangement of matter.

☛ New Classes are now commencing for the A.C.P. Examinations in August (1909) and December (1909).

For Prospectus, Plan, Terms, Entry Form, and all particulars of any of **CLOUGH'S CLASSES (P.T., PRELIMINARY CERTIFICATE, MATRICULATION, A.C.P., OXFORD AND CAMBRIDGE LOCALS, CERTIFICATE, CIVIL SERVICE, &c.),** write at once to THE SECRETARY,

CLOUGH'S CORRESPONDENCE COLLEGE, Temple Chambers, London, E.C.

LATIN IN THE SCHOOLS.

Prof. H. A. Strong, of Liverpool University, addressed the Liverpool Branch of the Classical Association (February 1) on "The Teaching of Latin in the Light of Modern Requirements." He said there were slight indications of a dawning of conscience in the authorities of our public schools that all was not exactly as it should be in an educational Utopia. It might not be out of place to consider whether it was advisable to introduce any new methods into the teaching of our public schools and to indicate broadly what those methods should be. The older Universities did as yet—and, owing to their singular prestige, would for many years—give the cue to the chief schools of England in the matter of education. Our English public schools were the nurseries of many of our chief professional men, our statesmen, our civil servants, and of many who, in any society, whether aristocratic or democratic, were sure to make their mark and to influence society. From these public schools would not proceed the voting majority of the nation; but, as the best blood of the nation had a tendency to drift for its education into these renowned institutions, they must expect to receive the choice spirits of the nation for years to come, and their pupils might, in their turn, expect to lead their nation. The question was whether it would not be possible to render this valuable asset in our civilization still more valuable by improved methods. Were they to maintain, to abolish, or to modify their present system of classical education? Was the cry of many business men justified who proclaimed the inaptitude of public-school boys for the ordinary affairs of life, maintaining that they could not write a legible and hardly an intelligible letter, and that they could not add up a row of figures correctly? The present system of instruction did not need radically changing, but did need revising. What they had to consider was whether classics were worth retaining at all as a means of education, and how they might be best taught in consideration of the limited time which could, under present educational circumstances, be allotted them. Their answer to the first part of the question must be in the affirmative. Some part of most public-school boys' education should consist in a training in some part of classical literature. What they meant by classic was something calm, dignified, statuesque, remote from our age, but not remote from humanity in general, capable of raising admiration and interest, but not capable of exciting passionate emotion.

Proceeding to speak of the method of teaching Latin, the professor said it was his firm conviction that, if young scholars at school were taught from the beginning to read and get by heart very simple sentences and to enter into dialogues with their teacher, employing the vocabulary furnished them by these sentences, much good progress would be made. It was imperative to teach pupils who were beginning to read Latin poetry the technique of that poetry. If he were told that this was already being done in our schools, all he could reply was that the process had not yet been carried out effectually. His wish was that before the pupil came to the great study of the great classics he should have so thoroughly mastered the repellent details that he should be able to read them from the beginning with appreciation and taste. The pupil must be made to understand the difference between the language of poetry and that of prose, and what artifices of language, prompted by what feelings, go to make up a poet. Then the extreme care and precision with which each and every word in the classic was chosen, and its place allocated, should be pointed out, and the pupil himself should be encouraged to criticize what he read in this spirit. It was particularly necessary in the case of Horace and Virgil, those great masters of words, that their works should be read with the greatest care. He did not think much was to be gained by reading translations of these authors; for he had never read one of either Horace or Virgil which gave him a full idea of the musical subtlety of the one or the supreme mastery of technique to express the delicacy of thought of the other. He did not wish these treasures to be handled by the schoolboy until his mind had ripened to see their beauties. If they were to retain classics at all, let them try to teach them so that they might haunt their memories pleasantly through life and form their taste and ennoble their thoughts.

Dealing next with the subject of Latin prose writing, Prof. Strong said this was a subject that took up much of the scholars' time, and in this connexion he felt they must abate some of their pretensions. They must confine themselves mainly to teaching sentences orally, but he would supplement that by causing the pupils to write out good translations of selected pieces of Latin prose, and then, after a short interval, retranslate those into Latin, and then read again carefully the copy in the original classic author.

There was one reform in the teaching of Latin on which he wished to dwell most earnestly, because it seemed to be so unaccountably neglected. He meant the connexion between Latin, the parent language, and the Romance languages, notably French, the daughter languages. Whichever language was learnt first—Latin or French—could not fail to throw a light upon the other, and, when once the connexion between the two had been pointed out, a series of surprises was sprung upon the learner at every stage, exciting his curiosity and encouraging him to seek ever for new revelations. This point was of special importance, having regard to the fact that comparative philology would be one of the new competitors for recognition in the curricula of the future. There was no process in comparative philology which might not be illustrated by the growth of Romance. It entailed some knowledge of the languages spoken by the Latin people as contrasted with the educated classes, and this in itself was something. Of course, in the study of comparative philology the scholar would have to master the application of different laws. He would find these laws hard to master, and would meet with many apparent exceptions. Many of these exceptions could be explained; many, too, must remain unexplained.

Prof. Strong, in concluding, discouraged the use of translations, or "cribs," as they were called—at all events, in the early stages of the scholar's career. At a later stage, however, after mastering the grammar, he had much better use a translation than misunderstand his work or than fail to realize the beauties of an author through having read him scrappily. But the translation must be the best possible obtainable. He had read "cribs" which would make the learner suppose that the Latin writer must have been either an imbecile or a joker. The lecturer summed up his points as follows:—(1) to make pupils catch the spirit as well as the letter of the author whom they are to read, and to insist that it is the teacher's duty to create a Latin atmosphere round his pupil; (2) to attempt a revival of oral teaching of Latin in Latin, and of committing to memory Latin dialogues from an early age; (3) to omit much prose composition, and thus to lighten the strain; (4) to encourage the study of Latin and Romance, especially of French, as supplementary to each other. Above all, he would add that the sympathy of parents and an endeavour to make every home, however humble, a foster-mother of learning, was indispensable.

THE PRONUNCIATION OF GREEK.

Mr. S. E. Winbolt writes to the *A.M.A.*:—

The A.M.A. is to be congratulated on once more giving the head masters a lead. This time we refer to the reformed pronunciation of Greek, which has now been adopted by the A.M.A., the Preparatory Schools Association, and welcomed by the Head Masters' Association. The Conference, presumably, preferred to wait till others had spoken. On the whole, the reformed Greek follows naturally on the reformed Latin pronunciation; in the future μοῦσα will be pronounced as *musa*, and αἰθήρ as *æther*. A matter of wider importance is that, in so treating the two classical languages, we are laying the basis, so far as the relation of form to sound is concerned, for a reasonable study of modern European languages, not excluding English. Let us hear Prof. Skeat. "Probably the public is as yet unaware of the enormous advance in the scientific study of language which this apparently small revolution (*i.e.*, the reformed pronunciation of Latin) will inevitably bring about in the near future. The boy who learns Latin under this new system is actually being taught fundamental truths, such as have left their impress upon the spelling of every language that employs the Latin alphabet. The statement that the reformed pronunciation of Latin gives the true key to the pronunciation of the Roman language in early times expresses but a small portion of the truth. It is also the key to the early pronunciation and early spelling of all the other languages that employ Latin symbols, including the various branches of Teutonic and Celtic. . . . The boy who learns to pronounce Latin aright will, quite unconsciously, acquire some respect for its symbols, and will at once be put into the way of understanding the science of phonetics. He will be taught to connect sounds with invariable symbols, and this will be for him

Digitized by Google

not merely a new conception, but will give him an important lesson that may very well serve him for his lifetime."

As to the amendments made to the Classical Association's scheme with reference to $\epsilon, \eta, \upsilon, \phi, \chi, \theta$, it was well to adopt the higher standard and put aside options which would stand in the way of uniformity. The practical difficulty lies here. The I.A.H.M. and the Preparatory Schools Association have adopted the scheme in its entirety—*i.e.*, three bodies have adopted the entire scheme, one body has amended it. Shall we be able to bring the other three over to our view, so that the Board of Education may have one definite scheme to press on "recognized" schools? This is an end much to be desired. Options in the schools mean the prolonging of Babel at the Universities. Members of the A.M.A. who teach Greek should lose no time in introducing the scheme, and I should be grateful if they would communicate to me any difficulties they find in working it, so that they may be represented to the Classical Association when (and if) it is willing to consider the matter.

PRACTICAL INSTRUCTION IN ELEMENTARY SCHOOLS.

By Sir Philip Magnus, M.P.

Introductory to the Report of a Committee on Practical Studies and a Discussion of Rural Education. Summary of a paper read before the British Association at Dublin.

A Committee was appointed at Southport in 1903 to consider the studies most suitable for elementary schools and to report generally upon the course of experimental, observational, and practical studies to be pursued in such schools. The appointment of the Committee was the outcome of a generally expressed dissatisfaction with the results of the elementary education during the preceding thirty years. It was felt that in many respects it had not succeeded to the extent anticipated in producing intelligent, capable, and resourceful citizens. Complaints came from employers in different trades, from heads of commercial firms, from officers in the navy and in the army, and from teachers in continuation, technical, and other schools into which pupils on leaving the elementary schools were admitted. The Committee nominated several sub-committees consisting of persons interested in the teaching of different groups of subjects. These sub-committees have reported from time to time.

Since the Committee was first constituted many improvements have been effected, and full recognition should be made of the high ideals set before teachers in the prefatory memoranda to the "Regulations," published by the Board of Education. Nevertheless, the true aim and purpose of elementary education do not appear to have been fully realized, and its relation to the pupils' life-work seems to have been too much neglected. The methods of teaching have been, and in many respects are still, defective, owing to the excessive reliance on book-learning and on oral instruction unaccompanied by practical and experimental work on the part of the pupils. The scheme of education is incomplete owing mainly to the want of correlation between the subjects taught and to the neglect of a much needed adaptation of the curriculum to the requirements of actual life. Subjects of the highest importance have been regarded as extras outside the ordinary curriculum, and the larger part of the school lessons have failed to stimulate observation, to encourage initiative, and to create those habits of self-reliance which are essential to success in the workshop, the field, or the counting house, or in the discharge of domestic duties.

A Report of the Committee was presented to the Section at the York meeting in 1906, and contained appendices dealing with the practical teaching of arithmetic and mensuration, Nature study and domestic subjects. The Presidential address at Leicester dealt in part with kindred subjects. In the teaching of science a remarkable improvement has been already shown, due very largely to the efforts of Prof. Armstrong, and advances have been made in manual instruction and in other branches of practical study very largely through the efforts of other members of the Committee.

The Report on science teaching to be presented this year and the discussion on Rural Education are further contributions to the solution of the problem referred to the Committee. The problem is one of the highest importance, whether considered from an economic or a national standpoint. For its satisfactory and complete solution further experiments in teaching are needed, and help must be obtained from the central as well as from Local Education Authorities. Moreover it is essential that teachers should be so trained as to be able to give instruction in accordance with the principles recommended by the Committee in their reports. It is hoped that the efforts of the Committee and of its individual members, will result in the introduction into our elementary schools of a revised curriculum based on practical studies.

REVIEWS.

A Curriculum Survey.

The Primary Curriculum. By F. H. Hayward. (4s. net. Ralph, Holland, & Co.)

This forms the second volume of the "Educational Science Series" being issued by Dr. Hayward, the first being "The Meaning of Education as Interpreted by Herbart." One is therefore prepared to find in the present book a general treatment of the question of curriculum on Herbartian lines. On examination, however, we find the book to belong rather to the class represented by Prof. Adamson's "Practice of Instruction" and Prof. Welton's "Principles of Teaching." Like those two works, it is not exclusively written by the editor. Even the elementary-school curriculum can no longer be treated effectively by any one person; so Dr. Hayward has obtained the co-operation of a number of specially qualified teachers, who deal with such subjects as drawing, needlework, music, manual training, natural science, mathematics. The editor lays considerable stress on the fact that his helpers are practical teachers: "They are not academic specialists whose pronouncements, even though educationally sound, suffer from lack of contact with the difficulties of the classroom."

The book appeals to two sets of readers—to students in training and to teachers in actual practice. At first sight it would appear to be impossible to meet the needs of both classes, but a careful examination of the book shows that the editor has so presented his subject as to justify his claim to be useful to both the experienced and the inexperienced teacher. As a matter of fact, the great complaint against the ordinary text-book for the training college student is that it is too theoretical, and that when its reader comes out into what is called real life he will find that he has to change a great many of his practices, if not his opinions. In this work we have no lack of theory, but it is kept in such close touch with actual practice that there is little danger of the reader losing consciousness in the too attenuated atmosphere of the abstract. It is true that the book is argumentative—it could not well be otherwise, coming as it does from a recognized advocate of the newer methods—but the matters in debate are things that are of everyday interest and practical importance. Further, we find that both in the case of the editor and his contributors there is an absence of dogmatism that is very refreshing. A new method is not pressed forward merely because it is new, and the editor is not at all unwilling to go back upon previous utterances if he sees reason to change his attitude towards a method. His treatment of Miss Nellie Dale's method of teaching reading is a case in point. The same reasonableness is shown by Mr. Madams in his treatment of the basic models in the teaching of drawing. Like all intelligent teachers, Mr. Madams objects to the abstract way in which these models were formerly used, but this does not blind him to the fact that they have a place in the rational drawing course. So with the heuristic method: the editor is strongly sympathetic with the views of those who support this method, but he is fully alive to its dangers, and takes occasion to point out that both on the moral and on the material side its advocates expect too much from it.

In reading the book one experiences an almost irritating alternation between a feeling of homogeneity and a feeling of heterogeneity. This may, perhaps, be accounted for by the fact that the work is based upon a definite theory. However diverse the subjects of discourse, there is an underlying principle common to them all. This cannot be said for most books that deal with these subjects. On the other hand, the illustrations are so rich and varied that one is continually being diverted from the main line of thought and drawn into apparently irrelevant side issues, only to be suddenly confronted by another aspect of the general principle of apperception that permeates the whole. The range of illustration is enormous, stretching from the fact "that modern music-hall singers have almost abandoned the practice of following a set tune," through the "Biglow Papers," up to the "matchless story of Isaiah."

As to the actual curriculum dealt with, there are certain points

Digitized by Google

of originality. Most text-books omit all reference to the teaching of religion and the Bible. Prof. Adamson has incorporated in his "Practice" a chapter on this subject dealt with from the Church standpoint. In the present work we have the matter treated mainly from the cultural point of view. It is hard to imagine how any one—Churchman or Nonconformist—could object to the teaching set forth in this chapter. Civic Instruction gets a chapter to itself, and one can conceive even Mr. Graham Wallas (who bemoans his sad fate in having had to read all the dull text-books on this subject) brightening up under Dr. Hayward's inspiration. Mr. Gould's chapter on Moral Instruction is clear and pointed, but will not make much impression on those who have the usual rooted prejudice against direct moral instruction. In the important section on English Literature we have a very able presentation of the possibilities of this subject in the elementary school. Here Dr. Hayward is very much at home. We find the practical teacher showing himself in every paragraph. He is particularly useful in the section on Recitation. Quite a swarm of tough old schoolroom idols suffer severely at his hands, as he, no doubt, has often suffered at theirs in his professional visits as inspector. In this section great stress is laid on the problem method, and several excellent examples are given. In dealing with Wordsworth's "One impulse from a vernal wood," Dr. Hayward seems to make less allowance for the poetical fancy than one would expect from him.

The chapter on History is particularly strong. What is specially admirable about it is that the writer never forgets that he is dealing with a subject to be presented to pupils at an elementary school. Would that more examiners wrote sentences like these: "The teacher may *teach*, or at least refer to, many facts which may not be made the themes of examination questions. Until this distinction is recognized by head and assistant teachers, history cannot be taught with much intelligence." When we come to the chapter on Geography we get a great many useful suggestions; but at this stage we begin to feel that within the scope of a chapter it is impossible to do anything like justice to subjects on which whole books are now written, and written from the teacher's standpoint. The chapter on Needlework in this book, for example, can be by itself of little use to the practical teacher. She must turn to some of the classical books on the subject—Miss Amy K. Smith's, Miss Walker's, or Miss Rosevear's. Yet even here there is some excellent, if controversial, matter that is not to be found in any of the books referred to. As a matter of fact, Dr. Hayward is keenly alive to the need for further reading on the various subjects he treats, and to this end he supplies a very useful bibliography on most of the subjects. There is certainly a place for just the sort of book that Dr. Hayward has written. We are probably at this moment at the beginning of a movement towards specializing in the teaching of our elementary schools, but in no case can this specialization go far. It is coming to be recognized that about a third of the whole school time is about the most that can be put at the disposal of specialists; the rest of the time ought to be in the hands of the class teacher, who is responsible for the education, as well as for the instruction, of the pupils. This being so, every teacher who proposes to teach in an elementary school ought to have a general knowledge of the methods of teaching all the subjects of the curriculum. Even if the teacher does not in future have to teach all the branches of the curriculum, he will teach the branches that are allocated to him all the better because he knows something about the others. All teachers may not be qualified to teach singing, for example, but every teacher will be the better for reading chapter ix. in this volume. There Mr. T. W. Greenstreet gives us his views on "Songs as Knowledge-links." The matter might be better arranged for the special needs of the teacher, but in itself it is extremely interesting and presents a new point of view to the teacher. The same may be said about the little section that Dr. Hayward writes on Logic in the elementary school. Naturally, he does not recommend anything but a few explanations of common terms, and in particular some references to the commoner fallacies. It has been long customary to call grammar "the logic of the elementary school." As a matter of fact, there are many points in school grammar that are more abstruse than many of the simpler parts of logic.

Dr. Hayward ends with "A Dogma and a Dream." The dogma is his old enemy, formal education, whose defenders, by the by, are singularly modest of late; the dream is the open-air school, in which the very words "atmosphere" and "right of entry" will sound strange. If this dream comes true, the curriculum will simplify itself, and all our troubles will come to a natural end. In any case, Dr. Hayward is prepared to have all his work done over again in twenty years. In the meantime he may congratulate himself on having done a capital bit of work, full of interest and suggestion. No one can read his book and remain content with "contemporary practice." To the student in training it will be an inspiration.

How to Teach Arithmetic.

Special Method in Arithmetic. By Charles A. McMurry, Ph.D. (3s. net. Macmillan.)

Although the present volume has taken a comparatively long time on its way to this country, other volumes of the series to which it belongs—all on educational method, and all from the pen of the same author—are already well known here. The manual addresses itself as well to teachers as to students about to enter the teaching profession, and deals with arithmetic in its relation to the work of schools corresponding to the elementary school of various grades as it exists in America. Among the works most often quoted by the writer in support of his own views are "The Teaching of Elementary Mathematics," by Prof. D. E. Smith, and "The Psychology of Number," by McLellan and Dewey.

Commencing with a brief historical survey of the teaching of arithmetic in the past, and touching on the progress effected by Trapp, Pestalozzi, Grube, and others, prior to whose day the imparting of the elements of the subject was eminently dull and formal, the author proceeds to enumerate the ideas held by some of the deeper thinkers at the present time—ideas that may be summed up in the statement that arithmetic in the elementary school may in reality be more effectively taught than it has hitherto been, yet not engross so many hours as it has been customary to assign to it. It has been wont to form a primary object of attention—(1) because a knowledge of arithmetical processes is necessary to the proper conduct of the business of life; and (2) because the study of arithmetic has at least had the reputation of being especially valuable as a mental discipline. But it is now argued by many authorities on education that for practical purposes a number of the arithmetical processes are not required by the average citizen, and that the knowledge of them is therefore necessary for those only who devote themselves to the study of arithmetical science for its own sake.

Further, they hold that, in the education of the future citizen in general, the proper province of arithmetic is to help to a true estimate of the world as a whole in its quantitive aspect, just as any other subject assists in the formation of an accurate estimate of it in some other relation, and hence that each branch of study in turn is an equally important factor in a school course based on a universal inductive-deductive method of instruction, and that no one subject must unduly encroach on the time available for the entire education of the individual. The fundamental principles which, in the author's opinion, govern the ideal study of number are laid down by him in vigorous terms and appeal strongly to his readers, although the repetition of some of his arguments (due, perhaps, to the free quotation of similar views as expressed by others) becomes at times rather tedious. The leading principles to which we allude are, broadly speaking, the following. Every process should really be taught in three stages: (1) through the medium of suitable natural objects and the common experience of the children; (2) by means of symbols that provide for the transition from concrete ideas to pure abstractions: (3) by the application of the number abstractions, when formed, to concrete problems bearing on topics that enter into the life-history of the individual, the State, and the world in general.

Again, the objects of number study should be not units of fixed size, with regard to which the teaching is entirely synthetic, but vague quantities, to be first analysed and then subjected to the process of combination of their constituent parts. And, once more, the relation of every fresh subject of investigation to the sum of the knowledge previously acquired should be constantly indicated and insisted upon. To the methods adapted to the ideal instruction and to illustrative lessons in arithmetic the greater portion of the work is devoted, and the text cannot be read otherwise than with the greatest interest and benefit by present and future teachers, seeing that it is full of valuable information and suggestions for their guidance. The chapters on these topics are supplemented by a useful one dealing with the works bearing on the teaching of arithmetic. The whole treatise constitutes an excellent contribution to the library of books on education.

GENERAL NOTICES.

MATHEMATICS.

(1) *A Complete Arithmetic.* By M. Eastwood, B.Sc., and J. Lightfoot, D.Sc., M.A. (4s. net.) (2) *Short Methods in Arithmetic.* By the same authors. (1s. 3d. net. Ralph, Holland & Co.)

These volumes are not for the actual beginner, but for the student already well grounded in the elements of the subject and desirous of following a course of theory as well as of practice. The second, and by far the smaller book, consists chiefly of excerpts from the "Complete Arithmetic," and includes brief explanations of and numerous exercises on methods that may be employed with practical advantage from the point of view of economy both in labour and time. The "Complete Arithmetic" itself must be regarded as an important accession to the number of standard works on the subject. With respect to the arrangement of the contents, it may be said that the authors, in planning the volume, have allowed themselves to be influenced specially by a desire to develop the theory, so that the course followed by the reader may provide for him a training in sound and accurate reasoning, in addition to giving him a knowledge of the subject itself. For example, we find decimals introduced from the first in close connexion with integers, and thus made to take up their natural position as a part of our general number system. The student is from the outset rendered familiar with the nature and value of the methods of approximate calculation, and the distinction is drawn between results which admit of being carried to a greater degree of accuracy than that actually obtained and those which from the very nature of the given facts must always retain a merely approximate character. Not the least interesting feature of the text-book is the brief historical survey of the subject with which the work opens. It contains, perhaps, nothing that we have not previously met with again and again, but the facts are put together in a manner that is fresh and attractive.

(1) *Trigonometry.* By R. C. Bridgett, M.A., B.Sc., F.C.S., and William Hyslop, M.A., B.Sc. (4s. 6d.) (2) *Experimental Trigonometry.* By R. C. Bridgett, M.A., B.Sc., F.C.S. (1s. Blackie.)

The two text-books together form a valuable and interesting course in the subject and are modern both in scope and conception. As might be anticipated, the earlier chapters of the first-named and more advanced of the two volumes and the text of the latter small preliminary treatise present many points of close resemblance. Amongst them may be noticed a simple and at the same time apt device intended to assist the mind in recalling the chief relations between the trigonometrical functions of any angle. The diagram employed for the required purpose appears to be original: certainly it does not usually find place in the elementary class-book on trigonometry. Prominence is assigned in both works to the practical utility of a study of trigonometry, and a characteristic feature is the setting of problems to be solved both by drawing and by theoretical processes of calculation. The object the writers desire to attain by these means is made evident through the medium of their excellent advice that students should be required to compare the results arrived at by the different methods and to compute the percentage errors due to want of accuracy in their measured constructions. They may thus be led to cultivate a feeling for the value of correct drawing. Large and varied collections of exercises, examination papers, and miscellaneous problems offer the usual facilities for the acquirement of skill in applying the principles of the subject. A long list of formulæ is placed at the opening of the advanced text-book, and in both volumes, in appendix form, the authors have reproduced suitable four-figure tables, those in the larger work including tables of logarithms, antilogarithms, natural and logarithmic sines, tangents, &c. Type, paper, and, as a general rule, the diagrams are very satisfactory.

MODERN LANGUAGES.

Le Médecin de Campagne. By Honoré de Balzac. Edited by de V. Payen-Payne. (3s. Cambridge University Press.)

The introduction gives a sketch of the life of Balzac and comments instructively upon the book in hand. "Judged as a novel," says Mr. Payen-Payne, "one might say it was a bad one, for there is hardly any action at all; but it is better than a novel—it is a magnificent study of applied sociology." Balzac himself said: "C'est l'Evangile en action." Sir Leslie Stephen found it "as dismal as a gigantic religious tract." We have no doubt it will be read with interest by all pupils worth their salt. The length of the story leaves little space for notes, but such as are given will be helpful in need.

Chatterton. By Alfred de Vigny. Edited by E. Lauvrière, Docteur ès Lettres, Professeur Agrégé au Lycée Louis le Grand, Paris, Lauréat de l'Académie Française et de l'Académie de Médecine. (3s. net. Clarendon Press.)

The introduction, which is written in French, deals at considerable length—nearly a hundred pages—with the life and work of Alfred de Vigny. "Le Chatterton de Vigny," says Dr. Lauvrière, "n'a, en effet, rien de commun avec l'actif, rusé, érotique petit poète faussaire de Bristol que révélait déjà la critique contemporaine: il n'est que le symbole romantique du noble et malheureux fils de 'cette fée malfaisante qu'on appelle Poésie.'" Various supplementary fragments on Chatterton and his writings are also given. The notes are partly biographical, partly explanatory, and will be very serviceable.

Cambriole, by Pierre Maël (6 fr., Hachette), is a laggard from Christmas, but it will be equally entertaining at any other season. Like half a score of M. Maël's other works, it belongs to the "Nouvelle Collection pour la Jeunesse." The story is developed most interestingly and it is charmingly written. There are forty-eight illustrations by Zier. A delightful and handsome volume.

Two volumes of the agreeable "Petite Bibliothèque de la Famille" (5 fr. each, Hachette) are also rather late for the New Year, but they are none the less welcome: (1) *Le Voleur*, by Charles Géniaux, with illustrations after De Casimacher; and (2) *Le Trèfle Rouge*, to which is appended *Le Secret du Capitaine*, by Norbert Silvestre, with fourteen illustrations after R. Wallace. The form is very handy and the get-up artistic. The scene of *Le Trèfle Rouge* is laid in London, with English and Irish characters, and there is no lack of humorous situations.

HISTORY AND GEOGRAPHY.

William the Conqueror and the Rule of the Normans. By Frank M. Stenton, M.A., late Scholar of Keble College, Oxford. (5s. Putnam.)

We regard this volume as one of the ablest contributions to the long and capable series of "Heroes of the Nations." Mr. Stenton has patiently studied his subject in its complete setting—English and Norman—and he handles it with a firm grip throughout. An extensive introduction explains luminously the position of the country before the advent of William, tracing the causes that rendered it a comparatively easy prey to his attack. "The continuance of the independent life of England had already, in 1000, become, if not an impossibility, at least a very remote contingency"; while in 1065 "all the symptoms of political disorganization—the independence of the great earls, the importance of the executive, the fatuity of the royal counsellors, the personal weakness of the king—are illustrated by the narrative of Tostig's expulsion." A separate chapter is devoted to the problem of the English succession. The narrative is lucid, though the style is rather plain and heavy. Even in describing the battle of Hastings, Mr. Stenton abstains, apparently of set purpose, from any pointed, not to say picturesque, effects: we are glad to see that he relegates the "palisade" to a foot-note and repudiates it—perhaps in another generation it will have disappeared from the text-books. The last three chapters—on William's dealings with the Church, on the Administration, and on Domesday Book—treat their important subjects with marked ability and discrimination. There are twenty-two illustrations of great interest, thirteen reproductions of coins, eight genealogical table, and seven maps.

Handbook of Commercial Geography. By Geo G. Chisholm, M.A., B.Sc. Edin., Lecturer in Geography in the University of Edinburgh. Seventh Edition. (15s. net. Longmans.)

That a book of such extent and cost should have run rapidly into a seventh edition is speaking testimony to its value. The contents have been steadily and carefully kept up to date; and now a very important and opportune chapter has been added on Trade Routes, with three elaborate maps showing express and transcontinental railway routes in Europe, Eurasia, and North America (all specially prepared for this edition), and an ocean traffic map in a pocket. A large mass of useful statistics is gathered in an appendix, and there is a full index. A thoroughly well informed, lucidly ordered, and comprehensive work.

(1) *The "Britannic" Historical Geography.* Part I., *To the Wars of the Roses.* (3d. net.) (2) *The "Suggestions" Historical Drawing Cards.* Sets A, B, C, and D. All by W. H. Donald. (1s. 6d. each set.) (Charles & Dible.)

(1) is "a history, geography, and mapping book." The maps and plans of famous battles are boldly outlined and not overloaded with names; and the letterpress on the opposite pages groups distinctly the events of greater importance. The book should be a very helpful companion to the detailed history. The Drawing Cards are disposed in sets of 24 each, illustrating the military, ecclesiastical, and especially the social and domestic, aspects of society. They are extremely well done, and cannot fail to be most serviceable in bringing home to the minds of the pupils a more definite and clear idea of the sort of world the people of their history book lived in. Set A illustrates the ancient Britons, the Romans, the Danes or Vikings, and the Anglo-Saxons; Set B, the Normans, Plantagenets, and Tudors; Set C, the Tudors, Stuarts, and Hanoverians; Set D, the Church, military weapons and armour, domestic utensils, and furniture. The idea is excellent, and it is efficiently executed.

RELIGIOUS AND MORAL.

Dictionary of the Bible. Edited by James Hastings, D.D., with the co-operation of John A. Selbie, D.D., and with the assistance of John C. Lambert, D.D., and of Shailer Mathews, D.D., Professor of Theology and Dean of the Divinity School in the University of Chicago. (20s. net. T. & T. Clark.)

Though Dr. Hastings has already edited a well known work on the same subject in five volumes, and has had the assistance of some of his former colleagues, the present dictionary is a wholly new and original work, and contributors to the larger undertaking have been put on to

Digitized by Google

different subjects from those they then dealt with. Moreover, every writer signs his articles. It is certainly a great achievement to have brought together into a single volume of a thousand double-column pages the substance of the average scholarship of the day upon so many, so varied, and often so strenuously contested matters. We follow the editor in saying the "average" scholarship of the day, and his main reason for the limitation is "the impossibility of getting the whole of the work done satisfactorily by either very advanced or very conservative scholars." An account is given of the whole of the contents of the Bible: and it has required exceptional discretion and firmness to keep the various articles to their just proportions. The volume will be most valuable, not only to the clergy, but also to the intelligent and inquiring laity, and will be greatly effective for the dissemination of fuller and more accurate knowledge of the Bible. There are four useful maps.

The Hebrew Prophets for English Readers. Edited by Francis H. Woods, B.D., sometime Fellow and Theological Lecturer of St. John's College, Oxford, Rector of Bainton, and Francis E. Powell, M.A., Vicar of Newerby and Grindale. In 4 volumes. Vol. I.: *Amos, Hosea, Isaiah* (1–39), *and Micah.* (2s. 6d. net. Clarendon Press.)

The texts are given "in the language of the Revised Version of the English Bible, printed in their poetical form, with headings and brief annotation." A considerable general introduction discusses under seven principal heads the origin, status, and "schools" of the prophets, the nature of the prophetic gift, the moral limitations of early prophecy, the literary prophets (with the classification, characteristics, &c., of the prophetic books), the predictive power of the prophets, and the relation of prophecy to Christ and Christianity. Each prophetic Book is furnished with a special introduction. The form of presentation will certainly enable the general reader to study the prophetic literature more intelligently and to feel its power more effectively.

Messrs. Chatto & Windus issue a generous edition of *The Imitation of Christ*, by Thomas à Kempis, handsome enough for a Christmas or New Year gift (7s. 6d. net). The text is the translation by Richard Whytford (1556) as re-edited into modern English (with an historical introduction) by Dom Wilfrid Raynal (1872). "None of the many translations published since Whytford's day," says Dom Raynal, "have rendered so forcibly, and yet with such sweet simplicity, the spiritual teaching of the *Imitatio Christi.*" The volume is effectively illustrated in four colours and in line by W. Russell Flint, and the binding is adapted from a fine example of the German style, dated Basel 1475.

The Oxford Hymn Book (3s. 6d. net, Clarendon Press) has been compiled by a committee of Oxford Doctors of Divinity, with expert assistance. It emerges as an expanded edition of the hymn-book used in the University Church. The qualities aimed at most are "simplicity, directness, and genuineness of religious feeling": the choice "has gravitated towards what may be called the Old Masters—Watts, the Wesleys, Doddridge, Cowper, Newton." The selection of tunes has been guided by somewhat similar principles; and the music type is a new fount, specially cast for the book. The hymns number 350. The selection has been most carefully and successfully made. The work is published in various forms, with or without the music.

BOOK-KEEPING AND PRÉCIS.

The A B C of Bookkeeping. By Lawrence R. Dicksee, M.Com., F.C.A., Lecturer at the London School of Economics and Political Science, formerly Professor of Accounting at the University of Birmingham. 2s. Longmans.

Mr. Dicksee has strong views in favour of the educational value of book-keeping, rating it as "at least equal to that of (say) geometry." Here he essays "to map out a course of instruction which, it is of real educational value as a course of mental gymnastics, will equally be found to be of some utility in the larger field of business life." Undoubtedly the volume will serve both ends very substantially. But the author "has not been so very much concerned with the more utilitarian aspect of the matter," his opinion being "that, if a boy's mind has been well trained in school, he should (under favourable circumstances) experience no difficulty later on in rapidly adapting himself to his environment, whatever it may be." In any case, the work is admirably executed.

Book-keeping for Beginners. By Beatrice Brackenbury, Teacher of Book-keeping at the South-Western Polytechnic, Chelsea, &c. 1s. 6d. Longmans.

Wisely assuming that the student is absolutely ignorant of the subject, the writer sets forth the rudiments in the simplest and clearest manner, showing by good examples, step by step, how each transaction is dealt with, and why it is so dealt with. Many varied exercises are inserted, and some typical examination papers are appended. The volume will be extremely useful for beginners.

The Student's Complete Commercial Book-keeping, "comprising the principles and practice of Double Entry as applied to modern business, and including a course of training for all examinations," by Arthur Fieldhouse, F.I.P.S., Commercial Lecturer at the Technical College, Huddersfield (4s., Leeds: Bean; London: Simpkin, Marshall, & Co.), has reached a twelfth edition. It is revised to date and considerably enlarged. The scope is comprehensive and the treatment is practical and lucid. The enormous popularity of the book speaks for its value to students.

The Practical Précis Book. By W. Cosmo Monkhouse, of the Board of Trade. (Omega Press.)

The alternative title—"Lessons in accuracy of statement and preciseness of expression for Civil Service students, London Matriculation, self-education, and use in Schools"—indicates the scope of this useful little book. It may appear that the author has gone far beyond the usual scope of Précis, but it is only too likely that his excursions into the teaching of English are justified by the attainments of not a few candidates. The directions are very judicious, and the examples are varied and well chosen.

ART.

The *Transactions* of the Third International Art Congress for the Development of Drawing and Art Teaching and their Application to Industries (1908), edited by C. Myles Mathews, form a considerable volume of some 600 pages (6s.: offices of the Congress, 157 Cannon Street, E.C.). The subjects are most varied, fairly covering the range of the subject, and they are treated very competently.—In connexion with this issue, we may note that two other works have been published, each compiled expressly with a view to the Congress, and each giving an account of the present state of the teaching of drawing in the country it deals with: "Deutsche Kunsterziehung," by Prof. Behrens, and "Art Education in the Public Schools of the United States," edited by Dr. James Parton Haney.

The Art Workers' Quarterly publishes a second special number (1s. net)—the first was published in August last—making a more comprehensive record of the Retrospective Exhibition of Students' Works held in the Galleries of the Victoria and Albert Museum. The number includes also papers and extracts of papers read at the International Art Congress by a number of well known artists and art critics. The matter is fresh and valuable, and the illustrations are abundant and excellent.

"WHO'S WHO."

(1) *Who's Who*, 1909. (10s. net.) (2) *Who's Who Year-Book*, 1909. (1s. net.) (3) *The Writers' and Artists' Year-Book*, 1909. (1s. net. A. & C. Black.)

(1) "Who's Who" has constituted itself indispensable. It has now run a long way over 2,000 double-column pages, and it contains some 23,000 biographies, every one of which has been submitted for personal revision. The book is simply invaluable to all that require to make reference for biographical facts relating to men and women of the time. —(2) The "Year-Book" is made up of the tables that used to be a valuable feature of "Who's Who" itself, but which are now more conveniently grouped apart—lists of the Royal family, of members of Parliament, of Government officials, the judiciary, the press, societies, &c. New features are steadily requiring an extension of space. The volume is most useful for ready reference.—(3) is "a directory for writers, artists, and photographers." If you want to place stories or articles, here is a long list of British and American journals and magazines, with notes of their characteristics; if you want to publish a book, here is a list of publishers to choose from. Then there are literary agents, art agents, press cutting agencies, and so forth. A very serviceable book.

MISCELLANEOUS.

Messrs. J. M. Dent & Co. have commenced the issue of a spacious volume, *Trees and Shrubs of the British Isles, Native and Acclimatized*, by C. S. Cooper, F.R.H.S., and W. Percival Westell, F.L.S., in sixteen Parts (1s. net each). There will be sixteen full-page coloured plates, and seventy full-page black-and-white plates, drawn direct from Nature by C. F. Newall. The first Part shows that the work will be thoroughly well executed and handsomely produced.

Messrs. Cassell have commenced to issue a new edition of their excellent *Encyclopædic Dictionary and Atlas* in weekly Parts (7d. net each). It consists of three portions: (1) the original seven-volume work, thoroughly revised and corrected; (2) a supplementary volume, giving words brought into use since the original work was published; and (3) an Atlas and a full index. The serial contains over 6,000 pages, 3,000 black-and-white drawings, 76 coloured plates, and (in the Atlas) 88 coloured maps drawn exclusively for the work.

The Leadenhall Press (50 Leadenhall Street, E.C.) has produced a "Stickphast Cement," which "will unite fractured china so that it will not break again in the same place, and will stand boiling in water 48 hours." This should be a useful household article.

We are glad to observe that the *Revista Pedagogica*, which is published monthly at Rome under the auspices of the Associazione Nazionale per gli Studi Pedagogici (2 lire; 12·50 lire per annum), is maintaining its high quality and wide range. The January number contains (among other able articles) a very interesting account of the pedagogical courses at Jena in the summer holidays last year. "Chi avrebbe detto al Prof. Rein nel 1889 che i suoi 25 studenti sarebbero giunti al numero di 632, e che i 14 professori che gli furono colleghi nei primi anni sarebbero quest' anno giunti al numero di 48?"

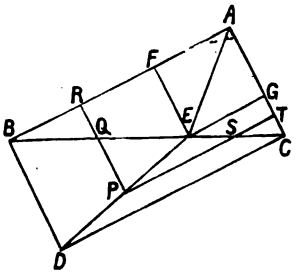
MATHEMATICS.

16562. (Henry B. Woodall.)—Find the locus of the point such that, if lines are drawn through it parallel to two sides of a triangle, the triangle shall make equal intercepts on those lines.

Solution by James Blaikie, M.A.



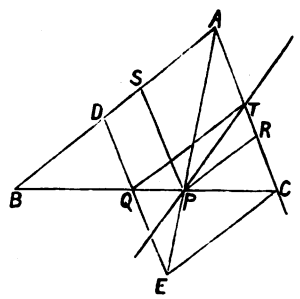
Let ABC be the triangle. Complete the parallelogram ABDC, and let the bisector of LA meet BC in E. Thus ED and the two corresponding lines are the locus required. For, let P be any point in DE or DE produced; draw PQR, PST parallel to AC, AB. Also draw EF, EG parallel to AC, AB.

$$QR/EF = QB/EB = PD/ED = SC/EC = ST/EG.$$

But $EF = EG$;

therefore $QR = ST$.

Mr. Henry Riddell, M.E., solves as follows the more general problem of which the one in the Question is a special case:—



This problem is quite as easily solved in the more general form giving the intercepts any given ratio when drawn parallel to any two given lines. In the proof the lines will be parallel to the two sides; but if P is found, which can easily be done for any directions, the proof will be manifest from what follows.

Cut off AD, so that AC/AD equals the given ratio of intercepts parallel respectively to AC and AB. Complete the parallelogram ADEC, and the diagonal cuts BC in P, a point on the locus. From Q, the point of intersection of DE and BC, draw QT parallel to AB; then is T another point on the locus. We have BP/PC = CP/CQ, and hence BP/CP = PC/PQ, and if any other pair of feet of corresponding intercepts are C′ and Q′, we have similarly BP/CP = PC′/PQ′, and always PC′/PQ′ is constant, and the intersection of lines through C′ and Q′ parallel to fixed directions is a line through P, in this case PT.

16463. (Professor Langhorne Orchard, M.A., B.Sc.)—Show that

$1^4-1^4+4^4-3^4+\ldots$, to $2n$ terms $+ 2(2^2-1^2+4^2-3^2+\ldots$, to $2n$ terms$)$
$= 2(1^3+2^3+3^3+4^3+\ldots$, to $2n$ terms$) + (1+2+3+4+\ldots$, to $2n$ terms$)$.

Solutions (I.) *by* D. P. Varadarajan, B.A.; (II.) *by* C. M. Ross, *and others*; (III.) *by* M. Satyanarayana, M.A.

(I.)

$$(2^4-1^4+4^4-3^4+\ldots\text{to } 2n \text{ terms}) + 2(2^2-1^2+4^2-3^2+\ldots, \text{to } 2n \text{ terms})$$
$$-2(1^3+2^3+3^3+\ldots, \text{to } 2n \text{ terms}) - (1+2+3+4+\ldots, \text{to } 2n \text{ terms})$$
$$= \sum_{p=1}^{p=n}\left[\{(2p)^4-2(2p)^3+2(2p)^2-(2p)\}-\{(2p-1)^4+2(2p-1)^3+2(2p-1)^2+(2p-1)\}\right]$$
$$= \sum_{p=1}^{p=n}\{2p(2p-1)(4p^2-2p+1)-2p(2p-1)(4p^2-2p+1)\} = 0;$$

therefore

$$1^4-1^4+4^4-3^4+\ldots+2(2^2-1^2+4^2-3^2+\ldots, \text{to } 2n \text{ terms})$$
$$= 2(1^3+2^3+3^3+\ldots, \text{to } 2n \text{ terms}) + (1+2+3+\ldots, \text{to } 2n \text{ terms}).$$

(II.) The series $1^4-1^4+4^4-3^4+\ldots$, $2n$ terms may be written $(2^4-1^4)+(4^4-3^4)+\ldots$, n terms. The nth term is

$$(2n)^4-(2n-1)^4 = 32n^3-24n^2+8n-1.$$

Hence $S_n = 8n^2(n+1)^2-4n(n+1)(2n+1)+4n(n+1)-n$ ..... (1).

Similarly, the sum of the series $2(2^2-1^2+4^2-3^2+\ldots$, $2n$ terms$)$ is

$$S_n' = 2\{2n(n+1)-n\} \quad \ldots\ldots\ldots\ldots\ldots\ldots \quad (2).$$

Adding (1) and (2),

$$S_n+S_n' = 8n^2(n+1)^2-4n(n+1)(2n+1)+8n(n+1)-3n$$
$$= 2n^2(2n+1)^2+n(2n+1)$$
$$= 2(1^3+2^3+3^3+\ldots+2n \text{ terms}) + (1+2+3+\ldots, 2n \text{ terms}).$$

(III.)

$1^4-1^4+4^4-3^4+\ldots$, to $2n$ terms $+ 2(2^2-1^2+4^2-3^2+\ldots$, to $2n$ terms$)$
$= 2^4+4^4+\ldots$, to n terms $-(1^4+3^4+\ldots$, to n terms$)$
$+ 2\{(2^2+4^2+\ldots$, to n terms$)-(1^2+3^2+\ldots$, to n terms$)\}$
$= (S_1-S_2)+2(S-S')$, say.

Then $S_1 = 2^4(1^4+2^4+3^4\ldots$, to n terms$)$;

nth term in $S_2 = (2n-1)^4 = 2^4.n^4-4.2^3.n^3+6.2^2.n^2-4.2n+1$;

therefore $S_2 = S_1-8n^2(n+1)^2+4n(n+1)(2n+1)-4n(n+1)+n$.

$$S = 2^2(1^2+2^2+3^2+\ldots+n^2);$$

nth term in $S' = (2n-1)^2 = 2^2.n^2-4n+1$;

therefore $S' = S-2n(n+1)+n$;

therefore

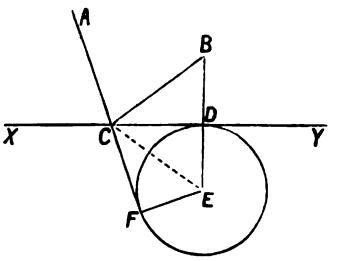
$$(S_1-S_2)+2(S-S') = 8n^2(n+1)^2-4n(n+1)(2n+1)+8n(n+1)-3n$$
$$= n(2n+1)(4n^2+2n+1).$$

Also $2(1^3+2^3+\ldots$ to $2n$ terms$)+(1+2+3+\ldots$, to $2n$ terms$)$
$= 2n^2(2n+1)^2+n(2n+1) = n(2n+1)(4n^2+2n+1)$.

Hence the result.

16564. (*Communicated by* E. P. Sergeant.)—A and B are two given points, XY a given indefinite straight line. Find a point C on XY, such that angle ACX equals twice angle BCY. [From Harper's *Euclid*.]

Solutions (I.) *by* F. C. Finlay, B.A., *and* Fred. C. Marks; (II.) *by* F. G. W. Brown, B.Sc., L.C.P.

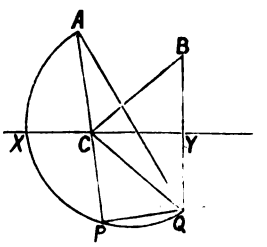


(I.) Let A and B be the points, XY the line.

Draw BD perpendicular to XY; produce it, and make DE equal to BD. Centre E, radius DE, describe a circle, draw AF tangent to it, cutting XY in C, between C and D. Join BC. Then angles FCE, DCE, and BCD are obviously equal; therefore

$$ACX = 2BCY.$$

Note.—Mr. Marks notices that with slight modification the above applies when A and B are on opposite sides of XY.



(II.) Draw BY perpendicular to XY, and produce it to Q, making

$$YQ = YB.$$

Join AQ, and on the side of it remote from B describe a semicircle APQ.

From Q draw the chord QP = QY.

Join PA, cutting XY at C.

Then $\triangle BCY = \triangle QCY = \triangle QPC$;

therefore $\angle BCY = \angle QCY = \angle PCQ$;

therefore

$$\angle ACX = \angle YCP = 2\angle PCQ = 2\angle BCY.$$

16131. (D. Biddle.)—At the vertices of an equilateral triangle are weights of value p, q, r $(p+q=r)$, which travel along the sides in the same positive direction at a uniform pace. Trace the locus of the centre of gravity. Also extend the investigation to triangles which are not equilateral, on the understanding that, though the sides be unequal, they are traversed by the weights in equal times.

Additional Solution by C. E. Youngman, M.A.

On the principle that when any two weights move uniformly in straight lines their centre of gravity also moves uniformly in another straight line—a principle which is equally true of three or more weights—the required locus is in each case a straight line, which to be drawn needs only that two definite positions of the centre of gravity should be found.

The geometrical proof of this principle probably appeared first in Newton's *Principia*, Lemma xxiii.

16402. (Professor Nanson.)—If $u_1, u_2, \ldots, u_n, v$ are $n+1$ quadratic functions of x, show that the value of

$$\int \frac{u_1 u_2 \ldots u_n}{v^{n+1}}\,dx$$

is algebraic, provided v is harmonically related to one of the u's.

Solution by the Proposer.

If the quadratic functions u_2, v of x are harmonically related, then, by a linear transformation $\int u_1 v^{-2}\,dx$ can be reduced to the form $\int (p+qX^2)X^{-2}\,dX$ and is therefore algebraic. Now operate on $\int u_1 v^{-2}\,dx$ with $a_r\,\partial/\partial a + b_r\,\partial/\partial b + c_r\,\partial/\partial c$ where a, b, c are the coefficients of v and r has the values 2, 3, ... n and the result stated follows.

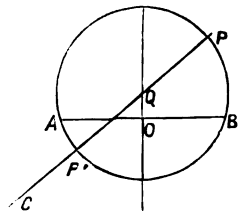
16563. (A. Dakin, M.A.)—Find, by the methods of pure geometry,

Digitized by Google

a point P in a given straight line c, such that the ratio AP : BP shall be a maximum; A and B are fixed points in a plane through c.

Solution by HENRY RIDDELL, M.E.

Bisect AB in O, and draw OQ perpendicular to AB, cutting the line C in Q. With centre Q and radius QA or QB draw the circle passing through A and B and cutting C in P and P'; then is AP/BP a maximum and AP'/BP' a minimum. The two circles of the Appolonian loci must touch C, and are themselves of the co-axial set having A and B for limiting points; therefore the tangents from Q, a point on the radical axis are equal to QA or QB, and P and P' are the points of contact.



16481. (Professor SANJÁNA, M.A.)—Find the sum of the series

$$1+x\frac{\sin 2\theta}{\sin\theta}+x^2\frac{\sin 3\theta}{\sin\theta}+\ldots+x^{n-2}\frac{\sin(n-1)\theta}{\sin\theta}+x^{n-1}\frac{\sin n\theta}{\sin\theta}$$
$$+x^n\frac{\sin(n-1)\theta}{\sin\theta}+\ldots+x^{2n-3}\frac{\sin 2\theta}{\sin\theta}+x^{2n-2}.$$

Solutions (I.) *by* A. M. NESBITT, M.A.; (II.) *by* D. M. KELKAR, B.A., L.T.

(I.) If we multiply the expression by $1-2x\cos\theta+x^2$, the coefficients of every power of x vanish, with the exception of x^0, x^n, x^{2n}. That of x^n comes at once to be $-2\cos n\theta$; thus the expression

$$=(1-2x^n\cos n\theta+x^{2n})/(1-2x\cos\theta+x^2).$$

It hardly needs pointing out that this will *not* give the sum of the first $2r-1$ terms by the substitution of r for n.

Or we may proceed thus. Denote $xe^{\theta i}$ by p and $xe^{-\theta i}$ by q, so that

$$pq=x^2 \quad\text{and}\quad p^rq^s+p^sq^r=2x^{r+s}\cos(r-s)\theta.$$

Then the proposed expression is easily seen to be the product of

$$p^{n-1}+p^{n-2}+\ldots+1 \quad\text{and}\quad q^{n-1}+q^{n-2}+\ldots+1,$$

and is therefore equal to $(p^n-1)(q^n-1)/[(p-1)(q-1)]$,

i.e., to $(x^{2n}-2x^n\cos n\theta+1)/(x^2-2x\cos\theta+1)$

as before.

(II.) Multiply the whole series by $\sin\theta$ and take it in two sections.

Let $S=\sin\theta+x\sin 2\theta+x^2\sin 3\theta+\ldots+x^{n-2}\sin(n-1)\theta+x^{n-1}\sin n\theta$,

$$-2x\cos\theta.S=\begin{cases}-x\sin 2\theta-x^2\sin 3\theta-\ldots\\ \ldots-x^{n-2}\sin(n-1)\theta-x^{n-1}\sin n\theta\\ -x^n\sin(n+1)\theta\\ -x^2\sin\theta-x^3\sin 2\theta-x^4\sin 3\theta-\ldots-x^n\sin(n-1)\theta,\end{cases}$$

$x^2S=x^2\sin\theta+x^3\sin 2\theta+x^4\sin 3\theta+\ldots+x^n\sin(n-1)\theta+x^{n+1}\sin n\theta$;

therefore $(1-2x\cos\theta+x^2)S=\sin\theta+x^{n+1}\sin n\theta-x^n\sin(n+1)\theta$.

Similarly, if

$S'=x^n\sin(n-1)\theta+x^{n+1}\sin(n-2)\theta+\ldots+x^{2n-3}\sin 2\theta+x^{2n-2}\sin\theta$;

then $(1-2x\cos\theta+x^2)S'=x^n\sin(n-1)\theta-x^{n+1}\sin n\theta+x^{2n}\sin\theta$;

therefore

$$(1-2x\cos\theta+x^2)(S+S')=\sin\theta-x^n\{\sin(n+1)\theta-\sin(n-1)\theta\}+x^{2n}\sin\theta$$
$$=\sin\theta(1-2x^n\cos n\theta+x^{2n});$$

therefore $$S+S'=\frac{\sin\theta(1-2x^n\cos n\theta+x^{2n})}{1-2x\cos\theta+x^2},$$

which, divided by $\sin\theta$, gives the sum of the given series.

8654. (F. MORLEY, B.A.)—There are n towns joined two and two by railroads. Show that it is possible to pass by rail over the entire system without using any railroad twice if n be odd, and impossible if n be even.

Solution by "SOLIDUS."

(1) If $2n$ towns are connected in pairs by roads, then each town has $2n-1$ roads leading to or from it. Now, for any town that is not the starting-point or the finishing point of the journey, the roads to it can only be traversed in pairs, one coming to it and the other going from it. Hence at least one road from or to such a town cannot be traversed without traversing another twice, so that on the whole at least $\frac{1}{2}(2n-2)$ or $n-1$ roads must be traversed twice in order to traverse all.

(2) To prove that the traversing is possible for any *odd* number of towns, we can proceed by mathematical induction, thus:—Assuming that the traversing has been done for all the roads connecting $2n-1$ towns, let two new towns A and B be taken, and let the town where the previous journey left off be marked 1, the others in any order being marked 2, 3, 4, ..., $2n-1$. Perform the journey 1A2B3A4B5A6 ... B$(2n-1)$AB1, which obviously traverses all the roads not traversed before. Now, traversing without repetition being possible for 3 towns, it is so for 5, 7, 9, ..., *i.e.*, for any odd number of towns.

16577. (Hon. G. R. DICK, M.A.)—P is any point in the plane of a triangle ABC whose circum-centre is O; a, b, c are the sides, R the circum-radius, Δ the area and AP $= x$, BP $= y$, CP $= z$. Show that $\Delta.OP^2=R^2(\Delta\pm\Delta')$, where Δ' is the area of a triangle whose sides are ax/R, by/R, cz/R respectively. Deduce Ptolemy's theorem.

Solution by R. F. DAVIS, M.A.

Upon PB describe the triangle PBQ directly similar to ABC so that PQ $= by/c$, PC $= z$, QC $= ax/c$; then the triangle PQC is similar to Δ', and the area PQC $= \Delta'(R^2/c^2)$.

Produce BP to meet the circum-circle in T; then angle

$$PCT=BPC\sim A=CPQ,$$

and CT is parallel to PQ.

Thus area PQC $= \Delta'(R^2/c^2)$ = area PTQ $= \frac{1}{2}PT.PQ\sin A$
$$=\tfrac{1}{2}\{(R^2-OP^2)/y\}(by/c)\sin A=(R^2-OP^2)\Delta/c^2.$$

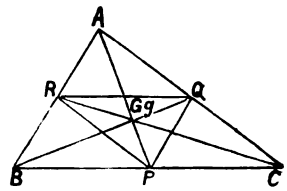
Thus $$\Delta'.R^2=(R^2-OP^2)\Delta.$$

When P is on the circum-circle $\Delta'=0$ and $ax\pm by\pm cz=0$.

Geometrical Note.

By S. G. SOAL.

Although the pedal and e-centre triangles have frequently been used to prove various theorems in connexion with the triangle, the following application of the triangle PQR whose vertices are the mid-points of BC, CA, AB, is one which personally I have never met with.



Evidently the triangles PQR and ABC are directly similar, and from the definitions it follows that

(i.) PQR and ABC have a common centroid.

(ii.) The ortho-centre of PQR is the circum-centre of ABC.

(iii.) The circum-centre of PQR is the nine-point centre of ABC.

(iv.) But the linear dimensions of the triangle ABC are double the corresponding linear dimensions of the triangle PQR.

Hence, using the facts (i.), (ii.), (iii.), in connexion with (iv.), we have at once the well known theorems that in a triangle ABC—

(i.) The distance between the centroid and the ortho-centre is double the distance between the centroid and the circum-centre;

(ii.) The distance between the centroid and the circum-centre is double the distance between the centroid and nine-point centre.

16569. (Professor SANJÁNA, M.A.)—For given values of θ, show how to determine a, b, c, a_1, b_1, c_1 so that the following relation may hold good:—$(a+a_1\surd\theta)^{\frac{1}{3}}+(b+b_1\surd\theta)^{\frac{1}{3}}=(c+c_1\surd\theta)^{\frac{1}{3}}$.

[All symbols denote rational quantities and some of the square roots may have either sign. Examples:

$$\surd(22+2\surd13)+\surd(10+2\surd13)=\surd(48+12\surd13),$$
$$\surd(22-2\surd13)-\surd(10-2\surd13)=\surd(48-12\surd13);$$
$$\surd(24+8\surd7)+\surd(5+\surd7)=\surd(45+17\surd7),$$
$$\surd(24-8\surd7)-\surd(5-\surd7)=\surd(45-17\surd7).]$$

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

Squaring the given equation, and rearranging

$$\{c-(a+b)\}+\{c_1-(a_1+b_1)\surd\theta\}=2\surd\{ab+a_1b_1\theta+(a_1b+ab_1)\surd\theta\}.$$

Now let this be compared with the identity

$$8\gamma+8\gamma_1\surd\theta=2\surd16(\gamma^2+\gamma_1^2\theta)+32\gamma\gamma_1\theta.$$

On identifying the two

$$c-(a+c)=8\gamma,\quad c_1-a_1+b_1=8\gamma_1 \ldots\ldots\ldots\ldots \text{(A)}.$$
$$ab+a_1b_1\theta=16(\gamma^2+\gamma_1^2\theta),\quad a_1b+ab_1=32\gamma\gamma_1 \ldots\ldots \text{(B, C)}.$$

Here γ, γ_1 are two arbitraries, which may be assumed at pleasure (integers of course). After which the four quantities a, b, a_1, b_1 have to be determined to satisfy only the two equations (B), (C); so that two of them may be assumed also (with some slight restrictions).

Finally c, c_1 are given (uniquely) by (A).

Example.—Take $\gamma=2$, $\gamma_1=1$. Hereby equations (B), (C) become

$$ab+a_1b_1\theta=64+16\theta,\quad a_1b+ab_1=64 \ldots\ldots\ldots \text{(B', C')}.$$

Ex. 1. — Taking $\theta=13$, assume $a_1=b_1=2$; (B'), (C') give $ab=64+12\theta$, $a+b=32$; where $a=22$, $b=10$; $c=48$, $c_1=12$ (as in the author's example).

16583. (W. J. GREENSTREET, M.A.)—In an examination the candidates must get x marks on the first of the four papers set. The maximum number obtainable on each paper is y, and the minimum for a pass is y. In how many ways can a candidate just get his y marks for a pass?

Digitized by Google

Solution by T. K. VENKATARAMAN, M.A.

The number of ways in which the candidate can get just y marks under the given conditions is evidently the same as the number of ways in which the partial product a^y can be formed in the product

$$(a^x + a^{x+1} + \ldots + a^y)(a^0 + a^1 + a^2 \ldots + a^y)(a^0 + a^1 + \ldots + a^y)(a^0 + a^1 + \ldots + a^y),$$

which

$$= \text{the coefficient of } a^y \text{ in } (a^x + a^{x+1} + \ldots + a^y)(1 + a + \ldots + a^y)^3$$
$$= \;,, \quad ,, \quad ,, \;,, \;,, \; a^x(1-a^{y-x+1})/(1-a).[(1-a^{y+1})/(1-a)]^3$$
$$= \;,, \quad ,, \quad ,, \;,, \;,, \; a^x(1-a^{y-x+1})(1-3a^{y+1}+3a^{2y+2}-a^{3y+3}) \times [1 + 4a + (4.5)\,a^2/2! + \ldots]$$
$$= \text{the coefficient of } a^{y-x} \text{ in } (1-3a^{y+1}+3a^{2y+2}-a^{3y+3})(1+4a+\ldots)$$
$$= \;,, \quad ,, \quad ,, \;,, \;,, \; 1.[1 + 4a + \tfrac{1}{2}(4.5)\,a^2 + \ldots]$$
$$= [4.5.6\ldots(y-x+3)]/(y-x)! = (y-x+1)(y-x+2)(y-x+3)/3!.$$

16549. (Professor E. B. ESCOTT).—In the recurring series

$$P_n;\; 1,\, x,\, x^2-x-1,\, x^3-2x^2-x+1, \ldots$$

where the scale of relation is

$$P_{n+2} = (x-1)\,P_{n+1} - P_n,$$

prove that $P_{\frac{1}{2}(p-1)} \equiv \pm 1 \pmod p$ according as $x-3$ is a quadratic residue or a non-residue of p, p being an odd prime.

Solution by the PROPOSER.

We can easily prove that

$$P_n = (a^{2n+1} - b^{2n+1})/(a-b),$$

where $a = \frac{1}{2}[\sqrt{(x+1)} + \sqrt{(x-3)}]$, $b = \frac{1}{2}[\sqrt{(x+1)} - \sqrt{(x-3)}]$,

$$a^p = (1/2^p)[\sqrt{(x+1)} + \sqrt{(x-3)}]^p$$
$$\equiv [(x+1)^{\frac{1}{2}(p-1)}\sqrt{(x+1)} + (x-3)^{\frac{1}{2}(p-1)}\sqrt{(x-3)}]/2^p \pmod p,$$
$$b^p \equiv [(x+1)^{\frac{1}{2}(p-1)}\sqrt{(x+1)} - (x-3)^{\frac{1}{2}(p-1)}\sqrt{(x-3)}]/2^p \pmod p.$$

Therefore

$$P_{\frac{1}{2}(p-1)} = (a^p - b^p)/(a-b) \equiv (x-3)^{\frac{1}{2}(p-1)}/2^{p-1} \equiv (x-3)^{\frac{1}{2}(p-1)} \pmod p$$
$$\equiv \pm 1 \pmod p,$$

according as $x-3$ is a quadratic residue or non-residue of p.

16578. (S. NARAYANA AIYAR.)—If O (AA′, BB′, CC′, ...) be any pencil in involution, and if a circle be drawn through the point O cutting the rays of the pencil in the points A, A′; B, B′; C, C′; ...; then the locus of the orthocentre of the triangles OAA′, OBB′, OCC′, ... is a circle.

Solution by R. F. DAVIS, M.A.

Let the focal rays of the pencil intersect the circle in S, S′. Then, since O (ASA′S′) = −1, AA′ passes through a fixed point T, the intersection of tangents at S, S′ to the circle.

The line joining O to the orthocentre of OAA′ is parallel to and double the line joining C (the centre of the circle) to M (the middle point of AA′).

But the locus of M is the circle upon CT as diameter; whence, &c.

16490. (Professor NANSON.)—Find the condition that the three involutions determined by three pairs of points on the same base may have one focus in common.

Solution by the PROPOSER.

If the three pairs of points are given by the three quadrics $u = 0$, $v = 0$, $w = 0$, the foci of the three involutions are found by equating to zero the Jacobians of v, w; w, u; u, v. Now, if no one of u, v, w is a perfect square, the three Jacobians vanish if any two of them vanish. Hence, in general, the condition for one focus in common is found by equating to zero the dialytic eliminant of the three Jacobians. Now this dialytic eliminant is clearly the adjugate, and therefore the square, of the dialytic eliminant of u, v, w. Because we have a perfect square, we infer that both foci must be common, and this is the case, because the condition found merely expresses that u, v, w are in involution.

If u is a perfect square, then the two-fold point it determines is of necessity a focus of the two involutions determined by u, v; u, w. The condition that it is also a focus of the involution determined by v, w is that it satisfies the Jacobian of v, w.

Thus, unless the three pairs of points belong to the same involution, and so have both foci in common, one of the three pairs must be a coincident pair, and the point of coincidence must satisfy the Jacobian of the remaining two pairs.

QUESTIONS FOR SOLUTION.

In Question 16590 (see *Educational Times*, February, 1909) x, y, z should be cyclically interchanged in the successive equations. Also on p. 79, l. 34, as above, for x^8 read $4x^8$.

16602. (A. M. NESBITT, M.A.)—A mass of liquid is stirred, and its volume changes in the process from v to μv. Prove that the chance that at any given instant *no* particle is in its initial place is $e^{-1/\mu}$.

16603. (S. NARAYANA AIYAR.)—$\phi_1(x), \phi_2(x), \ldots, \phi_n(x)$ are n functions of x, which are expansible in powers of x with the respective absolute terms $a_1, a_2, a_3, \ldots, a_n$. $c_1, c_2, \ldots, c_n$ and $s_1, s_2, \ldots, s_n$ denote respectively the real and imaginary parts of the functions $\phi_1(re^{i\theta})$, $\phi_2(re^{i\theta}), \ldots, \phi_n(re^{i\theta})$ [*i.e.*, $\phi_1(re^{i\theta}) = c_1 + is_1$, &c.]. S_r denotes the sum of the products of any r of the quantities $s_1, s_2, \ldots, s_n$ and the remaining $n-r$ of the same quantities with c written for s, the quantities being chosen in every possible way; thus

$$S_0 = c_1c_2c_3\ldots c_n, \quad S_1 = s_1c_2c_3\ldots c_n + s_2c_1c_3\ldots c_n + \ldots + s_nc_1c_2\ldots c_{n-1},$$

....

Show that

$$\int_0^\pi (S_0 - S_2 + S_4 - S_6 + \ldots)\,d\theta = \pi a_1a_2a_3\ldots a_n,$$

$$\int_0^\infty [(S_0 - S_2 + S_4 - \ldots) - \theta(S_1 - S_3 + S_5 - \ldots)]\frac{d\theta}{1+\theta^2} = \frac{\pi}{2}a_1a_2a_3\ldots a_n.$$

16604. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Show how to use tables of the roots $(y_2, y_3, y_4, y_6, y_8, y_{12})$ of the congruences $y_2^2+1 \equiv 0$, $(y_3^3 \mp 1) \div (y_3 \mp 1) \equiv 0$, $y_4^4 + 1 \equiv 0$, $(y_6^6+1) \div (y_6^2+1) \equiv 0$, $y_8^8 + 1 \equiv 0$, $(y_{12}^{12}+1) \div (y_{12}^4+1) \equiv 0$ to factorize numbers $N = (x^{12}+y^{12}) \div (x^4+y^4)$, where $xy > 1$ and all symbols are integers, and give an example with $N > 10^7$.

16605. (Professor SANJÁNA, M.A.)—In the solution of the equation $a^2 - Nb^2 = \pm 1$, where N is a rational quantity greater than unity, let the values of a and b form the series $a_1, a_2, a_3, \ldots, b_1, b_2, b_3, \ldots$. Show that these series are recurring with the scale of relation $1 - 2a_1x \pm x^2$, and that $2a_rb_r = b_{2r}$.

16606. (Professor SANJÁNA, M.A.)—Prove that $20^{35}-1$ is the product of the following numbers:—19; 11; 61; 251; 29; 71; 32, 719; 6, 527, 898, 023, 267, 251; 2, 441, 576, 160, 715, 231. Also analyse the last two factors.

16607. (R. F. DAVIS, M.A.)—Prove that the solution of the biquadratic equation $x^4 + px^2 + qx + r = 0$ reduces to the solution of the quadratic $x^2 + \alpha x + \beta = 0$, where α is a real root of

$$\alpha^6 + 2p\alpha^4 + (p^2 - 4r)\,\alpha^2 - q^2 = 0 \quad \text{and} \quad \beta = 2r\alpha/(\alpha^3 + p\alpha + q).$$

16608. (Professor COCHEZ.)—Construire la courbe

$$\rho^2 \cos 2\omega + 2a\rho\cos^3\omega + a^2\sin^2\omega = 0.$$

16609. (W. J. GREENSTREET, M.A.)—Find geometrically the locus of the centres of ellipses with the same focus, and touching a given line, and passing through a given point.

16610. (SARADAKANTA GANGULI, M.A.)—TP, TQ are tangents to a given ellipse. If the area of the triangle TPQ be constant, find the locus of T.

16611. (V. RAMASWAMI AIYAR, M.A.)—Let ABC be a given triangle, whose circum-centre is O and circum-radins unity. Let P be a variable point on the circum-circle. Let α, β, γ, u denote the vectors—from O to A, B, C, P; and V the vector to the focus of the parabola circumscribing the triangle ABC and having its axis in the direction of u. Prove that

$$V = [(4pr - q^2)\,u^8 + 8r^2u^6 + 2qr^2u^4 - r^4]/[4u^2r\,(u^6 + qu^4 + pru^2 + r^2)],$$

where $\quad p = \Sigma\alpha, \quad q = \Sigma\alpha\beta, \quad r = \alpha\beta\gamma.$

16612. (C. E. YOUNGMAN, M.A.)—In a rectangular hyperbola, tangents forming a triangle A′B′C′ touch at A, B, C; then if ABC is equilateral it has the same orthocentre as A′B′C′. More generally, if an in- or ex-centre of ABC lies on the curve, the orthocentre of A′B′C′ coincides with it; or, better still, the hyperbola is always the isogonal transformation of some diameter of the circle ABC, and the pole of that diameter is the orthocentre of A′B′C′.

16613. (H. L. TRACHTENBERG, B.A.)—The angular points of a triangle, the foci of the maximum inscribed ellipse, and the symmedian point lie on a conic.

16614. (*Communicated by* JAMES BLAIKIE, M.A.)—E and F are the mid-points of the sides AB, BC of a triangle ABC. G is a point in BC such that EG^2 = triangle ABC. If FN be drawn perpendicular to EG, prove that $FN = \frac{1}{2}EG$.

16615. (W. AUSTIN SLEIGH, B.A. Suggested by Question 15782.)—If K be the mid-point of the side BC of a triangle ABC, and I, I_1 the in-centre and ex-centre opposite A respectively, prove that

$$KI^2 + KI_1^2 = \tfrac{1}{2}(II_1^2 - BC^2).$$

[*Note.*—As problems also bearing on Question 15782, Mr. Sleigh *communicates* the following:—(1) If I be the in-centre, I_1 the ex-centre opposite A of the triangle ABC, and P, K the mid-points of II_1 and BC respectively, prove that PK is perpendicular to BC; (2) Ex. 6, p. 52 of Richardson and Ramsey's *Properties of Triangles*.]

16616. (Professor NEUBERG.)—Sur les côtés d'un triangle ABC on construit extérieurement trois rectangles BCDE, CAFG, ABHK dont les trois hauteurs CD, AF, BH ont une somme donnée l. Trouver le maximum de la somme des aires des triangles CDG, AFK, BHE et celui de la somme $DG^2 + FK^2 + HE^2$.

Digitized by Google

16617. (M. T. Naraniengar, M.A.)—Prove that the vertices of the harmonic triangle of the Feuerbach quadrilateral lie on the sides of the pedal triangle.

16618. (T. E. Lindfield.)—If

$$\sin\theta = a/b\sin\phi \quad \text{and} \quad \cos\theta = c/d\cos\phi,$$

prove that $\sin(\theta+\phi) = \sqrt{[(b^2-a^2)(c^2-d^2)]}/(ad-bc)$

and $\cos(\theta+\phi) = (ac-bd)/(ad-bc)$.

16619. (C. M. Ross.)—Solve the equation

$$\tan^{-1}x/a + \tan^{-1}x/b + \tan^{-1}x/c + \tan^{-1}x/d = \pi/2.$$

16620. (Professor Nanson.)—A skipper sails one mile on a course α to the west of north, and then another mile on a course β to the west of north. What is then his (1) bearing from, (2) distance from, (3) distance to the north of, his starting point?

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

11248. (Professor Sylvester.)—Let $p_1, p_2, \ldots, p_m$; $q_1, q_2, \ldots, q_n$ be any two sets of given positive quantities (integer or fractional, rational or irrational) such that $\Sigma p = \Sigma q$. Then using $E(u)$ to mean the integer part of u, prove that the sum of the maximum and minimum values $\Sigma E(px) - \Sigma E(qx)$ as x passes from 0 to ∞ is equal to $n-m$.

11370. (The late Professor Clifford, F.R.S.)—ξ_1, ξ_2, ξ_3, ξ_4 are connected with x_1, x_2, x_3, x_4 by the equations

$$2\xi_1 = -x_1+x_2+x_3+x_4, \quad 2\xi_3 = x_1+x_2-x_3+x_4,$$
$$2\xi_2 = x_1-x_2+x_3+x_4, \quad 2\xi_4 = x_1+x_2+x_3-x_4,$$

find the x's and the sum of their squares, in terms of the ξ's; and prove that

$$\theta x_1.\theta x_2.\theta x_3.\theta x_4 + \theta_1 x_1.\theta_1 x_2.\theta_1 x_3.\theta_1 x_4 = \theta_1\xi_1.\theta_1\xi_2.\theta_1\xi_3.\theta_1\xi_4 + \theta\xi_1.\theta\xi_2.\theta\xi_3.\theta\xi_4.$$

11507. (M. Brierly.)—A plummet, hung by a small ring, slides freely upon an inelastic string one end of which is fixed in a vertical plane; determine the locus of the other end of the string, so that, moving upwards or downwards, the plummet shall describe a circle upon the plane.

11509. (J. H. Grace, M.A.)—Having given three circles A, B, and C, (1) draw a circle which shall touch A, cut B orthogonally, and bisect the circumference of C, and (2) find how many circles can be so drawn.

11514. (Professor Morley, M.A.)—Let the complex variables w, z be connected by the relation $2w = z + b^2/z$; show that if z describes a circle, w describes a nodal bicircular quartic.

11569. (Colonel Clarke, C.B., F.R.S.)—The sum of three chords in a given circle (radius = a) is c. Find the chance that a triangle could be formed of them.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss Constance I. Marks, B.A., 10 Matheson Road, West Kensington, W.

Vol. XIV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, Francis Hodgson, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, February 11th, 1909.—Sir W. D. Niven, President, in the Chair.

The following papers were communicated:—

"The Conformal Transformations of a Space of four Dimensions and the Generalization of the Lorentz Einstein Principle," Messrs. H. Bateman and E. Cunningham.

"On a Certain Family of Cubic Surfaces," Mr. W. H. Salmon.

"Some Fundamental Properties of a Lebesgue Integral in a Two-dimensional Domain," Dr. E. W. Hobson.

"On the Relation between Pfaff's Problem and the Calculus of Variations," Prof. A. C. Dixon.

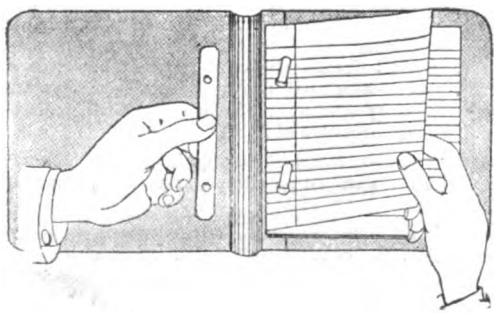
"On Implicit Functions and their Differentials" and "On Indeterminate Forms," Dr. W. H. Young.

"Modular Invariants of a General System of Linear Forms," Prof. L. E. Dickson.

NOVELTIES IN SCHOOL STATIONERY.

The Holborn File

Provides a simple and effective method for preserving Examination or other worked papers for future reference. It consists of a stout cover made of a very tough material, to which is affixed a brass binder. The paper in the Filing Blocks used with the File is punched with two holes; these exactly fit the brass binder. A strong piece of metal, provided with two holes, is placed over the paper, the ends of the binder are passed through the holes and turned over with a slight pressure of the finger or thumb; the papers being thus securely fixed in position. Papers can be either taken off or added to the File as required. **Price of the Files, 18s. per gross.**



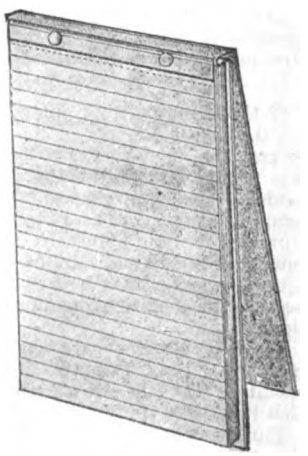
THE HOLBORN FILING BLOCKS.

These Blocks are made specially to fit the Holborn Files and are stocked in several sizes.

THE E.S.A. Writing Case

Made of Patent Washable Cloth that wears perfectly clean.

This is an ingenious arrangement consisting of a cloth-covered case so arranged that a loose writing pad can be easily inserted by the use of two metal fasteners. The Case is made with a hinge which allows the cover to be folded right back, leaving only the writing surface exposed.



BLOCKS OF PAPER (or Refils).

These Blocks are punched with two holes which exactly correspond with the holes in the Writing Case; the paper is of good quality, perforated, so that the leaf can be easily detached.

For further particulars and samples of any of the above apply to the

- DENT'S -
SCIENTIFIC PRIMERS

With Numerous Illustrations. Cloth Boards. Price 1s. net each Volume.

Messrs. J. M. Dent & Co. have pleasure in announcing a new and important series of Scientific Primers under the general Editorship of Dr. J. Reynolds Green, Downing College, Cambridge, who has secured the co-operation of most eminent scientists in the production of this series.

The undermentioned volumes introduce the series, of which those dealing with Biology, Botany, and Chemistry are now ready, the remainder being in active preparation.

The Publishers hope to announce further volumes at an early date.

A full and detailed Prospectus may be had, post free, upon application.

NOW READY.
BOTANY.
By Dr. J. REYNOLDS GREEN, F.R.S., Fellow of Downing College, Cambridge.

NOW READY.
BIOLOGY.
By Prof. HARVEY GIBSON, Professor of Botany in the University of Liverpool.

NOW READY.
CHEMISTRY.
By Prof. W. A. TILDEN, F.R.S., Professor of Chemistry in the Royal College of Science, South Kensington.

IN PREPARATION.
ASTRONOMY.
By Prof. F. W. DYSON, Professor of Astronomy in the University of Edinburgh.

IN PREPARATION.
GEOLOGY.
By Prof. J. W. GREGORY, F.R.S., Professor of Geology in the University of Glasgow.

EXCELSIOR PUBLICATIONS.

Bacon's EXCELSIOR WALL MAPS.
CONTOUR EDITION.
Heights of land and depths of water in different tints at varying contours. Meet every necessity of the Board of Education for Elementary and Secondary Schools. Europe, Asia, Africa, N. America, S. America, Australia, are ready. Price 16/- each.

Bacon's RELIEF WALL MAPS,
Size 30 by 40 in., are equal to Relief Models at one-sixth the cost. Price 7/6.

Bacon's RELIEF AND POLITICAL MAPS, side by side on one sheet, make the perfect Teaching Map. Price 13/-.

Bacon's RELIEF ATLAS
has no equal or superior. "The book is a marvel of cheapness, and needs only to be seen to be immediately adopted."—TEACHERS' AID.
Price 6d., 8d., and 1/- net.

Bacon's GLOBES. 5/6, 10/6, 12/6, 21/-, 30/-.

Bacon's MEMORY MAP ATLAS and TEXT-BOOK combined. Adopted in many Secondary Schools. Price 3/6.

Bacon's UPPER CLASS ATLASES,
Text-Books and Memory Maps combined. Ten parts ready—England, British Isles, British Colonies, Scotland and Ireland, Europe, Asia, Africa, America, World, and Astronomy. Price 3d. net, in paper covers; 4d. net, stiff covers.

Bacon's EXCELSIOR WALL MAPS.
The largest sale in the world. 20 kinds. Price 15/-.
Catalogues, Specimens, &c., free.

NELSON'S
YOUNG FOLKS' BOOKSHELF

Will teachers kindly make it known to their scholars that the FIRST PART OF THE SECOND VOLUME OF NELSON'S YOUNG FOLKS' BOOKSHELF ENTITLED

Stories of Famous Men and Women

will be published on March 9th? It will be complete in 10 Parts, published fortnightly at 2d. per Part.

The new issue will be fascinating to all young people; it will be copiously and beautifully illustrated in colour and black-and-white, and there will be numerous attractive Competitions for valuable book prizes. In addition, the publishers are offering

SIX SCHOOL LIBRARIES

three of 100 volumes, and three of 50 volumes, for competition between representative scholars in the various classes of schools; Secondary and Higher Grade, Urban, and Rural. For full particulars see cover of Part 1.

Be sure and give your order for Volume II. to your Bookseller or Newsagent to-day.

COLLEGE OF PRECEPTORS.
(INCORPORATED BY ROYAL CHARTER.)

MEMBERS' MEETING.

The next Monthly Meeting of the Members will take place on Wednesday, the 21st of April, at 7 p.m., when there will be a Discussion on "The Relations between Head Masters and Assistant Masters." The Discussion will be opened by W. J. ADDIS, Esq., M.A.

Members have the privilege of introducing their friends.

LECTURES FOR TEACHERS.

The First Course of Lectures (Thirty-seventh Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on **"The Psychological Bases of Teaching and Education,"** commenced on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods. The Fee for the Course is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C. *For Syllabus, see page* 148.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 30th of August, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in May, 1909.

Certificate Examinations.—The Midsummer Examination for Certificates will commence on the 29th of June, 1909.

Lower Forms Examinations.—The Midsummer Examination will commence on the 29th of June, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Autumn Examination in 1909 will commence on the 7th of September.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

Bloomsbury Square, W.C.

UNIVERSITY OF ST. ANDREWS.

L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

THE ASSOCIATED BOARD
OF THE R.A.M. AND R.C.M.
FOR LOCAL EXAMINATIONS IN MUSIC.

PATRON: HIS MAJESTY THE KING.

PRESIDENT: H.R.H. THE PRINCE OF WALES, K.G.

LOCAL CENTRE EXAMINATIONS (Syllabus A). Examinations in Theory at all Centres in March and November; in Practical Subjects at all Centres in March-April, and in the London District and certain Provincial Centres in November-December also. Entries for the November-December Examinations close Wednesday, October 6th, 1909.

SCHOOL EXAMINATIONS (Syllabus B). Held three times a year, viz., June-July, October-November, and March-April. Entries for the June-July Examinations close Wednesday, May 12th, 1909.

Specimen Theory Papers set in past years (Local Centre *or* School) can be obtained on application. Price 3d. per set, per year, post free.

Syllabuses A and B, entry forms, and any further information will be sent post free on application to—

LONDON INTER-COLLEGIATE SCHOLARSHIPS BOARD.

ENTRANCE SCHOLARSHIPS and EXHIBITIONS, 1909.

Twenty Scholarships and Exhibitions of an aggregate total value of about £1,500, open to Men and Women, and tenable in the Faculties of Arts, Science, and Engineering of

University College,
King's College,
The East London College,

will be offered for competition on May 11th, 1909.

Twenty-three Medical Entrance Scholarships and Exhibitions of an aggregate total value of about £1,500, tenable in the Faculties of Medical Sciences of

University College,
King's College,

and in the Medical Schools of

King's College Hospital,
St. George's Hospital,
Westminster Hospital,
The London School of Medicine for Women,

will be offered for competition on September 21st, 1909.

Full particulars and entry forms may be obtained from the Secretary of the Board,

A. E. G. ATTOE,
University College,
Gower Street, London, W.C.

ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN INTERMEDIATE AND SECONDARY SCHOOLS, EDINBURGH.

This College provides a year's Professional Training for educated women who intend to Teach.

The Course is supervised by the Edinburgh Provincial Committee for the Training of Teachers and is recognized by the Scotch Education Department and by the Cambridge Teachers' Training Syndicate.

Prospectus and further particulars from the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

DENMARK HILL PHYSICAL TRAINING COLLEGE FOR LADY TEACHERS, LONDON, S.E.

Full preparation for Public Examinations.

British College of Physical Education: English and Swedish systems. Massage and Remedial Work.

Board of Education: Science.

Swimming and Sports.

Schools supplied with fully qualified Sports Mistresses.

For particulars apply—Miss E. SPELMAN STANGER, Trevena, Sunray Avenue, Denmark Hill, London, S.E.

THE INCORPORATED

FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Sir W. MATHER, LL.D.
Treasurer—Mr. C. G. MONTEFIORE, M.A.
Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.
Principal—Miss E. LAWRENCE.

KINDERGARTEN AND SCHOOL.
Head Mistress—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union and other Examinations.

TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.

Prospectuses can be obtained from the PRINCIPAL.

BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON),

YORK PLACE, BAKER STREET, LONDON, W.

Principal—Miss M. J. TUKE, M.A.

The Easter Term begins on Thursday, April 22nd, 1909.

Lectures are given in preparation for all Examinations of the University of London in Arts, Science, and Preliminary Medicine; for the Teachers' Diploma, London; the Teachers' Certificate, Cambridge; and for the Cambridge Higher Local Examination.

Six Laboratories are open to Students for practical work.

There is a special course of SCIENTIFIC INSTRUCTION IN HYGIENE, designed to furnish training for Women Factory and Sanitary Inspectors, and Teachers of Hygiene.

The ART SCHOOL (which is conducted at South Villa, Regent's Park) may be attended by students who are not taking other subjects at the College.

A single course in any subject may be attended.

Regular Physical Instruction is given free of cost, to Students who desire it, by a fully qualified woman teacher.

ENTRANCE SCHOLARSHIPS.

One Reid Scholarship in Arts—value £31 10s., first year; £28 7s., second and third years.

One Old Pupil's Scholarship in Arts, value £20 for two years.

One Pfeiffer Scholarship in Science, annual value £48, tenable for three years, will be awarded on the results of the Examination to be held in June.

RESIDENCE.

Accommodation for about 40 resident students is provided in the College. At Easter the College will open as an additional residence, South Villa, Regent's Park, where further accommodation for 15 students will be provided. The new house is about five minutes' walk from York Place, and has large gardens available for students of the College.

Full particulars on application to the PRINCIPAL, at the College.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of Department—Miss MARY MORTON, M.A.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge.

Students are admitted to the Training Course in October and in January.

One Free Place (value £26 5s.), one Scholarship of the value of £20, and a limited number of grants of £10, are offered for the Course beginning in October, 1909.

They will be awarded to the best candidates holding a degree or its equivalent in Arts or Science.

Applications should be made to the HEAD OF THE DEPARTMENT.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN.

BURLINGTON CORRESPONDENCE COLLEGE.

Principal—Mr. J. CHARLESTON, B.A.
(Honours Oxon. and Lond.)

TUTORS.—The Staff includes Graduates of London, Oxford, Cambridge, and Royal Universities.

METHOD.—Thoroughly individual system, which ensures the closest attention to the needs of each student.

Rapid Preparation for:—

MATRICULATION,
B.A. and B.SC.,
L.L.A.,
A.C.P. and L.C.P.

For Terms, Testimonials, &c., address—

THE PRINCIPAL,
Burlington Correspondence College,
BIRKBECK BANK CHAMBERS, LONDON, W.C.

Messrs. TRUMAN & KNIGHTLEY, LTD.,

Educational Agents,

158 to 162 OXFORD STREET, LONDON, W.

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, LONDON, W.C.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL BASES OF TEACHING AND EDUCATION.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The First Course of Lectures (Thirty-seventh Annual Series) commenced on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods.

SYLLABUS.

I. (Feb. 4.) *The Data of Psychology:* unique character of consciousness: generic consciousness: insulation of the individual consciousness: polarity of consciousness: the objective and the subjective: the self and the ego: nature of the soul: evolution of personality: interplay of personalities: self-realization as goal of education: the teacher's lever.

II. (Feb. 11.) *Psychology as an Educational Instrument:* prevalent misunderstanding: Münsterberg's theory: nature of hypostasis: the exploded faculty psychology: distinction between soul and soul content: education as a process of assimilation of and by the external world: apperception: dynamic view of knowledge: Herbert Spencer's view of the educational value of knowledge.

III. (Feb. 18.) *Presentational Processes:* Sensation and the senses: the "preferred sense": practical applications of the theory of preferred sense: the training of the senses: distinction between sensation and perception: meaning and limits of observation and experiment: the "gaping point": the area of observational activity: distinction between observation and inference: the movable inference index.

IV. (Feb. 25.) *Representational Processes:* distinction between gathering and elaborating material: conception: the static and dynamic view of ideas: ideas as forces: changes in the activity of a given idea: copresentation and interplay of ideas: hierarchy of ideas: the fixed idea: marginal and focal ideas: the possibility of the subconscious influence of ideas.

V. (March 4.) *Soul-building:* nature and scope of association: usual limitation to ideas: really of general application: association makes habits possible: advantages and disadvantages of habit forming: the "growing point": accommodation and co-ordination: the old and the new laws of the association of ideas: Paulhan's view: manipulation of association in teaching.

VI. (March 11.) *Memory:* relation to personal identity: physical basis of memory: possibility of improving memory as a natural power: the associative and the rational memory: mnemonics and the *memoria technica:* mediate and immediate recall: temporary and permanent memory: the nature of the memory implied in "cram": rote-learning: relation between memory and general intelligence.

VII. (March 18.) *"The Busy Faculty":* unjustified depreciation of the imagination: differentiation from memory: aesthetic and practical spheres of imagination: "day-dreaming": need to imagine processes as well as results: misleading use of the word "ideal": the need for clearly imaged ends in practical life: application to the teaching of Geography, History, Arithmetic, and Geometry: imagination as a drag on thought.

VIII. (April 29.) *Regulation of Consciousness:* nature of attention: relation to interest: teachers' distrust of interest: confusion with pleasure: interest and attention as cause and effect: various classifications of the kinds of attention: the physiological basis of attention: the alternation between concentration and diffusion: possibility of degrees of attention.

IX. (May 6.) *Reasoning:* technical distinction between judgment and reasoning: both included in popular term *thinking:* fundamentally an adaptation of means to ends on the ideational plane: thinking may be called the purposive aspect of apperception: laws of thought as thought: the most fundamental law of all thinking: induction, deduction, and fallacies.

X. (May 13.) *Feelings and Emotions:* the pleasure-pain tone that accompanies the activities of the soul: unjustified depreciation of the emotions: driving power of spiritual life: relation to ideas: expression of the emotions, and the various theories connected with it: practical applications to school work: control of the emotions: relation between feeling and desire.

XI. (May 20.) *Desire and Will:* activity of desire: relation to possibility of attainment: expectation of success: evolution of will out of desire: nature and function of motive: fallacy of "the strongest motive" theory: subjective and objective aspects of the will: what is meant by training the will and breaking the will: the problem of the free will of educator and educand.

XII. (May 27.) *Temperament and Character:* various meanings attached to the term *temperament* in ancient and modern times: accepted classifications: physical characteristics of the temperaments: permanency of temperament: possible modifications: the time element: influence of temperament on character: character types and their classification: use and abuse of schemes of classifying characters.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

Works by the late Professor S. S. LAURIE

The Training of Teachers and Methods of Instruction. Selected Papers.

Crown 8vo 6s.

"We cordially recommend the volume to all readers. . . . To consider and appreciate Professor Laurie's opinions on education in the primary school, the secondary school, and the University—is itself a liberal as well as a professional education for teachers. No living writer is better able to deal with school problems in the light of fundamental truths."—*Practical Teacher.*

Studies in the History of Educational Opinion from the Renaissance.

Crown 8vo 6s.

"An extremely good small work that will be of value in the libraries of those who follow with intelligent interest the growth of thought on what we may call the philosophy of education. The first part deals with thought on education during that period of the Renaissance which precedes the age when the full effect of the Reformation was making itself felt throughout Europe. . . .; the second part deals with the educational opinions of Francis Bacon, John Amos Comenius, John Milton, John Locke, and Herbert Spencer."—*Spectator.*

John Amos Comenius, Bishop of the Moravians. His Life and Educational Works.

Sixth Edition Fcap. 8vo 3s. 6d.

In the Introduction the author describes the transition from the Renaissance to the Modern Period, with an account of Francis Bacon and Wolfgang Ratke. The Life of Comenius, written, like the rest of the book, entirely from a collation of original sources, is followed by an account of Comenius's educational system and works under the headings of "The Great Didactic," "The Method of Languages," "The Text-books and the way of using them," "The Inner Organisation of a Pan-Sophic School," and "The Instruction-plan," concluding with a brief critical survey of Comenius's system.

Aristophanes: The Knights. Edited, with Introduction, Notes, and Appendixes, by R. A. NEIL, M.A., LL.D.

Cheaper re-issue Demy 8vo 5s. net

"Not only the best work on Aristophanes that has appeared in England, but one which need not fear comparison with the best Continental editions. We do not doubt that this edition of 'The Knights' is final."—*Educational Times.*

Colloquia Latina. Adapted from ERASMUS. With Vocabulary by G. M. EDWARDS, M.A.

Paper boards 9d.

"This is an idea well conceived and executed, and we hope many schoolmasters may make the experiment of introducing their boys to Erasmus' living and humorous dialogues."—*Cambridge Review.*

Uniform with the above, price **9d.** *each.*

Horatius, and other Stories. Adapted from Livy. With Vocabulary by G. M. EDWARDS, M.A.

Caesar: Gallic War. Book I. With Vocabulary for Beginners by E. S. SHUCKBURGH, Litt.D.

Souvestre: Le Serf. With Vocabulary by A. R. ROPES, M.A.

The Fairy Tales of Master Perrault. With Vocabulary by W. RIPPMANN, M.A.

History of England for Use in Schools.

By ARTHUR D. INNES, M.A. Complete in One Volume. Or, in Three Parts:—Part I., to 1509 A.D.; Part II., 1509–1714 A.D.; Part III., 1689–1901 A.D. A separate Part is also issued containing the period "From the Wars of the Roses to the Death of Elizabeth."

Crown 8vo with 13 Maps and 8 Plans, 4s. 6d.; Parts, 2s. each

"Mr. Innes writes more especially for the middle and upper forms of schools, and he covers the whole space of English history, with a vigilant regard to proportion and to the educational value of historical teaching. He writes with great spirit and vividness, as well as with simplicity and lucidity, and he is remarkably well furnished with the latest results of historical inquiry. Appended are six admirable summaries—constitutional, ecclesiastical, Scottish, Irish, Indian, and Colonial; half-a-dozen careful genealogical tables; a glossary of technical terms, political phrases, &c.; a chronological summary, and an index. The work is exceptionally capable and useful."—*Educational Times.*

CAMBRIDGE LOCAL EXAMINATIONS, JULY AND DECEMBER, 1910

ENGLISH.

Shakespeare: Twelfth Night. Edited, with Introduction, Notes, Glossary, Appendix on Shakespeare and Puritanism, Hints on Shakespeare's English, and Index of Words, Phrases, and Names, by A. W. VERITY, M.A., sometime Scholar of Trinity College. Ninth Edition. 1s. 6d. (*Junior and Senior.*)

Shakespeare: Macbeth. By the same Editor. 1s. 6d. Student's Edition, 2s. 6d. (*Senior.*)

Scott: The Lay of the Last Minstrel. Edited, with Introduction, Notes, Glossary, and Map, by J. H. FLATHER, M.A. 2s. (*Preliminary and Junior.*)

The Educational Times.

Registration in Delay.

It has been a subject of reckless reproach to schoolmasters that they very seldom agree; but there is no doubt that all the thinking members of the scholastic profession are in agreement that there is urgent need for Registration. One cannot affect surprise if those that are less familiar with the practical working of official machinery are manifesting impatience at delays that do not seem to be readily intelligible. The College of Preceptors has laboured at the question for half a century, and almost a generation has passed since Lord Playfair introduced his first Registration Bill. It is true that at one period we were really in possession of a Register of which for a time great hopes were widely entertained; but no stronger evidence of its complete failure could be given than the statement, recorded in the Report for 1905 of the Teachers' Registration Council, that less than twenty men and less than two hundred women with definite professional training qualification had been admitted to the Register since its foundation in 1902, and this in spite of the fact that the object of the Register was mainly to induce intending teachers in secondary schools to submit themselves to a course of careful professional training.

No wonder that the Board of Education has meantime sought additional means of increasing the recognition of training for secondary school staffs, and that in the new conditions of grant to the grant-aided schools there is inserted the warning that a certain proportion of all new appointments may be required to consist of trained teachers. Having shown how pressure in favour of training may be exercised in the early future, and having provided for direct Exchequer grants in aid of training colleges for secondary-school teachers, the Board of Education seems to rest content for the moment, throwing entirely upon the teaching profession itself the business of formulating the lines of a Teachers' Registration Council and the conditions for admission to a professional Register. So far as private schools are concerned, naturally they will not be affected by the conditions of grant—unless, indeed, they are on the Board of Education List of Efficient Secondary Schools, in which case the conditions of recognition as efficient will probably be similar to the conditions of grant. For many reasons, however, private teachers generally will, no doubt, be content simply to see that the efficiency of their schools is well maintained. But, even if the Board has found independent means (other than the Register) of increasing the number of trained teachers, one has difficulty in defending its position when it is charged with ungenerous and unfair, if not with positively illegal, procedure, in casting the whole work of the reconstruction of a registration system upon the teachers' representatives.

Representatives of the more considerable bodies of secondary teachers, in association with the National Union of Teachers and with delegates competent to speak for technical education, under the presidency of Dr. Gow, have made a great united effort to solve the difficulty of forming a new Registration Council and a new Register. Their proposals are, undoubtedly, of a practical and substantial character, in view of the extreme variety and complication of the materials. But, instead of making or even suggesting any improvements, the Board of Education has applied merely a negative and embarrassing criticism. The scheme for the New Council is not sufficiently "representative of the teaching profession" as required by the Act, because, forsooth, kindergarten teachers, music teachers, art teachers, cookery teachers, and so forth, are not all and each provided with representation.

It would be irksome to criticize, in detail, the various applications that have been made to the Board for separate representation. Most of the bodies, indeed, are important and useful in their various spheres; but that is not enough to justify special representation on a general educational council. One or two of them, however, appear to have escaped the scrutiny of the Board. To give representation to each *bona fide* society of teachers on the fringe would be impossible: it would swell the Council to an impracticable size, and render the representation absurdly disproportionate. On the other hand, it cannot be too clearly pointed out that the absence of a special representative of any small society of teachers from the Registration Council does not mean the exclusion of such society either from effective representation on the Council or from enrolment on the Register.

Digitized by Google

There is one logical, substantial, and sufficient way of meeting the difficulty. Teachers may be divided into elementary, secondary, and technical, and a proportionate representation given to each division. University teachers could be adequately represented by the proposed nominees of the Crown. Each of these sections of representatives might be looked upon as representing the various groups of teachers coming substantially within the respective divisions. Something of this kind has already been foreshadowed by the action of the technical associations in relation to some numerically powerful bodies of teachers of (chiefly) single technical subjects. It is possible that more representatives will be given to technical teachers, and it is probable that one representative will be given to music and another to art. For all practical purposes, such an arrangement would seem to be perfectly fair and adequate and workable—at all events, to start with. It is not to be forgotten, however, that such teachers as are entrusted with the control of the moral as well as the intellectual education of their pupils, may reasonably claim a representation beyond that of teachers of single subjects. If we refer to the analogy of the Medical Council, we see that only those are registered who have built up their qualifications on the sound basis of a good general education, and that people of many occupations kindred to the medical profession, however worthy they may be in their several spheres, find no place upon the Medical Register.

It would be rash to prophesy the date of settlement of this question of Registration. Unfortunately, rapid progress is not easy. The delegates to Dr. Gow's Committee are also the delegates to the Federal Council, and each resolution, after leaving Dr. Gow's Committee, has to be considered first by the Federal Council and then by the separate Associations composing the Council; and every step takes time. The Head Masters' Association, however, give their representatives full power to act on Dr. Gow's Committee, and if in this they in some measure leave the other members of the Federal Council behind, it is to be hoped that they will still identify themselves with the Federal Council (their own creation), and give Mr. Easterbrook, the newly elected chairman, all possible support. The united action of all teaching bodies is required at this juncture, if the Board of Education is to be induced to fulfil its statutory duty of "constituting a Registration Council representative of the teaching profession." It is difficult to understand why it stands so coldly aloof; but, if the advantage already gained is followed up in all earnestness, it will be impossible for the Board to resist what is a legitimate demand made not only in the interests of the teaching profession, but in the interests of education generally.

NOTES.

It is painful to learn that one of the greater Education Authorities, which "some years ago inaugurated and publicly advertised a salary scheme under which a fair stipend was held out to teachers"—a stipend that "was to be increased annually"—"is now on the point of repudiating its obligations to teachers because there is a delay on the part of the Government in adjusting Imperial and local contributions towards the educational budget." The *A.M.A.* says:

> While the Authority is engaged in a quarrel which may prove costly, and will assuredly prove tedious, the annual increases held out to teachers as an inducement to join the service are to be discontinued. The matter is under the careful consideration of the Executive Committee of the Association, which is determined to use every legitimate effort to prevent such a pettifogging transaction from taking place. To attempt to remedy one grievance by the infliction of another is utterly unworthy of any educational body, degrades the very name of education, and is particularly odious in so far as it emphasizes the subordinate position which teachers occupy in our social system.

If a great Education Authority be tempted to such action, what may be anticipated from less powerful and less enlightened bodies? One must hope that this Authority will stand firmly to its obligations, which it no doubt undertook upon mature consideration of ways and means; and, if its reasonable expectations have been defeated by the Government, then it should treat with the Government for a just remedy. It is a very serious matter for any public body to be chargeable with "repudiating its obligations," whether to teachers or otherwise. Our contemporary does well to be vigilant and outspoken. "The members of the profession now turn to Mr. Runciman, with the sure conviction that he will not desert them in their need." We have every confidence that Mr. Runciman will do all that is officially possible in the circumstances, and we earnestly hope he will find a way out of the difficulty.

As *Secondary Education* remarks, the published reports of school medical officers afford anything but pleasant reading. "A very large percentage of children in attendance at elementary schools are found to be suffering from physical defects in some form or other." Yes; and if the medical officers all had specialist knowledge, and were numerous enough to make thorough examinations, the results would be still more disturbing. What follows? "It is clear," as our contemporary points out "that, if the money spent on medical inspection is not to be mainly wasted, Local Authorities will have to make provision for the medical treatment of school children. As well expect the mere recognition of the fact that a person is suffering from a broken leg to mend that broken leg, as to expect any good results from inspection unless it is followed up by treatment. In the interests of the children, it is right that steps should be taken to provide necessary treatment." And then attention will have to be turned to the parents. "What is to be thought of the many parents who seem not to realize that they are under any obligation to perform the primary duties of parenthood?" What is to be thought is clear enough; the question is, what is to be done? Ignorance and unintelligence are, no doubt, accountable for much; but irresponsible carelessness should be visited with a bracing reminder of social duty. The liberty of the subject is all very well, but it is for the State to deal promptly and sternly with cases of reckless parental neglect.

A significant step has been taken by Glasgow University, and it is anticipated that the other Scots Universities will follow Glasgow's example. Principal MacAlister has announced that in the bursary examinations the same maximum marks are henceforth to be assigned to all languages.

Digitized by Google

French and German, accordingly, will count for as much as Latin and Greek. "To the outsider," says a Scots contemporary, "this may appear a small matter, but by those that have for years been fighting for a better recognition of the claims of modern languages it will be felt that now more than half the battle has been won." The concession removes a serious handicap on French and German; and now it becomes still more urgent that the existing modern language lectureships should be elevated to the status of professorships.

Will Oxford reform herself, or shall she be reformed by external interference? A small but significant test has just been applied. After a two years' incubation, there was submitted to Congregation the other day a statute providing "that a Bachelor of Arts shall not be permitted to supplicate for the degree of Master of Arts unless he shall have obtained some distinction beyond the passing of such examinations as are a necessary qualification for the degree of Bachelor of Arts." The preamble was rejected by a majority of twenty-eight votes. The Oxford M.A. will therefore continue to signify simply that the bearer has passed the examinations for B.A. and has waited a short time and paid some additional fees. So far as increase of knowledge or of mental power is concerned, it gives no guarantee beyond the B.A. Apart from comparisons with the newer Universities, it seems a sheer waste of machinery to neglect to make an educational differentiation between the lower and the higher degree. "If the statute is defeated," said Dr. Macan, "the appeal will be to Caesar, and I do not know what Caesar may do." Upon this, the *Morning Post* very naturally remarks:

> Who is Caesar? Is it the Government which, through its spokesman in the House of Lords, twenty months ago asked for evidence of such an "intolerable weight of obstruction" as would justify the demand for a Commission? Or is it the Chancellor of the University, who, before his recent illness, announced his intention of preparing a reform scheme, and who will probably find a large and loyal minority of academic opinion behind him if he takes up the challenge now flung at his feet? Or is it the public opinion of the country, which is beginning to show unmistakable symptoms of its interest in University questions? The interpreter of Herodotus knew his master too well to tell us, but we have no doubt that his dark saying will soon come true.

When such a small and obvious reform as this is deliberately rejected, it will be somewhat difficult to persuade Caesar or anybody else that there is the remotest chance of reform from within, at all events to any extent approaching the necessities of the time. An educational institution that stereotypes itself in these days certifies its resolution to keep out of touch with progressive ideas: it declares for stagnation and decay. Caesar, we apprehend, will take a very different view of the national duty of Oxford.

Mr. Carnegie has thoroughly deserved the "specially congratulatory resolution" passed by the Carnegie Trustees on the motion of Mr. Balfour—congratulations "for the great success that has attended his efforts and hopes in the direction of encouraging original research in the Universities of Scotland." The results of post-graduate study and research encouraged by the Trust were reported to be on the whole eminently satisfactory. Mr. Balfour, emphasizing the value of this department of work of the Trust, declared that there was no greater or more serious waste in the world than waste of brains and intellect, of originality and of scientific imagination, which might be used to further the knowledge of mankind. That is true; and it is only too true that this waste, which Mr. Carnegie's benefaction stems to some extent, is enormous. Mr. Balfour said "they wanted to catch the man immediately after he had gone through his academic course, before he had become absorbed in professional life." One would be reluctant to discourage such ardour: it at least gives chances of discovering effective researchers; but, while we should not think of doubting that much of the Carnegie research work has been of "a uniformly high character," we know that not a little research work by fresh graduates, in this and in other countries, derives its main value from industrious compilation and is too often jejune in grasp and in original suggestion. On the other hand, it would be only too easy to point to professors that are eminent in research and ineffective in teaching, both rôles suffering from the combination enforced by pecuniary conditions. The fact is that research is urgently demanding recognition as an independent occupation of public importance; and it seems far more necessary to endow mature men that have proved their value as researchers than to assist inexperienced youths to show that they may possibly become useful as researchers. It is quite true that the most capable of researchers may occasionally learn from the queries of students, and no rigid rule can be laid down for the dissociation of research from teaching; but it is none the less true that in many cases the teaching would be more efficiently done by men of more common clay, and that the researcher would generally do more and better work if he were not tied to a class by his salary, or, if there be no salary, to other bread-and-butter labours.

To come down to the case of the ordinary student, the waste is equally grievous. The average graduate may not be expected to strike out new ideas or to increase the quantity of knowledge in the world; but his education, such as it is, must enable him to be a more effective citizen than he would have been without it. More than eight thousand Scottish youths have been assisted in the past seven years in their academic education by the fee department of the Carnegie Trust. It would be a mistake to suppose that but for the benefaction these thousands would have been kept outside the pale of the University; but the Carnegie contribution has more or less relieved the strain that Scottish parents are so keen to put upon their narrow resources for the education of their children. In England, unfortunately, there is but small indication of such ambition and self-sacrifice for the advancement of the rising generation as are general characteristics of the Scottish parent. Some part of the reason may lie in the mere fact that the English parent of low degree is unaccustomed to the rise of children in his sphere of life to higher planes of social usefulness; but another part is no doubt the cost and the prolonged strain of the effort for advancement. In any case it is a tragic situation for parent and children, and it is an appalling waste from the point of view of the State.

> That a brain capable of high attainment and desirous of the highest knowledge (says the *Daily News*) should remain ineffectual and empty simply for want of the opportunities that only wealth can give—this is

Digitized by Google

one of the most terrible tragedies of our civilization, though it is so common as to pass almost unnoticed. Though it happens a hundred times every day, it is a tragedy none the less. Of all the thousands of boys and girls who leave our primary schools every year there is hardly one in a thousand, we suppose, who gets a fair and equal opportunity with the rich for the best education. They leave exactly at the age when the rich man's child is going to one of our great schools, and for the most part they never hear of education again. That is the true waste of brain. Among those thousands there must be some, there are probably many, who have minds specially fitted for that original research of which Mr. Balfour spoke, or for some other function of the highest intellect. But to them the opportunity never comes and they pass unnoticed, very likely into the chaos of the casual labourers.

Where, then, is the English Carnegie? Or when shall we have an Education Minister that will provide for the reasonably full utilization of the brain power of the country?

SUMMARY OF THE MONTH.

THE estimates for Civil Services for the year ending March 31, 1910—Class IV., Education, Science, and Art—have been issued as a White paper [54–IV.]. The estimates for the year 1909–10 amount to £17,911,143, which, compared with grants in the Session of 1908 (£17,685,886), show a net increase of £225,257. The estimates for the Board of Education are £13,648,792, as compared with grants in 1908 of £13,587,806, an increase of £60,986. These estimates show increases as compared with the grants of 1908 under the following heads:—Salaries and allowances, £11,070; pensions and gratuities in respect of public elementary schools, £11,630, and grants in lieu of fees, £15,000; maintenance grants for training colleges, £55,000; grants for secondary schools and instruction of pupil-teachers, £23,550; grants for technical institutions, schools of art, and evening schools, £20,000. The total estimates for the British Museum are £127,935; for the Natural History Museum, South Kensington, £60,543; for the National Gallery, £11,725 (as compared with grants last year of £24,414), the National Portrait Gallery, £5,793, and the Wallace Collection, £6,614. The total estimates for those institutions which come under the heading "scientific institutions, &c.," are £57,964, the chief increases being sums of £4,500 and £2,000 for the National Library of Wales and the National Museum of Wales respectively. The provision made for Universities and colleges shows an increase of £15,000 for "Welsh University and Colleges: additional grant." Public education, Scotland, is represented by estimates for £2,147,541—a net increase of £98,984, of which £76,463 is a general aid grant for elementary schools, and public education in Ireland by estimates for £1,205,420—an increase of £76,478, of which £56,942 is to go to national schools for "principals, assistants, &c., in ordinary schools and teachers of schools paid by capitation."

SOME interesting particulars as to cost are given in the report of the L.C.C. Education Officer on Elementary Schools for the year 1907–8. In L.C.C. schools the "average" child was taught in a class of 44·8 in size; the salary of his teacher, if a master, was £154. 19s. 2d., if a mistress, £111. 16s. 2d.; his head master had a salary of £302. 7s. 9d., or his head mistress, £217. 9s. 6d. The approximate capital cost of the "place" in which the child sat was £30, which included site, building, and that part of the equipment properly chargeable to capital account. The annual maintenance cost in respect of the child's education was £6. 13s. 11d., which included the teachers' salaries, books, apparatus, cleaning, warming, lighting, school-keeper's service, structural repairs, administrative charges, enforcement of attendance, buildings and equipment, and debt charges on the capital cost of the "place" occupied. Against this was to be set £1. 18s. 4d. from the Board of Education grants for efficient instruction. The remainder, £4. 15s. 7d., came from the rates. It is worth noting that the central government and the local government contributed in the proportion of 29 per cent. and 71 per cent. respectively.

As regards the "average" child in the non-provided school, the average size of class was 37·5; and the average salary of an assistant master, £105. 13s. 3d.; of an assistant mistress, £76. 13s. 1d.; of a head master, £211. 8s. 2d.; and of a head mistress, £150. 7s. 8d. The annual maintenance cost in respect of the child's education was £4 (excluding the managers' charges in respect of the buildings). A multiplication of these figures by 505,698 for L.C.C. schools and 145,163 for non-provided schools (the respective average attendances) gives the total figures for London. The magnitude of the work of education may be gauged by the fact that the gross expenditure on elementary schools is approximately £4,000,000 per annum. The contribution by the Central Authority is approximately £1,300,000, and therefore the net expenditure from local revenue is £2,700,000.

THE following resolutions on the subject of the continued education of elementary-school pupils have been passed by the Council of the Teachers' Guild:—

(1) That in view of the educational waste which is caused by the fact that, in the case of the great bulk of the children passing through the elementary schools, education ceases at thirteen or fourteen years of age, this Council is of opinion that it is desirable that powers similar to those contained in the Scotch Education Act, 1908, should be conferred upon Local Education Authorities in England and Wales.

(2) This Council recognizes that, as a preliminary to the enforcement of compulsory attendance at continuation schools, facilities should be provided by employers, either by shortened hours of labour or by special provision during working hours.

THE fifty-third Annual Report of the Jews' College states that arrangements have been made by which post-graduate students attend criticism lessons and discussions thereon, and also a course in Pedagogy at the London Day Training College by the courtesy of Prof. Adams, Principal of the College. The Council have at the same time determined to seek opportunities at the Metropolitan Synagogue religion classes for affording these students practical experience in teaching. Another experiment that has been commenced during the year has been the award of entrance scholarships, tenable at one of the principal secondary schools. The successful scholars will be prepared for the Matriculation Examination of the University of London, at the same time continuing their studies in Hebrew and kindred subjects under the auspices of the College. Dealing with the finances of the institution, the Report says: "Despite the attention that was drawn last year to the threatening financial position that the institution occupied, but little improvement is to be recorded. The number of subscribers and total of contributions are still remarkably small, and quite incommensurate with the invaluable functions performed by the College and the important position it occupies in the communal organization. The supporters of the institution number barely two hundred; the amount subscribed by them last year was £488. 7s. 6d. In this total is included arrears from 1907. Moreover, several generous supporters of the institution have unfortunately passed away during the past twelve months. Unless a serious effort is made without delay to enlist new subscribers, the College will have either to curtail its activities or to realize some of its invested capital in order to meet current expenditure. Action in either direction would be greatly to be deplored."

PROF. C. E. VAUGHAN addressed the Yorkshire Branch of the English Association at Leeds University (March 10) on "English Prose Literature and its Place in Teaching." He remarked that English prose literature had never received the attention and admiration which was its due. We were proud, and rightly proud, to be the possessors of the finest poetic literature of modern times; for it was clear not only that the poetry of a nation must be the attractive part of its literature, but, in a sense, it was the truer representation of the nation in its imagination. They must be proud of the richness and variety of prose writers from Charles Lamb to Dickens on the one hand, and of others like Milton, Burke, and Carlyle on the other. With respect to imaginative literature, Prof. Vaughan said that nothing could be more stimulating than "Robinson Crusoe" when treated with skill by the teacher, for it struck at the very heart of their imagination and increased their powers of observation. The novels of Sir Walter Scott could also be made a great means of training the mind and imagination. Teachers were shy of reading the heavier works, and he suggested the "Essays" of Macaulay, the masterpieces of Bacon, and the speeches of Burke in order to train a lad to think clearly, to reason, and to take an interest in the great historical problems. If teachers could not make use of the enormous wealth of prose literature they had at hand, they were not worth their salt.

PROF. HARROWER presided over the spring meeting of the Classical Association of Scotland at Aberdeen (March 6). Per-

Digitized by Google

haps, he said, there never was a time when so much uncertainty regarding the future prevailed in Scottish educational affairs. The spirit of change was everywhere. For some years the whole school education of the country had been passing through a process of remodelling, which was not yet complete, and in the University had been inaugurated the most fundamental changes in the arts curriculum that had been seen for generations. If the Universities had suffered in the past through over-devotion to outworn creeds and curricula, that was not the danger with which they were menaced at present. The pendulum was swinging very far in the other direction. It looked as if those who were entitled to take the lead in directing their destinies were alarmed lest they should drop out of the ranks in the march of reform. Experience had shown that there was no proposal, however revolutionary, however glaringly at variance with facts and common sense, that might not take shape as an ordinance if they were told persistently enough that popular opinion was steadily turning in that direction. In that dangerous readiness to lend an ear to wild suggestions of so-called reform, even on the part of men of repute in the educational world, they were called on for a double vigilance on behalf of the subjects they had most at heart. Many of them saw, rightly or wrongly, in the present policy of the Scotch Education Department an influence that menaced the interests of classical study.

Attention was directed by Prof. Harrower to some changes already accomplished or now imminent in the northern school and University system: the average age at entrance, the standard of the bursary test, and the place of Latin and Greek in the new arrangements in the arts curriculum. At present, in Aberdeen, the average age of entrance for men was in some years a little under, in others a little over, nineteen, the average for women being actually somewhat higher. His own very strong conviction was that the advance in age was neither natural nor normal for Scottish students nor in any way desirable for the Universities. For one thing, in some at least of the Universities, it had pulled down the number of men entrants, and in all of them it was more than anything responsible for a calamitous change in the ideal of the arts curriculum, a change that boded no good to studies like the classics which were essentially disinterested and non-professional in their nature. It was indeed, to a large extent, an accidental thing brought about by the unnatural pressure of the bursary competition regulations in the four Universities imposed by ordinance. The bursary competition, with its insane condition of higher standard papers in five subjects, was mainly responsible for the leap of two or even three years that had taken place on the average entrance age of twenty years ago. The present severe conditions of the bursary competition were bound to be relaxed. He had always regarded the early higher grade Greek papers in the Leaving Certificate Examination as the deadliest blow delivered to Greek in his time, so completely out of relation were they to the work done in the schools in many parts of Scotland, and so far beyond the possibilities of the average pass man. As to the place of classics in the new regulations for the arts curriculum, he said the old conception of the aim of the arts curriculum had been lost sight of or else was spoken of with contempt. He believed that very soon, by the law of oscillation, which was so well worked in educational affairs, they would have a revolt against that new order and a return to the old.

The Education Committee of the London County Council have adopted a recommendation approving the Daylight Saving Bill. The recommendation expresses the opinion that the object of the Bill is one which, from the point of view of a Local Education Authority, is worthy of all commendation, as during the summer months it would enable both children and teachers, by leaving school an hour earlier, to have the advantage of a corresponding amount of daylight during their free time at the end of the school session. The Committee decided to recommend to the Council that an open-air school to accommodate seventy-five children should be carried on at Montpelier House, Upper Holloway, from the end of the Easter holidays next to the end of October, and that the school should be one for both boys and girls.

The Annual Report of the Carnegie Trust reviews the seven years of its existence. The actual expenditure upon the scheme of endowment of post-graduate study and research (under which the assistance offered was of three kinds—scholarships, fellowships, and grants) over the past five years has been £27,754. The grants to Universities and extra-mural colleges for six years amounted to £246,374, £23,000 having been allocated to libraries, £131,644 to buildings and permanent equipment and £91,729 to teaching. The second quinquennial scheme of distribution, which opened with the current year, makes contributions of £65,250 to buildings and permanent equipment and £20,500 to libraries. At the close of the five years the resources of teaching in the four University centres will have been increased by permanent endowment amounting to £87,500, while the Trust will at the same time have afforded an annual income of about £4,150 to meet ordinary expenditure. During the period of seven academic years in which the scheme of payment of class fees has been in operation, the individual students whose fees have been paid by the Trust number 8,263, and the fees paid reach the total of £298,686. Fifty-five beneficiaries under the scheme, the Report states, have made voluntary repayment of fees paid on their behalf, amounting in all to £880. For the period of over seven years from the institution of the Trust on June 7, 1901, to September 30, 1908, the total cost of administration amounts to £18,900. This represents an average of less than £2,600 a year, somewhat over 2½ per cent. of the income. Statistics of the payment of class fees for the academic year 1907–8 give the total number of beneficiaries as 3,269, the total amount of fees paid as £43,256, and the average amount in fees paid per beneficiary as £13 4s. 8d.—an increase, as compared with the preceding academic year, of 107, £2,154, and 4s. 8d. respectively.

At a meeting of the Day Training Committee of the University College, Cardiff, Mr. Owen Edwards, Chief Inspector of Schools for Wales, made the report of his inspection of the Day Training College, which now contains 240 men and women students, all of whom had passed the Matriculation Examination and are pursuing courses with a view to obtaining a degree of the University. Mr. Edwards stated, amongst other things, that the teaching of the Welsh language to the students in the day training college is of a most satisfactory character, and that the teaching of Welsh in the day schools as well as in the evening schools in Cardiff was most successfully done. He pointed out in this connexion how the teaching of Welsh to English-speaking children by means of the direct method improves very materially the teaching of English to the same children, because the teachers learn to teach English to them also by the direct method.

The Committee of the Glasgow Local Association of the Educational Institute of Scotland, having fully considered the changes in the curriculum for students in training proposed by the various Provincial Committees, and the report thereon adopted by the Council of the Educational Institute, have submitted the following resolutions:—

(1) That, as the training of teachers is a subject of national concern, the schemes adopted by the Provincial Committees, while not necessarily uniform in detail, should be based on the same general principles. (2) That all qualified students on entering their training course should be allowed the option of attending a University or central institution. (3) That the normal duration of the course for qualified students should be at least three years. The Committee believes that the increased facilities for study for junior students are now such as to enable a large proportion of them, on the termination of their course, to qualify for attendance at a University or central institution, and that such qualified students will not profit to the full extent by any well ordered course at a University or central institution unless the period of study extends to three years. Further, in view of the limited time given to practical training in the junior student course, as compared with that of the pupil-teacher system, the Committee recognizes the necessity of greater time being given by senior students to that subject than hitherto. This is most easily attainable by the adoption of a three-years' course. (4) That qualified students should be permitted to attend two University classes during each of the two years of training. (The Committee believes that two University classes can be taken each session without over-pressure if the amount of practical training is distributed over three years and not compressed into two years.) (5) That students in the third year of training should be permitted to take two or three University classes at the discretion of the Provincial Committee; those taking three classes to be relieved of the major part of the practical work during the session and required to return for a three months' term of intensive training in the following session. (6) That students taking logic, psychology, ethics, or education as part of their University course should be relieved from attendance at such class or classes in the training centre. (7) That meantime, as a temporary provision during the transition period, students whose preliminary training has not enabled them to reach the qualifying standard for attendance at a University should be permitted to complete their course for the general certificate in two years; but, in view of the recognized

Digitized by Google

importance of the teacher's work, the scheme of training for all primary teachers should in the near future be arranged on the basis of a three-years' course, whether such course be taken at a training centre, University, or central institution.

The Committee further state that they recognize the enormous advance in having training made compulsory for all candidates for the teaching profession, but regret the apparent intention on the part of the Joint Committee to restrict the normal course for the general certificate to two years, and strongly deprecate any policy that would tend to lessen the number of teachers graduating. In this connexion, the Committee draw attention to the method permitted by Article 17 of the Regulations, whereby a graduate can obtain the general certificate after one year's professional training.

At a meeting of Glasgow Philosophical Society, Mr. R. F. Muirhead, M.A., D.Sc., read a paper on "Some Considerations on Scottish Universities, with special reference to needed reforms." After a historical survey of Glasgow University, he referred to the Privat Docent in German and Austrian Universities as the successor to the teaching graduates of medieval times. It was somewhat strange, he said, that in the University of Adam Smith a closer monopoly of teaching should exist than anywhere else in Europe. Yet Glasgow University had shown that it could be liberal when its own monopoly was not in question. It was true that the University recognized the extra academic teacher, but it compulsorily excluded him from the use of University classrooms, many of which were "eating their heads off" during a great part of the day. Even if the regular staff of the University were sufficient in number to perform its work efficiently, there would be still strong reasons for the existence of a class of teachers having the status of the Privat Docent of the German Universities. After referring to the establishment of extra-mural teachers in the Arts Faculty, Dr. Muirhead went on to say that in the Arts Faculty, above all others, a really liberal education should be imparted. It should be a faculty in which some of the vital thinking of the nation might be transacted. It had not, like the other faculties, to regulate its examinations by the needs of any profession, and could therefore, give a lead in giving up a type of examination which doomed most of its activities to sterility; and by opening its doors to ambitious and able graduates it could not merely save them from the alternative of being "extra-mural crammers", or giving up their ambitions to study and teach, but it would enable the professors to step down from their pedestals as glorified schoolmasters and take their place as elder brothers in a band of brothers.

Mr. William Archer, writing of the Southern States of America in the *Westminster Review*, says: The hostility to negro education has lost much of its former strength. This is apparent from the case of Prof. Patterson, head of an excellent State school for negroes in Montgomery. The Professor (a title as lightly accorded in the South as Major or Colonel) is a sturdy Scot. When he first came to the South in Reconstruction days chance led him to a county in the State of Alabama where there was, indeed, already a school, but it was kept by a negro who could neither read nor write. An educator by instinct, if not by training, Mr. Patterson determined to set up a school of his own. For this misdemeanour he was twice shot at, and was finally arrested and put under a bond of 15,000 dols. to desist from teaching in that county. He went into another county, and started a school in the frame building that served as a negro church; but here the negroes themselves had to turn him out, as they were warned that if they did not the church would be burnt. These experiences only stiffened the Professor's backbone. He said: "I *will* teach—teach in Alabama—and teach negroes!" And here he is to-day, head of a fine large school in the State capital, and partially maintained by the State—a school well planned, well built, and with an excellent system of industrial training going on in various annexes in its spacious grounds. As I passed through one of the senior schoolrooms, a boy had just written on the blackboard, in a fine round hand, a quotation from a recent speech by Senator Foraker on the Brownsville affair—the affair of the negro regiment which President Roosevelt is alleged to have treated with high-handed injustice. The sentence ran: "We ask no favour for them because they are negroes, but justice for them because they are men." Evidently there is no affectation of excluding from the schoolroom the all-absorbing problem.

The death of the Rev. Richard Appleton, M.A., Master of Selwyn College, Cambridge, is very deeply regretted. Born in Liverpool in 1849, the son of the Rev. Richard Appleton, then Chaplain of Kirkdale County Gaol, he was educated at Christ's Hospital and Trinity College. In 1871 he was Sixth Wrangler, with a Second Class in the Classical Tripos; and he gained the second Chancellor's medal in classics in the same year. At Trinity College he was lecturer—first in Mathematics and afterwards in Theology, Junior Dean and Senior Dean, and Tutor. In 1894 he accepted from the Bishop of Rochester the presentation to the Vicarage of St. George's, Camberwell, the parish in which the College Mission is established, which he held till 1903. In 1904 he was presented by the College to the Vicarage of Ware, Herts, and in 1907 was elected Master of Selwyn College, Cambridge, in succession to the Dean of Ely. He was, from 1873 to 1882, Superintendent of the Jesus Lane Sunday School at Cambridge. He held the post of Examining Chaplain to three successive Bishops of Durham—Dr. Lightfoot, Dr. Westcott, and Dr. Moule. He was a man of singular simplicity of character and consistency of life. His strong and deep religious faith enabled him to exercise a lasting influence on many generations of undergraduates, both at Trinity and at Selwyn, as well as among the working population of Camberwell.

Mr. Simon Somerville Laurie, M.A., LL.D. (Aberdeen, St. Andrews, and Edinburgh), Emeritus Professor of Education in the University of Edinburgh, and Gifford Lecturer in Natural Theology at the same University in 1905–6, died in Edinburgh in his eightieth year. He was a native of Edinburgh and was educated at the Royal High School and the University of Edinburgh. His career as an educationist began with his appointment to the secretaryship to the Education Committee of the Church of Scotland. Later he became secretary to the Endowed Schools (Scotland) Commission in 1872, was honorary secretary to the Association for Promoting Secondary Education in Scotland, held for a time the office of President of the Teachers' Guild of Great Britain and Ireland, and was a corresponding member of the American National Educational Association. For many years Prof. Laurie was justly regarded as the leading educationist in Scotland. His eldest son is the well known principal of the Heriot Watt Technical College, Edinburgh.

Dr. J. Hutchison Stirling, of Edinburgh, the author of "The Secret of Hegel" (and of many other philosophical books), died in his eighty-ninth year (March 19).

UNIVERSITIES AND COLLEGES.

Oxford.

The report of the Curators of the Taylor Institution for 1908 records a steady increase in the numbers of students of modern languages. There were 905 separate entries for the year — 627 men and 278 women. Additional lectureships have been established in German and in French, and the funds required for the establishment of a professorship of the Romance Languages have now been provided. The Curators contemplate further extensions of the work of the institution this year, including a course of lectures on the social and political history of France and Germany. Three resident members of the University have contributed a sum of over £400 for the establishment of a German Seminar Library, and a further sum of £150 a year for five years for additional instruction in the German language and literature.

At a meeting, Prof. Firth in the chair, it was decided to form an Oxford University Reform Association, and a provisional committee was appointed to prepare agenda for a meeting next term. A resolution was carried to the effect that no scheme of reform would be considered satisfactory unless it provided for the reorganization of the faculties and the enlargement of their powers. It is understood that the Association will postpone any definite action until the proposals of the Chancellor have been laid before the University.

Cambridge.

(*From our own Correspondent.*)

The great battle about the poll degree has been fought and won. Now is the time to take stock of the situation. Readers of these notes will

Digitized by Google

remember that the Syndicate originally recommended the substitution of two special examinations for the General, followed by a special as at present. The whole current of criticism was to the effect that this would ensure no adequate standard of literary or scientific knowledge; in fact, that a man who was through the Little-go could at once begin to specialize on his arrival in Cambridge, and this, too, even if his abilities were confessedly unequal to the demands of a Tripos. An alternative scheme was brought forward by the Syndicate in consequence of the debate in the Senate. The Specials were divided into nine groups, and the two specials were to be chosen from different groups. This was an alteration, though hardly an improvement, for such subjects as chemistry and physics, its obvious complement, were included in the same group. The fly-sheets were not very numerous. One of the opponents of the Syndicate went so far as to make an allusion to the *sciolococcus malevolens* of the reformers and the optimistic viridescence of the freshman prepared to specialize in two subjects before his eighteenth birthday. But a solid phalanx of anti-literary and anti-Greek residents put the issue out of doubt, and the General was doomed by a majority of nearly two to one. It is now not only possible, but easy, for the poll man to take his degree by exactly six months' work, thus leaving two and a half years for the completion of his physical education.

We have had a very pleasant and useful innovation in the routine of our Law School. The credit is due to Prof. Kenny, who has asked some distinguished jurists to deliver single lectures on their pet subjects. This term we have welcomed Mr. Pickersgill, M.P., who discoursed to us on the admissions of prisoners; Dr. Wilson, the distinguished professor from Harvard, who, fresh from his labours at the Conference on Maritime Law, gave us indications of his own views, but none as to the report of the Conference, which at the time was necessarily a secret; Mr. Herman Cohen, who discoursed on the practical working of the Court of Criminal Appeal. The experiment has been a great success and will undoubtedly be carried further.

Apropos of lectures, Dr. Sven Hedin honoured us by appearing in person to receive an honorary degree, and laid us under further obligations by delivering a most delightful lecture on his explorations in Tibet. The explorer's genial manner, happy courtesy, and ever flowing humour quite won the hearts of his audience. One had to read between the lines to grasp the difficulties and dangers undergone, for Dr. Hedin made as light of his own exploits as if he had merely walked down Bond Street.

A curious little episode has arisen in regard to Senate House Passage. For years a temporary staircase has been erected on big Congregation days to allow of better means of exit from the Senate House. It is proposed to erect permanent steps, but, as they will encroach a few feet upon the passage, some opposition has been manifested by the townspeople, though probably no one ever goes down the passage except on his way to one of the colleges. The matter will, however, in all probability, be arranged in a satisfactory manner.

The Report of the Appointments Board shows that no less than 146 men have found their spheres of usefulness, thanks to the working of this unobtrusive organization. The number of appointments made through this agency in successive years were 93, 102, 134, 136, and 146. As recommendations are made with a due sense of responsibility, it is hardly surprising that large use is being made of the machinery of the office by employers all over the kingdom as well as by those responsible for the due filling up of quasi-public appointments.

The conduct of certain members of the University at the Theatre towards the end of the term has led to the directors issuing a notice that during the vacation no undergraduates will be admitted, that the comfort of the townspeople may not be imperilled. This is a most excellent piece of advertisement, as during the vacation the usual practice is to require men to be in college by 10, so the bold front will not involve much pecuniary sacrifice.

The date of the Darwin Centenary Celebration is fixed for June 22. On that day the Chancellor will hold a reception in the Fitzwilliam Galleries, and on the following day the banquet will be held. The functions will be peculiarly interesting to Cambridge, as so many of the great scientist's family have made their home among us.

It is almost time for our country cousins to be informed of the dates of our May term festivities. The races will be held from June 9 to 12, inclusive. The Hawks' Ball is fixed for the 10th, and this usually was the opening of the gaieties. This year, however, it is rumoured that the Athenæum Club will forestall the Athletic Club, and hold their function on the 9th. The arrangement is a good one, as many people like to come up for the race week who do not care for the endless festivities which follow when the men come out of training.

It is hoped in Cambridge that our boat will not prove us false at Putney, or rather at Mortlake. Our crew is probably the most powerful ever sent out by either University.

There was interest of more than one kind (says the *Illustrated London News*) attached to a debate held the other day at the Cambridge Union on the question of whether the University ought not "immediately" to admit the women who earn degrees to receive those honours. Up to the present, though the women students of Girton and Newnham may take the same examinations as men—and, as a matter of fact, a large number of those women have gained very high honours—the University which consents thus to examine their acquirements refuses to allow them to receive the degrees that they have thus earned. The last time the matter was voted upon was in 1897, when it was decided by a large majority of the graduates not to redress this grievance; and on that occasion the undergraduates of the period demonstrated hotly against the lady students. If the recent vote at their principal debating society is a sufficient index of the view of the present generation of young men, however, they are in advance of their predecessors on this subject, as a resolution to the effect that the University ought immediately to admit women to its degrees was carried by 147 votes for to 55 against. The mover of the resolution was the son of a lady who herself came out, some twenty-three years ago, at the very head of the list in Classical Honours. The lady Senior Classic, then Miss Agnata Ramsay, married Dr. Butler, Master of Trinity, and it is their son, Mr. J. R. M. Butler, who moved the resolution in favour of giving women degrees—a charming tribute on his part to his learned mother.

London. At a meeting of the Senate (February 24) attention was drawn to the announcement which had appeared in the press that a Royal Commission had been appointed to inquire into the subject of University education in London. It was reported that the reference to the Commission had not been submitted or communicated to the University, and that the Government had, prior to the publication of the announcement, been informed that it should not be assumed, without opportunity for consultation, that the Senate would be an assenting party to any reference to a Commission in excess of, or inconsistent with, the resolution on the subject passed by them on December 2 last.

In reply to a question in the House of Commons, Mr. Runciman explained that it was thought better to make the London University Commission not representative, but judicial.

Celtic has been approved as a subject for the M.A. Degree Examination for external students, and Elementary Geology as a subject for the Matriculation Examination.

A fête will be held in the grounds of University College on July 1, 2, and 3, a bazaar having been organized by the students of the College and of the Hospital to pay off the debt (some £7,000) on the new athletic ground (of nineteen acres) at Perivale. The Duke of Connaught will perform the opening ceremony.

Leeds. At a meeting of the Senate, it was decided to hold a new diploma course for textile chemists. This course is intended to supply a thorough scientific training in the chemistry and art of dyeing and finishing in conjunction with a sound technical knowledge of the principles and practice of the various branches of textile manufacture. Students holding a University degree in Science or otherwise bringing forward satisfactory evidence of previous scientific training may, upon application, be admitted to the diploma upon a shortened period of study.

Sheffield. The Council have decided to reorganize the department of Economics and Philosophy by means of the Hunter bequest (£15,000). A chair in Economics will be established, and the department of Philosophy and Logic will be carried on under a Lecturer. The Council have also decided to appoint another Lecturer in History, who is to have special qualifications in Ecclesiastical History.

THE EDUCATIONAL LADDER.

CAMBRIDGE UNIVERSITY.—Smith's Prizes: H. W. Turnbull and G. N. Watson, both of Trinity (names in alphabetical order). Powis Medal (Latin Hexameter Verse): J. R. M. Butler, Scholar of Trinity. Porson Prize (Greek Iambic Verse): F. W. Haskins, Scholar of Trinity; *proxime accessit* J. R. M. Butler. Chancellor's Medal for English Verse: D. H. Robertson, Scholar of Trinity. Allen Scholarship (Literary or Scientific Research): J. E. S. Green, B.A., Scholar of Peterhouse.

Downing.—Entrance Scholarships—Natural Sciences: G. H. Corke, Whitgift School, Croydon; H. A. Crouch, Merchant Taylors'; E. J. Selby, Rydal Mount School, Colwyn Bay; C. W. Tregenza, Truro College. Mathematics: H. E. G. Jarvis, St. Paul's. Law: C. A. Collingwood, Exeter School.

Magdalene.—Scholarships: R. H. Mayo, Perse School, £40 for Mathematics and Mechanical Sciences; A. G. Smith, Winchester, £40 for Classics; D. C. Westall, Merchant Taylors', £40 for Classics: G. Nash, Repton, £40 for History. Exhibitions: F. Ritson (Sedbergh), A. R. Kelsey (Bishop's Stortford), R. M. Williams (Hull), G. D. Barron (Berkhamsted), £30 each for Mathematics; H. M. Wigley (Dulwich), R. T. Cole (St. Paul's), £20 each for Classics; E. J. L. Grear (Mill Hill), B. Dickins (Nottingham), £20 each for History. Sizarships: C. E. Kindersley (Sedbergh) and T. N. Barstow (Aldenham).

St. John's.—Adams Memorial Prize — Mathematics: T. Clough, Scholar of the College.

DURHAM UNIVERSITY.—University Classical Scholarship: E. B. Pestle, University College. Hebrew Scholarship: W. R. G. Taylor, St. Chad's. Mathematical Scholarship: J. Moor, Bishop Hatfield Hall.

FRANCO-SCOTTISH SOCIETY BURSARIES.—60 candidates. (1) Sophia I. Younie, Edinburgh University, £30; (2) Elizabeth S. Barr, Glasgow University, £30; (3) and (4) Ruth E. Clark, Edinburgh University, and Agnes Morton, Glasgow University, £30 divided. Honourable mention: eight.

LEEDS UNIVERSITY.—Science Scholarship (Commissioners of the Exhibition of 1857), £150 a year: Miss May Sybil Leslie.

LONDON UNIVERSITY.—George Smith Studentship for 1908 (£200): A. C. Wood, internal student, University College.

OXFORD UNIVERSITY.—Hall Greek Testament Prizes—Senior: A. Grant, B.A., Trinity. *Proxime accessit:* J. Jones, B.A., Jesus. Junior: C. H. Williams, B.A., Merton. *Proxime accessit:* S. H. Hooke, Jesus. Hall-Houghton Septuagint Prizes—Senior: M. H. Segal, B.A., non-collegiate. Junior: L. Owen, Exhibitioner of St. John's. Houghton Syriac Prize: W. A. Davies, non-collegiate. Vinerian Law Scholarship: G. Johnston, Christ Church. Denyer and Johnson Theological Scholarships: Alfred E. J. Rawlinson, B.A., Corpus Christi; and Arthur Ll. Davies, B.A., Queen's. Honourable mention: Gerald B. Allen, B.A., Wadham.

All Souls.—Fellowship in Political Economy: Norman B. Dearle, M.A., formerly Hulme Scholar of Brasenose College.

Brasenose.—Junior Hulme Scholarship for Mathematics: Edgar William Verity, Bradford Grammar School. Somerset Thornhill Scholarship for Mathematics: Thomas Herbert Martin, Manchester Grammar School.

Christ Church.—Scholarship: Benjamin A. Swinden, King Edward VII.'s School, Sheffield.

Christ's.—Junior Fellowship: H. L. Ingle, B.A., Lecturer in Classics, Manchester University.

Exeter.—Scholarship in Modern History: Leslie C. Hughes, Clifton College.

Keble.—Natural Science Scholarship: A. E. Hodgkin, Repton School.

Magdalen.—Demyships in Mathematics: K. C. Goodyear, Brighton College; F. C. Walker, Church Institute School, Bolton.

Merton.—Classical Postmasterships: H. W. Howe, Eltham College, Kent; F. R. Baldock, St. Paul's. Classical Exhibition: G. E. Meugens, Eton.

Pembroke.—Abingdon Scholarship: G. H. G. Shepherd, Royse's School, Abingdon. Scholarship on the Foundation of King Charles I.: H. N. Parker, Elizabeth College, Guernsey.

Selwyn.—Scholarships: E. L. Mellersh, Berkhamsted School, £40 for Mathematics; J. C. Lucas, King Edward's School, Birmingham, £30 for Classics; R. E. Pond, St. Olave's Grammar School, £30 for Classics: R. T. Raine, North-Eastern County School, Barnard Castle, £30 for Natural Sciences. Exhibitions of £20—For Mathematics: L. W. Berrow, St. Olave's Grammar School; J. A. S. Castlehow, Loughborough Grammar School; J. B. Harris, Devon County School. For Classics: P. E. King, Dulwich College; R. F. S. Parry, St. John's School, Leatherhead. For Natural Sciences: A. F. R. Evans, Ipswich School.

University.—Exhibition: James Hunter, Wakefield Grammar School.

Worcester.—Mathematical Scholarship on the Eaton Foundation (open *pro hac vice*): Frederick Spriggs Thomas, Haverfordwest Grammar School. Mathematical Exhibition: Lewis Silkin, Central Foundation School and East London College.

THE COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on March 13. Present: Sir Philip Magnus, President, in the chair; Dr. Armitage-Smith, Mr. Bain, Mr. Barlet, Mr. Brown, Mr. E. A. Butler, Mr. Charles, Miss Dawes, Mr. Eagles, Miss Jebb, Dr. Maples, Mr. Marx, Mr. Millar-Inglis, Dr. Moody, Mr. Pendlebury, Mr. Pinches, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Starbuck, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Professional Preliminary Examination had been held on March 2 to 4, and had been attended by 329 candidates. He reported that an Examination for Certificates of Ability to Teach had been held on February 26, and the thanks of the Council were voted to the Head Master of the Central Foundation School, Cowper Street, for affording facilities for holding the Examination at that school.

The representatives of the College on the Federal Council gave a verbal report of the steps which had been taken by the Federal Council, acting in conjunction with the Committee convened by Dr. Gow, in order to meet the objections of the Board of Education to proposals for the constitution of a Teachers' Registration Council which had been submitted to the Board. It was resolved:—

> That the College representatives on the Federal Council be authorized to accept the following proposals:—(1) The Scheme for a Registration Council, proposed on February 29, 1908, might be amended by adding to the Council one representative of art teachers and one of music teachers. (2) Teachers of special subjects should, if they desire registration, form Advisory Committees, and the Order in Council constituting the Registration Council should contain a clause requiring the Registration Council to take the opinion of the Advisory Committees and to allow a representative of each of such Committees to be heard before deciding on the conditions of registration for teachers of special subjects.

An interim report of the Special Committee to consider "whether by any methods the work and usefulness of the College may be increased" was submitted.

The following persons were elected members of the College:—

Mr. C. E. Ayres, L.C.P., 3 Dorville Road, Hammersmith, W.
Miss M. A. Farrow, L.C.P., 6 Regent Street, Nottingham.
Mr. G. H. Goodfellow, L.C.P., 103 Bedford Hill, Balham, S.W.
Mr. F. W. Towle, B.A. Lond., L.C.P., 106 Vicarage Road, Langley, near Birmingham.
Mr. F. G. Witts, B.A. Lond., A.C.P., 5 Turle Mansions, Turle Road, Tollington Park, N.

The following books had been presented to the Library since the last meeting of the Council:—

By the GENERAL MEDICAL COUNCIL.—Medical Register, 1909; Dentists' Register, 1909; Minutes of the Medical Council, Vol. XLV., 1908; General Index to the Minutes of the Medical Council, 1903-8.

By the SMITHSONIAN INSTITUTION.—Annual Report of the Smithsonian Institution, 1907.

By A. & C. BLACK.—Flux's Scott's Legend of Montrose ("Sir Walter Scott" Continuous Reader).

By BLACKIE & SON.—Blackie's English Texts (Macaulay's John Hampden, and War of the Spanish Succession); Macgillivray's Our Native Land; Michell's Mérimée's Tamango.

By J. MURRAY.—Brackenbury's The Teaching of Grammar; Jones's Primer of Ethics.

By the OXFORD UNIVERSITY PRESS.—George and Leigh's Selected Poems of Matthew Arnold; Holden's Pope's Rape of the Lock; Plaisted's The Early Education of Children.

By RIVINGTONS.—Rivingtons' Direct Method Elementary German Texts (Gerstäcker's John Wells, and Riehl's Der Dachs auf Lichtmess).

PROFESSIONAL PRELIMINARY EXAMINATION.

MARCH, 1909.

THE Professional Preliminary Examination was held on the 2nd, 3rd, and 4th of March, in London, and at nine other local centres—viz., Birmingham, Bristol, Cardiff, Edinburgh, Inverness, Leeds, Liverpool, Manchester, Newcastle-on-Tyne. The following candidates obtained Certificates:—

First Class [or Senior].

Pass Division.

Cregan, H. Q.	Harding, G. D. *l.gr.*	Lichtenstein, L. M. *ch.*
Graddon, J. C. *g.*	Koch, A. H.	Walsh, T. C.

Digitized by Google

Second Class [or Junior].

Honours Division.

Barnes, F. G. L. *al.*
Blake, P. *al.*
Dimock, J. D. *g.f.*
Hicks, C. L. *a.al.*
Hollington, J. J. L.
Neely, W. G. S. *al.f.*
Saw, N. H. W. *al.*

Pass Division.

Ambler, R.
Baker, Miss F. E. B.
Bickerton, C. M.
Bramley-Moore, W. E.
Briggs, N.
Brookes, N. E.
Buckley, H. H.
Burge, G. H. K.
Carter-Braine, J. F.
Catford, E.
Childs, Miss W. M. *a.al.*
Clements, P. A. *al.*
Cohen, L. C. *a.*
Cotton, C. W.
Crossley-Meates, B.
Crowe, A. A. R.
Curnock, D. R.
Cutting, J. A. W.
Dadley, O. N.
Dann, Miss D. P.
Dixon, C. C.
Drake, H.
Ellam, H. J.
Flint, P.
Forrest, L. W.
Gabbott, J. B.

Thompson, E.
Veitch, J. R.
Ward, E.
Welton, F. E.
White, H. B. H.
Wood, D.
Wright, H. S.

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively :—

a. = Arithmetic.
al. = Algebra.
ch. = Chemistry.
f. = French.
g. = Geography.
gr. = Greek.
l. = Latin.

PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.

The following is a list of successful candidates at the Examination held in February, 1909 :—

Class I.

Wallis, T. E.

Class II.

Bennison, T. M.
Denne, E. J.
Haskew, F.
Jones, H.

CERTIFICATE EXAMINATION, December, 1908.

ADDITION TO CLASS LIST.

First Class (or Senior).—Pass Division.

Girl.

Trotter, L. M. W., Liverpool College, Huyton, Liverpool.

The above candidate passed with distinction in Scripture History, English Language, and Domestic Economy.

CONFÉRENCES FRANÇAISES.

Société Nationale des Professeurs de Français.

UNE FEMME DU SECOND EMPIRE.

Par Mlle Th. de Mayol de Lupé.

En dépit de la multiplicité des "Sociétés Françaises" qui se sont fondées ces dernières années dans la métropole, les conférences instituées par la Société des Professeurs, avec la gracieuse sanction des autorités du "College of Preceptors," ne perdent rien de leur attrayance, et sont assidûment fréquentées par un public nombreux et choisi, friand de langue française et de saine littérature.

Le 27 février dernier, la belle salle du Collège était comble ; Mlle de Lupé nous parlait d' "Une Femme du Second Empire," la comtesse de Castiglione, qui brilla à la Cour du plus haut éclat, tant par sa beauté que par son esprit.

Mlle de Lupé est une conférencière de race dont la voix chaude, souple et bien timbrée, le débit facile, l'esprit sémillant, la phrase alerte, donnaient au sujet choisi un charme particulier.

Et ce n'était point de trop de toutes ces qualités maîtresses pour bien peindre cette Cour fastueuse, gaie et spirituelle, au milieu de laquelle trônait l'Impératrice Eugénie, et où passait, rêveuse, pour ainsi dire mystique, la froide et sombre figure de Napoléon III.

La conférencière a fait revivre devant nous, avec un relief saisissant, les personnages marquants de cette époque, les groupant artistement autour de cette belle comtesse italienne qui, dès son entrée dans cette Cour, où se pressaient tant de grâce et de beauté, en fut acclamée la reine. Qu'était-elle venue faire à Paris, cette belle créature? S'y faire admirer? Dans ce cas elle y réussit pleinement, plus belle que les plus belles, les éclipsant par son luxe, et ne recueillant partout qu'hommages et admiration. Avait-elle quelque mission secrète confiée à sa finesse diplomatique innée? *Che lo sa!* Mais c'était l'époque où Cavour rêvait l'unité italienne, rêve qui ne semblait pouvoir s'accomplir qu'avec la coopération de la France. Envelopper l'Empereur, arriver à obtenir de lui quelque chose de plus tangible que des promesses, tel pouvait bien être le but que se proposait le patriotique diplomate. Qui veut la fin veut les moyens! Une femme pouvait seule obtenir ce résultat. L'intrigante Italienne fut envoyée à Paris, et elle sut attirer à elle et captiver l'Empereur.

Là se place l'attentat d'Orsini. Napoléon comprit que l'Italie lui était hostile. Il se sentit en danger. En habile diplomate, la comtesse lui fit entendre qu'il n'y avait qu'un moyen d'y échapper, lequel était d'aider à créer l'unité italienne. Orsini était devenu un héros. Sa mort, contre laquelle Mme de Castiglione s'était violemment élevée, n'arrêta pas les conspirations, ni ne mit non plus fin aux rendez-vous secrets avec l'Empereur. Mais, l'influence acquise se perdait, la confiance n'y était plus, car, comme le fait observer la conférencière, "sait-on jamais la vérité dans ce que dit une femme?" Un jour, étant chez la comtesse, l'Empereur n'échappa à la mort que grâce à la vigilance de sa police qui veillait sur lui jour et nuit. Ce drame sanglant, Mlle de Lupé nous l'a retracé dans toute sa poignante actualité. Le lendemain Mme de Castiglione quittait Paris. Ses dernières années se passèrent dans l'éloignement et l'obscurité.

Néanmoins la diplomatie italienne avait triomphé, et, en 1859, la France déclarait la guerre à l'Autriche, premier pas vers cette unité italienne qui tenait tant à cœur à Cavour et à son souverain, et qu'il leur fut donné de voir enfin se réaliser.

Cette conférence, écoutée d'un bout à l'autre avec la plus grande attention, a été fort applaudie, et M. Couillault, qui était au fauteuil, en remerciant, en termes choisis, Mlle de Lupé, a fidèlement traduit les sentiments de l'auditoire.

SIMPLIFICATION OF GRAMMATICAL TERMINOLOGY.

On behalf of the Joint Committee, promoted by the Classical Association for the simplification of grammatical terminology, Prof. Sonnenschein, the Chairman, and Prof. Conway, the Honorary Secretary, have circulated the following appeal for information :—

A Joint Committee of scholars and teachers has been summoned on the invitation of the Council of the Classical Association to consider the terminology used in teaching the languages, ancient and modern, including English, commonly studied in English schools, in the hope of framing some simplified and consistent scheme of grammatical nomenclature, tending in the direction of uniformity for the languages concerned.

At a preliminary meeting of the Joint Committee held in London, on February 27, it was resolved to make the project known as widely as possible, and to invite the co-operation of the general body of teachers of these languages in this country; and it seemed well to ascertain at the outset what points of current grammatical usage were found, in actual practice, to be causing ambiguity, confusion, or other difficulty in the minds of English pupils of any age. The Committee have therefore instructed us to ask if you would be so good as to furnish it with information as to what terms used in modern text-books you have found unserviceable or less serviceable than others used to denote the same thing. The value of the information would be increased (1) if you would refer to the particular grammar or other text-book in which the term or terms are found in use; (2) if you would distinguish (*a*) terms open to practical objections on the score of obscurity or inadequacy in representing the usage of any one particular language considered alone, and

Digitized by Google

(*b*) terms which, though not giving rise to difficulties within the study of one language, appear nevertheless to be inconsistent with those used to describe the same thing in other languages.

It would be a great convenience to the Committee in considering the answers (3) if separate points were, as far as possible, written briefly and on separate sheets.

The points would probably fall under one or other of the following heads :—

(i.) General grammatical concepts and names of the parts of speech, as *predicate*, *article*.

(ii.) Names of cases, tenses, moods, and other parts of accidence.

(iii.) Terms used in describing different types of sentence, different parts of a sentence, or common syntactical constructions—as *indirect speech* (*oratio obliqua*), or different types of conditional sentences.

(iv.) Terms of prosody, as *beat*, *ictus*, *arsis*.

(v.) Terms of phonetics, as *hard*, *lenis*, *aspirate*.

Answers to this circular should be sent, if possible, not later than April 13, to E. L. Milner-Barry, Littledean, Berkhamsted, who has kindly undertaken to act as Hon. Secretary of the Inquiry Sub-Committee.

Unless any wish is expressed to the contrary, the answers to this circular will be laid directly before the Joint Committee; but in any case in which it may be desired, the answer will be treated as confidential as far as its signature is concerned.

Dr. A. W. Ward writes to the *Athenæum* (March 27) an appreciative acknowledgment of the services of the work of the late Mr. F. G. Fleay to English literature, and to English dramatic literature in particular. "Beyond all doubt," he says, "conjecture and conclusion jostled each other in some of his writings; and not a little that he at one time pronounced to be settled he was himself at another time ready to resettle. But the debt which is permanently due to him from students of the Elizabethan drama, and of Shakespeare in especial, is not only on account of the methods of inquiry which, though not actually originated by him, he elaborated with extraordinary acumen and unsurpassed patience in fields so different as that of metrical criticism and that of stage history. His 'Life of Shakespeare,' his 'Chronicle of the English Stage,' and his 'Biographical Chronicle of the English Drama,' are monuments of a literary and historical learning both rare and minute, as well as of a courage in investigation hardly possible except to a mind gifted—I am not afraid of using the word—with genuine imaginative power."

CORRESPONDENCE.

THE MORAL EDUCATION LEAGUE.

Referring to the debate in the House of Commons (March 16) upon the motion of Mr. George Gooch, seconded by Sir William Collins, on the subject of "Moral Instruction in Elementary Schools," Mr. Harrold Johnson, Secretary to the Moral Education League, complains of "the inaccurate conception of the aims and work of this organization expressed by several Unionist members in the course of the debate." He writes :—

"The apprehension seems to have been entertained by some of those who took part in the debate that at the back of the work of the League there is an *arrière pensée* of hostility to religious instruction, and a desire that ultimately this may be superseded by the particular instruction the League supplies. No such conclusion could have been inferred from the speeches of the opener and seconder, who are Vice-Presidents of the League; nor has it any basis in fact. The League works, it is true, on non-theological lines, regarding questions of supernatural sanctions and relationships as outside its scope. It acts thus, however, not in any sectarian spirit, but, on the contrary, from the very catholicity of its interests.

"The Churches and the League have this much in common—that both are convinced that what, above all else, is essential for an efficient moral education is the religious spirit, in the sense, at least, in which this spirit may be defined as being one which recognizes the supreme value and power of moral ideas. This recognition the League would secure by endeavouring to make whatsoever things are 'lovely and of good report' so attractive to the children, by means of apt narrative and incident within the child's own circle of experience, that they are instinctively drawn to adopt a right attitude toward life and to respond to the highest claims. That the League's work is of this nature I think every one must admit who is familiar with its books or has heard any of the public moral lessons given under its auspices."

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.

USE EARLY IN THE EASTER VACATION

(for best results—or term if preferred—three times a year only)

The "DUST-ALLAYER" Co.'s

ODOURLESS, OR POWERFUL GERMICIDAL

FLORIGENE

(A REGISTERED NAME suggested by FLOOR-HYGIENE)

Unequalled for the Hygienic and Anhydrous treatment and cleaning of all

SCHOOL, LABORATORY,

Art Gallery, Library, Museum, and other Floors;

every kind of Wood, Concrete, Stone, or polished flooring; also Linoleums, Cork-Mattings, &c.

"Florigene"

LAYS THE DUST

(As recommended in the Education Department Blue Book)

Purifies the atmosphere, aids prevention of diseases and throat irritations, preserves floors, saves time, and greatly reduces labour.

Anhydrous, Economical, easily and quickly used by the unskilled—each application lasts for 2 to 6 months, according to wear.

Scrubbing (unless preferred), **also wet and all other sprinkling of floors—entirely dispensed with,** therefore no **injurious** moisture.

Not sticky—floors are only impregnated with "Florigene," and **can be cleaned daily with an ordinary broom alone—the sweepings being "weighted"** are not distributed.

BOOKS, FURNITURE, APPARATUS, &c., are less likely to soil, and seldom require dusting or cleaning.

The additional cost (if any) of the "Florigene" treatment is very small when compared with its hygienic and many other advantages.

THE DUST-ALLAYER CO.'S "Florigene"

(Awarded the Royal Sanitary Institute Bronze Medal)

is extensively used in Government (Royal Colleges, Science and Art and other Departments) and Municipal Buildings, also Schools, Laboratories, Libraries, Museums, Offices, &c. (and has been for many years), with highly satisfactory results.

CURRENT EVENTS.

Fixtures.

AT the meeting of Members of the College of Preceptors to take place on Wednesday, April 21, there will be a discussion on "The Relations between Head Masters and Assistant Masters." The discussion will be opened by W. J. Addis, Esq., M.A.

* * *

M. J. DUHAMEL, L. ès L., will address the Société Nationale des Professeurs de Français en Angleterre at the College of Preceptors on April 24, at 4 p.m., on "Choses et Autres sur l'Angleterre."

* * *

UNDER the auspices of the Executive Committee of the National Service League, the Rev. Prebendary Russell Wakefield, Chairman of the Central Unemployed Body, will deliver an address on "The Moral and Educational Aspects of National Service"—that is, of "universal military training for home defence"—at the Caxton Hall, Westminster, on April 2, at 5.30 p.m.

* * *

THE Board of Education has just published a list of thirty holiday courses which will be held on the Continent at different times during the present year, but mostly in the summer months. Seven of the courses are in German-speaking countries—viz., at Greifswald, Jena, Marburg, Neuwied, Lübeck, Kaiserslautern, and Salzburg; three in French Switzerland—at Geneva, Lausanne, and Neuchâtel; one in Spain—at Santander; one in Italy—at Florence; and the rest in France—at Besançon, Dijon, Grenoble, Nancy, Boulogne-sur-Mer, St. Servan, St. Malo, Paris, Versailles, St. Valéry-sur-Somme, Tours, Honfleur, Bayeux, Granville, Caen, Lisieux, and Villerville. The table published by the Board of Education gives the date of each course, the fees, return fares from London, lowest cost of boarding, principal subjects of instruction, address of Local Secretary, and other details of importance to intending students. Copies of the table (price 2d.) can be obtained direct from Messrs. Wyman & Sons, Ltd., Fetter Lane, London, E.C., or through any bookseller.

Honours.

OXFORD UNIVERSITY has conferred the following honorary degrees:—

D.C.L.—Prof. D. Felix Liebermann, Hon. LL.D. Cantab., Berlin.

D.Sc.—Sven Anders Hedin, Ph D.

D.Litt.—James Gairdner, LL.D. Edin., C.B., late Assistant Keeper of Public Records; Dr. Marc Aurel Stein, Inspector-General of Education, N.W. Frontier Province of India and Baluchistan; and Charles Bémont, Assistant Director of the Historical and Philological Department of the École des Hautes Études, Paris.

* * *

CAMBRIDGE UNIVERSITY has conferred the honorary degree of LL.D. upon Dr. Charles Gore, Bishop of Birmingham; Sc.D. upon Sven A. Hedin, Ph.D.; M.A. upon John Wood Oman, D.Phil. Edin., and Owen C. Whitehouse, M.A. Lond., Hon. D.D. Aberd.

* * *

MANCHESTER UNIVERSITY has conferred the honorary degree of LL.D. upon Mr. Whitelaw Reid, Prof. Baldwin Spencer,

Digitized by Google

Mr. C. E. B. Russell, and Mr. C. R. Barnes (Hon. Treasurer of the University Union).

* * *

THE University of Glasgow has resolved to confer the following honorary degrees:—

D.D.—Rev. Hugh Black, M.A., Professor of Practical Theology, Union Theological Seminary, New York; Rev. Robert Borland, Yarrow; Rev. Robert Kilgour, B.D., Editorial Superintendent of the British and Foreign Bible Society; Rev. J. Armitage Robinson, M.A., Dean of Westminster; Rev. John Willcock, B.D., F.R.Hist.S., Lerwick.

LL.D.—Robert S. Allan, Chairman of Glasgow School Board and of Glasgow Provincial Committee for the Training of Teachers; James Gairdner, C.B., historian; John Harrower, M.A., Professor of Greek, Aberdeen; William H. Maw, Past President of the Institute of Mechanical Engineers; Charles S. Sherrington, M.A., M.D., F.R.S., Professor of Physiology, Liverpool; William Strang, A.R.A.

* * *

THE University of Aberdeen has resolved to confer the following honorary degrees:—

D.D.—Rev. David S. Cairns, M.A. Edin., Professor of Dogmatics and Apologetics, U.F. Church College, Aberdeen; Rev. James R. Leslie, M.A. Aberd., Principal of the Episcopal Training College, Edinburgh; Rev. John Scott Lidgett, M.A. Lond., Warden of Bermondsey Settlement.

LL.D.—Allan R. Andrew, M.A. Aberd., Chief Inspector of Schools in Scotland; Alexander Bruce, M.A. Aberd., M.D. Edin., Edinburgh; Donald Crawford, K.C., Sheriff of Aberdeen, Kincardine, and Banff; Frederic Harrison; James Pittendrigh MacGillivray, R.S.A.; Paul Sabatier.

* * *

THE REV. DR. A. J. MASON, Master of Pembroke College, Cambridge, and Vice-Chancellor of the University, has been elected to an Honorary Fellowship at Jesus College.

* * *

PROF. HENRY JONES, on behalf of a committee, appeals for funds towards a permanent memorial of the late Dr. Edward Caird in the University of Glasgow—to place an inscribed tablet or medallion in the Moral Philosophy Classroom, and to supplement the endowment of the Lectureship in Political Philosophy.

Endowments and Benefactions.

THE directors of Krupp's Works at Essen have made an annual grant of 10,000 marks (£500) for the Aeronautic Professorship at Göttingen University, to be devoted to research work connected with aeronautics.

* * *

MR. C. A. FOSTER has given £1,000, and Mrs. Rawlings a second £1,000, towards the intended new Archæological Museum, Cambridge. The Foster family have now subscribed £6,000, in memory of Mr. W. K. Foster.

* * *

BY the will of the late Mrs. C. F. Thompson, of Grantham, formerly of Leeds, a contingent reversion of some £30,000 has been left to Leeds University.

* * *

A PORTRAIT in oils of the late Sir John Barran, by Miss Violet Garrard (after the portrait by the late Mr. Frank Holl, R.A.), has been presented to Leeds University by Mr. Rowland H. Barran, M.P.

* * *

MR. JAMES NEALE, architect, has left £1,000 to the Royal Institution of British Architects for a travelling studentship or for such other purposes as the Institution may decide.

* * *

CARDIFF UNIVERSITY COLLEGE wants £35,000 to clear off the debt on the new buildings. Mr. Austin Jenkins, the Registrar, is organizing the quest for funds.

THE personal estate of the late Dr. Thomas M'Kie, valued at some £80,000, will fall to the University of Edinburgh on the death of Mrs. M'Kie.

* * *

THE balance of receipts for the memorial to Mrs. Oliphant in St. Giles's Cathedral, Edinburgh, has been handed over to the University Court of St. Andrews to found an annual prize of £10 in English Literature.

* * *

DR. WILLIAM DEY, late Rector of the Old Aberdeen Grammar School, and now a member of the University Court, has intimated the intention of himself and his brothers to found a Scholarship in Education in the University of Aberdeen, of the annual value of £100, in memory of their father.

* * *

MR. R. HAY FENTON, London, a native of Aberdeen, has presented to Aberdeen University a very fine collection of British birds' eggs—upwards of 7,000 specimens, including an egg of the great auk. "Let me express the hope," says Mr. Fenton, "that this gift may be the means of stimulating Aberdonians at home and abroad, and especially graduates, to take an interest in, and contribute specimens to, the Natural History Museum, where, as a boy, I spent many a profitable and pleasant Saturday afternoon in the company of my father."

* * *

THE late Mr. M. G. Megaw has left £1,000 to found, in the Queen's University of Belfast, a scholarship tenable for one year by a son of a *bona fide* farmer farming land in Ulster, and of any Christian denomination, and under the age of twenty-one.

* * *

THE Goldsmiths' Company has renewed for a further period of three years its annual grant of £5,000 towards the maintenance of Goldsmiths' College, New Cross.

* * *

THE Royal Geographical Society has renewed for a further period of five years its annual grant of £400 to the Oxford School of Geography.

* * *

THE Glasgow and West of Scotland Technical College has received a grant of £10,000 from Mr. James Dick's Trust, to be applied to the training of sons and daughters of members of the poorer classes, "so that they may become useful artisans and citizens."

* * *

BRYN MAWR COLLEGE, Pennsylvania, has established five free scholarships for five German women University graduates.

Scholarships and Prizes.

SEVEN Cambridge Colleges—Pembroke, Gonville and Caius, King's, Jesus, Christ's, St. John's, and Emmanuel—will hold a combined examination for sixty-seven entrance scholarships and a number of exhibitions on December 7 and following days. Subjects: Mathematics, Classics, and Natural Sciences, at all the colleges; History, at all except Pembroke; Modern Languages, at all except Pembroke and Jesus; Hebrew, at Gonville and Caius and St. John's. Age not over nineteen on October 1. Forms of application from W. S. Hadley, M.A., Pembroke; the Master, Gonville and Caius; W. H. Macaulay, M.A., King's; A. Gray, M.A., Jesus; Rev. J. W. Cartmell, M.A., Christ's; the Master, St. John's; the Master, Emmanuel. Forms to be returned (with copy of register of applicant's birth and certificate of good conduct) by November 30.

Digitized by Google

EMMANUEL COLLEGE, Cambridge, offers (in October) an exhibition, £50 a year for two years, to an advanced student commencing residence as a member of the College in October next. Apply to the Master by October 1.

* * *

QUEEN'S COLLEGE, Oxford, offers (June 1) one open scholarship, £80 a year for four years; and one exhibition, £70 for seven years, open to natives of Middlesex. Examination in Classics. No age limit. Apply to the Provost at any time between May 18 and 25.

* * *

PEMBROKE COLLEGE, Oxford, offers (on May 11) six open scholarships—one of £100 a year, one of £90, and four of £80. Three (including the first two) are for Classics, two for Modern History, the sixth for either subject. Entry forms from the Master.

* * *

ST. JOHN'S COLLEGE, Oxford, offers (June 15) a Dean Mansell Exhibition in Divinity and Hebrew of £40 a year. Candidates (who must be members of the Church of England or of a Church in full communion with it) must send in their names to the Resident of St. John's College before June 1. Further information from the Senior Tutor.

* * *

THE London Inter-Collegiate Scholarships Board will hold a combined examination for twenty entrance scholarships and exhibitions, tenable at University College, King's College, and the East London College, on May 11 and following days. No candidates will be admitted to the examination unless they have passed the London University Matriculation or an equivalent examination and are under the age of nineteen on May 1, 1909. The total value of scholarships offered is about £1,500. Full particulars and forms of entry may be obtained from the Secretary of the Board, Mr. Alfred E. G. Attoe, University College, Gower Street, W.C.

* * *

IN connexion with the forthcoming celebration of the five hundredth anniversary of the foundation of the University of St. Andrews, the first institution of University teaching in Scotland, Dr. Peddie Steel, of Florence, has offered to award a prize of 100 guineas for the best essay on Scotland's debt of gratitude to her parish schools, her grammar schools, and her Universities.

Appointments and Vacancies.

ON the nomination of M. Doumergue, French Minister of Education, the Abbé Loisy has been appointed to the Chair of the History of Religions in the Collège de France, vacant by the death of M. Réville. M. Loisy was the candidate of the Collège presented by the faculty. M. Georges Foucart, Assistant Professor in the University of Aix, was the candidate of the Institute of France, which, however, gave M. Loisy 17 votes against 20 for M. Foucart.

* * *

THE London University Extension Board are about to revise the Panel of School Inspectors and Examiners, and make, if necessary, recommendations to the Senate for additions to it. They will be prepared to receive applications from graduates desiring to be placed upon the Panel, and forms on which applications may be made (together with a further explanation of the nature and conditions of the work) may be obtained from the Registrar.

* * *

THE London University Extension Board are about to revise the Panel and Supplementary List of University Extension Lecturers, and to make, if necessary, recommendations for additions to them. They will be prepared to receive and consider applications from graduates desiring to lecture, and forms on which application should be made may be obtained from the Registrar. Applicants should have made a special study of the branch of knowledge upon which they desire to lecture, and should have had experience in lecturing to such audiences as usually attend University Extension Lectures.

* * *

PROF. THOMAS PURDIE, LL.D., will retire from the Chair of Chemistry in the United College, St. Andrews, at the end of the summer session.

* * *

PROF. KIRKPATRICK has resigned the Chair of Constitutional Law and History in the University of Edinburgh, after twenty-eight years' service.

* * *

PROF. VICTOR KASTNER, B. ès L., M.A., has resigned the Chair of French in Manchester University.

* * *

MR. H. B. WALLIS, B.A., has resigned the Assistant Lectureship in Philosophy in Manchester University, on appointment to a post under the Board of Education.

* * *

THE Mastership of Selwyn College is vacant through the lamented death of the Rev. Richard Appleton, M.A., Fellow of Trinity College, Cambridge, and Hon. Canon of Durham.

* * *

MR. E. C. QUIGGIN, M.A., has been appointed to the new Monro Lectureship in Celtic at Caius College, Cambridge.

* * *

THE REV. THOMAS REES, M.A. Lond., Vice-Principal of Brecon Memorial College, has been appointed Principal of the Bala-Bangor Welsh Congregational College.

* * *

THE REV. F. C. N. HICKS, M.A., Tutor of Keble College and Examining Chaplain to the Bishop of Oxford, has been appointed Principal of Bishop's College, Cheshunt, which is to be opened in October as a theological training college.

* * *

DR. JOHN MARSHALL will retire from the Rectorship of the High School, Edinburgh, at the end of the current session. He has held the post since 1882.

* * *

MISS JEX-BLAKE, Head Mistress of St. Margaret's School, Polmont (since 1899), has been appointed to succeed Miss Wordsworth as Principal of Lady Margaret Hall, Oxford. Miss Jex-Blake is a daughter of the Dean of Wells.

* * *

MR. IVOR B. JOHN, M.A., B.Sc. Lond., Senior Lecturer and Deputy Vice-Principal of the Goldsmiths' College, has been appointed Principal of the new Dudley Training College.

* * *

THE REV. A. W. COMPTON, M.A. Cantab., has been appointed Warden of the Hadfield Memorial Hostel, Wellington, N.Z.

* * *

THE REV. S. B. CRISTON, M.A. Cantab., Curate of St. John's, Walham Green, has been appointed Assistant Master and Chaplain of the Diocesan College School, Rondebosch, Cape Colony.

* * *

THE Head Mastership of Coleshill Grammar School is vacant.

Digitized by Google

THE Head Mastership of St. John's Foundation School, Leatherhead, will be vacant in August.

* * *

MR. H. B. TRISTRAM, M.A. Oxon., late Head Master of Loretto, has been appointed Assistant Master and House Master at St. Paul's School.

* * *

MR. L. MARGERISON, Head Master of St. Paul's (Church of England) School, Chester, has been appointed Head Master of the new Council Higher Grade School, Chester.

Literary Items.

THE *Educational Review* (New York; edited by Dr. Nicholas Murray Butler) reprints in its March number, from the *Teachers' Guild Quarterly* (December last), Mr. A. C. Benson's Presidential Address to the Guild on "The Personality of the Teacher."

* * *

MR. FROWDE announces "A Vindication of Warren Hastings," based mainly on State papers, by Mr. G. W. Hastings.

* * *

MESSRS. RIVINGTON will publish this month the first two Parts of "Notes on British History," intended "to supplement the information given in the text-book and to lessen the amount of time devoted in school to the mere giving of notes." A third Part (1660–1815) is in preparation.

* * *

MR. HOPE MONCRIEFF is supplementing his charming volumes on "Bonnie Scotland" and "The Highlands and Islands," in Messrs. Black's Series of Colour Books, by another entitled "The Heart of Scotland"—that is, Perthshire and its borders. The illustrations, which are by Mr. Sutton Palmer, will mostly be drawn from "Bonnie Scotland."

General.

AT the Annual General Meeting of the Teachers' Training Association (March 13), Prof. J. W. Adamson was elected President for the ensuing year. Vice-Presidents are Mr. Oscar Browning, Mr. W. M. Keatinge, and Miss L. Brackenbury.

* * *

THROUGHOUT England and Wales in 1907 and 1908, while the number of Council schools increased by 426, the number of Voluntary schools decreased by 337.

* * *

THE Government has appointed a Committee (Lord Elgin, Chairman) to inquire into the needs of the Scottish Universities.

* * *

THE Queensland Government announces that it proposes to establish a University during the present year.

* * *

M. JACQUES BARDOUX has founded an association to group together all Frenchmen in Paris who have been educated at British Universities or in British public schools. The object is to reunite men of intelligence and energy, "who, faithful to the memory of the lessons they have received, desire to propagate the benefits they have received in the world of ideas"; and "to create a centre where, in a certain measure, those who have profited by British hospitality can do something towards paying off the debt of gratitude which they owe to members of British Universities passing through Paris."

THE EDUCATIONAL VALUE OF PLAY.

AT the Evening Meeting of the members of the College of Preceptors on Thursday, March 25, Mr. R. F. CHARLES, M.A., in the chair (in the absence of Mrs. HUMPHRY WARD, who was unfortunately indisposed), J. L. PATON, Esq., M.A., read the following paper:—

The centenary of John Milton has turned our attention afresh to the study of his character. His childhood has a special interest for us nowadays, because he was, as more than 75 per cent. of our own children are, born and brought up in the city.

Nothing but music seems to have redeemed that childhood from utter sombreness. It was a childhood without games. In "Paradise Regained," he says:

> When I was yet a child, no childish play
> To me was pleasing; all my mind was set
> Serious to learn and know, and thence to do
> What might be public good.

And his biographer tells us how from the age of twelve he never went to bed before midnight, and one of the maids was told off to sit up with the strenuous young student. It was this overstrain of early days which cost the poet his eyesight in later years—a loss which he turned to glorious gain. But was the loss of his eyes the only detriment he suffered? Far be it from me to belittle the greatness of Milton. On the contrary, I have such faith in his real greatness that I have no fear of any deductions truth may make from it. Great men are given us that we may learn from their defects as well as from their achievements. Do we not feel that there was something lacking to the wholeness of the man in John Milton? Did not Mary Powell and his daughters feel it in their day—a lack of human kindness, and that sensibility which can put itself in another's place, and make allowances for others because it looks at things from that other person's point of view and feels as he or she feels—a lack of the playful, sportive touch, that hearty and good-humoured laugh which oils the wheels of life and carries us without colliding round some of its awkwardest corners? Did not those who lived their daily day with him feel that there was a little too much—I will not say of sternness, still less sourness; for, after all, he would sing when the fit of the gout came on him—but too much settled fixity of mood, too much of that "mind set serious to learn and know"? And when we read the autobiography of his young Quaker amanuensis, who took himself so extremely seriously, do we not see there the same flaw more pronounced and own to a certain fellow-feeling for the father who would knock off the hat which Ellwood persisted in wearing in his presence?

"All work and no play," we say, "makes Jack a dull boy." But that is only half of the mischief, and perhaps not the more serious half. It is not dullness we see in John Milton; it is failure in that art for which we have no special name, though it is one of those which count for most in this workaday world—the art of living with others. The tractate on "Education" shows the same defect. Sports of all kinds are admitted, as they are by Thomas Elyot and all the educational writers of the Renaissance; but their aim is with Milton, as with his predecessors, strictly utilitarian, to develop strength of body, to teach the arts of warfare, and to realize, what was, after all, to Milton, spite of all his Puritanism, the ideal, the life of the great Romans and Greeks who kept the bridge of old, and swam the Tiber, and hunted the wild boar in Elis, and wrestled on the yellow sand, and tossed the quoit, and ran with the tidings of victory from Marathon to Athens. Strictly speaking, there is no more play in the tractate than there is in an English public school. There is no spontaneity; there is no room for it. All the exercises are prescribed, all are compulsory, and you will find no child so dull and deadened, so lacking in initiative and agility, as the child for whom every single activity has been prescribed by superior authority from the nursery onwards, however sage the prescribing authority may be.

It is most instructive to set side by side with the childhood of Milton the childhood of that other great man, so different from him, whose centenary came two months later, Abraham Lincoln. His was a childhood which never received more than a single year's formal tuition in all, and that in irregular doses from teachers who knew hardly anything themselves beyond the "three R's"—a childhood on

> The good old rule, the simple plan,
> When wild in woods the noble savage ran.

Digitized by Google

But what amazing agility and versatility of mind! How rapidly he takes up one thing after another—rail-splitter, store-keeper, postman, surveyor, wrestling champion, legislator, lawyer, inventor, orator, leader of his nation, *generalissimo* of the forces. All of them came, I will not say easily, but naturally, to him, for he "sees nothing to the contrary." And, above all, spite of his awkwardness and his clothes, which were "never much to look at," and his top-hat, which was practically coeval with himself, was there ever a man who possessed in a more eminent degree the art of living with others? Yet few men have been tried as he was. Did ever a political leader have more impossible colleagues than Seward and Stanton? Did ever a statesman confront a crisis more crucial in its character and huge in its dimensions than Abraham Lincoln confronted when he was elected President of the United States? Did ever a leader live through a more harassing period of conflict and of strain? But he drove his team; there were no resignations. He went through that period of harassment "without uttering one word of violence or rancour, one phrase which, after the cessation of hostilities, might return to embitter the defeated combatants or be resented by their descendants." And his crowning glory is that he not only re-united America, but made subsequent co-operation and fellowship possible for both North and South on terms of mutual respect and affection. How unlike Cromwell! What a contrast to the sequel of our own Civil War!

It is well for us to dwell on these things and draw out this contrast. It is full of significance, if we have eyes to see. There is nothing so salutary for us to consider as the folly of educators and the consequences of that folly. It is history, as Bacon says, which makes us wise. But, some one will say, there is no fear of our banishing play nowadays from childhood; Froebel has taught us better. I wish this objector could see some of the infant departments, where a single teacher struggles with some fifty prisoned infants and endeavours to instil into them some knowledge which the inspector can duly assess. Still more, I wish he could visit a Sunday school and see these infants stacked up in rows, like so many wine-jars, as Aristophanes would say, listening to the doctrinal exhortations of an unimpeachable, but otherwise hopeless and impossible, adult. "What is there behind this gallery?" you ask of the minister who is proudly showing you round his new buildings. "The hot-water boilers for heating," is the reply; and you are no longer surprised to learn that the favourite hymn of the babies is "Here we suffer grief and woe."

And, lest my interlocutor should think that these things are confined to Sunday schools and those lower classes for whom such institutions are needed, may I ask him to read in the sixth volume of Prof. Sadler's special reports, which deals with the schools which prepare boys under thirteen for the public schools? There is plenty of play there, but it is all within the high ring wall which shuts out the actualities of life, and it is all rigidly prescribed and equally rigidly supervised. There is none of the Abraham Lincoln spontaneity and self-activity about it. As for the curriculum, it is such as would be suitable, perhaps, for a generation of juvenile Miltons and John Stuart Mills; it prepares boys of thirteen for scholarships in those foreign languages taught according to the straitest sect of the grammar-grinding Pharisees; sometimes even it prepares boys for scholarship competitions which include both Latin and French and are open to boys of nine years of age. And this—save the mark!—is what our sagacious, practical-minded countrymen call "the best education that money can buy." Yet men can ask, in all seriousness, "Do angels weep?"

The poor, dumb, irrational creatures, for all their dumbness and irrationality, know better than this. Long ago that careful, sympathetic observer, Lucretius, noticed the play of dogs and the way they lived in dreams over their hunting sport. "The great Molossian hounds, with their large, spongy lips, . . . when they essay fondly to lick their whelps with their tongue or when they toss them with their feet and snapping at them make a feint, with lightly closing teeth, of swallowing, though with gentle forbearance and yelp as they caress" ("Lucretius," V. 1,072, Munro).

But it has been reserved for the modern zoologist to show the training value of this play of animals. Let us take, first, the harmless, necessary cat. "In her hunting," says Prof. Ainsworth Davis, "she shows us what a wonderful faculty she has for learning by experience. When she has caught some unlucky wanderer, she avoids killing it at once, patting it with her deadly paw that it may run a little and give her the chance of catching it over and over again. This habit has undoubtedly grown up and become fixed in the race because the cats which practised in this way were made thereby better hunters, and so lived on and trained their children in the way they should. The fact that the cat trains her kittens makes it much easier for a useful habit to become fixed in the race and gives a chance for the inheritance of tradition which might otherwise disappear." Again, passing on to discuss "the pretty, but apparently trivial, play of kittens," he says: "This is not merely due to the superabundant energy of healthy youth, for a kitten will play when almost faint with fatigue. Nor must we think that the kitten plays to amuse us with its pranks. An explanation of that kind might be suggested for the obliging dog, though it would not be right even for him; but the cat is far too independent and self-centred for that. The play of kittens—and of other animals, too—means the acquisition of habits, due at first, perhaps, to imitation of the parent, which are useful as training for the serious business of hunting and fighting which make up most of a cat's life. To live well a cat must have learned to play well, and the same is true for other young animals besides cats."

When I read this I felt inclined to write an appendix to Aesop. Of how much more value are we than many cats! Does it never strike us that so many of our grown-up people live badly because so many of our children never "learn to play well"? How human is that touch about the kitten, faint with fatigue, but still ready to play. Have we never seen the boy who was too tired to go an errand rouse at the sound of a punted football, faint yet pursuing, if you will only give him a football to pursue? "Mutato nomine de nobis fabula narratur."

I am tempted to dwell on this, but I beg you to allow me to quote once more from an author I have cited before in this place, W. J. Long, the author of those excellent educational handbooks, more readable than most, "School of the Woods," and "The Ways of the Wood Folk." He is observing the play of young bears. "There were two of them, nearly full-grown, with the mother. The most curious thing was to see them stand on their hind legs and cuff each other soundly, striking and warding like trained boxers. Then they would lock arms and wrestle desperately till one was thrown, when the other promptly seized him by the throat." Then Mr. Long points out how the bear needs that quick, well aimed dart of the fore-paw to catch fish and frogs, to smash the stumps of trees where honey is stored; how in fighting his enemy his one chance is to hit hard and clean, or, if it comes to a close encounter, to hug and squeeze him to death. But the point is, "How many earthly mothers in our hypercivilized country would have been as wise as that mother bear? How many would have realized that her two young pugilistic sons in some similar encounter were preparing themselves for facing up to obstacles bravely in after-life and 'downing' them? Would not the usual practice have been rather to have sent them both up to bed and to have pronounced over them the Scriptural admonition, 'Let brotherly love continue'"? How many mothers and maiden aunts really understand the various forms which brotherly love is apt to assume with romping, roystering, healthy-minded, animal-spirited British boys? It is the greatest mistake to try to eradicate the fighting instinct in boys. There is as much fighting to be done now as there ever was in life, only the enemies against which we wrestle are principalities and powers and spiritual wickedness in high places. "An able-bodied young man who cannot fight physically," says Dr. Stanley Hall, "can hardly have a high and true sense of honour, and is generally a milk-sop, a lady-boy, or a sneak. He lacks virility, his masculinity does not ring true, his honesty cannot be sound to the core. Hence, instead of eradicating this instinct, one of the great problems of physical and moral pedagogy is to rightly temper and direct it."

Every atom of our children's combativeness is wanted. See that none of it is wasted. It is the essential ingredient, the dynamic of forceful character; it is the tension on the string which sets the whole machinery in motion; and the problem is not to eradicate it, but to temper it rightly and direct it. "Pro patria est dum ludere videmur."

The whole subject of the play of animals has been treated once and for all by Prof. Karl Groos, and, for my part, I find as much "wisdom for our own selves" in his first book, "The Play of Animals," as I find in his later work, "The Play of Men."

Note, in the first place, that it is only the higher orders of animals which play. Your low-grade caterpillar, your limpet, your sea anemone, or other form of animated digesting machine, does not play, and it is only rarely that a turtle is found lapsing into this reprehensible habit. The proportion holds throughout: it is the most highly developed and most intellectual animals, such as dogs or elephants among mammals, and parrots among birds, which do most playing.

Digitized by Google

Again, the more highly developed the animal in the scale of evolution the longer is its period of youth. The low-grade animal grows up in no time; the high-grade animal takes a long time to mature his powers; the higher the attainment required, the longer the time of preparation; and Prof. Groos's conclusion, as a biologist, is: "Youth probably exists for the sake of play. Animals cannot be said to play because they are young and frolicsome, *but rather they have a period of youth in order to play*; for only by so doing can they supplement the insufficient hereditary endowment with individual experience, in view of the coming tasks of life. . . . The animals do not play because they are young, but they have their youth because they must play." Clearly, this question of play conditions the whole development of children, physical and psychical. Though it seems paradoxical to say so, there is really nothing so serious for a child as play. As Mr. Archibald puts it pithily: "The child that plays needs a director; the child who does not play needs a doctor. The child who does nothing but play can be taught and trained through his love of play; but the child who does no playing must be regenerated in nerve and muscle." And he is only repeating what the master of all modern educators said: "I can convert childish activities, occupations, amusements—all that goes by the name of play—into instruments for my purpose."

We have now defined our attitude towards play. It is not the attitude of the taboo. We dare not exclude play from our purview, as the old pietist who said, "Play of whatever sort should be forbidden in all evangelical schools, and its vanity and mischief should be explained to the children." This is what I am inclined to call blasphemy; it is what the Greeks would call "fighting against God"—the God who made us as we are in order that He in His wisdom might make us what He would have us be.

Nor, again, can we adopt the attitude of merely tolerating play as a necessary means of recreation or redintegration, because we cannot always be, as Milton put it, "contemplative or pragmatical." The recreative side of play is highly important, and specially so for those whose work in these days of the division of labour is so mechanical and monotonous that it cannot, like our work, for instance, enlist their heart or give scope for any self-expression, still less for æsthetic joy. Yet, be it noted, the classes which most need recreative play are just the classes for whom least opportunity is provided in our social system. The street is their playground, or the court, and the gin-palace and the music-hall are their early ingrained ideas of environment. Is not the real root of the mischief our idea that play is not a necessity, but a sort of luxury for those who can afford it—a slice of tart at the end of dinner; the rich boy has it because he can afford it, and the poor boy goes without because he can't?

The position at which we have arrived is much more pronounced. Play is an integral part of education, not as Herbert Spencer said, "concerned with the less vital matters," but with the most vital matters of all. In fact, in the early years of childhood up to four or five years of age, the two terms, play and education, are interchangeable. It is in play that the child acquires his first notions of the properties of the objects which surround him in this new-found world, learns the law of gravity, the grateful vicissitude of light and dark, simple notions of heat and cold, the pungent taste of soap, and the pricking property of pins; forms his senses of sight and hearing and touch, develops his powers of voice and movement, acquires the control of his muscles, exercises his will to command the muscles, and generally learns to correlate himself with things, or, as Froebel put it, "to make the inner outer."

In the next stage of development, after five years of age, the ideas of play and of work begin to differentiate themselves; but the educational value of play is not diminished. Take, first, the body: there is the rapid molecular change, with its composition and decomposition, and the consequent need for muscular activity, frequent and even violent, to use up the waste products of this rapid combustion and to help the assimilation of new materials by keeping a constant stream of oxygen at play upon the furnace. We have recently woke up to the necessity of physical training. What I fear is that, in our wooden, mechanical way, we will say to ourselves, "So much physical activity is needed, so much oxygen has to be consumed so as to produce carbonic anhydride. Science tells us this. Go to! Let us ascertain the quantities required and provide in the curriculum the requisite amount of physical exercises." It is not merely a question of so much movement and so much oxygen. These the treadmill could supply. What we want quite as much is something which no formal exercises can supply. We want the sense of joyous activity; we want self-direction and self-initiative, and we do not get these when the child is under orders all the time. In these days of applied physiology we must beware of mechanizing the body: something of the infinite nature of man pervades it, too. All we want is to give opportunity for play, both place and time, and enough supervision to check bullying and other forms of vandalism. Given the opportunity, the restless instinct of the children will secure the adequate exercise of their muscles. Their delight in hallooing will make them shout enough to strengthen their lungs. Never be it forgotten that along with free play there goes a heightened vitality which does not come with formal physical exercises, however carefully chosen. If God gives the instinct, let man give the playground. The time is not far distant when we shall recognize that the provision of playgrounds is at least as necessary as the provision of hospitals, because prevention is at least as good as cure.

I have spoken of the hygiene of the body: it would be easy to take each one of Groos's categories—experimental play, constructive play, nursing arts, acquisitive play, curiosity play, imitative play—and to show how each of these contributes to the hygiene of the mind and of the spirit, contributing some element to the wholeness of the man towards which all education should consciously be directed. This would open up the whole subject of hobbies, which is sufficient for a course of lectures in itself. The very names of the categories suggest interesting educational vistas. Here, again, the wise policy is neither to prescribe nor to proscribe, but to encourage. "I took a good deal of pains with his eddication, sir," said Mr. Weller senior; "I let him run in the streets when he were very young and shift for hisself. It's the only way to make a boy sharp, sir."

Best of all, I should like to treat of the social education of play—an aspect which is coming into increasing importance in our generation of carefully restricted families. "Die soziale Bedeutung des Spiels ist ausserordentlich gross," says Groos. "A child should go," says Judge Parry, "to some good kindergarten presided over by some delightfully bright and pleasant lady, merely to learn the lesson that there are other children in the world beside itself. How important it is in life to learn to sit next to some one you cordially detest without slapping him or her. And yet such a lesson, to be really mastered, should be learnt before five or seven at the latest. After that, it can only be learnt by much prayer and—dining out. At dinner parties, and particularly public dinners, one can get the necessary practice in this kind of self-control; but it is better to learn it when you are young, when alone it is possible to master the great lessons of life thoroughly and with comparatively little pain. Men have reached the position of King's Counsel without attaining this simple moral grace."

This fundamental lesson of social science is learned quite early, but the real comradeship of play comes later, as the following table of Prof. St. John shows:—

GAMES OF BOYS.

Age	Individual Play.	Competitive Games.	Co-operative Group-Games.
1–7	Blocks. Sand. Running. Cutting. Shooting. Machinery.		
7–12		Tag. Hide-and-Seek. Marbles. Ball.	
12–14			Base-ball. Basket-ball. Football. Hockey. Tennis.

It is thus after the age of twelve, as the years of adolescence are coming on, that the social instincts become strong and the boy begins to learn that most invaluable lesson that he must accommodate his own activity to that of others: he cannot win the game alone, however brilliant his play may be, but he may lose the

Digitized by Google

game for his side by his slackness or cowardice or by his failure to co-operate. So he gets some elementary conception of the salient truth that the great results in this world are only attained when men work loyally and heartily together for the attainment of a common end. He learns also that self-restraint which is one of the three virtues which lead up to sovereign power. He learns pluck and he learns how to concentrate his effort; he learns, above all, justice to an opponent, and that the essential condition for corporate action is the strict adherence to law. He must not only play up; he must play the game.

Stolen goals aren't worth a straw;
Honesty's the better law,
Please remember, never jaw,
Play the game!

Lastly, the game gives a chance to the teacher which he cannot get otherwise. If it is true that in play the real self is disengaged, the teacher who does not know his pupils in their play has only a partial knowledge of them. He does not see their real self. This is specially the chance of the young teacher or of the teacher who, like E. E. Bowen, of Harrow, takes a leaf out of Peter Pan's book and refuses to grow old. "Sympathy," says Herbert Spencer, "is best cultivated by habitual participation in the pleasures of others." The master who has learned his lesson of sympathy on the playing field has no difficulty in getting into touch with the central sensorium of his boys. He can lay his soul alongside.

It is thus in the highest reaches that we understand the higher unity, the fusion of these different branches of training which we mistakenly keep apart; for, as Plato says, speaking in terms of Greek education: "Neither are the two parts of music and gymnastic designed, as is often supposed, the one for the training of the soul and the other for the training of the body. The teachers of both have in view chiefly the training of the soul."

The Chairman, in inviting discussion, said that he agreed with the lecturer that games should not be prescribed. He would go further, and urge that boys should not be forced against their will to play any of the recognized games, and that they should be left entirely free to choose or devise their own methods of relaxation. In view of the lecturer's opinion as to the value of fighting, it was interesting to note that the combative spirit as expressed in fisticuffs appeared to be dying out. It was hardly correct to suggest that Milton's life was unenlivened by play. All through the "Tractate" there was an evident love of open air and the country, and the author of "L'Allegro" could not have been insensible to the influence of play.

Mr. Wilson did not think there was anything very valuable in the Tractate on Education, except the definition of education itself, which seemed to be based upon Milton's knowledge of Greek culture. The Hellenic idea of popular culture was that which enabled a man to perform skilfully, justly, and magnanimously all offices, private and public, in peace or war. From such a definition physical education could not be excluded. How could a man perform the offices of peace or war without courage, physical strength, and all that must be cultivated by exercise and games, and not by poring over books? Music and gymnastics were inseparably connected in the Greek idea of education. The Greeks of those early times could not conceive of a healthy mind in a sickly body or a serene soul in an ungainly covering. So that in this old Greek system of education there was the same idea which the lecturer had been putting before them, that physical education should form an integral part of general education. Modern science had confirmed the wisdom of the Greek system, showing as it did the interdependence of the physical and spiritual or intellectual to be so intimate that one could not be dealt with alone. If physical exercise were regarded as an integral part of education, there must be a certain amount of drill and management as in intellectual education.

Miss Franks thought that joy formed part of development and growth in education, and there could be no progress without it. There could be no joy without spontaneity. But there were various stages, and the amount of spontaneity varied accordingly. In the earlier stages, children were generally unwilling to take the initiative and welcomed direction. Imitation followed, and, finally, they were led to assume the initiative.

Dr. Hayward doubted whether it was safe to draw a distinction between work and play. He looked forward to the time when schools would be open-air schools, or largely so, and the curriculum so alluring in itself that play could be arranged within it—constructive games dealing with the material of the curriculum, and what might be called heuristic games. A more important distinction was that between interest on the one side and drudgery on the other. Mr. Paton himself was one of the foremost advocates of drudgery, believing that a dull subject might be especially valuable because of its dullness. In his (Dr. Hayward's) opinion the only drudgery which was of any use was that which led to something valuable in itself. When education came to be regarded as a means of satisfying the interests, desires, or passions, the distinction between work and play would largely disappear. It was fallacious to suppose that the training of a boy's pugilistic instincts would develop his spiritual efficiency, or to assert, as Professor Armstrong had done, that ability to weigh quantities must be followed by the power to weigh opinions. It was only by means of direct instruction that boys could be made to understand the relation between physical bravery and moral courage.

Mr. Addis said play and work were not different entities, but merely different methods of approach to activities, and these might be utilitarian or non-utilitarian. The method by which a utilitarian end was approached was work, and the method of appoaching non-utilitarian ends might be called play. A man who was playful as an adult had surely been playful in his youth, and Milton must be judged from this standpoint. He entirely concurred in the lecturer's view that playgrounds were necessary as a prophylactic against the hospital, and also that the modern prevalence of small families made it necessary for teachers to supplement the limited opportunities afforded by the home for corporate enjoyment. Teachers were agreed that, generally speaking, children should be left to play by themselves, but there were occasions when the supervision of adults was necessary. The question of the provision of playgrounds for the less fortunate children was one for the philanthropist rather than for the schoolmaster.

Miss Penstone thought that it was important that games should produce a tonic effect. Kindergarten teachers were offenders in this respect. They often laboriously endeavoured to teach children games which were apparently suffered rather than enjoyed. A mass of material should be provided with which children could amuse themselves quietly. The child liked to have a chosen task and to use its material and go on tranquilly with those things which attracted it, and thereby a habit of concentration was formed which might flow over into some other activity of life.

Mr. Beckett thought that the teacher should show sympathy with the children in their games, and encourage them to join in those which required the exercise of physical bravery. Games should form part of the curriculum. In all games there must be a sense of joyous activity, and this could be best secured by letting the children choose their games.

Mr. Thorne, giving his experience of a club for working girls, said that he knew of nothing so effective as morris dancing for securing joyous activity. The dance was practised in conjunction with old English folk songs. Those responsible for the club thought that the reason for the popularity of the morris dance was that it was an expression of English life and character.

Mr. Paton having replied to the remarks of the several speakers,

Mr. Rushbrooke proposed, in cordial terms, a vote of thanks to the Lecturer, which was carried by acclamation.

MEMORIES OF A GIRLS' HIGH SCHOOL.

'TIS THIRTY YEARS SINCE.

By Constance M. Spender.

High-school girls are now the rule rather than the exception. Indeed, they must comprise more than two-thirds of all the girls who go to secondary day schools in England. All of us number high-school girls amongst our acquaintance, and there are many provincial towns where high schools have entirely swamped the private and inefficient day schools, or "select academies for young ladies," which formerly reigned supreme. Those private schools which have survived have been levelled up so much by competition with the public schools that they are often quite as good and efficient.

Many women who read this paper will agree with me in holding that their high-school days were almost the happiest times in their lives, and that no days which have come to them in after life have been more full and varied with earnest work and eager play. Any girl who has been at the head of a high school, or one of the prefects, will also acknowledge that she has never been a more important and powerful member of society since the days she helped to rule her little school world to the best of her ability. She was taught to feel that upon her efforts and influence depended the tone and the well-being of the rest of the school, and she caught a public feeling which should never desert her. A girl who has had such a training ought never to be a helpless and inefficient member of society, and this fact is very widely recognized. The secretary of a large and powerful committee of women was heard to remark a short time ago that the most efficient and businesslike members of the committee were invariably the women who had received a public-school training.

The high school of the present day has not been evolved all at once: it is the product of more than thirty years of careful work. There has been time to test different theories for the education

Digitized by Google

of girls, to correct mistakes, and to learn through failures. For this reason, it may be interesting to the high-school girl of the present day to hear what a high school was like thirty-two years ago, from one who was a child of twelve years old on the day it opened. The school still flourishes exceedingly in its original building, though now it has been enlarged in all directions, in order to afford room for the growing numbers and the many organizations of a healthy school. I can hardly recognize my old form rooms now as I wander over the old house, for improvements have taken place on quite a colossal scale. Walls have been knocked down, ceilings raised, and cloak-rooms built. Several classrooms have also been thrown into one to form a central large assembly hall with noble proportions; and last, but not least, a very large playing field has been annexed.

In 1875 the fifty-two girls who met for the first time to work together were accommodated in a spacious private house; but the hall was narrow and many of the classrooms were small, dark, and inconvenient. Such premises would hardly have been chosen in the present day; yet they seemed quite palatial to many a girl accustomed to the cramped quarters of a small private day school. I well remember my awe and admiration of everything. Our Head Mistress was young and pretty and armed with a quiet, dignified authority, in spite of her shyness of manner. I lost my heart to her at once when she shook hands with me and entered my name in a large book, and to the end of my school days I ever remained her faithful slave and warm adherent. We were collected from many different systems of education—from home teaching, from private governesses, and from private schools and boarding schools. One thing we all possessed in common, and that was ignorance.

A paragraph from the Commission of Inquiry into the state of Girls' Secondary Schools in 1870 will best explain this. It spoke of "slovenliness, want of method, want of thoroughness, undue time given to accomplishments, and these taught in a slipshod manner," as universal failings. Of course, there were notable exceptions. Amongst the fifty-two girls who were awaiting examination that day there were two who had been grounded thoroughly by a careful father, and several who had had the advantage of really good governesses. My own case was a very typical one. Though I was only twelve years old, the high school was to be my fourth essay in school life. I had been taken away from one day school and from one boarding school because I was learning nothing at either; but my third school, a private boarding school near London, had filled me with a great desire for knowledge. The Head Mistress was a born educationist, and to the present day I owe her much. She filled us with an enthusiasm for English literature and taught us Latin in a most careful and methodical manner, though we used a very old-fashioned Accidence.

An anecdote about my very first school occurs to me in this connexion. We were a class of eight-year-olds, comprising three boys, myself, and one other girl, and we had a master for Latin. In those days masters were generally decayed professors with a very small smattering of knowledge. They were the rocks upon which private schools were generally wrecked, but they sounded grand; and parents had a way of valuing a school according to the number of masters employed. After learning Latin for a year with our master, not one of us could say the first declension. I quote this as a feat in education which must be almost unsurpassed, for in that class there was a boy who afterwards became a Balliol scholar.

The great event of my first high-school day was the entrance examination paper. We were divided into three sections according to age, and papers were given us of varying grades—(1) for girls over fourteen, (2) for those under fourteen, and (3) for those under ten years old. Only a short time ago I was allowed to see some of the answers to the easy questions set to us upon that autumn day of 1875, and I was utterly appalled at the general vagueness and want of accuracy. In answer to a question about Julius Caesar, one girl wrote: "I never heard of him, but I can tell you all about the Duke of Wellington." About twelve girls wrote nothing at all that day, but sat gazing hopelessly at their papers. A girl of seventeen thought that the Wars of the Roses took place in the reign of Queen Elizabeth, and that George IV. planned the Reformation. On the whole, we did better in history than in most other subjects in spite of these lapses. We were required to write out the reign of a king. I remember choosing William the Conqueror because there is a solidarity about the date 1066, and it was also possible to describe Domesday Book and the Curfew Bell at some length. It took us quite a term to correct our own mistakes in history, and I remember that we were not allowed to study any special period until we knew our outlines and general scheme.

If the history was shaky, the arithmetic was wild. The examiners who correct the beautifully clear work in arithmetic turned out by even stupid girls in these latter days can form no conception of the general muddle of the best of our papers. Many girls of fifteen and older could not multiply correctly by two figures. At that period arithmetic was a purely experimental science to me. I had worked by rule of thumb up to discount, and could do good automatic work if nobody disturbed my mind by inquiring the reasons for anything that was done. At one of my earliest schools nobody who taught us knew any arithmetic at all. We used to do our best with Colenso by ourselves, and were severely punished if we did not produce the right answers to involved problems. We used to work backwards from these answers by a system of ingenious and intricate guesswork until the desired result was obtained. I think one can forgive the high schools who made almost a fetish of arithmetic for some years. I know of one such school where it was taught in every form on every day of the week until work of the highest order was obtained.

The geography papers proved that nothing was known beyond the names of capitals of European countries. One or two girls who had evidently been brought up on those archaic books, "Far Off" and "Near Home," were positive that Roman Catholics were pagans, worshipping idols. I also gather from a survey of these answers that the river Danube waters Denmark, that London is on the Ouse, and Lapland an island in the Arctic Ocean.

The literature was, on the whole, the best known. Indeed, as far as I remember, we did not do any literature the first term, but spent all our time trying to make our insecure foundations a little safer. Grammar and parsing proved full of pitfalls to the unwary that first day, and many of us had never heard of the analysis of sentences. In French the standard was very uneven. Only one girl out of the whole fifty-two could write the verb *aimer* quite correctly. At the end of the first term it was the proud boast of the French teacher that everybody had performed that feat down to the youngest child that learned French.

Many of us felt very sad and subdued as we handed in our examination papers. We were allowed to spend the rest of the morning in wandering over the house, finding our way about it, and in making friends with the little band of teachers who had been gathered together for our edification.

One of the great difficulties of the early high schools was the dearth of efficient teachers. The supply from Cheltenham College and the North London Collegiate School was necessarily limited. There were no training colleges, and it would have been impossible to insist upon a University degree. When I read the advertisements for high-school teachers now, insisting on the highest qualifications for even the lower forms, I smile when I remember that our Head Mistress, capable as she was, had only passed the London Matriculation in the Honours Division, and that the other teachers were considered very fully qualified if they had passed the Senior Oxford or Senior Cambridge Local Examinations.

All the same, they were a singularly efficient staff, and their enthusiasm was most infectious. It was in our hands to build up and form a school that might become great. We were all fellow-workers together in what might eventually prove a great work. That was the key-note of the address after prayers, upon the second morning, when our Head gathered us all together for the first time. "Let us see to it," she continued, "that we build carefully, making every foundation sure; let us learn to be accurate and sincere. If one member shirks her duty, all the rest will suffer." As I recall the scene, I can see the golden September sunshine once more lighting up her earnest face and bright hair, and I remember that I felt thrilled and as if I had caught a glimpse of a new life. Several of my old schoolfellows have agreed with me that upon that day they seemed to grasp a new ideal and to be conscious of a desire to do their utmost; but a great many girls did not even dimly comprehend the meaning of her words.

Some of us listened with beating hearts to the class-lists, which were then read out. Classes were not called "forms" until I had been at school about two years. Upon that occasion there was no first class, just as it sometimes happens that for a time there is no sixth form at a school. In the second class there were about a dozen older girls. Most of them were there, not for

Digitized by Google

proficiency, but for age. Such a top form would be the despair of any well taught school now, though there were at least two clever girls in it. I found that I was placed in the third class with fifteen others, and I was very lucky to be there, for it was upon this class that every effort was concentrated. We were mostly young enough to be trained into a good sixth form within three or four years. The Head Mistress gave much of her time to the third class, and we had a Class Mistress who was a great disciplinarian, though not a very great teacher. The two years I spent in that class are full of pleasant memories and also of great surprises. We worked extremely hard, and there was no time limit for our preparation. Nor were there any games, and hardly anything in the shape of gymnastics. Twice a week we had arm exercises, but that was all. Even that was often crowded out for some extra lesson, and no high-school girl of the present day would be allowed to lead the sedentary life that many of us drifted into. I remember so well our delight in our new desks and new books and our wonder at the time-tables, which seemed so marvellously to map out our time in school. Above all, it was such a joy not to be incessantly scolded and nagged at whatever one did. There were rules which could not be broken with impunity, and there was a minimum of marks which had to be gained for each lesson. If that minimum was not gained the lesson was returned, and had to be done over again in the afternoon. Some of us found it very slow work to learn to be thorough and not to scamp. Personally I had so often trusted to quickness of wit to get me through somehow that I was bound to have lapses. One day is for ever graven on my mind. The lesson was a fairly easy French Grammar one. To our horror it was announced suddenly that the Head Mistress would take it that morning, and many were the hasty and despairing glances at our books before she entered. We had all got into the way of trading on the easiness of the French teacher and getting through somehow; but it took the Head only five minutes to discover that only one girl in the class had looked at the lesson. I shall never forget her scorn of the whole class for shirking. She said very little, but what she did say was a revelation and filled us with shame.

I used to have the joy of doing Latin twice a week with the Head Mistress by myself. We used to end the lesson with talking, and I still remember the substance of many of those delightful talks.

It was inevitable that the task of building our school should be a slow one, and there were some unusual difficulties. Many of the elder girls resented the new methods and were too old to learn accuracy. Then the parents often put great obstacles in the way. The parents of the present day are much less carping and critical and much more appreciative. There were absolutely piles of letters of excuses for lessons omitted brought every morning, and there were outside enemies to the school. Indeed, it had to run a fire of adverse criticism from all quarters. The girls who attended the earlier high schools were often made to feel rather a marked class. The system was on its trial, and they were a very small minority. They were sometimes reminded of this fact in very unpleasant ways. They were suspected of being independent, mannerless, and rough, and certainly this was a danger. After the excessive supervision of a private school, where nobody was left in peace for long, it was a comfort to scamper home from school without gloves. In those first days, indeed, the life outside the school was not sufficiently considered or controlled. One was allowed to walk home with any one one liked, and several of us who adored a masculine young teacher imitated her stride and longed for short hair and thick, hob-nailed boots. At the same time there was much less giggling and affectation than there had been at any of the private schools I had been to, and extremely little scolding, though the discipline was somewhat stern.

A girl who wrote a note to a boy in the school at the corner of the road was asked to be removed by her parents; and several cases of cheating during our first examinations were visited with public disgrace. Looking back upon those first school-days, I often think that it was all rather hard upon the elder ones and upon those who had nearly finished with school. To them the new methods were strange and distasteful, and they lived in a whirl of new ideas. They must often also have been aware that the interest was centred upon the younger ones, who would be the future props of the school. Those younger ones ran a certain chance of becoming prigs. They had no games to divert their enthusiasm, no Dorcas Committees, no musical meetings, or prize-givings. All their interest had to be focused on their work, and all work and no play turns Jill into a very dull girl. Again, there was too much adoration of the teachers to be entirely healthy. I remember quite well spending much time out of school hanging about the road on the mere chance of meeting my form mistress, or some one who would give me a smile or a look. The healthy rivalry of games has now absorbed a great deal of this sentiment and converted it into a good public feeling.

The modern high-school girl is unconscious of a system. She has probably never questioned the fact that she has a right to the best of teaching. She has had it always, and all her friends have had it, too; for there is not a private-school room or small secondary school in the land which has not been levelled up by the new standards the high schools set thirty years ago.

In fact, high schools are so much an accomplished fact among us, and play such a large part in English educational life, that we are apt to forget the names of some of the pioneers who founded them. All honour to Maria Grey, Emily Shirreff, Frances Buss, and Dorothea Beale! May we never forget how they laboured in the cause of women's education!

REGISTRATION OF TEACHERS.

QUESTIONS IN THE HOUSE OF COMMONS.

Teachers' Registration Council.

In the House of Commons, on March 22, Sir Philip Magnus asked the President of the Board of Education whether, having regard to the statement in the recently issued Report of the Board of Education that the Board cannot advise His Majesty in Council to issue an order constituting a new Teachers' Registration Council until they are satisfied that it will be representative of the teaching profession and not of certain sections of it only, he will state whether, in order that the Council may be representative of the teaching profession, as intended by the terms of the Administrative Provisions Act, it must necessarily include teachers of gymnastics, of shorthand, and of book-keeping, referred to in White paper (Cd. 4402), to whose associations the scheme for a new Teachers' Registration Council, submitted to the Board, was forwarded by the Board for consideration; and whether, in the event of any such sections of the teaching profession being unable to agree as to the constitution of a Teachers' Registration Council, he intends to postpone indefinitely any recommendation for the formation of a Council.

Mr. Runciman: I do not think it is possible to discuss by means of questions and answers what bodies should or should not receive representation on a new Registration Council, and I can only refer the hon. member to the answer which I gave on the 9th instant, to which as yet I have nothing to add.

Sir Philip Magnus: Is the right. hon. gentleman able to answer the question which I put down as to whether this Registration Council will necessarily include teachers of all these special subjects referred to in the White paper issued by the Board of Education?

Mr. Runciman: I have answered that question several times. I can only add that, as I have said on previous occasions, a Registration Council cannot be considered representative if it excludes large sections of the teaching profession.

Sir Philip Magnus: May I ask whether the Board of Education are opposed now, as they certainly were in 1906, to the reconstitution of any Registration Council?

Mr. Runciman: If the hon. gentleman will put a question down on the paper, I will give an answer.

Training for Secondary Teachers.

Sir Philip Magnus asked the President of the Board of Education whether, seeing the movement in favour of providing systematic training for the teachers of secondary schools is stated in the Report of the Board of Education to have received, so far as women were concerned, some stimulus from the regulations of the Teachers' Registration Council, and seeing that the Head Mistresses' Association, the Assistant Head Mistresses' Association, the College of Preceptors, the Teachers' Guild, and the National Union of Teachers, each of which bodies includes a large number of women teachers, have petitioned the Board in favour of the reconstitution of the Council, now in abeyance, he will take steps to accelerate the formation of the Council so that it may continue to give the much needed stimulus and encouragement to the training of teachers for secondary schools.

Mr. Runciman: The point referred to was made with reference to the former Register, the principal feature of which was the

Digitized by Google

registration of secondary teachers on a separate list (known as Column B) from elementary teachers. That form of Register was, it is believed, scarcely in conformity with the Act. I doubt whether the same stimulus would be supplied by any Register in which the names of all registered teachers must be "in alphabetical order in one column." This point was fully dealt with on page 21 of the White paper (Cd. 4185) issued in July, 1908. I am informed that some people, whose opinion is entitled to respect, think that a more effective stimulus for the training of secondary teachers, men as well as women, will be derived from Section 15 of the Board's Regulations for secondary schools.

REVIEWS.

The Yeast of National Feeling.

"The Cambridge Modern History." Vol. XI., *The Growth of Nationalities.* (16s. net. Cambridge University Press.)

The present volume, with more than a thousand pages (over a hundred and fifty of them devoted to bibliography), covers, roughly speaking, a quarter of a century. The time "is remarkable as being an epoch of violent international and civic disturbance interposed between two generations of almost unbroken peace—the period 1815–45 and that from 1871 to the present day," and "it is also, from the point of view of universal history, the most important period since the Congress of Vienna." The explanation is embodied in the title of the volume: the artificial arrangements of "sovereigns and statesmen" are burst and broken by the growing forces of national feeling and natural requirements. The opening chapter takes up the tale of Great Britain, and, did we not recognize the necessities of space, we should have wished it much more detailed and much sharper in outline. It deals with the deplorable state of the country, the potato famine and coercion in Ireland, and the repeal of the Corn Laws and of the Navigation Laws—a story with the most important bearings upon prominent questions of the present time. But the condensation crushes all the sap out of it. Later we have the story of the Crimean War, in which a policy of drift and division of the Cabinet entangled the country, and of Parliamentary reform, replacing (in form, at least) the government of the middle classes by the government of the people. More essentially important than these two chapters are the matters crammed summarily into a single paragraph of three-quarters of a page enumerating the material results of home and foreign trade, the practical applications of great inventions, and the prudent management of the national finances—records of vigour and growth "far better worth recording than the Parliamentary conflicts of rival statesmen" or the dodges of the diplomatic chess-board. The final British chapters are concerned with India and the colonies. Lord Durham's Canadian policy is admirably explained in origin, principle, and operation: "Perhaps Durham himself, had he been praised for the originality of his ideas, might have replied that not he, but Bentham and Fox—names not usually associated with Imperial unity—were the real inspirers of his famous Report and the true legislators for generations yet unborn." But the main point is the efficiency of the principles. The progress of events in South Africa and in Australasia is also instructively outlined. In the Indian section the military operations, which are all too numerous, are not effectively described, partially by reason of the limits of space. It is a very suggestive and condemnatory remark that "India was startled by the news" of the outbreak of the mutiny: it places the heaven-born Service in a rather awkward predicament. The causes of the rising are by no means efficiently examined, and when the writer says "it was reported that the cartridges, smeared with the fat of sacred cows and the lard of polluted pigs, were to be bitten by Hindu and Mohammedan alike," we cannot but say that history requires him to state explicitly the ascertained facts of the case. Again, admitting ample cause, one naturally asks why the mutineers got head at the first points of outbreak, and why the movement was not instantly stamped out; but the writer ignores the obvious question, and betrays history by a false patriotism or a false consideration for weaklings in authority. "The transfer of Government to the Crown—with its necessary consequence of Parliamentary control—was," no doubt, "an epoch in Indian history"; but the expression should not disguise the fact that the Government had been practically in the hands of the Crown for more than a generation before.

The interests of Great Britain again come up in connexion with events in the Far East, on which there are two important chapters treating of China and Japan. Here, too, occur unfortunate reticences—inevitable, apparently, when officials or ex-officials essay to write history. Thus the writer tells us how the American House of Representatives observed that the Opium War of 1840–42 "had originated in the refusal of the Chinese Government to receive Ministers appointed by the British sovereign and in the rejection and expulsion with insult and indignity of Lord Napier," &c., adding that "this American vindication of British policy is remarkable." But he neither corrects the statements nor dissents from them, nor even expressly agrees with them. The reader would, indeed, learn from a previous page how a Minister had been sent out on a "grievous misunderstanding" of the mind of the Chinese Government; but he must go elsewhere to discover that Lord Napier himself was amazed that his impudence was treated by the Chinese with an amount of forbearance absolutely ridiculous to the Western mind. "Four edicts," he wrote to the Home Government (August, 1834), "have been let off against me for landing without a red chop, or permit. I have been ordered off and entreated to depart; yet with all this they have not yet taken me and sent me down the river. Suppose a Chinaman, or any other man, were to land under similar circumstances at Whitehall, your Lordship would not allow him to loiter as they have permitted me." Such insolence is all but incredible, even with the man's own confession before one. In like manner the writer expresses no opinion on the seizure of the crew of "the British *lorcha* 'Arrow'" in 1856, and leaves the reader under the impression that it was a high-handed act of Chinese aggression. Why does he not explicitly admit that there was nothing British about the *lorcha* except her captain (who was not on board) and her flag (which Sir John Bowring testified "she had no right to hoist"), and that the Chinese were perfectly right in their action? Such reserves do violence to history and put regrettable blots on the pages of this great work. Otherwise the chapters are very convenient and instructive narratives.

The progress of affairs in France is traced in ample lines and with conspicuous ability, mainly by Prof. Emile Bourgeois, of the University of Paris, the period of Napoleon III.'s personal Government of the Empire being adequately handled by M. Albert Thomas and the Franco-German War by Major F. Maurice. Dr. Ward, Master of Peterhouse, deals most capably and luminously with the Revolution and the Reaction in Germany and Austria, while special aspects are ably presented by three German or Austrian professors. A very interesting sketch of the achievement of Swiss Federal Unity is furnished by Prof. Œchsli, of the University of Zurich. The story of Italian Unity is told by the late Prof. E. Masi. Ample attention is also bestowed by competent authorities upon the political movements in other countries of Europe—in Spain and Portugal, in Scandinavia, in Holland and Belgium, in Russia and in minor Slavonic communities. There is also a very able and well informed chapter on Rome and the Vatican Council. Several attractive chapters review the progress of literature in various countries. The present volume is equal to any of its predecessors in ability and interest.

What is Man?

Man's Origin, Destiny, and Duty. By Hugh MacColl, B.A. (4s. 6d. net. Williams & Norgate.)

Threefold, judging from the title, this book is in reality fourfold, not to say manifold. For it deals with the nature of man and also of the Infinite, not to mention the intervening "superhuman." But, like all Mr. MacColl's other books, it is eminently readable, and stimulates thought of a high kind. Moreover, it is distinctly favourable to religion, unbounded respect being given to the Will of God, "without which no law of Nature is valid—not even the law of gravitation."

The first chapter is devoted to "The Soul and the Body." We should have preferred the use of "human spirit" instead of "soul," especially since the Revised Version of the New Testament translates ψυχή so constantly by "life"; and we also desiderate in it the function of willing as well as of feeling; whereas Mr. MacColl, in his preface, speaks of "the soul (which I simply define as *that which feels*)." Strange to say, he elsewhere states the following as one of the questions with which he deals: "*Where is the Ego, or Soul, that wills?*" The *ego* is undoubtedly a sentient power, capable of reacting on the outer world, which supplies it with objects for feeling and motives for willing.

Digitized by Google

Otherwise, man would be the passive victim of every impression produced upon him, and have no responsibility. Mr. MacColl proves very clearly that feelings which seem to be at some remote part of the body are in reality at the very seat of thought; and he thus concludes: "Since, then, the Soul feels, and the body (the brain not excepted) does not, there is no escape from the conclusion that in all sentient animals the Soul and body are two separate entities." But when he goes on to say that, as an entity, "the Soul, in its higher developments, thinks and reasons," he is attributing to the "Soul" what we feel unable to attribute to the "human spirit"; and we are convinced that he greatly underrates the capability of the brain as an idea-framing organ. Everything connected with the elaboration of ideas, and the storing of them in memory, is carried out by the brain. Hence the decay of memory, and reasoning power generally, as age advances. The will to think, and some exercise of choice, as the result of thought, in the mode of our reaction on the world around, is that which, in addition to feeling, we can alone attribute to the sentient power. Thought goes on in spite of our will, for to "think of nothing" is oftentimes one of the most difficult achievements.

The chapter on "The Superhuman" is very forcible, but must be read in its entirety to be properly understood. St. Paul's warning, "But who art thou, O man?" not infrequently comes to our mind, to be shortly allayed by the cogency of the argument as it proceeds. And it is a curious circumstance that the present writer, by aid of the same publishers, gave vent, forty years ago, to much the same proposition as the first following:—

Moral evil, the evil called wickedness, is a necessary, indispensable factor in the upward development of the sentient universe—*e.g.*, the knowledge of evil as well as of good (so as to be able, with a full understanding, to choose the one and reject the other) being essential to true happiness—that is, to Godlike happiness—He instituted at the outset the law of virtuous self-denial—a law to which our nature was not equal, at least when allured by deceit, that He might give us every blessing in Christ. (See "The Spirit Controversy," 1869, page 69.)

The chapter on "The Infinite" deals with the subject as a devout mathematician might be expected to deal with it. But, in treating of Time and Space in this connexion, there is no reference to Kant's "Critique of Pure Reason," and the masterly account of the matter therein given—namely, that time and space are forms of thought, neither of them subsisting of itself, even in relative magnitude. Nevertheless, as Kant asserts, they are "two sources of knowledge, from which, *a priori*, various synthetical cognitions can be drawn," as in pure mathematics. There is much in the chapter on "The Foundation of Ethics" that we should like to quote: "An atheistic system founded on avowedly human authority alone will never command the respect of the average man." There is "one Supreme Ruler over all. His and His alone must be the final authority; to Him and Him alone must be the final appeal. What *He* approves must, by express definition, be *right*. What *He* disapproves must, by express definition, be *wrong*."

Mr. MacColl does not disbelieve miracles. Nor does he draw the distinction, so often drawn, between the miracles of Christ and scientific wonders of the present day—namely, that the latter can be repeated and verified, whereas we have to take the former on trust. There was no want of power on Christ's part to repeat his miracles: "He healed them all" are words used more than once; the fact being that he knew how, whereas we do not. Yet our author says: "Deplore it as we may, it is an almost universally admitted fact that among all classes belief in the Biblical miracles, those of the New Testament not excepted, is fast declining." And he tries to show how they can be done without, which is very remarkable, considering the lofty terms in which he elsewhere speaks of Christ and Christianity.

The chapter on "Evolution and Design," and an appendix containing a reprint from the *Hibbert Journal* of the author's paper on "Chance or Purpose," are fine specimens of cogent argument; especially where he details an instance, capable of verification by schoolboys, of the combination of chance and design, showing that "chance, working within the limits of prescribed conditions, can be made to evolve with almost perfect accuracy in every detail, foreseen, designed, and predetermined figures of various forms, sizes, and shadings."

There are, besides, chapters on "Man and the Lower Animals," on "Pseudo-Evolution," and on "The Fallacies of Haeckel," which are all of exceeding interest, but need to be read in full to produce their true effect. Indeed, we could wish this book of wise and earnest thought were placed on the shelves of every public library in the land. It may be fanciful in parts, as where it supposes the *ego* to be at a distance from the body which it is generally held to inhabit. But, as a whole, it is worthy of warm commendation, and will harm no one. There is a breadth and breeziness about it which will act as a tonic to the reader, and at least make him think more kindly of those who differ from him.

We could have wished, however, that a chapter had been devoted to the formation of habit, which is one of the chief ethical functions of the sentient power, and which seems to occur largely in the cells of the brain, to which afferent nerves bring sensations and from which efferent nerves proceed to the particular muscles concerned in the reaction. The track between the two sets of nerves seems doubtful for a while, but is strengthened by repetition and becomes well defined in time, like a path across a field. In this way actions which at first are voluntary, and the result of conscious effort, become well-nigh automatic, and such may be good or ill. D. B.

GENERAL NOTICES.

CLASSICS.

M. Tullii Ciceronis De Finibus Bonorum et Malorum Libri Quinque. Edited by W. M. L. Hutchinson, sometime Fellow of Newnham College, Cambridge. (8s. 6d. net. Edward Arnold.)

A complete edition designed to "enable what is, on the whole, Cicero's best philosophical work to be read and appreciated not only by students at the University, but by sixth-form boys." The interest is both historical and practical, and the difficulty, as usual, is mainly in the first steps. The text of Madvig's latest edition is followed, with the exception of a few readings, mostly Müller's, which are set forth in a brief appendix. A very careful and instructive introduction outlines the philosophical position and stimulates the reader to further inquiry. Arguments are prefixed to the several books, showing concisely and clearly the nature and disposition of the contents and substantially elucidating the exposition. The notes, if not numerous or extensive, are directed to judiciously selected points, and will be found to be helpful where help is really desirable: a few, requiring space beyond the limits of a foot-note, are usefully appended to the text. The volume is spaciously printed and agreeably got up. It is a most competent and welcome edition of an extremely interesting work.

Basis Latina. An Introduction to Latin through the Language to the Literature. By Edward Vernon Arnold, assisted by Walter Rippmann. Part I., Introduction, Syllabus, Grammar, Notes, Vocabulary, Index. (1s. 6d. Dent.)

What knowledge of the Latin language is to be expected of boys and girls who leave school or give up the study of the subject soon after they have reached the age of sixteen? What knowledge can they acquire in the time available which will be of permanent value to them? The present volume, while an attempt to promote a solution of some important questions connected with the study of Latin in secondary schools, is most directly addressed to answering these two questions, and particularly the latter of them. The vocabulary is selected so as to present the words that are "most important to a beginner," though we are not so sure about the propriety of giving "rather more attention to those words which are more common in conversation than in classical literature"—a point of inconsiderable detail, however. The accidence is sensibly limited by the vocabulary and otherwise, and here there is room for wider disagreement on details. Syntax, of course, is involved in manifold difficulties, which, we think, are here met on sound lines of approach, and a beginning is attempted in comparisons of ancient and modern idioms—a process dependent on the acquisition of the pupils. The grammar and other notes contain much that is suggestive, as well as points that are directly useful. The work appears to be a sequel to "Forum Latinum" (same author and publisher), and "is intended as a companion book, taking the place of a grammar, for the second, third, and fourth years of the school Latin course." It is specially important that teachers of Latin should not only examine the book in point of theory, but also submit the course to the test of practice.

The trustees of the British Museum have published *A Guide to the Exhibition illustrating Greek and Roman Life* (1s. 6d.). "In this Exhibition an attempt has been made to bring together a number of miscellaneous antiquities which hitherto have been scattered through the Department" of Greek and Roman Antiquities, "in such a method as illustrates the purpose for which they were intended rather than their artistic quality or their place in the evolution of craft or design." The purposes of the various articles and figures fall into more than twenty distinct groups, presenting together a most instructive, if not at all points complete, view of the public and private life of the Greeks and the Romans. The members of the departmental staff have co-operated in the work. The descriptions and explanations are scholarly and lucid, though necessarily concise; and useful references are appended to the several sections. There are 242 illustrations, judiciously chosen and admirably reproduced. The volume is a most instructive companion to the Exhibition.

MATHEMATICS.

Graphics, applied to Arithmetic, Mensuration, and Statics. By G. C. Turner, B.Sc. Lond. (6s. Macmillan.)

The author has made a close study of the subject and is possessed of experience in teaching. Accordingly, it may be anticipated that this text-book will prove an efficient help to a large class of students of pure and applied mathematics. Written without reference to any special examination syllabus, the work has admitted of more elasticity with regard to arrangement and treatment than is in many cases possible. At the same time, by selecting from its contents courses varying in standard of difficulty and sufficiently clearly indicated, the volume may be adapted to the work of secondary schools, to the requirements of candidates preparing for military and naval examinations, and to the courses of reading suitable both for students in technical colleges and for those whose object it is to obtain the degrees of the University of London. A very large number of problems are fully worked, for the purpose of illustrating principles and methods of solution, but the reader is supposed to carry out the graphical constructions independently and to verify his own results by comparison with the diagrams that accompany the text. Accuracy to three figures is the standard generally maintained and regarded as essential. The section devoted to the discussion of the equation to a straight line needs revision, for the old error occurs—namely, that of ignoring the *sense* of lines, after accurately defining it and dwelling on its significance. Great care has evidently been bestowed on the preparation of the original drawings required for the numerous diagrams and also on the reproduction of them. Frequent sets of exercises afford abundant material for practice in the working of problems.

Concurrent Practical and Theoretical Geometry. Part I. By W. J. Potter, M.A. Cantab. (1s. 6d. net. Ralph, Holland, & Co.).

In Part I. Mr. Potter discusses the substance of Euclid's First Book—as far as Proposition 34—and also some important additional matter. The mode of treatment is thoroughly modern, and has much to recommend it. The way for each new advance in the study of the theory of geometry is prepared by means of suitable experimental work, interesting in itself; then the proposition under consideration is formally proved; and, finally, the truth established by the demonstration is applied so as to deduce further facts. The course of instruction, of which the original scheme has been modified to meet the demands of experience, has stood the test of years in one of our well known schools. The manner in which the writer deals with the subject of some elementary loci is satisfactory, for he is not, like many authors, content merely to show that all points lying *on* the locus satisfy the given conditions; he also proves that no point *not on* it will satisfy them. The demonstrations of the propositions are good and well arranged, but the tabular form adopted for setting out the work is, nevertheless, open to adverse criticism, since young students are apt to waste time in the excessive ruling of lines, and often the mischief is carried still a stage further by the employment now of black and now of coloured ink.

ENGLISH LITERATURE.

The Arthur of the English Poets. By Howard Maynadier. (6s. net. Constable.)

The work has grown out of a course of lectures at Harvard University and Radcliffe College. It needs no argument to persuade one that the stories about Arthur are worthy of study; and it is rather surprising "that there exists in English no history of the Arthurian legends at once accurate, well-proportioned, and readable." Mr. Maynadier takes possession of the vacant field. He thinks that, on the whole, we may believe in a real Arthur, "probably not of royal blood," but "only a brave leader, perhaps one of considerable military genius, though we may suppose of comparatively slight civilization, a half-barbarous chieftain, attached to the party of the Britons who had viewed with joy the departure of the legions" of the Romans in the fifth century. He seeks to trace the evolution, hypothetical and historical, of the Arthur of popular story. Some three centuries after Arthur's victories, "the so-called history of Nennius shows us that a romantic hero-story of Arthur had got started among the British Celts"; and more than three centuries after that, Geoffrey of Monmouth started Arthur's literary fame on traditions gilded with romance. Mr. Maynadier then discusses the legends as they have been moulded in literature from Geoffrey down to Tennyson. He has "not sought to advance new theories regarding the origin and development of the Arthurian legends, though here and there may be found some new suggestion"; his purpose has rather been to select what seem to him "the sanest of the frequently conflicting opinions on the Round Table stories which students of medieval literature have held, and to present them clearly," so as "to indicate the general tendencies of Arthurian literature in the English world from its first appearance to the present." Mr. Maynadier writes with ample knowledge, with trained critical faculty, and in simple and agreeable style. Every chapter is full of interest and charm. As to Tennyson's "Idylls," he thinks, "it is not too much to say that, for their melody, dignity, beauty, meaning, and human interest, they present the huge conglomerate mass of the Arthurian stories in their noblest form." "It was not easy to make the Arthurian stories over into a poem which, modern in spirit, should keep the old incidents and the picturesqueness of the mediæval romances. But Tennyson has succeeded in writing his score so that the horns of his Arthurian Elfland, always distinct whether faintly or loudly blowing, are in harmony with all the new instruments in the mighty symphony of Victorian England."

English Pastoral Drama, from the Restoration to the date of the Publication of the "Lyrical Ballads" (1660–1798). By Jeannette Marks, M.A. (Wellesley), Associate-Professor of English Literature, Mount Holyoke College. (5s. net. Methuen.)

"As an indicator," the author thinks, and rightly, "this work should be of value. It covers the ground from the reopening of the theatres to the natural death of play-writing and the incoming of novels; it exposes the fundamental weaknesses of dramatic conception during the Restoration and discusses a past of vital beauty for the pastoral, and then, by means of some two hundred plays, it follows, often wearily enough, through triviality, cheapness, and vulgarity, the complete degeneration of the dramatic pastoral mode." The origin of the pastoral is examined, and the development of the pastoral drama is traced; definitions of the pastoral are reviewed, involving a consideration of the nature and scope of the pastoral literature and the themes of pastoral poetry; the stage setting is presented; and a large number of the more important and typical pastoral plays and operas are analysed and their significance estimated. All this may be regarded as an essay based upon the final section of the book, which consists of a very considerable bibliography of Italian and Spanish pastoral plays and English pastoral plays and operas, and of critical works on the pastoral. The compilation, which includes an exact record of the title-pages of the first editions of the English plays and frequent supplementary notes of utility, must have been a prolonged and laborious business. The handling of the materials in the body of the work is very careful, thoughtful, and independent, and, with whatever deductions at points, contributes effectively to the substantial discussion of the subject. For the general reader the interest is varied and curious. The volume is handy and generously furnished forth.

HISTORY AND GEOGRAPHY.

The British Empire: its Past, its Present, and its Future. Edited by A. F. Pollard, M.A., Fellow of All Souls College, Oxford, Professor of English History in the University of London, late Assistant Editor of the "Dictionary of National Biography." (5s. net. The League of Empire, Caxton Hall, Westminster.)

The essential purpose of this book "is to promote a knowledge and, what is more important, an understanding of the Empire as it is, and of the causes which have brought it into being, and to provide that minimum of information without which all discussion of Imperial questions is barren, if not productive of positive mischief." The secondary object "is to make further provision for education in the Empire." It "is the work of no one school of politics, and represents no single standpoint," and "no effort has been made to impose upon it a fictitious uniformity of view." To the volume "writers have contributed of all shades of opinion and from all quarters of the Empire; suggestions have been adopted from authorities in almost every Dominion, Colony, and Dependency of the Crown; and it reflects a diversity of gifts and aspirations which no other political system has known how to combine with imperial unity." Different parts of the Empire have developed upon different lines; and, while it is well that every Dominion and Colony should understand the British point of view, it is also well that Great Britain should understand the points of view of her adult children. The primary object, accordingly, is to explain rather than to recapitulate history. The work is "the result of two and a half years' labour in which more than a hundred authorities have, in varying degrees, co-operated." Now, then, we ought all to be able to understand each other. But shall we? Prof. Pollard has struggled most ably with the all but impossible task of condensing the materials into some eight or nine hundred pages. Facts must be given as the basis of conclusions, and the statement of facts is often too condensed for the reader to do otherwise than to take the conclusion on trust. Yet it is a very valuable work for popular instruction, though inevitably there will be at many points dissent from the opinions expressed, especially with regard to the Colonies and India.

Over-Sea Britain. By E. F. Knight. (6s. net. Murray.)

This volume is "a descriptive record of the geography, the historical, ethnological, and political development, and the economic resources of the Empire" so far as concerns the Nearer Empire—that is to say, the Mediterranean, African, and American possessions of Great Britain, Asia and Oceania being reserved for a second volume. Mr. Knight is well known as a traveller, a war correspondent, and an engaging descriptive writer, and is able to draw upon his own personal experiences and observations in most of the countries under the British flag. The geographical description, with the account of productions and industries, is very satisfactory: the main points are judiciously selected and vividly presented in a very readable narrative. Here and there, on matters of history and economics, the writer provokes controversy, into which we do not enter: the welfare of the Empire and the best relations between the Colonies and the mother country are matters of common interest, but the means of attaining them are keenly disputable and disputed. However, it is only occasionally that Mr. Knight lapses into what we regard as heresy: in many cases his self-restraint is manifest. With such reservations, we can commend the work highly. There are nine excellent maps, and the volume is liberally furnished forth.

Historical Portraits: Richard II. to Henry Wriothesley, 1400–1600. The Lives by C. R. L. Fletcher, formerly Fellow of All Souls and Magdalen Colleges. The Portraits chosen by Emery Walker, F.S.A. With an Introduction on "The History of Portraiture in England." (8s. 6d. net. Clarendon Press.)

"It is obviously impossible to begin a series of portraits" of persons celebrated in the history of Great Britain and Ireland "from a date at which portrait painting was unknown north of the Alps." Indeed, it is not until we come to Henry VII. that "we quit the category of Court-cards and enter the realm of portraiture in the modern sense." The introduction sketches, in a very interesting and instructive way, the various developments of the art in England. "From an artistic point of view, nearly all the paintings reproduced in the present volume are what may be called primitive—that is to say, they belong to an epoch and style in which a quasi-deceptive appearance of roundness, depth of tone, and aerial perspective was not regarded, as it has been in more modern times, as a principal object of attainment." There are just over a hundred portraits, gathered from many collections, public and private, and admirably reproduced. The concise historical notes by Mr. Fletcher are characteristically pointed and trenchant. The volume is handsome enough for a show-book, but it ought also to be available on the shelves of the higher school library as a vividly illustrative companion to the history of the two centuries it covers. We are glad to observe that "it is hoped that subsequent volumes may carry the series down to the middle of the nineteenth century."

MUSIC.

The Theory of Music. For Students and Teachers. By J. Lightfoot, D.Sc., M.A., Mus.Bac. (2s. net. Ralph, Holland, & Co.)

The work "comprises the elements of music in both notations and elementary harmony, together with a short exposition of the principles of voice production and voice training." It is intended to provide for students and teachers a systematic exposition of the theory underlying the elements of music. The scientific precision that we have remarked in the author's books on mathematics and logic has been well appreciated in his orderly development of musical theory: the volume now appears in a third edition, with three new chapters. Numerous well devised exercises and examination papers are given. The work covers the syllabus of the University Senior Local Examinations, and it will be very welcome to candidates in its new and enlarged form.

Folk Songs from Somerset. Gathered and Edited, with Pianoforte Accompaniment, by Cecil J. Sharp. Fifth Series. (5s. net. Simpkin.)

It is only a few months since we noticed the preceding two series of this most interesting collection. The present volume contains the words and tunes of 26 songs, including sailors' chanties, Christmas carols, and wassail songs, forms not exemplified in the preceding series. The whole tale of the five series is 130 songs—a remarkably fruitful result of Mr. Sharp's diligent exploration. Nor is the field even yet exhausted. Mr. Sharp has also collected a great many children's singing games and dancing tunes, as well as some dances, which, however, he reserves for a possible supplementary volume. Meantime, all interested in the recovery of bygone illustrations of national music will renew their cordial thanks to him and to the helpers of his quest.

YEARBOOKS.

The Schoolmasters Yearbook and Directory, 1909 (7s. 6d. net, The Year Book Press, c/o Swan Sonnenschein & Co.), is well up to the high mark of former years. The review of the year handles the main points concisely and effectively. The information on matters of administration, organization, examination, and inspection, &c., is selected with practical judgment, and is most convenient for reference. The Directory of Masters in Secondary Schools, and the List of Secondary Schools, with Staffs (which have been brought, as far as possible, into correspondence), are specially valuable; and it is to be hoped that the appeal of the editor to be kept informed of changes will be carefully noted, especially by head masters. There is every evidence of keen interest and of unsparing labour on the part of the editor and of liberality and enterprise on the part of the publishers—virtues that deserve warm recognition. The volume, we repeat, is indispensable to educationists.

Messrs. Swan Sonnenschein & Co. issue *The Public Schools and Preparatory Schools Yearbook for* 1909 (3s. 6d. net). A fresh importance is given to this elaborate and valuable compilation by the arrangement that the next annual issue will appear as the Official Book of Reference of the Head Masters' Conference. In the past five years the volume has steadily grown: while the old subjects are kept thoroughly revised to date, new subjects are constantly pressing forward. Evidently every effort is made to provide full and accurate information, and the result is an extremely useful and trustworthy book.

Messrs. Scott, Greenwood, & Son have just published a *Handbook to the Technical and Art Schools and Colleges of the United Kingdom* (3s. 6d. net). It forms a directory of nearly 1,000 institutions, with a concise statement of the more essential facts regarding them. A considerable index to courses of instruction is appended. The volume will be very useful for ready reference.

Messrs. Eyre & Spottiswoode issue *"The Epicure" Directory of Schools and Teachers of Domestic Economy* (2s. 6d.)—a revival of a former directory of ten years ago, but practically a new departure. It contains a great mass of pertinent facts, many of them of a kind most difficult to collect, especially when the forms sent out for information are not returned—which not unfrequently happens. It will be found serviceable for reference.

MISCELLANEOUS.

The *Transactions* of the Second International Congress on School Hygiene, which was held in London in 1907, have now been published at the Offices of the Royal Sanitary Institute, Margaret Street, W., in three volumes, 12s. 6d.; bound, 15s. net; single volumes, 5s. The matter is extraordinarily various and very largely good; it is in English, French, or German, and the whole has been edited and arranged by the Honorary General Secretaries, James Kerr, M.A., M.D., D.P.H., and E. White Wallis, F.S.S. The volumes constitute a most valuable mine of information upon all aspects of the subject, and it is highly desirable that the substance of the more important parts should get promptly worked into the popular consciousness.

Messrs. Cassell have commenced to issue (1) *The King's Empire pictured by the Camera*, to be completed in twenty-four fortnightly parts (7d. net each); and (2) *The World's Great Pictures*, to be completed in twelve fortnightly parts (7d. net each). The first numbers are handsomely and lavishly illustrated, and the letterpress is instructive. Both serials are sure to be very popular.

The Hardy Patent Pick Company, Limited, of Sheffield, offer to send to any head teacher, on application, pamphlets entitled *Tales told in a Shop* (such as "The History of the Pick"), which they have issued for the use of schools. Also a large and clear "Diagram of Coal Pit and Workings," accompanied by a descriptive sheet. These publications, if slight, are usefully informatory.

FIRST GLANCES.

Classics.

Aeschylus, The Persians of. Translated from a revised text by C. E. S. Headlam, M.A., formerly Fellow of Trinity Hall, Cambridge. 1s. George Bell (Classical Translations Series).

[With aid of notes left by Dr. Walker Headlam, the translator of the previous plays of Aeschylus in the series. Close and accurate].

Greek Exercises, Elementary. By the Rev. A. E. Hillard, D.D., High Master of St. Paul's School, and C. G. Botting, M.A., Assistant Master at St. Paul's School. 2s. 6d. Rivingtons.

["An introduction to North and Hillard's Greek Prose." Simple; carefully selected vocabulary; sufficiently varied constructions; one Greek-English exercise to three English-Greek exercises; well graduated. Vocabularies. Practical and very serviceable.]

Ovid, Easy; with rules for scansion and exercises thereon. By Frank Ritchie, M.A., Matriculation Examiner (1900–07) to the University of Wales, &c. 1s. Longmans.

[Passages easy, short, and self-contained. Excellent selection; notes brief and useful. Vocabulary.]

Plato, The Euthyphro of. With introduction and notes by St. George Stock, M.A. Oxon., Lecturer in Greek at Birmingham University. 2s. 6d. Clarendon Press].

[Comprehensive and pointed introduction; helpful summary of the dialogue; reasonably full and very good notes. Excellent edition.]

Puerorum Liber Aureus. By T. S. Foster, B.A. Oxon., Assistant Master at Epsom College. 1s. 6d. A. & C. Black.

["A first Latin translation book"; exercises for retranslation; full vocabularies, particular and general; 15 illustrations. Revised edition.]

Virgil: Aeneid, Book XI. Edited by L. D. Wainwright, M.A., Assistant Master, St. Paul's School. 1s. 6d. Bell (Illustrated Classics).

[Useful introduction; text in sections headed with brief contents; ample and judicious notes; vocabulary; illustrations.]

Mathematics.

Algebra, Exercises in. By R. Nettell, M.A., Head of the Mathematical Department, Royal Naval College, Osborne, and H. G. W. Hughes-Games, M.A., Mathematical Master in the same College. 5s. 6d.; without answers, 4s. 6d. Longmans.

[Progressive, varied, abundant. Most useful.]

Geometry, Concurrent, Practical and Theoretical. By W. J. Potter, M.A. Cantab.; Second Master, Roan School for Boys, Greenwich. Parts I. and II. 3s. net. Ralph, Holland, & Co.

[See General Notices—Mathematics. A third Part will follow. The whole work will contain the substance of Eucl. I. to XI., treated both experimentally and formally.]

Geometry, Elementary, Cassell's. By W. A. Knight, M.A., B.Sc., formerly Head Master of Devon County School. 2s. 6d.

[Alternative proofs frequent. Figures large and clear. Plenty of exercises.]

Digitized by Google

Geometry, Solid, Practical. By the Rev. P. W. Unwin, M.A. Cantab., Assistant Master on the Military and Civil Side of Cheltenham College. 4s. 6d. George Bell.

["To provide the *general* student with a carefully graduated course of instruction." Covers Stage I. of the Board of Education Examination. Easy examples to each chapter. Supplementary (advanced) volume in preparation.]

Komplex-Symbolik: eine Einführung in die analytische Geometrie mehrdimensionaler Räume. Von Roland Weitzenbock, K. und K. Leutnant im Pionierbataillon Nr. 2, Linz a. d. Donau. M. 4.80 geb. Leipzig: Göschen (Sammlung Schubert LVII.).

Kurven, Ebene, Spezielle. Von Dr. Heinrich Wieleitner, Gymnasiallehrer am hum. Gymnasium, Speyer. M. 12. Leipzig: Göschen (Sammlung Schubert LVI.).

SCIENCE.

Botany, Elementary. By E. Drabble, D.Sc., F.L.S., Lecturer in Economic Botany in the University of Liverpool. 2s. 6d. Edward Arnold.

[Covers Oxford and Cambridge Junior Local Examinations. Simple and lucid description; simple experiments. Attractive.]

Botany, Practical, Elementary. By Wm. E. Clarke, A.R.C.Sc. Lond., Science Master, Kirton Grammar School, Lincs., late Lecturer under the Middlesex Education Committee and the L.C.C. 3s. 6d. net. Normal Press.

[Simple, careful; 227 figures; test questions numerous.]

Chemistry, A History of. By Dr. Hugo Bauer, Royal Technical Institute, Stuttgart. Translated by R. V. Stanford, B.Sc. Lond., Priestley Research Scholar of the University of Birmingham. 3s. 6d. net. Edward Arnold.

[Outline of the general development. Interesting.]

Chemistry, An Intermediate Course of Laboratory Work in. By Edward Kenneth Hanson, M.A. Cantab., F.I.C., Teacher's Diploma (Lond.), Lecturer to the Cambridge University Local Lecture Syndicate, and John Wallis Dodgson, B.Sc. Lond., Director of Evening Classes and Lecturer in Chemistry, University College, Reading. 3s. 6d. Longmans.

[Built up on experience; "in use in manuscript form for three years." Broadly covers Intermediate Science (London). Markedly thoughtful and careful.]

Electricity, Sound, and Light: A Short University Course in. By Robert A. Millikan, Ph.D., Associate Professor of Physics in the University of Chicago, and John Mills, A.M., Instructor in Physics in the Western Reserve University. 8s. 6d. Ginn.

["An attempt to secure a satisfactory articulation of the laboratory and classroom phases of instruction in physics," while "presenting a complete logical development, from the standpoint of theory as well as experiment, of the subjects indicated in the title." Analytical rather than descriptive. No mathematics beyond trigonometry presupposed. Many examples and problems. 250 figures. Able.]

Living Matter, The Functional Inertia of: a Contribution to the Physiological Theory of Life. By David Fraser Harris, M.B., C.M., M.D., &c., Lecturer on Physiology and Normal Histology in the University of St. Andrews. 5s. net. Churchill.

["Functional inertia is as fundamental, primary, and primitive a property of protoplasm as is affectability." Extremely interesting and fresh monograph.]

EDUCATION.

Assistant Mistresses in Public Secondary Schools, Association of; Report of 25th year's work and of 25th Annual Meeting.

Board of Education.—(1) Statistics of the Certificate Examination for Teachers in Elementary Schools, 1907. 6d. (2) Statistics of Public Education in England and Wales, 1906-7-8: Part II., Financial Statistics. Cd. 4506. 9d. (3) Report of the Board of Education for 1907-8. Cd. 4566. 7d. Wyman.

Carnegie Foundation for the Advancement of Learning: Third Annual Report of the President and Treasurer. 1908. 576 Fifth Avenue, New York City.

Child Life, Wastage of: a Series of Articles upon its Causation and Prevention. By J. Johnston, M.D. Edin. 6d. net. Heywood.

Disadvantages of Education, The. Paper read before the Manchester Principal Teachers' Association (Feb. 12). By his Honour Judge Edward A. Parry. 3d. net. Sherratt & Hughes.

English Association, The. Bulletin 7: Report of the General Meeting (Jan. 15, 16), and the Executive Committee, 1908, with Proceedings of Committees and Branches, Bibliography, &c.

New South Wales, Report upon the physical condition of children attending Public Schools in (with special reference to height, weight, and vision): based upon statistics obtained as a result of the introduction of a scheme of medical inspection of public-school children, 1907-8. With Anthropometric Tables and Diagrams. Issued by direction of the Minister of Public Instruction. Sydney: W. A. Gullick, Government Printer.

MATHEMATICS.

16587. (Professor E. B. ESCOTT.)—Factorize

14^8+14^5+1, $7^8+2.7^5+1$, $7^{16}+2.7^9+1$, $7^8+7^5.2^{17}+2^{32}$.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

The four proposed numbers (N) are all expressible as Dimorph Sextans—*i.e.*, as

$$N = (x^6+y^6)/(x^2+y^2) = (x^6+z^6)/(x^2+z^2);$$

and are therefore (algebraically) resolvable into two factors. See the author's Solution of Question 16277 in the *Reprint*, Vol. XIV., p. 36.

Write $x = x'^2+y'^2$, $y = x'^2-y'^2$; then

$$N = (x^6+y^6)/(x^2+y^2) = x^4-x^2y^2+y^4 = x'^8+14x'^4y'^4+y'^8.$$

Now, take x', y', such that $z = 2x'y'$. Then it is shown (in the Solution quoted) that N has the above double form and is resolvable into two factors $N = (x^2-yz)(x^2+yz) = L, M$.

When x', y' are both odd, then x, y, z are all even, and N is divisible by 16, and each of its factors L, M by 4. Also $z = 2x'y'$ always.

The Table below shows the elements x', y'; x, y, z, and the resulting factors L, M of the four proposed numbers N derived from the above,

x'	y'	x	y	z	L	M
14,	1	197,	195,	28	33349;	44269;
7,	1	50,	48,	14	4.457;	4.13.61;
49,	1	2402,	2400,	98	4.829.1669;	4.13.37.3121;
7,	16	305,	207,	224	13.37.97;	139393;

From the above it is clear that the two following forms are similarly factorizable $(14^{8n}+14^{4n+1}+1)$, $(7^{8n}+2.7^{4n+1}+1)$.

Dr. T. STUART and the PROPOSER give the Solution thus:—

Since $(\alpha^2+\beta^2)^4 \equiv \alpha^8+4\alpha^6\beta^2+6\alpha^4\beta^4+4\alpha^2\beta^6+\beta^8$

$\equiv (\alpha^8+14\alpha^4\beta^4+\beta^8)+4\alpha^2\beta^2(\alpha^4-2\alpha^2\beta^2+\beta^4)$;

therefore $N = \alpha^8+14\alpha^4\beta^4+\beta^8 \equiv (\alpha^2+\beta^2)^4-[2\alpha\beta(\alpha^2-\beta^2)]^2 = n_1.n_2$,

where
$$\left.\begin{aligned} n_1 &= \alpha^4+2\alpha^3\beta+2\alpha^2\beta^2-2\alpha\beta^3+\beta^4 \\ n_2 &= \alpha^4-2\alpha^3\beta+2\alpha^2\beta^2+2\alpha\beta^3+\beta^4 \end{aligned}\right\} \quad \ldots\ldots(1).$$

And since $n_1 = (\alpha^2+\alpha\beta)^2+(\beta^2-\alpha\beta)^2 = (\alpha^2+\alpha\beta-\beta^2)^2+3(\alpha\beta)^2$

$= (\alpha^2-\beta^2-2\alpha\beta)^2+6\alpha\beta(\alpha^2-\beta^2)$ $\ldots\ldots(2)$.

and $n_2 = (\alpha^2-\alpha\beta)^2+(\beta^2+\alpha\beta)^2 = (\alpha^2-\alpha\beta+\beta^2)^2+3(\alpha\beta)^2$

$= (\alpha^2-\beta^2+2\alpha\beta)^2-6\alpha\beta(\alpha^2-\beta^2)$ $\ldots\ldots(3)$.

it follows that every odd prime factor of n_1 or n_2 is of the form 1 (mod 12); and that, if $\alpha = \lambda^2$, $\beta = \mu^2$, $\lambda^4-\mu^4 = 6z^2$, then n_1, n_2 are each further decomposable into two factors, and so N into four factors.

Examples.—

(*a*) $\alpha = 14$, $\beta = 1$,

$N = 14^8+14^5+1 = (197)^4-(5460)^2 = (33349)(44269)$.

(*b*) $\alpha = 7$, $\beta = 1$,

$N = 7^8+2.7^5+1 = (2500)^2-(672)^2 = 2^4(793)(457) = 2^4.13.61.457$.

(*c*) $\alpha = 7^2$, $\beta = 1$,

$7^{16}+14.7^8+1 = 7^{16}+2.7^9+1 = 2^4.1501201.1383601$.

Here $\alpha^2-\beta^2 = 7^4-1 = 2400 = 6(20)^2$,

and hence $n_1 = 2450^2+48^2 = 2302^2+840^2$, from (2) and (3);

$n_2 = 2498^2-840^2$, from (3);

giving $n_1 = 2^2.37.40573 = 2^2.37(13.3121)$,

$n_2 = 2^2.829.1669$.

Hence $N = 7^{16}+2.7^9+1 = 2^4.13.37.829.1669.3121$.

(*d*) $\alpha = 7$, $\beta = 2^4$,

$N = 7^8+7^5.2^{17}+2^{32} = (93025)^2-(46368)^2 = 46657.139393$

$= 13.37.97.139393$.

16402. (Professor NANSON.)—If $u_1, u_2, \ldots, u_n, v$ are $n+1$ quadratic functions of x, show that the value of

$$\int \frac{u_1 u_2 \ldots u_n}{v^{n+1}}\,dx$$

is algebraic, provided v is harmonically related to one of the u's.

Note by G. H. HARDY, M.A.

The result stated in this Question is not quite accurate, as is easily seen by an example. Let

$u_1 = a_1x^2+c_1$, $u_2 = a_2x^2+2b_2x+c_2$, $v = x$.

Digitized by Google

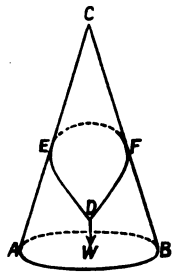
Then the coefficient of $1/x$ in u_1u_2/v^3 is $a_1c_2+a_2c_1$, and $\int u_1u_2v^{-3}dx$ will be rational only if $a_1c_2+a_2c_1=0$, *i.e.*, if u_2 as well as v is harmonically related to u_1.

The Proposer's argument, "Now operate on $\int u_1v^{-2}dx$ with $a_r\partial/\partial a+b_r\partial/\partial b+c_r\partial/\partial c$, ...," is unsound because (if a_1, b_1, c_1 are supposed given) a, b, c are not independent, being, in fact, connected by the relation $ac_1+ca_1=2bb_1$. The correct form of the result, viz.,

$$\text{"}\int\frac{u_1u_2\dots u_n}{v^{n+1}}\,dx$$

is rational if *all* the quadratics are harmonically related to any one in the numerator," is stated in my pamphlet, "The Integration of Functions of a Single Variable" (*Camb. Math. Tracts*, No. 2, 1905, p. 16).

16547. (Colonel R. L. Hippisley.)—ABC is a right cone firmly fixed upright upon its base. A weight W is supported by a loop of string DEF thrown over the cone. Neglecting friction, show that the suspension is safe if the apical angle of the cone is less than 60°, and unsafe if the angle is greater than 60°.



Solution by M. T. Naraniengar, M.A.

By considering the equilibrium of any portion of the string, it will be seen that the perpendiculars from C on the tangents at the extremities are equal. Hence the ultimate form of the loop may be derived as follows:—

Imagine a right-angled triangle CGD, right-angled at G, such that, when wrapped round the cone in question, CG, CD are opposite generators of the cone. Then the curve formed by GD will represent half the loop determined by the question.

Now the condition that the above construction may be possible is that $\angle GCD = (\frac{1}{2}$ circumference of base$) \div$ (slant side$) = \pi\sin\alpha$, where α = semi-apical angle of cone.

Thus $\angle GCD$ should be acute; therefore $\pi\sin\alpha < \frac{1}{2}\pi$.

Therefore $\sin\alpha < \frac{1}{2}$; therefore $\alpha < 30°$; therefore $2\alpha < 60°$.

The following Solution is due to the Proposer:—

The loop will follow a geodesic line, which will be a straight line upon the developed surface of the cone. If the surface be cut along a straight line through C and D and unwrapped, it will form the sector of a circle whose angular extent is $2\pi\sin\alpha$, where 2α is the apical angle of the cone; and, if $2\pi\sin\alpha = \pi$, the track of the string will pass through C. Hence, if $\sin\alpha$ is greater than $\frac{1}{2}$, the loop will slip over the apex of the cone. In the same way it may be shown that, if the loop passes twice round the cone like a double necklace, the critical value of α is $\sin^{-1}\frac{1}{4}$, or about 14° 30′.

16491. (H. Stanley Redgrove, B.Sc.)—It is required to determine the values of a and b. Experiments are carried out with the following results:—

Experiment 1: $a = -34{\cdot}3$. Experiment 3: $b = -86{\cdot}8$.
Experiment 2: $a = -31{\cdot}9$. Experiment 4: $b = -85{\cdot}1$.
Experiment 5: $a - 2b = 135{\cdot}8$.

Calculate from these data the most probable values of a and b.

Solution by the Proposer.

Let A and B be the most probable values of a and b respectively; then, by Legendre's principle of least squares,

$$(A+34{\cdot}3)^2+(A+31{\cdot}9)^2+(B+86{\cdot}8)^2+(B+85{\cdot}1)^2+(A-2B-135{\cdot}8)^2,$$

namely, the sum of the squares of the individual errors, must be at a minimum. Therefore $3A^2-139{\cdot}2A+6B^2+887{\cdot}0B-4AB+$ (a number) must be at a minimum, so that, if this expression is represented by u,

$$\delta u/\delta A = 0, \quad \delta u/\delta B = 0.$$

Hence $6A-139{\cdot}2-4B=0$, $12B+887{\cdot}0-4A=0$.

Solving simultaneously, the values of A and B, namely, $A=-33{\cdot}5$, $B=-85{\cdot}1$, are obtained.

10585. (J. J. Barniville.)—The asymptotes of three equilateral hyperbolas coincide in pairs so as to form an equilateral triangle; the trilinear equation of the curve being $\alpha\beta\gamma \pm d^3 = 0$, find the intercepted area.

Solution by M. T. Naraniengar, M.A.

The Question seems to be ambiguous. It ought to read "*three equal hyperbolas*" instead of "three *equilateral* hyperbolas."

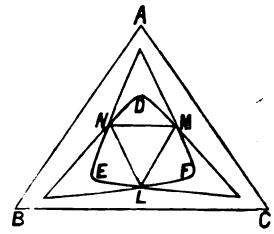
With this correction the equation to any hyperbola will be (i.) $\alpha\beta = d^2$, (ii.) $\beta\gamma = d^2$, or (iii.) $\gamma\alpha = d^2$. Their points of intersection L, M, N are obtained by solving (i.), (ii.), (iii.) simultaneously two at a time. Thus L is found from $\alpha\beta = d^2 = \gamma\alpha$; therefore $\beta = \gamma$ and $\alpha+\beta+\gamma = h$ (height of the triangle). Therefore

$$\alpha + 2d^2/\alpha = h;$$

therefore $\alpha = \frac{1}{2}\{h \pm (h^2-8d^2)^{\frac{1}{2}}\}$.

Hence the distance of L from BC is

$$\tfrac{1}{2}\{h-(h^2-8d^2)^{\frac{1}{2}}\} = h_1 \text{ (say)}.$$



The enclosed area is easily found by considering the figure DEF as made up of three hyperbolic segments *plus* the triangle LMN.

$$\text{Area} = (d^2-h_1^2)\,h/(h_1\sin 60°) - 8d^2\log(d/h_1).$$

12043. (J. Griffiths, M.A.) — If u_n, u_{n-1} denote rational and integral functions of two variables, of the degrees n and $n-1$ respectively, prove, by means of the substitutions

$$x = \frac{\xi u_{n-1}(\xi,\eta)}{u_n(\xi,\eta)}, \quad y = \frac{\eta, u_{n-1}(\xi,\eta)}{u_n(\xi,\eta)},$$

that the curve expressed by the equation $u_n(x,y) = u_{n-1}(x,y)$ is unicursal.

Solution by Professor Nanson.

Writing $x=t\xi$, $y=t\eta$, the curve $u_n(x,y)=u_{n-1}(x,y)$ gives

$$tu_n(\xi,\eta) = u_{n-1}(\xi,\eta);$$

whence the result stated is obvious.

16182. (W. F. Beard, M.A.)—ABC is a triangle with AB = AC; any tangent to the in-circle whose centre is I meets BC, CA, AB at D, E, F. Prove that DI bisects the angle EIF. Generalize, if possible.

General Discussion by C. M. Vijendra Rao.

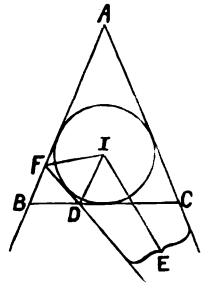
Case I.—When the circle concerned is the in-circle as in original problem.

Fig. 1.—When D is between E and F.

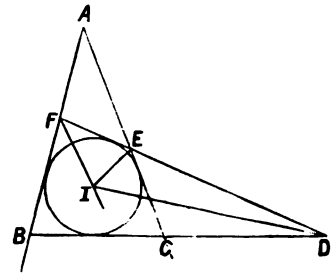
Since I is an ex-centre of triangle BDF,

$$\angle DIF = 90°-B/2 = \tfrac{1}{2}(180°-B/2-C/2) = \tfrac{1}{2}(90°+A/2) = \tfrac{1}{2}\angle EIF,$$

for I is the in-centre of triangle AEF; therefore DI bisects $\angle EIF$.



Case I., Fig. 1.



Case I., Fig. 2.

Fig. 2.—When D has E and F on the same side of it.

Exterior angle at I of $\triangle EIF = 180°-\angle EIF = 180°-(90°-A/2)$, for I is an ex-centre of triangle AEF

$$= 90°+A/2 = A+B/2+C/2 = A+B.$$

Also

$$\angle DIE = \angle DIF-\angle EIF = (90°+B/2)-(90°-A/2) = A/2+B/2$$
$$= \tfrac{1}{2}(A+B) = \tfrac{1}{2}\text{ exterior angle at I of } \triangle EIF;$$

therefore DI bisects the exterior angle at I of $\triangle EIF$.

Case II.—When the circle concerned is an ex-circle.

Fig. 1.—When D is between E and F.

I being an ex-centre of triangle CDE,

$$\angle DIE = 90°-DCE/2 = 90°-(A+B)/2 = C/2 = \tfrac{1}{2}C = \tfrac{1}{2}(90°-A/2)$$
$$= \tfrac{1}{2}\angle EIF,$$

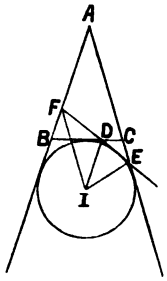
for I is an ex-centre of triangle AEF; therefore DI bisects $\angle EIF$.

Fig. 2.—When D has E and F on the same side of it.

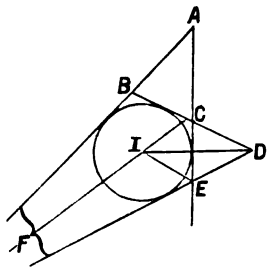
Exterior angle at I of $\triangle EIF = 180°-\angle EIF = 180°-(90°+\frac{1}{2}A)$, for I is the in-centre of triangle AEF $= 90°-\frac{1}{2}A = C$.

Digitized by Google

Also $\angle DIE = \angle DIF - \angle EIF = (90° + \frac{1}{2}FBC) - (90° + \frac{1}{2}A)$
$= \frac{1}{2}(A + C) - \frac{1}{2}A = \frac{1}{2}C = \frac{1}{2}$ exterior angle at I of $\triangle EIF$;
therefore DI bisects exterior $\angle EIF$.



Case II., Fig. 1.



Case II., Fig. 2.

The theorem is thus true in the case of ex-circles also.

11602. (J. J. Walker, M.A., F.R.S.)—Show how to form, say in the case of three or four linear equations, the cubic or biquadratic whose roots shall be the values of the three or four unknown quantities—of course, without assuming the usual solutions of those linear equations.

Solution by Professor Sanjána, M.A.

Taking the case of a cubic, let the roots of $\theta^3 + p\theta^2 - q\theta + \frac{1}{3}r = 0$ be connected by the linear system $a_k x + b_k y + c_k z + d_k = 0$ $(k = 1, 2, 3)$.

As $x + y + z + p = 0$, we get, by elimination,

$$\begin{vmatrix} 1 & 1 & 1 & p \\ a_1 & b_1 & c_1 & d_1 \\ a_2 & b_2 & c_2 & d_2 \\ a_3 & b_3 & c_3 & d_3 \end{vmatrix} = 0,$$

which at once gives

$$(a_1b_2c_3)\,p + (b_1c_2d_3) + (c_1d_2a_3) + (d_1a_2b_3) = 0.$$

Again, combining $s.x + x.y + y.z + q = 0$ with the linear system, we have

$$\begin{vmatrix} z & x & y & q \\ a_1 & b_1 & c_1 & d_1 \\ a_2 & b_2 & c_2 & d_2 \\ a_3 & b_3 & c_3 & d_3 \end{vmatrix} = 0,$$

whence $z(b_1c_2d_3) + x(c_1d_2a_3) + y(d_1a_2b_3) + q(a_1b_2c_3) = 0.$

This should be again taken as a fourth linear equation, giving

$$q(a_1b_2c_3)^2 + (b_1c_2d_3)(c_1d_2a_3) + (d_1a_2b_3)(c_1d_2a_3) + (b_1c_2d_3)(d_1a_2b_3) = 0.$$

Thus p and q are determined. Finally, combine $yz.x + zx.y + xy.z + r = 0$ with the given linear system, and the resultant with it again, and so on; we shall obtain

$$r(a_1b_2c_3)^3 + 3(b_1c_2d_3)(c_1d_2a_3)(d_1a_2b_3) = 0.$$

Obviously the method can be applied to equations of higher and higher degree; the process, however, grows more and more tedious.

16571. (W. J. Greenstreet, M.A.)—If $\Sigma a = \Sigma x = \Sigma ax = 0$, then

$$\Sigma ax^7 = xyz\,\Sigma x^2\,\Sigma ax^2.$$

Solutions (I.) *by* R. F. Davis, M.A., *and* C. M. Ross; (II.) *by* M. T. Naraniengar, M.A.

(I.) The condition $\Sigma x = 0$ leads to the equation

$$x^3 + x(yz + zx + xy) - xyz = 0$$

and two similar equations. Multiply successively the first equation by ax^n, the second by by^n, the third by cz^n $(n = 0, 1, 2, 4)$, and add results.

Then, putting $yz + zx + xy = q$ and $xyz = r$,

$$\Sigma ax^3 = 0, \quad \Sigma ax^4 = -q\,\Sigma ax^2, \quad \Sigma ax^5 = r\,\Sigma ax^2,$$

and $$\Sigma ax^7 = -2qr\,\Sigma ax^2 = xyz\,\Sigma x^2\,\Sigma ax^2,$$

since $\Sigma x^2 = -2q$.

(II.) Since $\Sigma a = \Sigma x = \Sigma ax = 0$, we have

$$\frac{a}{y-z} = \frac{b}{z-x} = \frac{c}{x-y} = \lambda \text{ (say)};$$

therefore $$\Sigma ax^7 = \lambda\,\Sigma x^7(y-z) = \lambda\,\Sigma x^7(y-z)\,H_5,$$

where H_5 = sum of the homogeneous products of 5 dimensions in x, y, z
$= \Sigma x^5 + \Sigma x^4(y+z) + \Sigma x^3yz + \Sigma x^3y^2 + \Sigma x^2y^2z.$

Now $$\Sigma x^4(y+z) = -\Sigma x^4x = -\Sigma x^5, \quad \Sigma x^3yz = xyz\,\Sigma x^2,$$
$$\Sigma x^3y^2 = \Sigma x^2y^2(x+y) = -\Sigma x^2y^2z.$$

Therefore $$H_5 = xyz\,\Sigma x^2;$$

therefore $$\Sigma ax^7 = \lambda\,\Sigma x^2(y-z)\,H_5 = \Sigma ax^2\,xyz\,\Sigma x^2.$$

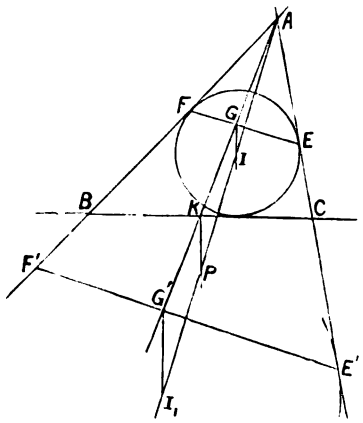
15782. (A. M. Nesbitt, M.A.)—The inscribed circle of a triangle ABC touches the sides AC, AB in E and F, and an escribed circle touches the same sides produced in E′ and F′. If the median AK cut EF in G and E′F′ in G′, prove that BGCG′ is a parallelogram.

Additional Solution by W. Austin Sleigh, B.A.

Let I_1 be the ex-centre, P the mid-point of II_1.

Then PK is perpendicular to BC. But GI, G′I_1 are also perpendicular to BC, and therefore parallel to PK.

Hence K is mid-point of GG′ and BC.



16509. (Professor R. W. Genese, M.A.)—From a point P perpendiculars are drawn to the faces of a given tetrahedron. The feet of the perpendiculars lie in one plane. Prove that the locus of P is a cubic surface containing the edges of the tetrahedron.

Solutions (I.) *by* W. H. Blythe, M.A.; (II.) *by* L. Isserlis, B.A., *and* A. M. Nesbitt, M.A.

(I.) Take tetrahedral co-ordinates. Let X, Y, Z, W be the co-ordinates of any point. Let A, B, C, D be the areas of the faces of the tetrahedron; bA, cA, dA being the projections of B, C, D respectively upon A, so that $b + c + d = 1$. The co-ordinates of the foot of the perpendicular from X, Y, Z, W upon the face A are 0, Y + bX, Z + cX, W + dX.

Expressing the co-ordinates of the feet of the perpendiculars upon the four faces as a determinant, we find the condition that the four points lie in one plane. Adding the four columns we find that X + Y + Z + W is a factor. Therefore the remaining factor, being of the third degree, represents a cubic surface; and, if any pair of the quantities X, Y, Z, W vanish, two columns become identical. Therefore the surface contains the edges of the tetrahedron.

(II.) Let $u_r \equiv l_r x + m_r y + n_r z - p_r = 0$;

$r = 1, 2, 3, 4$ be the four faces of the tetrahedron.

The x coordinate at the foot of the perpendicular from P(XYZ) on face 1 is $x_1 = X + l_1(p_1 - l_1X - m_1Y - n_1Z)$ or $x_1 = X - l_1u_1$.

Hence the four points are coplanar if

$$\begin{vmatrix} X - l_1u_1 & X - l_2u_2 & X - l_3u_3 & X - l_4u_4 \\ Y - m_1u_1 & Y - m_2u_2 & Y - m_3u_3 & Y - m_4u_4 \\ Z - n_1u_1 & Z - n_2u_2 & Z - n_3u_3 & Z - n_4u_4 \\ 1 & 1 & 1 & 1 \end{vmatrix} = 0,$$

the equation to a cubic surface, which is obviously satisfied if XYZ is such as to make u_1, u_2 vanish simultaneously; *i.e.*, the cubic surface contains the edges of the tetrahedron.

16576. (Professor Neuberg.)—Une parabole P touche les côtés de l'angle xOy aux points donnés A et B; une seconde parabole P′ touche ces côtés en C et D. Construire le troisième tangente commune aux deux paraboles.

Solutions (I.) *by* R. F. Davis, M.A.; (II.) *by* M. T. Naraniengar, M.A.

(I.) If P be any point in AB, and PM, PN be drawn parallel to OA, OB respectively, meeting OB, OA respectively in M, N, then MN is a tangent to the parabola, having OA, OB for tangents and AB their chord of contact. (Milne and Davis, *Parabola*.) Therefore let AB, CD intersect in H, and draw HY, HZ parallel to Ox, Oy respectively, meeting Oy, Ox respectively in Y, Z. Then YZ is a common tangent to the two parabolas.

(II.) Using oblique coordinates, we have $\xi/x + \eta/y = 1$ for the tangent, where $x/a + y/b = 1$ and $x/c + y/d = 1$. (a, b, c, d denote OA, OB, OC, OD respectively.)

QUESTIONS FOR SOLUTION.

16621. (Professor R. W. Genese, M.A.)—To a passenger in a train, moving uniformly, a rope in a parallel plane appears on the window to rotate uniformly. Prove that it hangs in a catenary of equal strength.

Digitized by Google

16622. (C. M. Ross.)—Find the value of the double integral

$$\int_0^{\frac{1}{4}\pi}\int_0^{\frac{1}{4}\pi} \frac{\sin x \cos x \, dx \, dy}{(1-\sin^2 x \sin^2 y)^{\frac{1}{2}}}.$$

16623. (G. N. Watson, B.A.)—Prove that

$$1+\sum_{n=1}^{\infty}\left(\frac{1.3.5\ldots(2n-1)}{2.4.6\ldots(2n)}\right)^3 = \{\Gamma(\tfrac{1}{4})\}^4 \div 4\pi^3,$$

where Γ denotes Euler's gamma-function.

16624. (Lt.-Col. Allan Cunningham, R.E.)—Solve, in integers,

$$N = (x^6+y^6) \div (x^2+y^2) = (x^6+z^6) \div (x^2+z^2),$$

with $6xy = \square$ and $y \neq z$. Give an example with $N > 10^{14}$ resolved into prime factors.

16625. ("λ, μ.") — Factorize the following polynomials for the values specified :—

(1) $4x^8+3x^7+7x^6+9x^5+6x^4+9x^3+7x^2+3x+4$ when $x = 17a^2$;

(2) $4x^6+3x^5+6x^4+x^3+6x^2+3x+4$ when $x = 13a^2$;

(3) $x^8-6x^7-x^6+3x^5+7x^4-5x^3-2x^2-3x+4$ when $x = 19a^2$;

(4) $4x^6-14x^5+5x^4+14x^3+5x^2-14x+4$ when $x = 2a^2$.

16626. (Professor E. Hernández.)—On donne un nombre composé de trois tranches de n chiffres, qu'à partir de la première tranche à droite sont trois nombres entiers consécutifs. On renverse les tranches, mais sans changer l'ordre de leurs chiffres. La différence entre ce nouveau nombre et le proposé est $2(10^{2n}-1)$.

16627. (Professor E. B. Escott.)—For what values of d will the following equations have equal roots?—

$$bx+cy+az = d, \quad cx+ay+bz = d, \quad xy+yz+zx = d.$$

16628. (Professor Cochez.) — α, β, γ étant les racines de $x^3+px+q = 0$, calculer

$$(\alpha^2-\beta^2)(\alpha^2-\gamma^2)+(\beta^2-\alpha^2)(\beta^2-\gamma^2)+(\gamma^2-\alpha^2)(\gamma^2-\beta^2).$$

16629. (Professor M. T. Naraniengar, M.A. Suggested by Question 16392.)—In a limaçon PQR is an inscribed triangle having the focus for orthocentre. Prove that the circum-circle of PQR touches two fixed circles, having their centres on the axis of the limaçon, and that the locus of the centre of PQR is a conic with the centres of the fixed circles for foci.

16630. (Professor Nanson.)—A circle moves in a plane so that its radius is a given function of the arc of the path described by its centre. Find the condition for the ultimate intersection of the circles.

16631. (Professor Sanjána, M.A.)—Given the triangular co-ordinates of three points, show how to find those of any point related to the trigon formed by them (*e.g.*, the orthocentre, circum-centre, &c.).

16632. (W. F. Beard, M.A.)—Prove that the point P mentioned in Question 16599 is the fourth point of intersection of the circum-circle of ABC with the ellipse through ABC, with its centre at the centroid of ABC.

16633. (S. Narayana Aiyar.)—If V_1, V_2 be the volumes generated by the revolution of an area A about any two corresponding tangents drawn from any point on the mutual orthoptic circle of two confocal conics, show that $V_1^2+V_2^2+4\pi A(p_1V_1+p_2V_2)$ is constant, where p_1, p_2 are the perpendiculars from the centre of the conics on the tangents.

16634. (A. M. Nesbitt, M.A.)—A conic which has a principal axis parallel to the axis of a parabola has contact of the second order with the parabola at a point P. Prove that, whatever be its eccentricity, the two curves will intersect again in a fixed point. If the eccentricity be fixed by the relation $e^2 = 1-f$, prove that the locus of the centre for varying positions of P will be $4(x^2-2fc)^3 = 27cf^2y^2$ or $4(fx^2-2c)^3 = 27cfy^2$, according as the major or the minor axis of the osculating conic be parallel to the axis of the parabola, 4c being the latus rectum of the latter curve.

16635. (R. F. Davis, M.A.)—S is a point within a given triangle ABC, and AS intersects the circum-circle in T. Prove that the major axis of the ellipse, having S as focus and touching the sides of ABC, is SB.SC/ST.

16636. (M. V. Arunachalan, M.A.)—Find a point D in the base BC of a triangle such that, if DE, DF be drawn parallel to AB, AC meeting AC, AB in E, F respectively, EF may be antiparallel to BC.

16637. (Saradakanta Ganguli, M.A. Suggested by Question 16182.)—If the in-centre of an equilateral triangle be joined to the points where *any* tangent to the in-circle cuts the sides of the triangle, then each pair of the joining straight lines will include an angle of 60° between them.

16638. (D. Biddle.)—ABC is a given plane triangle. (1) Within its area construct another triangle A'B'C' such that A', B', C' shall be the respective mid-points of the joins C'A, A'B, B'C. (2) Find the invariable ratio of the areas. But (3) trace the divergence of the pairs of points (which are usually designated by O, I, H, G in any single triangle), according as the original triangle varies from the equilateral type.

16639. (Professor Neuberg.)—On considère des tetraèdres OABC de même volume et dont les arêtes OA, OB, OC sont dirigées suivant les mêmes axes rectangulaires Ox, Oy, Oz. Trouver l'enveloppe des sphères circonscrites.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

11265. (Professor Harkema.)—Find the time before its rising at which the sun is at a given distance below the horizon, and hence obtain the increase of the length of day due to refraction. Show that this increase varies for different places as the geometric mean between the secants of the sun's zenith and nadir distances at midday and midnight respectively.

11524. (Professor Ramaswami Aiyar, M.A.)—Let D, Δ be two matrices, each containing n columns and $n+1$ rows; and D_r, Δ_r denote the determinants obtained by omitting the rth rows of D, Δ. Given that the matrical product of every two non-corresponding rows of D, Δ is equal to unity, prove that

$$D_1 : \Delta_1 = \ldots = D_r : \Delta_r = \ldots = D_{n+1} : \Delta_{n+1}.$$

11604. (J. Tate, M.A.)—The sides AB, BC, CD, DA of a spherical quadrilateral formed by arcs of great circles are divided internally at E, F, G, H respectively so that

$$\sin AE/\sin BE = \sin CF/\sin BF = \sin CG/\sin DG = \sin AH/\sin DH = \lambda.$$

Prove that the arcs EG, FH intersect in a point I lying on the arc KL, where K and L are the middle points of the diagonals, and that, if the diagonals be equal, $\sin KL/\sin LI = \lambda$.

11701. (Professor Bôcher.)—Solve the differential equations—

$$\frac{d^2y}{dx^2}+\tfrac{1}{2}\left(\frac{1}{x-a}+\frac{1}{x-b}\right)\frac{dy}{dx}-\frac{1}{4(x-a)(x-b)}y = 0,$$

$$\frac{d^2y}{dx^2}+\tfrac{1}{2}\left(\frac{1}{x-a}+\frac{1}{x-b}+\frac{1}{x-c}\right)\frac{dy}{dx}+\frac{-3x+a+b+c}{16(x-a)(x-b)(x-c)}y = 0.$$

12267. (Professor Orchard, M.A., B.Sc.)—A mass of 3 lb. is placed upon a wedge of mass 6 lb., the wedge itself resting on an inclined plane and having one face horizontal. If wedge and plane have each the same angle 45°, and both are smooth, compare the pressure between them with the sum of their masses.

12503. (Professor Matz, M.Sc., Ph.D.)—From a point in the circumference of a circular field, a projectile is thrown at random with a given velocity, which is such that the diameter of the field is equal to the greatest range of the projectile. Find whether the following chance is correct, which Todhunter gives, of its falling within the field :— $C = 2^{-1}-2\pi^{-1}(\sqrt{2}-1) = \cdot 236+\ldots$.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss Constance I. Marks, B.A., 10 Matheson Road, West Kensington, W.

Vol. XIV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, Francis Hodgson, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, March 11th, 1909.—Prof. W. Burnside, Vice-President, in the Chair.

The following papers were communicated :—

"The Transformation of the Electrodynamical Equations and the Laws of Motion," Mr. H. Bateman.

"The Transformation of the Electrodynamic Equations of Moving Bodies," Mr. E. Cunningham.

"The Kinetic Image of a Convected Electric System formed in a Conducting Plane Sheet," Prof. J. Larmor.

"On an Integral Equation," Mr. G. H. Hardy.

"On Term-by-Term Integration of Oscillating Series," Dr. W. H. Young.

Mr. A. L. Dixon gave a preliminary account of "Some Further Researches in the Theory of Elimination."

NEW AND SECOND HAND. ALL ENQUIRIES ANSWERED.

MR. EDWARD ARNOLD'S

MATHEMATICAL LIST.

MECHANICS.

A SCHOOL COURSE.

By W. D. EGGAR, M.A., Assistant Master at Eton College. viii + 288 pages, cloth, **3s. 6d.**

"The author has succeeded in producing a most admirable text-book, and one which we should like to see largely used throughout the schools of the country."—*Nature.*

"Mr. Eggar's exposition is very clear and pointed, and the stress he lays upon experimental work may be trusted to clarify the notions of students and to excite and hold their interest. The occasional historical references will help in the same direction; probably there will be no more popular—that is to say, stimulating—chapter than the one chiefly occupied with Galileo's works. The examples are abundant, many of them being selected from examination papers; and there are 232 figures. . . . The volume is exceptionally good for a school course."—*Journal of Education.*

ELECTRICITY AND MAGNETISM.

(THEORETICAL AND PRACTICAL.)

By C. E. ASHFORD, M.A., Head Master of the Royal Naval College, Dartmouth; formerly Senior Science Master in Harrow School. pp. xii + 304, with over 200 Diagrams, cloth, **3s. 6d.**

This book is intended to provide, in one volume, theoretical and practical work in Electricity and Magnetism, from the stage of the beginner up to the standard required for University Scholarships.

"The book responds satisfactorily to every test which we have applied to it. It is a happy combination of practical work and book-work. The matter has evidently been selected with great care, and forms an excellent primary course of instruction on the subject. . . . Those who adopt the book will certainly have no cause whatever to regret their choice."—*Schoolmaster.*

ELEMENTARY ALGEBRA.

By W. D. EGGAR, M.A. Crown 8vo, cloth, **3s. 6d.** Answers to Miscellaneous Examples and Revision Exercises only, **6d.**

The subject is treated in a practical way. Stress is laid on its applications to Arithmetic, Mensuration, and Geometry. The order is chosen so as to postpone mechanical processes until their meaning and necessity become obvious; and in the examples distinction is made between exercises of a practical nature and those which exist for examination purposes only.

PRELIMINARY PRACTICAL MATHEMATICS.

By S. G. STARLING, B.Sc. (Lond.), A.R.C.Sc. (Lond.), Head of the Department of Physics and Mathematics in the Municipal Technical Institute, West Ham, and F. C. CLARKE, B.Sc. (Lond.), A.R.C.Sc. (Lond.), Lecturer in Mathematics in the Municipal Technical Institute, West Ham. viii + 168 pages. Crown 8vo, cloth, **1s. 6d.**

Intended for Students of Technical Classes of all kinds; in the first place, to give them good methods of performing ordinary calculations, and, in the second place, to lead them to begin the serious study of mathematics.

A FIRST GEOMETRY BOOK.

A SIMPLE COURSE OF EXERCISES BASED ON EXPERIMENT AND DISCOVERY.

By J. G. HAMILTON, B.A., Lecturer on Geometry at the Froebel Educational Institute, and F. KETTLE, B.A., Head Master of Clapham High School for Boys. Small crown 8vo, cloth, **1s.**

"This useful little book is written by experienced teachers, and proceeds upon the right lines. With its help an intelligent teacher will be able to arouse a spirit of observation and inquiry, and at the same time to teach the elements of geometrical measurement and construction, the elementary properties of lines, angles, triangles, and parallelograms, and the rudiments of practical solid geometry."—*School World.*

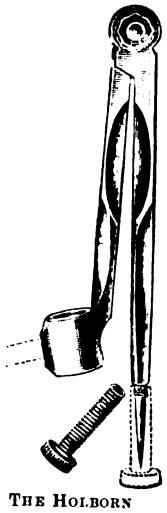
Unique Mathematical Instruments.



THE HOLBORN SAFETY COMPASS.

Three forms of Safety Instruments.

HOLBORN SAFETY COMPASS (Patent).

In this Compass the screw that holds the pencil forms a protector to the point. *See illustration.*

Price per dozen, **4s. 6d.**

VIADUCT SAFETY COMPASS (Patent).

A Compass with a bow head, which can be detached and screwed over the steel point; fitted with Helix pencil holder and patent lock nut-head.

Price per dozen, **6s. 6d.**

VIADUCT SAFETY DIVIDER (Patent).

A Divider with a bow head, which can be screwed on to either leg of the Divider and holds both legs simultaneously; fitted with patent lock nut-head. *Price per dozen*, **5s. 6d.**

SETS OF MATHEMATICAL INSTRUMENTS ON MODERN LINES.

In Metal Boxes.
In Wooden Boxes.
In Cardboard Boxes.

A Metal Box.—"CAMBRIDGE" BOX No. 2. Containing "Viaduct" Safety Bow Pencil Compass, 2 Pencils, Boxwood Rule and Protractor, 2 Nickel Set Squares, and one piece of India-rubber. Box arranged so that Instruments do not rattle.

Price per box, **1s. 9d.**

A Wooden Box.—"CAMBRIDGE" BOX 11A. Strong, polished. Containing "Viaduct" Safety Bow Pencil Compass, 2 Pencils, Boxwood Rule and Protractor, 2 Nickel Set Squares.

Price per box, **2s. 3d.**

A Cardboard Box.—"PREPARATORY SCHOOLS" 9A. Sliding, cloth covered. Containing Brass Pencil Compass, with Helix Holder, Divider Point, 2 Pencils, 2 Set Squares, Brass Semicircular Protractor, Boxwood Rule. *Price per box*, **1s. 4d.**

A Cardboard Box.—"SCHOLARS" BOX 8A. Sliding, cloth covered. Containing "Holborn" Safety Compass, 2 Pencils, 2 Set Squares, Boxwood Rule, and Protractor. *Price per box*, **1s.**

The Patent Safety Mathematical Instruments quoted above, which are manufactured expressly for the Educational Supply Association, are utilized in fitting up the various boxes of the **Modern Sets of Mathematical Instruments** supplied by the Association. These sets are consequently unique: they cannot be obtained elsewhere.

School Furniture on Hygienic Principles.

THE "STANTON" DESK

as supplied for the use of

H.R.H. PRINCE EDWARD OF YORK, and
H.R.H. PRINCE ALBERT OF YORK,

both at Marlborough House and Sandringham.

This desk has many special features.

A Sliding Locker, allowing, as regards the relative positions of the desk and seat, of either a vertical, plus, or minus distance.

Seats of Various Patterns.—Chair seats, fixed seats, tilting seats.

Backs of Various Patterns.—Upright backs, adjustable backs, chair backs.

The New Illustrated Catalogue, containing particulars of every article of School Furniture, sent free on application.

N.B.—The Geography in this Series is in use

AT WELLINGTON COLLEGE.

HIGHER SCHOOL SERIES.

TEXT-BOOKS.

By the Rev. C. S. DAWE, B.A.

These books are specially prepared for the Oxford and Cambridge Preliminary and Junior **Local Examinations** and Candidates for **Minor Scholarships.** The Series consists of the following books:—

ARITHMETIC.

Small amount of **Theory**, large amount of **Practice.** Worked-out **Examples** for each step. Prominence given to **Metric System. Laboratory Exercises** in a Special Section.

GEOGRAPHY.

Physical facts made the basis of **Political. Commercial** aspects kept constantly in view. British Empire fully treated. **Many Coloured Maps and Diagrams.**

ENGLISH GRAMMAR.

Examples made the basis of instruction. **Analysis** introduced **early.** Aids to **correct speaking** a prominent feature. Plenty of scope given for **"practice."**

ENGLISH HISTORY.

Contains landmarks of our national history. More than usual attention given to last three centuries. **The Growth and Greatness of the Empire specially considered.**

Published at One Shilling each.

The *Schoolmaster* says:—"We can speak well of all. Each book will be found just the kind to place in the hands of pupils beginning a systematic course of study in these subjects. The Arithmetic strikes us as being especially good; in fact, the writer of this review has decided to introduce it into his own school. We feel compelled to add a word of commendation to the publishers, who have produced the books in a most pleasant and serviceable form."

Specimens and particulars gratis.

COLLEGE OF PRECEPTORS.
(INCORPORATED BY ROYAL CHARTER.)

MEMBERS' MEETING.

The next Monthly Meeting of the Members will take place on Wednesday, the 26th of May, at 7 p.m., when Professor JOHN ADAMS will read a Paper on "The Dangers of Illustration in Class Teaching."

A Discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

LECTURES FOR TEACHERS.

The First Course of Lectures (Thirty-seventh Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on **"The Psychological Bases of Teaching and Education,"** commenced on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods. The Fee for the Course is Half-a-Guinea. The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C. *For Syllabus, see page* 188.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 30th of August, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in May, 1909.

Certificate Examinations.—The Midsummer Examination for Certificates will commence on the 29th of June, 1909.

Lower Forms Examinations.—The Midsummer Examination will commence on the 29th of June, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Autumn Examination in 1909 will commence on the 7th of September.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

Bloomsbury Square, W.C.

UNIVERSITY OF ST. ANDREWS.

L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

UNIVERSITY OF ST. ANDREWS.

UNIVERSITY HALL.

Warden:
Miss FRANCES H. MELVILLE, M.A.

UNIVERSITY HALL, for Women students, was opened in 1896, under the government of the University of St. Andrews.

The usual Course of Study at University Hall is in preparation for the Degree Examinations of the University of St. Andrews, of which all the Classes and Degrees in Arts, Divinity, Science, and Medicine are open to women on the same terms as to men.

The Sessions of Residence are the two University Sessions, viz. the Winter Session, October to March; the Summer Session (Optional), April to June.

University Hall fees for residence—Winter Session, £30–£50; Summer Session, £15–£25.

Matriculation and Class Fees average £10 for the Winter Session.

For further information, apply to the WARDEN, University Hall, St. Andrews, Fife.

(Trinity College, Cambridge).

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.
MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.
MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.
MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

COLLEGE OF PRECEPTORS.

(Incorporated by Royal Charter.)

BLOOMSBURY SQUARE, LONDON, W.C.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL BASES OF TEACHING AND EDUCATION.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The First Course of Lectures (Thirty-seventh Annual Series) commenced on Thursday, February 4th, at 7 p.m.

The purpose of the Course is to give teachers an opportunity to study at first hand the principles that underlie the practice of their profession. The lecturer will treat his subject in such a way as to fit in with the requirements of the College in connexion with the examinations for the Associateship, the Licentiateship, and the Fellowship; but his main purpose will be to present the matter in such a way as to make it of practical service to the teacher. The reading of the students will be guided, and problems set for their exercise. All the illustrations in the lectures will be drawn from actual experience in the schoolroom, and will include the results of current experimental methods.

SYLLABUS.

I. (Feb. 4.) *The Data of Psychology:* unique character of consciousness: generic consciousness: insulation of the individual consciousness: polarity of consciousness: the objective and the subjective: the self and the ego: nature of the soul: evolution of personality: interplay of personalities: self-realization as goal of education: the teacher's lever.

II. (Feb. 11.) *Psychology as an Educational Instrument:* prevalent misunderstanding: Münsterberg's theory: nature of hypostasis: the exploded faculty psychology: distinction between soul and soul content: education as a process of assimilation of and by the external world: apperception: dynamic view of knowledge: Herbert Spencer's view of the educational value of knowledge.

III. (Feb. 18.) *Presentational Processes:* Sensation and the senses: the "preferred sense": practical applications of the theory of preferred sense: the training of the senses: distinction between sensation and perception: meaning and limits of observation and experiment: the "gaping point": the area of observational activity: distinction between observation and inference: the movable inference index.

IV. (Feb. 25.) *Representational Processes:* distinction between gathering and elaborating material: conception: the static and dynamic view of ideas: ideas as forces: changes in the activity of a given idea: copresentation and interplay of ideas: hierarchy of ideas: the fixed idea: marginal and focal ideas: the possibility of the subconscious influence of ideas.

V. (March 4.) *Soul-building:* nature and scope of association: usual limitation to ideas: really of general application: association makes habits possible: advantages and disadvantages of habit forming: the "growing point": accommodation and co-ordination: the old and the new laws of the association of ideas: Paulhan's view: manipulation of association in teaching.

VI. (March 11.) *Memory:* relation to personal identity: physical basis of memory: possibility of improving memory as a natural power: the associative and the rational memory: mnemonics and the *memoria technica:* mediate and immediate recall: temporary and permanent memory: the nature of the memory implied in "cram": rote-learning: relation between memory and general intelligence.

VII. (March 18.) *"The Busy Faculty":* unjustified depreciation of the imagination: differentiation from memory: æsthetic and practical spheres of imagination: "day-dreaming": need to imagine processes as well as results: misleading use of the word "ideal": the need for clearly imaged ends in practical life: application to the teaching of Geography, History, Arithmetic, and Geometry: imagination as a drag on thought.

VIII. (April 29.) *Regulation of Consciousness:* nature of attention: relation to interest: teachers' distrust of interest: confusion with pleasure: interest and attention as cause and effect: various classifications of the kinds of attention: the physiological basis of attention: the alternation between concentration and diffusion: possibility of degrees of attention.

IX. (May 6.) *Reasoning:* technical distinction between judgment and reasoning: both included in popular term *thinking:* fundamentally an adaptation of means to ends on the ideational plane: thinking may be called the purposive aspect of apperception: laws of thought as thought: the most fundamental law of all thinking: induction, deduction, and fallacies.

X. (May 13.) *Feelings and Emotions:* the pleasure-pain tone that accompanies the activities of the soul: unjustified depreciation of the emotions: driving power of spiritual life: relation to ideas: expression of the emotions, and the various theories connected with it: practical applications to school work: control of the emotions: relation between feeling and desire.

XI. (May 20.) *Desire and Will:* activity of desire: relation to possibility of attainment: expectation of success: evolution of will out of desire: nature and function of motive: fallacy of "the strongest motive" theory: subjective and objective aspects of the will: what is meant by training the will and breaking the will: the problem of the free will of educator and educand.

XII. (May 27.) *Temperament and Character:* various meanings attached to the term *temperament* in ancient and modern times: accepted classifications: physical characteristics of the temperaments: permanency of temperament: possible modifications: the time element: influence of temperament on character: character types and their classification: use and abuse of schemes of classifying characters.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

PHILIPS' SELF-ROLLING AND RAISING SYSTEM OF MAP MOUNTING

(WEEKES' PATENT).

ECONOMY IN EXPENDITURE — ECONOMY IN WALL-SPACE.

A Wall Map mounted on this system can be rolled up by an extremely simple self-acting device and kept free from dust and sunlight. When required, it can be instantly unrolled, the act of unrolling at the same time bringing it to a convenient height for display to the class.

THIS SYSTEM SUPPLIED WITH

PHILIPS' COMPARATIVE SERIES OF LARGE SCHOOLROOM MAPS

Gives the perfection of Modern Scientific Cartography with the most economical and effective Mounting.

SEND FOR FULLY ILLUSTRATED EXPLANATORY PROSPECTUS AND PRICE LIST.

PHILIPS' GEOGRAPHICAL PICTURES.

A New Series of 24 Pictures on 20 Plates enlarged from actual Photographs direct from Nature. Size of Sheet, 25 inches by 20 inches.

SERIES I.

LAND FORMS, CLIMATE AND VEGETATION.

With Notes, Questions, and References.

Edited by P. H. L'ESTRANGE, B.A., Author of "A Progressive Course of Comparative Geography on the Concentric System." Price, in Sheet suitable for framing, **1s. 3d.** each, net; the Set, complete in Cardboard Box, **21s.** net.

ILLUSTRATED PROSPECTUS POST FREE ON APPLICATION.

Adapted to the Board of Education's Syllabus in Geography for Secondary Schools.

A RATIONAL GEOGRAPHY.

By ERNEST YOUNG, B.Sc., Head Master of the Lower School of John Lyon, Harrow. In Three Parts, with numerous Maps and Diagrams. Cloth, crown 8vo, **1s. 6d.** each.

"The book will do much to produce a greatly needed revolution in the method of teaching geography. . . . Full of hints and new ideas."—*Schoolmaster.*

LEEDS and GLASGOW.

IMPORTANT NOTICE.

The latest Circular of the Board of Education on the Teaching of Geometry and Graphic Algebra in Secondary Schools states that the majority of Teachers have not sufficiently availed themselves of the opportunity of breaking away from the bad parts of the Euclidean tradition.

Messrs. Hamilton and Kettle's First and Second Geometry Books accurately reflect the spirit of the modern methods of teaching recommended by the Circular, and among their special features are many of the points on which the Circular lays stress.

Thus in the early stages they evoke the general concepts of surface, line, angle, parallels, &c., by indirect appeal to the observation of familiar instances, instead of endeavouring directly to implant them by way of definitions. Axioms and postulates are banished.

The study of the congruence of triangles is based on a building-up process rather than on superposition. Especial attention is paid to the frequent observation of continuously changing figures, and practical ways of doing so are suggested.

The treatment of solid Geometry, a subject usually neglected, is also in close accordance with the recommendations of the Circular.

A First Geometry Book. A Simple Course of Exercises based on Experiment and Discovery, introductory to the study of Geometry. By J. G. HAMILTON, B.A., Lecturer on Geometry at the Froebel Educational Institute; and F. KETTLE, B.A., Head Master of Clapham High School for Boys. Cloth, 1s. Answers (for Teachers only), 6d.

A Second Geometry Book. By J. G. HAMILTON, B.A., and F. KETTLE, B.A. viii + 300 pages. With or without Answers, 3s. 6d.

Cambridge University Press

Phaethon and other Stories from Ovid. Edited, with Notes and Vocabulary, by G. M. EDWARDS, M.A., Fellow and Lecturer of Sidney Sussex College, Cambridge.

Fcap. 8vo 1s. 6d.

This little book owes its origin to a belief that a selection from Ovid should contain a good proportion of Hexameter pieces. The famous Greek legends, of which many excellent examples are provided from the "Metamorphoses," should become a "possession for ever" to the intelligent reader. For imparting the rudiments of sound Latin scholarship these stories provide much useful material. As the text consists of over 1,000 lines, a free choice of subjects is open to the teacher.

TEXTS WITH VOCABULARIES

Price 9d. each.

Colloquia Latina. Adapted from ERASMUS. With Vocabulary by G. M. EDWARDS, M.A.

"This is an idea well conceived and executed, and we hope many schoolmasters may make the experiment of introducing their boys to Erasmus' living and humorous dialogues."—*Cambridge Review.*

Horatius, and other Stories. Adapted from Livy. With Vocabulary by G. M. EDWARDS, M.A.

Caesar: Gallic War. Book I. With Vocabulary for Beginners by E. S. SHUCKBURGH, Litt.D.

Souvestre: Le Serf. With Vocabulary by A. R. ROPES, M.A.

The Fairy Tales of Master Perrault. With Vocabulary by W. RIPPMANN, M.A.

These Texts are also published *with Notes*, as well as a Vocabulary, price 1s. 6d. each.

THE REVISED VERSION FOR SCHOOLS

A series of Commentaries intended to draw attention to the importance of some of the changes made in the Revised Version, as well as to present, in clear and intelligible form, the best and most approved results of recent theological work. The following new volumes are now ready:—

The Epistles to the Galatians and to the Romans. Edited by the Rev. H. W. FULFORD, M.A.

The First and Second Epistles to the Corinthians. By the Rev. S. C. CARPENTER, M.A.

The Epistles to the Ephesians, Philippians, Colossians, and to Philemon. Edited by the Rev. W. K. LOWTHER CLARKE, M.A.

With Maps Fcap. 8vo 1s. 6d. net each volume.

Editions of the Four Gospels and the Acts of the Apostles, uniform with the above, have also been published, and the remaining books of the New Testament are in preparation.

"It is a great thing that the young people in our schools should be able to study the books of the Bible with the advantages of careful introduction and exposition that they possess in the case of the Greek and Latin Classics, and this series exactly meets the need. . . . For school use, it is as near perfection as anything can be."—*Sunday School Chronicle.*

Trees. A Hand-book of Forest Botany for the Woodlands and the Laboratory. By the late H. MARSHALL WARD, Sc.D., F.R.S.

Vols. IV. and V. Crown 8vo 4s. 6d. net each.

The author intended to write three volumes in addition to those already published, but was not spared to complete his full scheme. He, however, left behind sufficient manuscript to make up two volumes. Of these, Volume IV., Fruits, is now ready, and Volume V., Form and Habit, with an Appendix on Seedlings, is just ready. The first three volumes deal with Buds and Twigs, Leaves, Flowers, and Inflorescences. Each volume is fully illustrated.

SUBJECTS FOR THE CAMBRIDGE LOCAL EXAMINATIONS, 1910

Shakespeare: Twelfth Night. Edited, with Introduction, Notes, Glossary, Appendix on Shakespeare and Puritanism, Hints on Shakespeare's English, and Index of Words, Phrases, and Names, by A. W. VERITY, M.A. Ninth Edition.

1s. 6d.

"The best school edition of the play that has come under our notice."—*Journal of Education.*

"A model of how a play of Shakespeare should be prepared so as to attract and not to repel young students."—*Athenæum.*

Shakespeare: Macbeth. By the same editor. Fifth Edition. 1s. 6d. Student's Edition, 2s. 6d.

Scott: The Lay of the Last Minstrel. Edited, with Introduction, Notes, Glossary, and Map, by J. H. FLATHER, M.A.

2s.

"One of the very best edited school texts ever placed before the public."—*Guardian.*

Scott: Kenilworth. By the same editor.

2s. 6d.

"An admirable presentation in educational form of what is perhaps Scott's most fascinating novel. . . . Altogether this edition is worthy of high praise."—*School World.*

Chaucer: The Prologue and the Knight's Tale. Edited, with Introduction, Notes, and Vocabulary, by M. BENTINCK SMITH, M.A.

2s. 6d.

"We have seen no introduction to Chaucer's works which we can so heartily recommend to secondary or primary school teachers as the suggestive essay which precedes the text. Chaucer's relation to his age, both at home and abroad, is admirably sketched. There is no reason why, with the very slight and easily mastered apparatus here provided, Chaucer's poetry should not be approached directly and with delight by a reader of quite slender philological attainments."—*Journal of Education.*

SUBJECTS FOR THE OXFORD LOCAL EXAMINATIONS, 1910

Shakespeare: As You Like It. Edited, with Introduction, Notes, Glossary, Hints on Metre and on Shakespeare's English, by A. W. VERITY, M.A. Seventh Edition.

1s. 6d.

"Admirably thorough."—*Athenæum.*

"A very good edition."—*Journal of Education.*

"A model edition. . . . This volume contains all the essentials necessary to an intelligent and thorough study of this beautiful comedy."—*School World.*

Shakespeare; Twelfth Night. By the same editor. 1s. 6d.

Shakespeare: Hamlet. Edited, with Introduction, Notes, Glossary, Hints on Metre, by A. W. VERITY, M.A. Second Edition.

3s.

"Mr. A. W. VERITY has made many notable contributions to Shakespearean literature, but in the Student's Edition of "Hamlet" he has undoubtedly surpassed all previous efforts."—*Guardian.*

Shakespeare: Coriolanus. Edited, with Introduction, Notes, Glossary, Hints on Metre, and extracts from North's Plutarch, by A. W. VERITY, M.A.

3s.

"As sound and thorough a piece of work as we were led to expect from his 'Macbeth' and 'Hamlet' in the same series, to say nothing of the plays which he has so ably prepared for the 'School Shakespeare.'"—*Guardian.*

Candidates will be expected to show a general knowledge of the following Plays:

Shakespeare: Julius Caesar. Edited by A. W. VERITY, M.A. Twelfth Edition.

1s. 6d.

"Another of Mr. Verity's admirable School Editions of Shakespeare's Plays."—*Guardian.*

Shakespeare: King Richard II. By the same editor. Seventh Edition.

1s. 6d.

"Every page shows careful scholarship and a ripe literary judgment. It would be difficult to praise this work (or this series) too highly."—*School World.*

Shakespeare: Macbeth. By the same editor. Fifth Edition.

1s. 6d.

"A good copy of 'Macbeth,' edited by Mr. A. W. Verity, on the lines that have made his former editions of plays in this series so highly valued by teachers."—*Scotsman.*

Applications from Teachers for specimen copies should be addressed to E. T., Cambridge University Press, Fetter Lane, London, with a statement as to the number of copies likely to be required if the books are adopted for class use.

The Educational Times.

How to teach Geometry.

Death of Euclid! Thus has an imaginative contemporary heralded the issue of a modest pennyworth of a White paper (Circular 711) by the Board of Education on the "Teaching of Geometry and Graphic Algebra in Secondary Schools." But, although the Circular states that the general effect of the recent changes in the treatment of geometry has been beneficial, it criticizes firmly not only those who cling uncritically to the older system, but also those who, "in thinking practical work everything, have sacrificed the training in rigid deduction which is an essential element in school geometry." The test of the value of this training is not the reproduction of memory work, but ability to solve new problems; and we are told that, unless this power has been developed, the study of the subject must be considered a failure. There appears to be a deplorable waste of time and energy through misconception as to what is desirable and attainable; and the reason here assigned is the unscientific method of dealing with the earlier stages. Hence this Circular.

A distinguishing feature of most modern schemes is the introduction of practical work with instruments. What is the result? Apparently a plethora of aimless constructional work. Practical work seems to be too often regarded as an end in itself—a thing to be done just for the doing of it. Very often, we are told, "a whole year is given to such work, sometimes even two. The results are seldom or never good, and the time may be regarded as pretty nearly wasted."

But, again, those who build on ready-made definitions, axioms, and postulates, and on proofs unsuited to the pupil, are in no better case. In forcing on a raw pupil what might very well be a fit subject of investigation for teachers themselves, they are shown to violate sound principles of teaching; they repel, and make boys think the whole subject artificial and unreal. So here, again, we have another serious obstacle to progress.

What is the remedy? The close interdependence between practice and theory should never be lost sight of: practice must be purposeful, and it must mean something much more than mere manipulation of compasses and set-squares. Real progress, in later stages as in earlier, demands that the student shall have a background of wide experience to draw upon, and, of course, he must not be artificially restricted to Flatland. With beginners vivid presentation of geometrical truths is everything: formal proofs fall flat; they are unconvincing and psychologically wrong. These and other such points are developed and illustrated in a full and fresh discussion of the fundamental propositions on which the subsequent reasoning is to be based (Euc. I., 13-15; 27-29, 32; 4, 8, 26). The work of these early stages is founded "entirely on careful observation of familiar things, experiment, and direct intuition."

The English, it has been alleged, never talk and cannot discuss. Now, open discussion has much to recommend it in mathematical as in other teaching. Let there be a discussion, say, as to what is necessary to fix a triangle or a piece of framework. Lead on to illustrations from the world of life—camp chairs, the opening of a door or a desk, woodwork joints, crank and connecting rod—and an observer will be struck by the keen interest aroused even in folk not particularly mathematical and by the vast amount of geometrical knowledge latent in a boy of twelve—a fund that is perhaps rarely drawn on to any considerable extent in school. Such a boy may easily outstrip his teacher, who however need not be alarmed thereby, for the lad, rightly treated, has sense enough to know that omniscience is not to be expected—even from a teacher. It is, we take it, this kind of teaching for the early stages of geometry that would be welcomed by the Board of Education, as it most certainly would by the ordinary pupil.

As to the subsequent stage—the general deductive development—the Circular says but little. It rightly urges that new truths shall be so presented that the pupil shall have full opportunity for original work; for thus only can he gain mathematical power and self-reliance. It follows, too, that closely related truths must be dealt with in natural groups and not artificially isolated—"an essential vice, for teaching purposes, of Euclid's order." Emphasis is laid on the importance of introducing, wherever possible, the idea of change or motion, and of cultivating the habit of considering the effect of gradual modification of a figure: in the diagonals

Digitized by Google

of a parallelogram as the angle between adjacent sides alters, the modern idea of a tangent, and the like.

The Circular does not profess to be exhaustive, and it is concerned only with the common practice where the subject is begun at about twelve. But it will occur to some of our readers that much valuable preliminary work in geometry may be done before twelve; also that geometrical conceptions may enter largely into the teaching and illustrations of arithmetic and algebra, usefully replacing much arid matter still in vogue both in primary and in secondary schools. Again, the Circular does not point out the advantage of leading on to the consideration of the general truth from the consideration of particular and numerical examples—a procedure that is specially valuable in reasoning about angles.

Careful reflection will compel the admission that in its main outlines the scheme is both sound and practicable. It is infinitely better to speed on and get an outlook over the country than to toil slowly along ever in a world of only two dimensions. We hear of the practical study of aeronautics in the public schools: let us hitch on mathematics to real live interests wherever we can, and so engender enthusiasm in teacher and pupil alike. In all classes of schools, it must be acknowledged, the early study of mathematics is too bookish and not sufficiently realistic. Surely much of this might most profitably be replaced by a simple experimental course long before a child is twelve. The imagination is fired, not dulled, by suitable concrete helps; and simple apparatus which is capable of movement, or of depicting movement, is far more suggestive to teacher as well as to pupil than fixed figures ever can be. Mechanism is all about us: even children cannot escape it if they would—except in school, where it might be used so effectively and so pleasurably in developing mathematical notions.

The Circular also contains some illuminating hints on graphs, and keen criticism, not uncalled for, as to the usual treatment they receive. It richly deserves the thoughtful study of everybody that is interested in mathematical teaching.

NOTES.

THE appointment of the London University Commission has naturally revived the ancient and "strikingly divergent views of the proper relationship of examinations to education." It is a hopeless divergence, no doubt, for the controversy cannot be restricted to combatants that possess adequate knowledge and experience of the facts. Accordingly, "A Late Member of the Senate of the University of London" writes to a contemporary proposing a solution:

> The great need of the moment is that the Royal Commission should recognize that these two ideals of education—an external examining Board and a local teaching University—though temporarily combined and working without outward manifestations of strife, are as hopelessly at variance with each other as they have been at any time during the last fifty years. If this is recognized, and it is further agreed that each of these ideals manifesting itself in its appropriate institution can serve a really useful purpose in the State, it is surely a mistake to hamper the growth of each by insisting on their forces being combined in a single institution.

But why should one raise an outcry before one is hurt, or is at all likely to be hurt? If it be true—and it is certainly true—that the two ideals are as yet, in their "temporary" combination, "working without outward manifestations of strife" (or inward manifestations either, as may be confidently added), why not leave them alone? The internal growth of the University cannot and will not be allowed to be hampered by the external organization; but the external system has not, so far as is publicly known, been in any way hampered by the internal, or, we believe, in any way threatened with such a misfortune. While the internals are quite determined to develop their own side with absolute independence of action, that neither involves, nor is intended to involve, the imposition of the slightest disability upon externals. The whole fuss about equality of standard and of fairness in examinational proceedings is palpably destitute of basis in fact. The examination papers are open to the public; an external examiner is always conjoined with the teacher in the examination of internal students. An independent examining University seems, on the known facts, to be absolutely unnecessary.

THE continued connexion of University College and Training College is regarded by the Welsh Colleges Committee as "a matter of the utmost importance" both from the educational and from the financial point of view. Educationally: for "the intending teacher profits by receiving his or her education as one of a large body of students and in a place where various intellectual interests are represented"; and "for the teacher in training, whose course is marked out by authority, it is a great advantage to be associated with others who are more or less free to choose their subjects and to qualify themselves for advanced study." Financially: for "without the teachers in training the Arts side of the college would be much weaker than it is." The reasons are good enough: the first indeed may be accepted as conclusive and final. The value of the pronouncement lies in its confirmation of an opinion that has been widely accepted elsewhere. The teacher must be impressed with breadth of view and rescued from the fatal danger of a stereotyped narrowness of mind. The higher actual achievement in studies must always count; but it is of much less importance than the clear conviction of inadequacy of attainment and the establishment of a worthy ideal of aspiration.

A SUB-COMMITTEE of the Head Masters' Conference is reported to have adopted a recommendation to the effect that Greek should receive no more attention than French, Mathematics, or Science in the education of the public-school boy up to the age of sixteen. Whatever this may precisely mean, it points to a weakening in the position of Greek and a corresponding advance of the modern subjects. Whether or not the Conference will accept the recommendation remains to be seen. Very likely the results would be good for Greek as well as for its modern competitors. One cannot avoid a grave suspicion that Greek suffers (and causes the other subjects to suffer) through the too common educational vice of teaching excellent things at psychologically inappropriate ages and often to mentally recalcitrant victims. The learners of Greek should be a select number, and they should be well grounded in the common subjects before essaying the special study. Their progress would then be markedly accelerated.

THE personal avowal of the President of the National Union of Teachers on the crux of educational reform has naturally stirred the smouldering embers of a futile controversy. Undoubtedly Mr. Hole is not by any means alone among thoughtful people in finding himself driven to this conclusion—the "civic" solution. The worst of it is, however, that this may turn out to be no solution at all; or, rather, if it be found a solution of the difficulty as between contending ecclesiastical parties, it may raise a still more serious difficulty between all such parties and the mass of the people, who, whatever they may think of "sectarian" teaching, certainly are not prepared for the exclusion of "religious" teaching from the schools. But is it the fact that all other solutions have failed? Certain solutions have indeed failed—in a sense. Still we must ask ourselves how it is that other countries manage to have religious teaching in their schools without any political trouble, and see whether we cannot go and do likewise. Moreover, it would be well to ascertain the actual results of the "secular" or "civic" solution in countries that have tried the experiment. Even with all our disagreements, are there not many people that have confidence that, if the teachers and the parents were left alone to regulate the matter on the basis of an agreed syllabus (such as has been found to work satisfactorily in various districts), the difficulties would promptly shrink out of sight and hearing?

THE Board of Education have reissued their sensible Circular enforcing the rational pronunciation of Latin in secondary schools. It is really amazing to have it bluntly laid down that Latin will not be officially reckoned as efficiently taught where quantity is ignored, and that teachers will not be considered qualified to teach Latin unless they can read Latin prose and verse without violating the quantities. The Board, we may take it, are not speaking without book; but in that case what of the teachers, and where and how can they have learnt their Latin? As to the pronunciation, we are no doubt getting forward, and can read with a certain detached amusement M. Victor Tourneur's description (in the March number of the *Revue de l'Université de Bruxelles*) of the five different types of Latin pronunciation prevalent in Belgium. "Pourrait-on concevoir une situation plus confuse?" he asks, hopelessly. And he proceeds:

> Cependant, de la prononciation d'une langue dépend sa physionomie musicale, la beauté de sa phrase et l'impression esthétique qu'elle produit sur l'auditeur. Même lorsqu'il s'agit d'une langue morte, on peut affirmer que la lecture muette d'un texte produit dans l'esprit des images de sons. Il résulte de ces constatations que, en général, le latin est perçu d'une manière erronée par la plus grande partie des peuples modernes. A de rares exceptions près, aucun de ceux qui lisent une ode d'Horace ne se représente exactement l'harmonie musicale qui la constitue.
>
> Et pourtant, l'enseignement ne deviendrait-il pas plus vivant, et la langue ne revêtirait-elle pas un attrait tout nouveau si on pouvait entendre retentir dans nos salles d'école telles qu'elles ont été prononcées les harangues que César adressait à ses troupes, le bâton d'imperator à la main, ou le plaidoyer par lequel Cicéron arracha à ce même César la grâce de Ligarius, ou bien encore les vers passionnés que Tibulle murmurait doucement à Délie.
>
> Je ne parlerai point de l'intérêt scientifique que présenterait une telle réforme; mais . . . Ne rirait-on pas sans pitié d'un Allemand qui apprendrait le français en le prononçant à l'anglaise? Or, c'est précisément ce que l'on fait faire à nos élèves pendant les sept ans qu'ils passent à l'Athénée. Et pourtant, il serait aisé de leur apprendre à lire le latin d'une manière exacte: il suffirait de leur en inculquer la prononciation correcte avec les premiers éléments.

The Board of Education do well to insist stringently on observance of the requirements set forth in the Circular.

THERE is only one remark that we care to make upon the insurrection at Ruskin College, and that is that we should like to believe that the incident is satisfactorily closed. The peaceful halls of Continental colleges are sometimes convulsed with warlike demonstrations, or closed by authority for months together. But in this country academic rebellions are happily most rare. A writer in the *Globe* has recalled a few instances of exceptional disturbance in our public schools, which are mellowed by remoteness in time. He tells us of a week of anarchy at Marlborough in 1851, when authority was defied, windows smashed, furniture demolished, and outbuildings fired—a demonstration against the withdrawal of certain privileges. At Harrow, in 1764, some two hundred of the senior boys are said to have seceded till a newly appointed head master, who had invaded their old customs, was sent about his business. Winchester, too, has annals of rebellion. The Warden cancelled the Easter holidays because of some slight trespass of a single boy. The outraged youths stormed his house and imprisoned him in his own dining room overnight, raised barricades, fortified the tower, loosened parapets, and so forth; but the High Sheriff, coming up with a company of soldiers, engineered an amnesty, the Warden acknowledging complete defeat. More than a century ago, Rugby boys, resenting a punishment, exploded the head master's study with gunpowder, and made a bonfire of his books, plus school furniture. A regiment from the town besieged the boys in a moated island, and the Riot Act was duly read for their edification. Boys will be boys: they have a keen sense of justice.

THE LATE MR. H. C. BOWEN.

MEMBERS of the educational profession will have heard with deep regret of the death of Mr. Herbert Courthope Bowen after a long illness. Mr. Bowen was born in 1848, and received his early education in Trinidad. He entered Corpus Christi College, Cambridge, in 1868; he was a scholar of his college, and graduated in 1870, taking a respectable place in the Mathematical Tripos. His natural bent was rather towards literature than towards mathematics, and he gave a juster measure of his real abilities by gaining shortly after his degree two University Essay prizes (the Le Bas and the Maitland). He early devoted himself to school work, and after some experience at Dulwich and elsewhere, he was in 1873 appointed second master of the Central Foundation School. In 1876 he was selected as the first head master of the Grocers' Company's School at Hackney Downs, a post he relinquished in 1881. Shortly afterwards he became Principal of the Finsbury Training College for Teachers in connexion with the Central Foundation School, the first organized attempt to give a complete training to intending teachers in secondary schools (1882–6). He also, during those and several subsequent years, gave lectures on education at Cambridge. His tenure of office, both at the Grocers' School and at the Finsbury Training College, was characterized by a high ideal of work and real enthusiasm, an enthusiasm which extended to education in general and to the advancement and consolidation of the scholastic profession. For more than twenty years he was a valued member of the Council of the College of Preceptors; he was one of the founders of the Teachers' Guild, in the work of which he always took a keen interest; and he was on the council of several other educational bodies. Mr. Bowen was also a frequent contributor to educational literature. His list of historical novels illustrating English history was much appreciated by teachers. He also published an annotated edition of Macaulay's "Essays on Clive and Hastings" and other school books. He was very familiar with pedagogic literature, and the college library owes much to his judicious advice.

SUMMARY OF THE MONTH.

MR. ARMITAGE asked the President of the Board of Education (April 6) what was the percentage of income, under each of the following heads, during the year ending July 31, 1908, or the nearest date thereto, of teachers' training colleges not maintained by Local Education Authorities: endowments, voluntary subscriptions, students' fees and sale of books, Government grants, and other sources, if any, stating what the same are.

Mr. Runciman: Income of training colleges for elementary teachers in England and Wales, not maintained by Local Education Authorities, during the year ending July 31, 1908:—

Source of Income.	Amount.	Percentage.
Endowment	£1,003 16 8	·23
Voluntary subscriptions	26,422 10 2	6·13
Students' fees and sale of books	100,890 10 0	23·41
Government grant	301,287 18 10	69·91
Other sources	1,387 0 9	·32
Total	£430,991 16 5	100

In addition to the Government grant included above, a sum amounting to £53,189. 13s. 4d. was paid by the Board to various colleges during the year in respect of personal grant to day students not residents in hostels. "Other sources" of income include £453. 4s. 7d. "proceeds of sale of land"; the remainder consist mainly of bank interest, together with some small miscellaneous receipts. In the case of three colleges the figures for 1907–8 are not available, and particulars for 1906–7 have therefore been substituted. The Upper Norwood (Blind) Training College has been excluded from the return. Bangor Normal Training College has also been omitted, as this College was transferred to a Joint Committee of the Carnarvonshire and Anglesey Local Education Authorities in April, 1908. The amount of Government grant paid to residential colleges in the year 1907–8 was larger than usual, owing to a change in the regulations, by which a greater proportion of the grant earned was paid within the year.

SIR PHILIP MAGNUS asked the President of the Board of Education (on April 7) whether he could state how many secondary schools for boys and for girls, respectively, had qualified for the higher grant by conforming to the regulation as to 25 per cent. of free places; of such boys' schools, in how many Latin was an obligatory subject of instruction; and in how many handicraft teaching and laboratory work were essential parts of the curriculum.

Mr. Runciman: The number of secondary schools which have qualified during the year ending July 31, 1908, for the higher grant by conforming to the regulation as to free places, the number of those schools in which boys are taught, and the number of schools for boys in which Latin or handicraft form a regular part of the curriculum are shown in the following table:—

	Number of Schools.	Schools in which Latin is taught.	Schools in which Handicraft is taught.	
			Throughout the School.	To the Lower Forms only.
Boys only	305	261	226	38
Boys and Girls	166	114	131	16
Girls only	186	—	—	—

Latin is not in all these schools a compulsory subject for every pupil. The regulations of the Board require that the curriculum of all secondary schools shall provide for science, and that the instruction in science must include practical work by the pupils.

THE Report of the Board of Education for the year 1907–8 (Cd. 4566), referring to the further education required by those who have already taken as full advantage of the facilities afforded in elementary or secondary schools as their circumstances permit, states that the position is one of promise; the record of performance in all sections of the work is improving steadily; there is a fairly widespread recognition of existing shortcomings, and much serious effort is being made to overcome the difficulties inherent in the case. The machinery for the education of those who can give their whole time to study, including technical study, until they reach manhood, is already in existence. In particular centres and in relation to particular occupations there is a sufficient supply of adequately prepared students to enable the teaching institutions to develop their power to the full; others still suffer from the inadequacy of this supply and from the difficulty of retaining their students long enough to complete the allotted courses. In each type of school improvement is observable in several directions: students are coming up better prepared and with several years in hand for study; technical colleges are adjusting their teaching more directly to the requirements of the related occupations; and employers are finding it of advantage to secure the services of young men who have had the technical training the colleges afford. There is, the Report maintains, sufficient evidence that the teaching institutions are capable of raising the standard of their work when they have the opportunity. Attention is directed also to some aspects of evening school organization. It is a plain duty at the present time, says the report, to increase the number of trained teachers available for work in evening schools who are capable of bringing their teaching to bear directly upon some of the courses of instruction required in these schools in their areas.

THE Treasury have appointed a Committee to consider the statement of claims to additional State assistance, and estimates of the amounts needed for the respective services, which have been supplied by the Scottish Universities at the request of His Majesty's Government, and to report as to what assistance, if any, should be granted from public funds in the interests of the proper development of the work of the Universities, due regard being had to the co-ordination of their work with that of other institutions in Scotland giving instruction of a University standard. The Committee is composed of the following members:—The Right Hon. the Earl of Elgin and Kincardine, K.G. (Chairman), Miss Haldane, Sir Kenelm Digby, G.C.B., K.C.; Principal Sir Harry Reichel, LL.D.; Mr. Charles Mackinnon Douglas; Prof. Andrew Russell Forsyth, Sc.D., F.R.S.; and Prof. G. Sims Woodhead, M.D. Mr. Hubert Warre Cornish will act as Secretary to the Committee. Communications may be addressed to him at Treasury Chambers, Whitehall.

AT a meeting of the West Yorkshire Branch of the Association of Teachers in Technical Institutions at Huddersfield Dr. R. Pohl, late lecturer at the Bradford Technical College, read a paper on "The Defects of English Technical Education and the Remedy." He said that there was not a student of national economy who failed to realize that Germany and the United States, now serious rivals to English trade, owed their rapid industrial and commercial development largely to the magnificent system of technical education which they had established. Technical education was only in its infancy. Almost invariably when that fact was recognized and pointed out the conclusion was drawn from it that the people of England must be prepared to spend more money in erecting and thoroughly equipping technical colleges and Universities. The main object of his paper was to prove the fallacy of that conclusion. It was not lack of money which was to blame. England spends about twice as much money as Prussia, reckoned per head of population, with educational results which would not bear any comparison. What was wrong was the fundamental principle on which rested the whole structure of technical training in this country. The most essential condition for efficiency and economy was that technical education should be established on the basis of systematic national organization, and that it should be nationally managed. The number of day students in all institutions was far too small. Even in the largest colleges, in such institutions as the Birmingham University and the Manchester Municipal School of Technology, the attendance of day students bore no proportion to the cost of their beautiful equipments. This and other defects could be removed by placing technical education on a national basis. He ventured to think that technical education could be far more easily organized on such a basis than, for instance, primary education. The pressure which the Board of Education by means of the grant alone could bring to bear on the governing bodies would prove sufficient to bring the majority, if not all, of the existing schools into line with a national scheme, and to make them take up the position assigned to them in it. He should not recommend an imitation of any existing foreign system; not only because he was unaware of any system that could not be materially improved upon, but chiefly because the educational system of any country must, of course, be adapted to its particular industrial and educational

Digitized by Google

conditions. And again, far from condemning the present English system root and branch, he considered that some of its features were most excellent, and should be maintained and further developed. Unless English primary education was put into a much more satisfactory condition, technical education must remain severely handicapped. Did it not almost amount to a national crime that many thousands of children were permitted to leave school when only twelve years of age and when the instruction was just becoming most valuable?

The report of the Committee of the Mocatta Library and Museum states that the most important gift to the museum during the year was a collection of articles from the temple and town of Onias, which was presented by the British School of Archæology in Egypt, through Prof. Petrie. Sir Isidore Spielmann has made a gift of a complete set of photographs of the documents in the Public Record Office relating to the re-admission of the Jews to England. The Committee appeal to those in possession of books or articles of antiquarian value which they think would be of interest to students of Jewish antiquities to offer them to the museum.

The Council of the Royal Asiatic Society at its last meeting accepted the recommendations of a Committee, of which Sir Arthur Wollaston was Chairman, as to the allocation of the Public Schools Medal annually awarded for the best prize essay on a selected Indian historical subject sent in by the competing public schools. A condition of participation is the inclusion of Indian history in the school curriculum. The subject of the last competition was "Lord Wellesley," and the prize essays sent in —one from each school—came from Rugby, Harrow, Eton, Merchant Taylors', Westminster, Glenalmond, and Perse (Cambridge). For the second time since the institution of the medal in 1902 the award went to Eton, whose representative this year is Mr. A. H. M. Wedderburn. Lord Curzon has consented to present the medal at the rooms of the Society on Friday, May 21, at 4 p.m.

A meeting of representatives of the Leeds Education Authority and the accredited representatives of the teachers has arrived at an amicable settlement. Under the terms agreed the operation of the new scale of salaries will be limited to future appointments and the existing scale will be maintained for all present teachers. The annual increments will be awarded as usual, but the resolution of the Council, passed some time since, which provides that all increments are to date as from March 31 in each year, will be observed. The benefits of the settlement extend to secondary teachers in the service of the city authority.

The Report of the United States Commissioner for Education for the year ended on June 30, 1907, in two volumes, which together run to 1,214 pages, deals exhaustively with every branch of American education, and includes also valuable reviews of educational progress in many European and other countries. The carefully arranged and remarkably complete tabulated statistics of the 606 Universities, colleges, and technological schools of the United States, contained in the second volume, show what valuable assistance our own Board of Education could render students and administrators of education if it would provide similar conspectuses concerning British institutions of higher learning. The total value of all gifts and bequests reported by the 606 institutions as having been received during the year amounted to £4,574,000. Of this amount about £1,540,000 was given for buildings and improvements, and £2,540,000 for endowment. The remaining amount was for current expenses. Forty-two institutions each received £20,000 or more. The six institutions which benefited to the largest extent in this way were the University of Chicago, which received some £1,189,000; the Rensselaer Polytechnic Institute of New York, £15,400; Yale University, £198,000; Cornell University, £56,000; Princeton University, New Jersey, £153,000; and Harvard University, £139,000. Of the 606 institutions, 150 are for men only, and 330 are open to both men and women. The teaching force aggregated 24,679—an increase of 729 teachers of different grades over the preceding year. The total enrolment of students was 293,343. Leaving out colleges for women only, and dealing with the remaining 480 institutions, tables are provided in the report which show that in the session 1906–7 £3,399,000 was received in students' fees. The grand total of the receipts of these 480 colleges from every source was £13,616,000.

Much regret will be felt for the death of the Rev. Dr. Rigg. Born in 1821, he was twice President of the Wesleyan Conference, an original member of the London School Board, 1870–76, a member of the Royal Commission on Education, 1886–88, and Principal of the Westminster Training College for Day School Teachers, 1868–1903. For fifteen years he was Editor of the *London Quarterly Review*, and he was a voluminous writer.

UNIVERSITIES AND COLLEGES.

(*From our own Correspondent.*)

Oxford. As at the time of writing term has only just commenced there are no important movements to chronicle: if there are any hatching they certainly have not yet—if we may judge from the silence of the *Gazette*—broken the shell. After all, we had a busy time last term with the two propositions which were *non-placeted*—the reform of Congregation and the qualifications for the M.A. degree—and possibly we may be allowed a little breathing time. There were those who foretold that before this time we should have once again before us those two burning questions, the Women's Degree, and Necessary Greek, and perhaps we may have one of them this year. At present, however, there seems rather a lack of reformers—or firebrands. But, whatever strength the conservative party may possess, one can hardly doubt that a time will come when it will be possible to obtain an Oxford degree by examination—not, indeed, an Arts degree—without the knowledge of Greek and conceivably without the knowledge of Latin. But for the retention of one of the two great dead languages most of us would die in the last ditch.

Ruskin Hall has hitherto played such a comparatively unimportant part in the University—except, perhaps, in the estimation of those who believe in it—that the recent disturbances have attracted from the daily papers rather a disproportionate attention: the whole affair partakes more of the nature of comedy than tragedy.

There used to be a saying that professors played golf in the morning (the only time indeed when golf is possible in term time) and postponed lectures in the afternoon, but the first *Gazette* of the term, with its pages and pages of announcements of discourses on all conceivable subjects by professors and readers, seems to refute the saying, and there is no doubt now that more men do go to the professors and that the college lecturer is not nearly so hard worked as he was twenty years ago. Theology and law professors have always played an important part, but there has been a noticeable increase in the professorial discourses on scientific and historical subjects, and the students in the medical school are especially well looked after. But an even more striking sign of the times is to be found in the lectures on modern languages. In German we have now, beside Prof. Fiedler, two Taylorian lecturers. There are three in French and a fourth on Old French and Romance Philology, and special courses in Italian and Spanish, and really it has been a case of the demand creating the supply. Of other lectures announced one is sure to attract a large gathering—Mr. Mackail on Swinburne.

Though Oxford movements may have temporarily rested, the athletic undergraduate has achieved a series of triumphs, and it must be a good many years since Oxford so nearly swept the board: of course, the confounding of the critics over the Boat Race was the greatest triumph of all, and Magdalen College, both in the crew and the coach (Harcourt Gold), had a great share in the triumph. It was unfortunate that, after the Lacrosse team had made such a commotion about the half blue, they should, despite being the favourites, have been one of the unsuccessful teams against Cambridge.

London. Convocation passed unanimously the following resolution (March 26): "That the Standing Committee be constituted the Committee to represent the views and guard the interests of Convocation generally in all matters connected with the recently appointed Royal Commission and any scheme which may be submitted to it, and that for this purpose they be empowered to confer and take joint action with the Senate and to act otherwise as may seem expedient, to appoint sub-committees with the same powers, and to add other members to their number; and that the Standing Committee be requested to report to Convocation from time to time." It was further agreed "that it be an instruction to the

Digitized by Google

Committee to expedite by all means within its power the proceedings of the Commission, so as to limit the interruption of the work of the University, and to do its utmost to maintain the present general and dual character of the University, while providing for its development on the lines of the request of the Senate for the appointment of the Commission."

Wales.

THE report of the Departmental Committee appointed to inquire into the University of Wales and the work of the University Colleges in Wales has been issued. It says that the members are satisfied that graduates of the University are holding their own in competition for appointments of a scientific or educational nature with the graduates of other Universities. They suggest that the sum expended on the three colleges upon undergraduate scholarships from general income, amounting to nearly £2,000, might, with advantage, be added to the amount now available for the improvement of the colleges as University institutions. As to the lines on which any development of work should proceed, the report says teaching should be left as at present to the colleges, the University continuing to bring the colleges into co-operation in all such matters as are of common interest. The Committee state that the history of the colleges gives them a strong claim to the assurance that the assistance hitherto given will not be withdrawn or curtailed. The Committee suggest that the question of a quinquennial review of the work of the colleges should be referred to a Committee constituted somewhat in the same manner as the Committee which advises on the distribution of the grant to University colleges in England.

Edinburgh.

THE Committee appointed for the purpose of inaugurating a scheme for the improvement and expansion of the University report that the total amount of subscriptions intimated was £47,970. With a portion of the money so subscribed the University has been able to purchase the site of the old Royal Infirmary at a cost of £15,000, and the adaptation of certain buildings thereon to museums, classrooms, laboratories, and other workrooms for the departments of physics and engineering has been met in most part by grants from the Carnegie Trustees. From Sir Donald Currie's munificent gift a capital sum of £20,000 has been set aside as a fund for the endowment of lectureships in various branches of University education. A special memorial fund has been contributed by Sir John Jackson, in memory of the late Prof. Tait, for promotion of research in the physical laboratory.

Glasgow.

AT a recent meeting of the General Council a report was received from a Committee which dealt with the proposal to give a trial to a system of instituting lecturers having a status similar to that of the *Privatdozenten* in the German Universities. Dr. Kerr moved that distinguished graduates who make application to the University Court to teach classes in the University qualifying for graduation should, when the University Court is satisfied of their ability and fitness, be appointed lecturers in the University, and should be granted classroom accommodation in so far as that is possible. It was intended that the University should not pay these new lecturers, but give them house room and allow them to live on the fees they obtained. The motion was duly seconded, and after some discussion it was agreed that the resolution should be sent to the University Court for approval.

St. Andrews.

A SIGNIFICANT fact in connexion with the graduation ceremony on March 31 was the number of women students who received the degree of Master of Arts—out of 50 graduates 38 were women. In connexion with this matter, at a meeting of the general Council of the University held on April 1, a communication was received from the Students' Representative Council regarding the relative number of men and women students. It was pointed out that, whereas the number of women students was rapidly increasing in the four Universities of Scotland, and without as yet any indication of slackening in the rate, the number of men students, while also growing, was growing very slowly. This great increase in the number of women students was confined almost entirely to the Arts Faculties in the Universities, in which they now formed 46 per cent. of the total number of students. These facts had peculiar significance to St. Andrews University, not only because its strength was in its Arts Faculty, but also because the proportion of women students in that faculty was much higher than in the Arts Faculties of any of the other three Universities, forming 61 per cent. of the whole. The report proceeded to point out that this extremely high percentage of women was a possible source of danger in the near future to St. Andrews University, and it was therefore advisable to avoid that danger by keeping the percentage of men students as far as possible above that of women. The report recommended that St. Andrews University might, as a corrective, turn its attention to the development of its science and medical schools, and also encourage the department of military subjects.

Hong-Kong.

THE University which is to be founded at Hong-Kong (says the *Empire Review*) is to be on more practical and advanced lines than the older Universities in the East. Its system of education is to be adapted to the careers which its graduates intend following. In making an appeal for funds the Governor remarked: "We have seen in India and elsewhere the harm which is done by a system of higher education, not based on such principles, which has, in fact, produced a class of young men of high intellectual attainments, but without a corresponding development of character, men for whom there are no adequate careers in life. The same thing has happened in Africa. The graduates from the University of Hong-Kong will have all the opportunities which the Empire of China offers in the ranks of official life and in the fields of commerce and the profession of medicine, engineering, and other occupations, as well as the opportunities offered by the colonies. The model of the new University should approximate to Birmingham or Leeds rather than to that of Oxford or Cambridge or Calcutta."

THE EDUCATIONAL LADDER.

CAMBRIDGE UNIVERSITY.—Bell Scholars: W. H. Carter, Scholar of St. John's; J. M. Creed, Scholar of Gonville and Caius; and Gordon H. Luce, Scholar of Emmanuel (equal). Distinguished in the examination: William St. John Pym, Trinity; and William H. C. Romanis, Minor Scholar of Trinity.

St. John's.—Exhibitions for Cambridge Senior Local Examinations: Thomas T. Scott, Wolverhampton Grammar School, for Classics; W. E. Douglas, Wellingborough Grammar School, for Mathematics.

EDINBURGH UNIVERSITY.—Hamilton Philosophical Fellowship (£93 a year for 3 years): Thomas Anderson, M.A. Mackenzie Classical Scholarship (£111 a year for 4 years): Roderick M'Kenzie, M.A. Sir David Baxter Mathematical Scholarship (£66 a year for 4 years): Herbert Bell, M.A., B.Sc. Drummond Mathematical Scholarship (£101 a year for 3 years): A. B. Grieve, M.A. Vans Dunlop Scholarship in English (£100 a year for 3 years): Gordon Hislop, M.A. Vans Dunlop Scholarship in Logic and Metaphysics (£100 a year for 3 years): Robert Ross, M.A. Lapsed Vans Dunlop Scholarship in Moral Philosophy: D. M. Baillie, M.A. Vans Dunlop Scholarship in Classics (£100 a year for 3 years): Margaret K. Tennant, M.A.

FELSTED.—The following scholarships have been awarded: £70, C. H. S. Haygarth (Mr. Newcombe, Wootton Court, Canterbury); £50, R. B. Beevor (Mr. Pridden, Rosslyn House, Felixstowe), H. W. Duffield (Messrs. Ransome and Jeston, Bay School, Birchington), and E. W. C. Wace (Mr. Middlemist, Allhallows School, Honiton); £40, G. Hetherington (in the school); £30, J. C. Donaldson (Mr. Crawley, St. Stephen's Green, Dublin), G. S. King (in the school), D. J. Longden (in the school); £20, R. L. Bicknell (Junior House, Felsted School).

OAKHAM.—Scholarships: £40, H. Finlinson (Mr. Chapman, Fritham House, Lyndhurst); £25, J. Metcalfe (Mr. Gowring, St. Bede's School, Eastbourne); £25, M. A. Neilson (Mr. Raven, Uppingham and Oakham School).

OXFORD UNIVERSITY.—Radcliffe Travelling Scholarship: Martin W. Flack, B.M., M.A., Keble. Radcliffe Prize: A. F. Hertz, D.M., Magdalen. Worthy of the Prize: A. G. Gibson, D.M., Christ Church; A. C. Inman, M.A., B.M., Wadham. Lothian Prize: F. H. Lyon, late Exhibitioner, Magdalen. Honourably mentioned: Gabriel S. Woods, B.A., Exeter. Arnold Prize: John C. Walton, B.A., formerly Scholar of Brasenose.

Exeter.—Stapledon Scholarship for Chemistry: William C. Rhymes, King's College School.

Magdalen.—Classical Demyships: Stephen A. Wadsworth, Tonbridge: Howard J. B. Clough, Rugby; Eric E. F. Pretty, Harrow; Leonard W. Mynes, Bishop's Stortford College; and Edward I. Powell, Eton. Classical Exhibitions: Henry G. Paterson, Winchester, and William L. Vince, King Edward's School, Birmingham. Exhibition in History: Albert V. Murray, Morpeth Grammar School.

OXFORD: LADY MARGARET HALL.—Scholarship of £40 a year for 3 years: Gwendolen Watkinson, Glasgow High School and Liverpool High School (English Literature). Jephson Scholarship of £45 a year:

Clementina M. E. Benthall, Sandecotes School, Parkstone (Latin and French). Scholarship of £35 a year: Violet A. Hyett, Mortimer House School, Clifton (English Literature). Commended: Gladys Maltby, Bedford High School (French and German).

OXFORD: ST. HUGH'S HALL.—Ottley Scholarship of £40 a year for 3 years: Dorothy Selby, Worcester High School (Mathematics). Scholarship of £25 a year for 3 years: Hilda Stansfield, Manchester High School and Liverpool College (Modern History).

ROSSALL.—Promoted from Junior Scholarships to Senior Scholarships: Y. L. Ellis, R. A. Beloe, C. M. Reece, R. W. Paul, R. V. Menzies, and F. Brundrett (Mathematics). Elected to Junior Scholarships: for Classics, E. K. Allin (Mr. A. P. Cary Field, West House School, Edgbaston); J. W. Blake (Mr. A. S. Athawes, Dumpton House, Broadstairs); P. H. L. Brough (Messrs Knowles and Danglish, Cothill House, Abingdon); H. F. G. Bromley (Mr. R. M. Hugh-Jones, Colet House, Rhyl); V. P. Davies (Mr. G. E. Rudd, Stoneygate School, Leicester); and A. L. Trundle (Mr. E. A. Cooper, Orleton, Scarborough). For Mathematics: A. G. Blake (Mr. A. S. Athawes, Dumpton House, Broadstairs); H. Hall (Mr. A. E. Buckhurst, the County School, Richmond); N. Kemp (Rossall School); and C. D. Storrs (Mr. H. T. S. Storrs, Shirley House School, Old Charlton).

SHREWSBURY.—Elected to Entrance Scholarships: £70, F. J. Kinchin Smith (Mr. E. W. M. Lloyd, Hartford House, Winchfield); £40, B. H. Ellis (Mr. W. R. Mills, Highfield, Liphook), and H. B. Stones (Mr. P. S. Dealtry, The Leas, Hoylake); £30, D. D. La Touche (Mr. W. L. Scott, Baymount School, Dollymount, Dublin).

THE COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on April 17. Present: Prof. Adams, Vice-President, in the chair; Mr. Barlet, Rev. J. B. Blomfield, Mr. E. A. Butler, Mr. J. L. Butler, Miss Crookshank, Mr. Eve, Mr. Hawe, Rev. R. Lee, Mr. Morgan, Mr. Pinches, Rev. Dr. Scott, Mr. Starbuck, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

The Secretary reported the arrangements that had been made for holding the examinations of the Newfoundland Council of Higher Education to take place in June next. The number of entries showed an increase of about five hundred on the corresponding examinations last year.

The Diploma of Licentiate was granted to Mr. R. P. Kulandaiswami, and that of Associate to Mr. J. S. Bower and Mr. G. W. Dominey, who had satisfied the prescribed conditions.

One of the representatives of the College on the Federal Council reported that Dr. Gow's Committee, which included the members of the Federal Council, had come to the conclusion that there was no present prospect of securing the constitution of a Teachers' Registration Council, and that attention should be directed to the consideration of the conditions which should govern admission to a Register. The Committee had agreed that it would be desirable to arrange for a conference of representatives of bodies interested in registration in order to discuss this matter, and it had been decided to entrust the drawing up of the agenda for the conference to a sub-committee of three persons, representing respectively secondary, elementary, and technical education.

The following persons were elected members of the College:—

Mr. W. L. Brooksbank, A.C.P., 2 Lancaster Villas, East Finchley, N.
Mr. J. H. Brown, B.Sc. Lond., L.C.P., 67 Legsby Avenue, Grimsby.
Mr. J. H. Ferraro, A.C.P., Bella Vista, St. Budeaux, Devonport.
Miss S. Greves, B.Sc. Lond., L.C.P., 19 Guernsey Grove, Herne Hill, S.E.
Mr. W. J. T. Pascoe, A.C.P., Anerley College, Anerley, S.E.

The following books had been presented to the Library since the last meeting of the Council:—

By the CAMBRIDGE UNIVERSITY PRESS.—Payen-Payne's Balzac's Le Médicin de Campagne.
By METHUEN & CO.—Foat's London Reader; Fursdon's French and English Parallels; Perry's Die Geschichte von Peter Schlemihl.
By J. MURRAY.—Proceedings of the Classical Association, 1908; Hartog's Mérimée's La Vénus d'Ille et la Dame de Pique; Poole and Becker's Commercial French Reader.
By the OXFORD UNIVERSITY PRESS.—Delp's Balzac's Cesar Birotteau; Payne and Beazley's Hakluyt's Voyages of Drake and Gilbert; Smith's Book of Verse for Boys and Girls, Part III., Sections 1 and 2; Wahl's Hugo's Préface de "Cromwell"; Wilson-Green's Sismondi's Pavie et le Sac de Rome.
By RELFE BROS.—Perry's Intermediate History of England.
By RIVINGTONS.—Somerville's Grammaire Française Elementaire.
Calendar of University College, Reading.
Joint Scholarships Board Year Book.

CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

DU PROGRES DU MOUVEMENT FÉMINISTE EN ANGLETERRE.

Par Mme C. BAGNALL.

LE 27 mars dernier il y avait foule dans la grande salle du Collège. Mme Bagnall, directrice de l'enseignement du français à la "High School for Girls" de Clapham, avait choisi un sujet de brûlante actualité, que rehaussait la haute place qu'elle occupe dans le monde enseignant, aussi bien que l'autorité de son expérience, et qu'elle a traité avec tout le tact et tout le talent auxquels on pouvait s'attendre d'elle. Forme littéraire, saine philosophie, argumentation serrée avec documents à l'appui, rien n'y manquait. Ajoutons à cela une forte personnalité, une voix sympathique, une excellente diction, l'art de faire valoir la phrase, le sentiment profond de l'orthodoxie de sa thèse, et nul ne sera surpris qu'elle ait porté la conviction dans les cœurs, et gagné son auditoire à sa cause.

Aux temps anciens, nous dit la conférencière, les fourmis, faibles encore, vivaient, humbles et soumises, sous la tutelle des lions, qui en faisaient lors à leur guise. Grâce à cette protection, celles-là devinrent si nombreuses et si puissantes que, confiantes dans leur bon droit, et lasses du rôle effacé qu'on leur faisait jouer, et dont elles souffraient, elles exprimèrent un jour le désir d'avoir leur petite part dans le gouvernement de la république. Ces messieurs n'en tinrent aucun compte. Mais les revendications se firent plus pressantes, et, devant un refus obstiné, les fourmis résolurent de s'imposer. Elles attaquèrent les lions qui, harassés de pétitions, harcelés de piqûres, impuissants contre le nombre, ne surent bientôt plus à quel saint se vouer, et implorèrent un moment de répit. L'affaire en est là, *sub judice*.

Tel semble être, *in parvo*, l'historique du mouvement féministe.

Certes, depuis nombre d'années, la femme n'est plus ce qu'elle était, une pure créature d'ornement ou d'utilité domestique. L'éducation, surtout l'enseignement supérieur, en a fait un tout autre être, sous beaucoup de rapports l'égal de l'homme. Comme ouvrière dans les ateliers, comme employée dans les grandes administrations, elle le remplace avec avantage. Toutes les professions libérales lui sont ouvertes, et elle sait y tenir un rang honorable. Tout comme les hommes, elle sort des universités Maitre-ès-Arts ou ès-Sciences. Ce qui ne l'empêche pas d'être, à l'occasion, épouse dévouée, excellente ménagère et mère de famille.

Mais, dans quelque position qu'elle se trouve, son infériorité économique est notoire, et c'est là ce contre quoi elle s'insurge. Son travail manuel ou intellectuel, équivalent en tout point à celui de l'homme, n'a pas la même valeur marchande. De quelque côté que l'on regarde, dans les ateliers, dans les écoles, dans les administrations, le salaire de la femme est coté à près de cinquante pour cent au-dessous de celui de l'homme. Il y a donc là une injustice criante qui n'a plus sa raison d'être dans l'incapacité de la femme. Et il semblerait que, pour relever sa position économique, il n'y eût de moyen plus efficace que de lui octroyer le vote parlementaire. Le suffrage ne sera point en ses mains une arme dont elle abusera, mais un levier dont elle usera en toute sagesse pour améliorer une position subordonnée qui la rend par trop dépendante de l'homme. Dans cette revendication de ce qu'elle considère son droit, la femme n'est point mue par un sentiment d'ambition mais par un sentiment de pure justice. Et puisque la représentation indirecte ne suffit plus pour parvenir à un résultat équitable, elle réclame, comme facteur important dans l'économie sociale de la nation, le libre exercice de son droit de citoyen, le droit de vote.

Faire un compte rendu détaillé de cette remarquable conférence qui a été d'un bout à l'autre intéressante et instructive, nous entraînerait trop loin. Il nous suffira d'ajouter que Madame Bagnall ne s'est pas contentée de nous donner tous les arguments en faveur de sa thèse, mais qu'elle a sobrement, sans parti pris, discuté le pour et le contre, pour en arriver à la conclusion que le vote pour la femme est devenu impératif.

Nous nous attendions à une longue discussion, à une véritable passe d'armes. Point. La discussion a été presque nulle. Un monsieur a bien fait ressortir qu'en entrant dans la politique, en singeant l'homme, la femme perdrait beaucoup de cette | presti-

gieuse puissance, de cette grâce, de cette poésie qui en font tout le charme et qui sont son véritable apanage, les plus beaux fleurons de sa couronne . . . L'auditoire était gagné, et a montré toute son appréciation par de chaleureux applaudissements.

THE N.U.T. ANNUAL CONFERENCE.

The fortieth Annual Conference of the National Union of Teachers was held at Morecambe on April 8–12, under the presidency of Mr. C. W. Hole, of the Church Street Council School, Stoke Newington, London. The Union now numbers fifty-six County Associations, five hundred Local Associations, and 64,459 members; and, in addition to over eighteen hundred delegates from the various branches of the Union, representatives of teachers' associations in Belgium, France, Germany, Holland, Switzerland, Ireland, and Scotland, the Teachers' Guild of Great Britain and Ireland, and the Co-operative Union, as well as distinguished representatives of local bodies, were also present.

The Civic Solution.

After a careful and dispassionate review of the recent difficulties over the Education Bill, and of the existing situation, the President said: The only possible solution, since all others appear to fail, is that sacrifices are bound to be made all round, and the State must disendow all sectarian and religious teaching and concern itself only with the provision of secular education. Doubtless England has not yet agreed that the State has no function either to teach religion or to have religion taught in its name; but that there is a tendency in that direction is apparent when a stanch Catholic like Mr. T. P. O'Connor, M.P., says: "The secular solution had one great thing to be said in its favour; he would not say it was logical, because that apparently was rather a term of opprobrium to apply to any proposal in the House. He said it was good, because it was consistent, and it was fair all round. It established no form of religious teaching of one communion over another, it excluded with equal justice and with absolute equality every form whatever of religious instruction; and if Protestants were willing to accept exclusion, Catholics could make no particular complaint: they got no worse treatment than any other body."

That all past attempts at compromise have failed does not augur well for future endeavours, since, unhappily, so many decry the simple Bible teaching as unsatisfactory; but the civic solution, sweeping aside the entire subject over which there has been conflict, would clear the ground for a national system of schools with full local control, no "contracting out," and no creed tests. Therefore, speaking for myself, and not claiming that a single member of this Conference is in accord with me, I must say that I have been driven to the conclusion that in this solution lies the largest measure of practical justice and equity that can be meted out to contending claims; provided always that, where denominations have furnished the funds for building their schools, the public must pay a fair rent for the occupation of the premises and keep them in a satisfactory state of sanitation and repair.

Neglect of Pressing Problems.

Perhaps the greatest evil arising out of this controversy is the neglect of real educational problems needing instant attention. Mr. Runciman regrets this. He says: "The attention of the public is diverted from the real educational needs of the country; administrators' time and attention are wasted; and half the time of the capable heads of the department is taken up with matters that arise out of the religious question." The Board of Education has happily seized the opportunity offered by the temporary cessation of strife over Education Bills to consider the staffing of public elementary schools and the size of classes, with the result that an admirable circular has been sent out which proves Mr. Runciman to be one of the wisest and ablest of the many brilliant men who have presided over the destinies of the elementary schools of this country.

Staffing of Elementary Schools.

That the changes which will be effected by the Code for 1909 are highly desirable and necessary will be admitted at once, when the present position is fully realized. The character of the teaching staff in the elementary schools of England and Wales, as shown by the latest available return of the Board of Education, is—of certificated teachers, 89,078, or 49 per cent.; of uncertificated teachers, 40,569, or 22 per cent.; of supplementary teachers, 21,984, or 12 per cent.; and of pupil-teachers, 27,227, or 15 per cent. The 22,000 so-called supplementary teachers—possessing scarcely any educational equipment, utterly unfitted in most cases for the important duties they are called upon to perform; their sole passports to the teaching profession being that they must be at least one year over sweet seventeen and have been successfully vaccinated—are answerable for the education of nearly 600,000 children. The Board of Education proposes that, in future, each member of this class of teacher shall count on the staff for twenty instead of thirty children, while other regulations provide for the limitation of the numbers to be employed in the schools, and for the withdrawal by the Board of the recognition of a supplementary teacher at any time, if not efficient. This is, indeed, a step in the right direction, and shows that Mr. Runciman is really solicitous that there should be an improvement in the quality of the teachers at work in the schools.

Student Teachers.

There are also many young persons termed "student teachers," whose academic training is unexceptionable. These enter as teachers immediately after having been pupils themselves in secondary schools, and have, of course, no knowledge of the principles of teaching: they come into the Elementary Schools—which they only attend eight times a week—with the object of learning the technique of their future profession: they need the attention and assistance of qualified teachers to supervise and direct their practice in teaching and class management. They are really apprentices, but the Board of Education has regarded each of these young people, who may never have been in an elementary school before, or done a day's teaching anywhere, and who are away one day out of every five, as an efficient teacher equal to educating forty-five children on every occasion on which the school is opened. It needs no arguments of mine to prove that it is farcical to imagine that these beginners are capable of performing the task allotted to them. It is perfectly right and necessary that at this stage of their career they should enter the schools to discover whether their choice of a profession is a congenial one and whether they have an aptitude for the teacher's life. If they should prove to be unfitted, it is much better that at this period the fact should be ascertained, so that, both in their own interests and those of the children, they may turn their attention to some other walk in life for which they have a greater natural ability.

College-Trained Certificated Teachers Waiting.

Whether fit or unfit for the teaching profession, these learners certainly should not count as qualified teachers: rather their presence on the staff should be counted as a serious addition to the head teacher's duties. Hence I hope that, although by the new proposals the student teacher still counts for twenty children, he, like the pupil teacher, will be withdrawn ere long from the roll of responsible instructors. There are some five hundred well equipped, college-trained certificated teachers waiting to fill the gap which will be caused by the new regulations of the Board of Education, and an additional four thousand will be seeking employment in August. The Circular of the Board of Education is practical, but not heroic; and, although far from being exhaustive, it will work a marvellous change in the mental, moral, and physical fitness of the output from the primary schools, and at the same time an act of justice will be performed in enabling a very large number of college-trained teachers to secure the engagements they have been led to expect. The present position of these unemployed teachers is, indeed, a grievous one. From a statement made by the President of the Training College Association in December last, it appears that, out of 3,764 students who left in July, 851 failed to secure appointments. Of those employed we are informed, by the Principal of Hockerill College, "that many had been compelled to become waitresses at City restaurants and to take odd jobs at stores and drapery establishments"; while Mr. Gautrey, a member of the London County Council, stated, on March 9, "that, of 176 students leaving one of the London colleges last year, 74 are still without a permanent post: one of these had accepted a temporary clerkship in the Board of Trade Offices, and one or two others had become clerks or cashiers at refreshment houses in the City."

Digitized by Google

THE FINANCIAL ASPECT.

Each of these teachers in the course of training has cost the nation a sum of at least £200, so that if these 500 teachers, who are out of employment, turn to other forms of occupation in order to gain a livelihood, £100,000 will have been wasted. The proposals of the Board of Education must take immediate effect unless these teachers are to be lost to the State. For this a much more generous grant should be forthcoming from Imperial sources, owing to the heavy burden of the Education rates in many parts of England and Wales, especially when it is remembered that the clause in the Circular which limits the number for a certificated teacher to sixty on the roll undoubtedly will have the effect of reducing the average attendance, and, therefore, the Government grant. One cannot but sympathize with the Local Education Authorities over the financial strain put upon them by the Board of Education, which, while it makes fresh demands year by year, yet fails to pay a proper share of the increasing cost. Money amounting to a million and a half was promised if Mr. Runciman's Bill had passed; but when a portion of it was asked for for educational purposes, he spoke of the request as a "raid upon the Exchequer," and the Education Estimates of last March extinguished hopes by reducing the grants to elementary schools to the extent of £68,000. I sincerely hope that shortly he will view the question more sympathetically: for it is to be remembered that the provision of meals, medical inspection of children, and the reduction of staff values, all mean additional cost, and that the Local Authorities have had the whole of this expense thrust upon them; it appears only just that Mr. Runciman should persuade the Treasury to come to their relief by a largely increased grant from the national funds; otherwise the strain upon the Local Authorities will become intolerable and reaction will set in. This of necessity must be detrimental to the true interests of the children he evidently desires to benefit.

The National Union does not wish to create a dearth of teachers. Its ideal is a qualified teacher for every class, and it will gladly see the requisite number trained and engaged; but it is bound to draw the attention of parents and guardians to the fact that the outlook is still gloomy.

WOMEN AS TEACHERS.

NOWHERE (says the *Westminster Gazette*) is the different standard of pay more marked than in the teaching profession, for here, by general admission, women are as a rule more efficient than men. Even in the elementary schools in rough districts it is admitted that women teachers are often more effective in maintaining discipline than the men, as well as teaching better on the whole. Yet there is a wide difference in the standard of pay. That is sometimes justified on the ground that it is assumed that the man will marry and have a wife and children to support. Yet there are many cases in which the women teachers are actually widows with children to maintain, while by no means all the male teachers marry, and in many instances where they do they join their fortunes with a woman teacher, who continues to contribute her full earnings to the joint household.

Yet, with all the injustice of the lower salary, there is no profession that offers to the young woman of capacity so wide a field or one in which the average of remuneration is so good. Teaching in the elementary schools is becoming almost the preserve of women. The pay is good on the whole, the holidays are long and regular, and there is usually some provision for the years when active work is over. Nor are the qualifications demanded of an altogether exceptional kind. Other than educational qualifications are wanted, however. The successful teacher must possess a sound physique; she must have the full sympathy with children which enables her to enter into all their ideas and conversation; there must be the capacity for gaining the confidence and love of the children with the power of maintaining discipline. Moreover, an absolutely essential qualification is that of clear and lucid exposition, born of simplicity of thought, and added to great patience.

There are at present over a hundred thousand women teachers in elementary schools, and more than twenty thousand female pupil-teachers in training. Those figures are in themselves indicative of the extent to which it has been realized that teaching is almost the ideal profession for women.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.
Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,351,137. Annual Income, £471,097.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS. LARGE BONUSES. Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES. Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

1. **WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

2. **PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

ANNUAL PREMIUMS FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

MACMILLAN'S NEW AND RECENT BOOKS.

ENGLISH LITERATURE FOR SECONDARY SCHOOLS.—*New Volumes.*

Selections from the Poems of Robert Browning. With Introduction and Notes by Mrs. M. G. GLAZEBROOK. Limp cloth, 1s.

Gulliver's Travels.—I. **A Voyage to Lilliput.** II. **A Voyage to Brobdingnag.** Abridged. With Introduction, Notes, Glossary, Questions, and subjects for Essays by G. C. EARLE, B.A. Illustrated by C. E. BROCK. Limp cloth, 1s.

Selections from White's Natural History of Selborne. Edited with Introduction, Notes, and Glossary, by F.A. BRUTON, M.A. With 40 Illustrations. Globe 8vo, limp cloth, 1s.

A School Arithmetic. By H. S. HALL, M.A., and F. H. STEVENS, M.A. Complete, with Answers, 4s. 6d.; without Answers, 3s. 6d. Or in Two Parts:—Part I., with Answers, 2s. 6d.; without Answers, 2s. Part II., with Answers, 2s. 6d.; without Answers, 2s. Answers, 1s. KEY in preparation.
This work follows closely the recommendations of the Mathematical Association.

A Modern Arithmetic with Graphic and Practical Exercises. By H. SYDNEY JONES, M.A. Parts I. and II., with or without Answers, 2s. 6d. each. Complete, with or without Answers, 4s. 6d.

A New Algebra. By S. BARNARD, M.A., and J. M. CHILD, B.A., B.Sc. Volume I. containing Parts I., II., and III. 2s. 6d. KEY in the press.
Part I.—A generalized Arithmetic in which letters are employed to represent Natural Numbers, and the idea of Algebraic Form is introduced.
Parts II. and III.—Zero and Negative Numbers and Fractions are considered. These two new classes of numbers are defined so that the expressions $a-b$, a/b may always have a meaning.

Practical Arithmetic and Mensuration. By F. CASTLE, M.I.M.E. 2s.

Five-Figure Logarithmic and other Tables. By FRANK CASTLE, M.I.M.E. Fcap. 4to, limp cloth, 1s.

Graphical Methods in Applied Mathematics. A Course of work in Mensuration and Statics for Engineering and other Students. By G. C. TURNER, B.Sc. 6s. (First published in 1908 under the title of "Graphics.")

A Course of Plane Geometry for Advanced Students. Part I. By CLEMENT V. DURELL, M.A. 8vo, 5s. net.

NATURE.—"This is a really capital book for students of what may be called scholarship standard. It contains, among other things, sections on similarity, transversals, vector geometry, inversion, and coaxal circles."

Key to Students' Manual of Book-keeping. By A. THORNTON, B.Sc. 8vo, 7s. 6d. net.

A New Series.—FIRST BOOKS OF SCIENCE.

A First Book of Botany. By ELIZABETH HEALEY, A.R.C.Sc. Illustrated. 1s. 6d.

Beginners' Botany. By L. H. BAILEY. Illustrated. 3s. 6d.

A Manual of School Music in Elementary Grades. For Supervisors and Class Teachers. By FRANK R. RIX, A.B., M.D. 4s. 6d. net.

SIEPMANN'S FRENCH TEXTS FOR RAPID READING.

ELEMENTARY SECTION. Sewed, 6d. each.

Chateaubriand—Les Aventures du Dernier Abencerage. (Adapted.)
Dumas—Les deux Frères. (Adapted.)
Gerard—La Chasse au Lion. (Adapted.)
Mme. de Girardin—Le Chien Volant. (Adapted.)

SCIENCE AND ART EXAMINATIONS.

BOOKS FOR THE FIRST STAGE.

GEOMETRY, PRACTICAL PLANE AND SOLID. By G. F. Burn. 2s.

BUILDING CONSTRUCTION. By Bryson Cunningham, B.E. 2s. 6d.

MATHEMATICS (ALGEBRA AND EUCLID). Edited by Dr. Wm. Briggs. 2s.

MECHANICS OF SOLIDS. By F. Rosenberg, M.A., B.Sc. *Fifth Edition.* 2s.

MECHANICS OF FLUIDS. By G. H. Bryan, Sc.D., F.R.S., and F. Rosenberg, M.A., B.Sc. *Second Edition.* 2s.

SOUND, LIGHT, AND HEAT. By John Don, M.A., B.Sc. 2s.

MAGNETISM AND ELECTRICITY. By R. H. Jude, M.A., D.Sc. 2s.

CHEMISTRY, INORGANIC (THEORETICAL). By G. H. Bailey, D.Sc., Ph.D. Edited by Dr. Wm. Briggs. *Third Edition.* 2s.

CHEMISTRY, INORGANIC (PRACTICAL). By Dr. F. Beddow. 1s.

CHEMISTRY, ORGANIC (SYSTEMATIC PRACTICAL). By G. M. Norman, B.Sc., F.C.S. 1s. 6d.

PHYSIOLOGY, HUMAN. By G. N. Meachen, M.D., B.S. Lond. 2s.

BIOLOGY (SECTION ONE). By W. S. Furneaux. 2s.

BOTANY. By A. J. Ewart, D.Sc., Ph.D. *Second Edition.* 2s.

STEAM. By J. W. Hayward, M.Sc. *Second Edition.* 2s.

PHYSIOGRAPHY (WHOLE). By A. M. Davies, D.Sc., F.G.S. 2s.

HYGIENE. By R. A. Lyster, M.D., B.Sc., D.P.H. *Fourth Edition.* 2s.

ELEMENTARY SCIENCE OF COMMON LIFE (CHEMISTRY). By W. T. Boone, B.A., B.Sc. 2s.

CURRENT EVENTS.

Fixtures.

At the meeting of members of the College of Preceptors on Wednesday, May 26, Prof. J. Adams will read a paper on "The Dangers of Illustration in Class Teaching."

* * *

M. A. Canivet will address the Société Nationale des Professeurs de Français en Angleterre at the College of Preceptors on May 29, at 4 p.m. Subject: "Mme. Tallien."

* * *

The Incorporated Association of Assistant Masters in Secondary Schools will hold a meeting of Council and a General Meeting of members at the Leys School, Cambridge, on May 29. Among the subjects a series of resolutions with regard to the Teachers' Register, the formation of the new Registration Council, and the Regulations for Secondary Schools will be submitted.

* * *

Mr. Cecil J. Sharp will address the London Schools Musical and Dramatic Association on "Folk Song in Education," at St. Bride Institute, Bride Lane, Ludgate Circus, E.C., on May 13, at 7.15 p.m. Illustrations by Miss Kay.

* * *

Miss Fay Davis and Mr. Gerald Lawrence continue their Shakespearean representations at the Court Theatre: May 3, "Twelfth Night"; May 10, "Hamlet"; May 17, "Much Ado about Nothing."

* * *

The St. Andrews Summer School will be held July 19–30 and August 2–13.

Honours.

The University of Edinburgh has conferred the honorary degree of LL.D. upon Dr. William Burnside, M.A., D.Sc., F.R.S., Professor of Mathematics, Royal Naval College, Greenwich (in addition to the list given in our March number, page 123).

* * *

Sheffield University has conferred the honorary degree of D.Litt. upon the Prince of Wales on the occasion of his opening the new Library; and upon Mr. Edgar Allen, donor of the Library.

* * *

McGill University, Montreal, has resolved to confer the honorary degree of LL.D. upon Dr. George A. Gibson, Edinburgh.

* * *

The Right Hon. Sir Horace Curzon Plunkett has been elected to an Honorary Fellowship at University College, Oxford.

Endowments and Benefactions.

"A Prize Fellow" has given £1,000 to the Bodleian Library for the purchase of foreign books. An Honorary Fellow of Balliol has given £100 towards the revision of the Catalogue.

Digitized by Google

LADY MARGARET HALL, Oxford, appeals for some £17,000 for additional buildings—£7,000 for dining hall and library block, £7,000 for new students' wing, £3,000 for chapel. Cheques to be made payable to Mrs. Toynbee, Hon. Treasurer, 10 Norham Gardens, Oxford.

* * *

A "JOHN OLIVER HOBBES" Scholarship in English Literature, tenable at University College, London, has been established in memory of the late Mrs. Craigie.

* * *

AN appeal has been issued for funds for the encouragement of research at the University College of South Wales and Monmouthshire.

* * *

SIR FREDERICK WILLS, BART., has left another £5,000 to Bristol University, provided the charter is granted by January 14, 1910.

* * *

THE Assembly's College, Belfast, has received a bequest of over £100 a year for the Library from the late Miss Isabella Brownlee, of Lisburn.

* * *

FIVE gentlemen in New York, acting as a committee to assist in the establishment of a Chair of Scottish History and Literature in Glasgow University, have already received contributions amounting to some £500.

* * *

LORD WINTERSTOKE, Chairman of the Court of Governors of Mill Hill School, and an old Millhillian, has given £9,000 to found three University Scholarships for Mill Hill boys.

* * *

HARVARD UNIVERSITY has received a gift of £30,000 for the endowment of the University chapel.—Yale University has received £10,000 from an unknown donor for establishing a memorial to the late Prof. Ely.—Hamilton College is to receive a bequest of £10,000 from Mrs. Annie P. Burgess, of New York City, who died about three years ago, leaving for educational and charitable purposes upwards of £40,000. This included £2,000 to Columbia University and to Barnard College for scholarships.—Mr. Carnegie has given £4,000 and Mr. J. D. Rockefeller £1,000 to Hamilton College as a memorial fund in honour of the services in the cause of international peace and friendship rendered by Senator Root, recently America's Minister for Foreign Affairs. Mr. Root was educated at Hamilton. Mr. Carnegie's generosity assures another gift of £10,000 which was contingent on a certain sum being collected by July 1.—The late Mrs. Emma Cummings, of East Hampton, L.I., left £5,000 to Dartmouth College and £5,000 to Bowdoin College.—The late Dr. Charles H. Roberts, of Highland, N.J., in his will provided for the founding of five scholarships of £48 a year at Cornell University.—The Legislative Appropriation Bill, carrying £196,400 for the University of Kansas, has passed.—Wellesley College receives the residuary estate of the late Ellen A. Kendall; £12,000 to found a professorship bearing her name, the balance (if any) to be used to aid worthy students.—A friend of McGill University has promised £20,000 as soon as £100,000 is otherwise raised; and another has given the University £5,000 unconditionally.

Scholarships and Prizes.

A COMBINED examination for open scholarships, exhibitions, &c., will be held at Trinity, Clare, Trinity Hall, Peterhouse, and Sidney Sussex, Cambridge, on December 7 and following days. Detailed information regarding the number and value of the scholarships and exhibitions, the schedules of the subjects, the age of candidates, and forms of application for admission to the examination, may be obtained from any of the tutors of Trinity College—namely, Mr. J. D. Duff, Mr. W. M. Fletcher, Mr. W. C. D. Whetham, and the Rev. E. W. Barnes—or from the senior tutor of Clare College, Mr. W. L. Mollison; from the tutor of Trinity Hall, Mr. G. B. Shirres; from the tutor of Peterhouse, Mr. H. J. Edwards; or from the Master of Sidney Sussex College, Mr. C. Smith, to one of whom the form of application (when filled up), together with certificates of birth and of moral character, should be sent.

* * *

THE *London University Gazette* of April 7 contains a complete list of the scholarships and exhibitions connected with the University.

* * *

SOMERVILLE COLLEGE, Oxford, offers a Research Fellowship, £120 a year for three years. Send name, three references, and statement of proposed research to Miss H. Darbishire, Somerville College, Oxford, by May 15.

* * *

LADY MARGARET HALL, Oxford, will offer, in 1910, three scholarships of £50, £40, and £30, tenable for three years.

* * *

ST. HUGH'S HALL, Oxford, will offer, in 1910, three scholarships of £35, £30, and £25, tenable for three years.

* * *

ROYAL HOLLOWAY COLLEGE offers twelve Entrance Scholarships (£50 to £60) and several bursaries (not more than £30), tenable for three years. Examination begins June 28. Apply to the Secretary by May 29.

* * *

THE CITY OF LONDON SCHOOL offers seven entrance scholarships (Classical, Modern, Science) of £15. 15s. each for competition in May. Particulars and forms from the Secretary.

* * *

TONBRIDGE SCHOOL offers for competition, January 8–10, two scholarships of £100 a year, two of £80, two of £40, and not more than six Foundation Scholarships (exemption from tuition fees). Particulars from the Head Master.

* * *

MILL HILL SCHOOL offers entrance scholarships and exhibitions for competition on July 8. Apply at once to the Bursar.

Appointments and Vacancies.

APPLICATIONS for the Chair of Latin in the University of Liverpool should be lodged with the Registrar by May 15. Not less than three references; twelve copies of testimonials, if candidate desires. Not less than £600.

* * *

APPLICATIONS for the Chair of Economics in the University of Sheffield should be lodged with the Registrar by May 12.

* * *

APPLICATIONS for the Chair of French Language and Literature in the University of Birmingham should be lodged with the Secretary by May 8. Not less than three references (sixty-five copies). Testimonials not required. £500.

* * *

APPLICATIONS for the Professorship of History in the University of Birmingham should be lodged with the Secretary by May 8. Not less than three references (sixty-five copies). Testimonials not required. £600.

* * *

APPLICATIONS for the Chair of French in the University of Manchester should be lodged with the Registrar by May 22. £600.

THE University of Manchester requires an Assistant Lecturer in Botany (including Vegetable Physiology). Particulars from the Registrar.

* * *

PROF. LLOYD TANNER, M.A., D.Sc., F.R.S., has resigned the Chair of Mathematics in Cardiff University College, after twenty-six years' service.

* * *

PROF. MASTERMAN has resigned the Chair of History in the University of Birmingham, which he has held since 1902.

* * *

MR. DENNIS HIRD has resigned the Principalship of Ruskin College, Oxford.

* * *

DR. J. FITZMAURICE KELLY, D.Litt. Col., F.B.A., has been appointed Gilmour Professor of Spanish in Liverpool University.

* * *

PROF. WILLIAM STROUD, M.A. Oxon., D.Sc. Lond., has resigned the Cavendish Chair of Physics in the University of Leeds, after twenty-four years' service.

* * *

THE Strathcona Chair of Zoology in the McGill University, Montreal, is vacant. Apply to the Secretary.

* * *

THE Professorship of English Language and Literature in the Maharaja's College, Mysore, is vacant. Apply to the Inspector-General of Education in Mysore, Bangalore, South India, by June 10.

* * *

MR. THOMAS W. ARNOLD, M.A., Professor of Arabic in University College, London, and Assistant Librarian at the Foreign Office, has been appointed "Educational Adviser to Indian Students."

Prof. Arnold was ten years on the professorial staff of the Mohammedan Anglo-Oriental College at Aligarh, and was afterwards Professor of Philosophy in the Lahore Government College.

* * *

MR. J. F. DODSON, M.A., has been appointed Senior Assistant Lecturer in Classics, and Mr. R. Petrie, B.A. Oxon., Junior Assistant Lecturer in Philosophy, at Manchester University.

* * *

MISS CONSTANTIA ELIZABETH MAXWELL, M.A., has been appointed an Assistant to the Professor of Modern History in Trinity College, Dublin.

Miss Maxwell graduated last Michaelmas with a First Senior Moderatorship and large Gold Medal in History and Political Science. She is the first woman to join the teaching staff of Trinity College.

* * *

MISS L. HARRISON has been appointed Assistant Mistress in the Birmingham University Training College.

* * *

MISS M. E. STOKER, B.A. Lond., has been appointed Head Mistress of Clapham Secondary School.

* * *

MISS S. E. STENHOUSE, B.A. Lond., has been appointed Assistant Lecturer in Education in Clapham Training College.

* * *

MISS C. M. WORSFOLD has been appointed Head Mistress of St. Margaret's School, Polmont, N.B.

* * *

THE Principalship of College Hall (Byng Place) is vacant, through the resignation of Mrs. Viriamu Jones. Applications (with not more than three testimonials and three references, and any other evidence—twenty-four copies), marked "*in re* Principalship," to the Hon. Secretary, Lady Lockyer, 16 Penywern Road, S.W., by May 10.

* * *

MISS E. STRUDWICK, M.A., has been appointed Resident Tutor at Bedford College for Women (University of London).

* * *

THE Head Mastership of Thetford Boys' Grammar School is vacant. £120, £3 capitation fee (maximum), house rent free. Graduate, with secondary-school experience. Apply (with three testimonials) by May 5 to F. V. Houchen, Esq., London Road, Thetford.

* * *

WE learn with regret that the Rev. C. H. T. Wood, M.A., has resigned the Head Mastership of Sherborne School through illness.

* * *

A HEAD MASTER is required (August 1) for the new County School at Ramsgate. Particulars from Fras. W. Crook, Esq., Caxton House, Westminster. Apply by May 10. £300 to begin with.

* * *

MR. C. E. THOMPSON, M.A. Cantab., L. ès. L. Paris, has been appointed French and German Master at St. Marylebone Grammar School.

* * *

DR. JOHN HUTCHISON will retire from the Rectorship of Glasgow High School at the end of the current session. He has been associated with the teaching staff of the school for forty-eight years.

* * *

A CLASSICAL mistress is required for the Girls' Section of the Bede Collegiate School, Sunderland. Not less than £120 to begin with. Apply to the Education Secretary, 15 John Street, Sunderland. Stamped envelope for particulars by May 9.

* * *

AN Assistant Master is required (for September) for Batley (Boys) Grammar School. Application forms (to be returned by May 15) from G. R. H. Danby, M.A. Oxon., Education Offices, Batley.

Literary Items.

MESSRS. A. & C. BLACK announce a "Colour Book on Essex," painted by Mr. Burleigh Bruhl and described by Mr. Hope Moncrieff. Also a volume on "The Inns of Court," illustrated (with twenty water-colour drawings) by Mr. Gordon Home and described by Mr. Cecil Headlam.

* * *

MR. FROWDE announces "Principles and Methods of University Reform; being a Letter addressed to the University of Oxford by Lord Curzon of Kedleston, Chancellor of the University."

* * *

MESSRS. BLACKWOOD announce "The Place of History in Education," by Prof. J. W. Allen, of Bedford College (University of London).

* * *

MR. EDWARD STANFORD announces, for early publication, "A Sketch of Historical Geography," by the late Keith Johnston, F.R.G.S., describing the growth of the world as known to civilized nations from the dawn of history to modern times — a reprint of a section of the author's "Physical, Historical, Political, and Descriptive Geography." It will be prefaced by an appreciation of the author by Sir Clements R. Markham, K.C.B., F.R.S.

* * *

MESSRS. NELSON have begun to issue in serial form a

Digitized by Google

strikingly interesting and instructive work, popularly written and lavishly illustrated, on "Engineering Wonders of the World." (See "General Notices—Science.")

* * *

L'Education, "revue internationale illustrée d'éducation familiale et scolaire," edited by M. G. Bertier, Directeur de l'Ecole des Roches, Verneuil, Eure, has just made its début. The first number is varied, attractive, and promising.

General.

"A University of Bull-Fighting," says the Madrid correspondent of the *Daily Express*, "has been established at Bilbao, and will open its doors on July 1. It will grant two degrees—Licentiate and Doctor of Tauromachy. It is hoped that the new University will rescue the national sport from the decadence into which it has fallen recently."

* * *

Old (and Young) Boys of the City of London School will be pleased to see it immortalized in the April number of the *Captain*. The description is ample and the illustrations are numerous and good.

THE RELATIONS BETWEEN HEAD MASTERS AND ASSISTANT MASTERS.

At the Evening Meeting of the members of the College of Preceptors on Wednesday, April 21, Dr. R. Wormell, F.C.P., in the chair, Mr. W. J. Addis, M.A., introduced a discussion on the above subject. He said:—

A direct effect of State activity and municipal activity in our schools has been the emasculation of education in all its branches and their ramifications. We are strenuous over trifles, and our potency runs to pettiness.

Enter a school, on a voyage of discovery, and an experience will be yours of the following kind.

You ring the bell. No answer. You re-ring, and after an interval the janitor admits you.

Why didn't he come at first? He was lost in reflection, absent-minded, plunged in thought over a serious matter by the side of which his duty of answering the bell or any school duty paled into insignificance. He had heard the night before that his compeer, Caretaker Smith, was able to finish his work at a quarter past six as a rule in the evenings. Now *he* could not finish till twenty past. This discrepancy had given him furiously to think. He had all along scented unfair treatment to himself, and overwork. Now that scent had materialized into definite substance, into a fact. There was no doubt about it. He was overworked. Smith *had* a better time of it. And he was engaged at the moment of your ring in speculating what step he had better take to put right this preposterous state of affairs—either blame the head master, petition the governors directly, or move a resolution at the next meeting of the society for the preservation and prolongation of caretakers' leases and lives.

You ask to see the head master. "Yes, very well, come in, he is busy at this moment. He doesn't see visitors except at notified times, but will no doubt see you in the school interval." You go into his room and wait. Piles of books and papers, graphs and diagrams everywhere about. Grand work, you think, these head masters are doing. Forming character, developing mind, rearing brave and noble citizens. At this very moment he is busy teaching (for you know that he teaches as well, not merely organizes). All sorts of elevating thoughts in connexion with this man's high destiny pass through your stimulated soul. In your thought you pay him the highest possible tribute.

You could wish you were a head master yourself.

Amid these lofty musings you stroll to the window and gaze on the playground. It is all marked out with chalk-lines—curious small squares and circles. These, you afterwards learn, are for organized hop-scotch and other modern developments of play. The school is very good at these; it is the champion school in the district at hunt-the-slipper. The head master would like you to see the team have a game, only unfortunately there is at present a slight lull in this special excellence, as the school slipper has been mislaid, and the requisition system requires that a certain date has to come before the missing treasure can be replaced—if the Committee passes it. It is a great bore. No provision has been made in the regulations for such a misfortune. The head master feels that it is not for him to move.

As your eye roves about, you catch sight of a figure, gowned, and moving actively hither and thither, bobbing up and down, evidently very busy over something. You idly wonder who it may be, and return to your seat.

Presently in bustles the head master. He apologizes for having kept you waiting, and begins to explain how busy he is. "Yes; taking your VI. form, I s'pose," you say. "What lesson was on?" "Oh, no," he replies; "I do usually take the Sixth in Scripture, but just now I have more important matters on hand. My Committee wants a report on the number of railings round my playground, and I have been counting them—that is to say, a part of them. I shall go on with the work later."

He tells you a few more of the occupations on which he had been engaged since the beginning of term. All of the same kind: choosing colours for his "houses," making out averages of attendance for the various boroughs from which his boys come to school, trying to master the difference between bursar, pupil-teacher, and student-teacher, ascertaining which of the pupils might reasonably be provided with free boot-laces, which, after weeks of animated discussion, had at length been pronounced needful for supply by the Education Authority. Not a word, not a thought of mind-developing, character-forming; and, what is worse, the man feels no humiliation or unworthiness in the pursuits of his career. He is interested, cheerful, hopeful, evidently acting up to the highest ideals of his epoch, entirely worthy and as well-meaning, industrious, and vigilant as you could possibly desire.

"Well," you say, slightly disappointed, and perpending this problem, "of course, after all the head master is not a *teacher* in the strict sense; he is a supervisor, organizer, co-ordinator. Perhaps the tendency *is* to become rather trivial in the contemplation of many things, and to lose sight of proportion. If this man, who seems perfectly sound at heart, were given, say, a year's rest from his environment—a year without the mental acrobatics involved in producing artificially calculated returns—a year's absence from lectures, meetings, discussions, where his poor brains are distracted and tempted by a kaleidoscopic succession of childish variants of old aims and methods: a year in which to come back to his simple mission, that of making boys manly, clever, and happy; if this year's respite from educational Babel could be secured for him, his own life might be saved from triviality and his boys would stand a chance of becoming manly men."

Though I have here pictured only the caretaker and the head master, I might multiply these sad cases by mentioning every grade of person and every type of occupation found in a school.

Much of our class-teaching is glorified kindergarten work. At first this was monopolized by science, with its costly, elaborate, trivial multiplicity of apparatus for the hands to handle and the senses to perceive; while the brainwork behind the senses, which is so much more important, had very little demand made upon it.

The next subject to feel this substitution of play for power was geography. Then came practical mathematics, where you performed a huge heresy if you taught that 5 and 5 equal 10, but were welcomed as an advanced and enlightened teacher if you said that 5 apples added to 5 apples made 10 apples, because you were then bringing mathematics into touch with real life.

Meanwhile, the language teacher began to get his innings, and prevailed upon us to spend time and effort, with gramophones and megaphones, on scientifically prepared imitations of inaccurately formed foreign sounds. The true beauties of style—its grace and its powers, its potency as a method for presenting and emphasizing thought—are absolutely disregarded. One would have thought that classics would have been left alone. The easiest way to deal with it would surely have been to ignore its existence—cease to teach it. But, no! Your true modernist is not for suppression of subjects. He likes his curricula to bristle with a variety of them. But he will reform every method. And in classics he has introduced two original improvements: (i.) the neglect of grammar, which makes it impossible for us ever to divine when and at what stage a boy will know any special case- or tense-form, and (ii.) the introduction of pictures. Any pictures will do. Some are simple, some complicated; but all are distorted. And the relevancy of the pictures is a matter

Digitized by Google

beneath contempt. The *pièce de résistance*, in this matter is of course statuary. Sandwiched here and juxtaposed there—anywhere—in admired disorder, are gods and discus-players and legionaries—the amphora, the crater, the cothurnus.

Inspectors whirl about; do not know where they are and what they want. They have no well thought out schemes or ideas which are flexible enough to be adapted and applied to particular circumstances. They are all specialists, and fail in that comprehensive and appreciative view so necessary to envisage the wide area of interests covered by a school.

For the staffs, teaching is made so easy; anything is accepted so long as it is new. Masters seldom think over their own influence and the good they are doing the boys. No; it is their own status, feelings; and I do not fancy that masters treat their responsible situation as serious.

I draw a distinction—tenure and purse should be, have been, fought for; fair promotion too. But have not we gone on too far and brought into the circle of protected interests status and feelings? I rather incline to think that the emasculation I mentioned as generally operative in schools touches us schoolmasters on this side as well as on the side of our classroom work. For one thing, there has been so much talk of the dignity of our profession. Dignity is, after all, a personal possession and attribute. That man has dignity who does not condescend to childishness in his intercourse with others. And dignity does not reside in the thing done, but in the manner of doing it. The head master does not lose or impair his dignity by the act, say, of picking up paper in his playground, but he would if he tossed up every piece in the air and played with it like a kitten. Nor does the assistant master lose dignity, I think, if he walks with his boys two and two.

You will say I have mentioned nothing germane to our titular subject, but there are links.

Now to come to the specific purpose of our discussion. I am not by any means stating that collisions between heads and assistants do at present frequently occur. Collisions—severe, grave ones—have occurred, of course, but on the grave questions of tenure, and so on. And they have much clarified the relations between heads and assistants in these matters. But I rather foresee collisions possible on questions of what is dignified and what derogatory. Say, for instance, a master is asked to take some lessons with little boys—I don't mean, of course, pointedly deposed to such a task out of spite, which, I suppose, is possible—but because the head master honestly considers that to be the best disposition of duty; the experienced old master will probably accept the task and fulfil it with normal loyalty and energy. But will not the young man incline to look on it as an infringement of his dignity? Is not that temper, that attitude in the air, and is it not ministered to by colloquy in the masters' room, by exacerbation of feeling due to a colleague's prompting? That is one distinct case of possibility of wrong relation. I should like that to be discussed.

Here is another. While every one, without a single exception, will agree that it is a head master's duty to ask a class-master's permission to interrupt his lesson (if interruption is for some reason required): is it equally necessary that the head master should knock at the classroom door for permission to enter the room at all, or at the common-room door. Personally, my experience is all against knocking. But our delicate methods are, perhaps, going to alter that. That is point No. 2, on which I should like the record of experience.

A third point is, the work that may reasonably be expected of assistants out of the classroom. In some schools I believe assistants stay almost regularly for from one to two hours after classes have broken up, marking books. What is the experience there? How much should a head reasonably require?

A fourth point. This concerns head masters only, but it is cognate. If inspectors are present in a school, does the head master lose anything in dignity, either for himself or his fellow head masters, by giving a lesson in the inspector's presence? I have heard the point raised. I invite expression of feeling on it.

A fifth point. In one school objection was raised by a staff to the suggestion that masters should, when the school fell in by forms in the playground, join their forms, and accompany them into the schoolroom for prayers. One section of people sees nothing derogatory in this: another section does. May we have views? The point is, not whether the task is inconvenient or unpleasant, but derogatory?

By way of a closing suggestion, may I propose as a cure—or, at all events, a distinct soother—of annoyances arising out of little demands or injunctions of a head master (whether these are felt *by* him or *against* him), that we masters should, all of us, in the first place determine that our own acts and thoughts in school life shall be dominated by only one aim—the welfare of the boys. That will put us on a right basis with ourselves; for I believe that nearly all the unhappiness of school relations arises out of thinking of ourselves, *our* welfare, *our* feelings; the treatment we *get*, not that we *give*. And so in judging the tasks enjoined on us, the attitudes invited of us, let us judge the enjoiner and inviter by this criterion first—the question, namely, is this enjoined with the view of promoting the good of the school, whether in discipline, scholarship, feeling of fellowship, or whatever be the special direction concerned? If the answer is *yes*, then let us try by all means, whole-heartedly to co-operate. If our personal judgment does not approve the specific mode enjoined, let us certainly try to improve that mode, but keep ourselves out of view; and in the end loyally abide by our superior's decision, for only one judgment can co-ordinate school methods, and his is, after all, the *responsible* judgment.

The Chairman invited members of the audience to take part in the discussion, and he suggested that the points to be considered should be taken in the order in which they were presented by the opener.

Mr. Newsome said the points raised by the opener had reference mainly to the intimate personal relations existing between the head master and his staff, and not the much broader subject of the relations of head master and his assistants as a class. But directly the attempt was made to deal with the subject of those relations they were confronted with the personal equation. One of the points they were asked to express an opinion upon was the extraneous duties that an assistant master might reasonably be expected to perform. No assistant master worth his salt would hesitate to render his head master such assistance within reasonable limits. He feared, however, that all head masters were not reasonable in this matter, and occasionally the Assistant Masters' Association received complaints on this score. In fact the matter had reached such a point with regard to one or two schools that the Association had felt itself impelled to consider the whole subject, and to lay down some general lines for the guidance of its members. It was not very long ago that a head master had intimated to his staff that he expected the whole of their time to be at his disposal. That, he thought, was going to the extreme; but one or two of the points that Mr. Addis had put before them seemed to be almost equally extreme. He had apparently experienced some difficulty either in his own case, or in a case with which he had been made acquainted, where some foolish assistant master had objected to accompany his boys in the playground. He could hardly conceive that any responsible assistant master could seriously take up this attitude, and put his own feelings as to what was dignified or derogatory before the interests of the school. It was possible, of course, that a difference of opinion might exist as to what was dignified and what was derogatory, and there were some head masters who were too autocratic in their conduct towards their assistants. He had himself the good fortune to serve under a head master who had contrived to conduct his school without any sort of friction, and who had a pleasant way of suggesting to his masters whether they did not think that such and such a course would be for the benefit of the school. Where there were periodical meetings of the staff, he thought it would be advisable that the head master should himself be present, and the ultimate decision on all matters touching the order and discipline of the school should of course rest with the head. The question of an assistant objecting to teach little boys as being derogatory was also, he thought, an extreme case. If there was one work more difficult and more important than another in the school, it was the teaching of very young pupils, having to do, as it did, with the foundations of education. With regard to the question whether a head master should knock at the door of a classroom before entering, that, of course, must depend very much upon the assistant master and his personal relations with his chief. If there were an assistant master whose boys occasionally got out of hand—and he believed there were such cases—he might possibly feel a little discomposed if his head did not tap at the door before entering the classroom. Here, again, it was a question of the personal equation.

Mr. Patterson said that so far he had only served under two head masters. Both of them were considerably older than himself, and he had never felt the slightest tendency to experience loss of dignity or anything of that kind. As a member of the legal sub-committee of the Assistant Masters' Association, he had heard of not a few cases when such dissensions had arisen,

Digitized by Google

and he had often found the assistant master to blame, particularly in the case of young men, who were often very much alive to their own importance and sensitive to any appearance of want of courtesy on the part of the head master. The young man who had been engaged as sixth-form master might foolishly feel annoyed if asked to take a class of little boys, but in two or three more years he would come to take it as a compliment to his efficiency. With regard to the suggestions as to the common room, the tendency of the common room was to bring the young man and the older masters on to a common level. They got into direct contact with one another, and if an assistant master were inclined to behave foolishly he was made aware that his colleagues would not countenance any such conduct. As to the head master entering the classroom without knocking at the door, the only ground on which objection could be taken was that the assistant master might feel that he was not trusted, and that the head master was going round, as it were, spying upon him. It might take all the spirit out of a master's work to feel that he was being watched by his head master. But the head master had not only a right, it was his duty to go into the classrooms in order to see that things were going on properly, and he did not see why the assistant master should object. With regard to the common room, to which the assistant masters retired when off duty, it was intelligible that they might not like the head master to enter here. As to whether assistant masters should be allowed to smoke in the common room, the custom varied in different schools, and it was not a matter simply of what the assistant master liked. In cases where smoking was not allowed the common room was very often empty and members of the staff hardly knew one another, which of course did not conduce to the good of the school. With regard to the question of extra work, cases had come before the Assistant Masters' Association, in which assistants had been told they would have ample time to prepare for their own examinations, and nevertheless extra work had, little by little, been added. If, when he was engaged, the assistant master did not expect that his duties would include, besides teaching in ordinary school hours, correcting in the evening, and possibly supervision of games on half-holidays, he might have cause of complaint; but this would not be so if all this was made clear to him at the time of his engagement. As to the point whether it was derogatory to the dignity of the head master to teach with the inspector standing by, it was, of course, the duty of the inspector to form an opinion of the work of the school as a whole and he would therefore be perfectly justified in hearing the head master teach a class. With regard to the assistant master joining in the games in the playground, he could only conceive a young man with an undue sense of his own importance objecting to it. With regard to the supervision of the boys going upstairs to the dormitories and preventing them from acting in a disorderly manner, he believed most assistant masters would gladly do what the head master desired them to do, understanding that it would be for the good of the school. Speaking generally, assistant masters did not like to feel that they were not trusted, and they did not like to feel that they were being imposed upon by being asked to do something which they had been given to understand they would not be asked to do.

Mr. KAHN said the five points mentioned by Mr. Addis were minor points which, as Mr. Newsome had pointed out, depended for their solution upon a number of simultaneous personal equations. The opener had told them that they must be guided by the question of what was for the welfare of the boys, and he himself would add what was for the welfare of education as a whole. It was quite obvious that it would be for the welfare of the boys that the relations between the head master and the assistant master should be entirely cordial, and if the head master could exercise a little extra politeness it would add to the cordiality and good fellowship, and it seemed to him it was his business to do so. He did not see why the head master should not knock at the classroom door when he was about to enter. The head master would expect the assistant master to knock at his door, and, although the head master might be on his own ground in the assistant master's classroom, it must yet be considered that the assistant master's room was his own particular sanctuary. Then, with regard to the teaching of small boys, that again depended upon circumstances. Supposing that the head master had been in the habit of putting a master of lower qualifications to teach young boys, which was quite a common thing for head masters to do, and he were to ask a master who had taken a high honours degree to take this lower form, he would say that under these circumstances this master might be excused for considering that he had been degraded. But, if the lower form had been taken by masters of the same status as masters of other forms, then of course there could be no possible degradation. Then, as regards the masters joining their forms in the playground, that would depend upon circumstances. He was quite sure that if the head master of Eton were to ask the assistant masters to join the boys in the playground they would consider it derogatory. It was a question how far it was necessary that the boys should be marched upstairs to the dormitories, but, if it was absolutely necessary in the interests of discipline. he did not think the assistant masters would object. But if it was a mere fad of the head master's, if it was not necessary, and the assistant masters had not been consulted in the matter, then he could quite understand how they might consider that they had been subjected to an indignity. He had taught in a school in which it was taken as a matter of course that the assistant masters should march the boys up to their rooms, and no one thought it derogatory. That was in a large school where it was absolutely necessary. He had taught in another school in which it was not done; and if the head master had introduced the practice, it would have been objected to because it was not necessary. He was surprised at the opener's suggestion that it might possibly be considered undignified for a head master to teach in the presence of an inspector. It appeared to him there was no reason why the inspector should not observe the head master's work, as it was his business to judge of the work of the school; and if the head master was engaged in teaching, it was as much the inspector's duty to see his teaching as it was to see the teaching of the assistant masters. He did not think the assistant master should be regarded as a person of lower status than the head master. The assistant master and the head master were colleagues. The head master was simply the first minister, the organizer, and unifier; but, as far as his academic qualifications and experience were concerned, the head master might possibly be inferior to the assistant master. He hoped that the day would come when the term "assistant master" would be abolished, because the term "assistant" suggested a sort of personal dependence. He had been struck with the difference in the tone and in the whole spirit of secondary schools on the Continent simply owing to the fact that the dignity of the assistant master was respected a great deal more than it was respected in this country.

Professor RIPPMANN said his own experience as an inspector had visitor. He did not propose to deal with general questions, been much more favourable than that of Mr. Addis's imaginary but rather to confine himself to some of the points Mr. Addis had raised. As to the question whether it is derogatory for an assistant master to take a class of young boys, in the first place there were extraordinarily few assistant masters who were capable of taking young boys, and wherever he went he suggested that a woman should take them, it being much easier to get a good, sound, sympathetic woman teacher; but, assuming that a man was to teach them, then he must be one who had been carefully trained. It was not a man of exceptional ability (in the academic sense) that was wanted. Generally speaking, a man of exceptional ability was unfit to take young boys because he had been giving so much of his brain to the acquisition of knowledge that he was inclined to disdain questions of method. In the higher stages it was necessary, no doubt, to have academic ability, but lower down in the school method was of far greater importance. With regard to the practice of the head master knocking at the classroom door, this appealed to him on the score of good example, as it would suggest to the boys that the head master was showing respect to the class master, and might have a good effect as a matter of ordinary courtesy, especially as it so frequently happened that the boys came from homes where courtesy was very little cultivated. As to smoking in the common room, he thought, from his own experience, that the prohibition was a rare one. With regard to the question as to whether the head master should be required to teach in the presence of the inspector, there was really no difficulty at all in actual practice. If the head master were a competent teacher he was willing to show his ability, and if he were not he did not want to exhibit his incompetence, and the inspector was spared the agony of listening to bad teaching. As to the work the assistant master should be required to do outside the classroom, it raised the whole question how much work might fairly be expected of an assistant master, a matter upon which he felt very strongly, and of which the importance had been brought home to him by a comparison between boys' schools and girls' schools. How was it that in girls' schools the

Digitized by Google

same results could be obtained as in boys' schools with a far smaller number of hours? In the majority of girls' schools the women taught for eighteen or nineteen hours a week, while a man taught for from twenty-five to twenty-seven hours, and yet the results were the same, for the simple reason that in the boys' schools the preposterous idea prevailed that quantity is the great thing, instead of quality. It was unreasonable to expect the assistant master, after so many hours' teaching, to undertake a certain amount of supervision, to correct exercises, and also to devote time to the preparation of lessons. It was humanly impossible to do it, because he must have some recreation, otherwise he would get terribly stale. Women were able to get through the same amount of teaching in a shorter time, because they were given time to prepare the lessons and took interest in their methods. The overcrowding of the time-table was one of the great causes of difficulty in schools; it led to difficulties of overwork and difficulties in connexion with salaries, and made masters irritable, and that irritability often expressed itself in resentment of suggestions of the head master, which otherwise might be accepted in a reasonable spirit. This overwork was sometimes added to by the head master constantly making fresh demands on his assistants on the ground of the welfare of the school. He was quite in accord with the general principle that what one did should be done for the welfare of the school, but it was not reasonable to expect too much. Sad tales could be told of breakdowns in health, especially amongst women teachers, through over-conscientiousness, and a good deal of the friction which one found was due to the over working of the assistant master. But the blame must not be imputed entirely to the head master, who was himself too frequently overworked. When the head master of a large school was expected to do twenty or twenty-five hours teaching, to look after the school, and to manage parents more or less reasonable, could he be expected always to be tactful, always to be gentle, always to be amenable, and always to put things in the nicest way? If his teaching hours were reduced to, say, twelve, and he had more leisure to look after his school, then he would probably be found to possess a sweet temper, and his relations with the assistant masters would be satisfactory.

Mr. Butler said that, having been engaged all his life in teaching in private schools, there were some phases of the relations between head masters and assistants of which he had no personal knowledge. The question of tenure, for instance, was one which had not arisen within his experience, and other questions to which the opener had referred he had not found troublesome at all. He thought that sometimes head masters were apt to forget how much they owed to their assistants, and to what a large extent the work of the school was what it was by reason of the assistants. The occasional expression of a few words of appreciation would tend to make the relations of the head master and his assistants more cordial. The questions which had been raised about dignity, &c., seemed to him to be of small consequence. If the head master was really concerned for the good of the school, and if the assistants chosen by himself were like-minded, he could not understand where the question of dignity could come in. The school ought to be a happy community, all working together for a common aim, and then such trifling matters would not be likely to arise. With regard to the visits of inspectors, he entirely agreed with the last speaker, and was sure that if Prof. Rippmann should visit any school in which he had anything to do he would be extremely pleased to see him and would be quite at ease in teaching before him. At the same time he could quite understand that in many cases head masters might find a good deal of difficulty in teaching before an inspector. Here again the question of the personal equation came in, and much would depend on the character of the inspector as well as that of the head master.

The Chairman said he wished to make briefly a few disjointed remarks on the points discussed. As a rule they had little or no opportunities of looking into one another's schools. He had worked in London for forty years, and it was astonishing how few head masters he had seen teach. He had often had a great desire to know how a certain master would teach a certain subject, but he never had the opportunity, and therefore he was driven to base his methods on his own experiment, assisted by the discourses and discussions of the monthly and other meetings. He thought this question of the relationship between head masters and assistants would be much simplified by getting rid of the term "assistant master"; it was quite a sufficient distinction to have the masters of a school and the "head master." His ideal would be that the community of masters in school might be a kind of Republic, electing their own president for the year or for a term of years. But in order that such an ideal might be adopted everywhere, there should be an accepted system with regard to the status and training of masters. In such places as Harrow, Eton, and Rugby, he believed they might very well elect the head master from among the other masters, and they might make any one of the masters head master for twelve months; but they could not do that in a school where there was a marked difference in the general education and culture. With regard to the teaching of younger children, every one knew, who had had the opportunity of wide observation in schools, that the higher a man's personal qualifications the better would he be fitted to become a teacher of the younger children, provided he be also endowed with the temperament and natural characteristics which would enable him easily to enter into the thoughts, and read the minds, of the very young. There were some men who were peculiarly apt with little ones, and some who were not, and this difference made it necessary that, in placing the masters, each should have assigned to him the class in which he would be happiest, most useful, and most successful. With regard to such questions as entering a classroom without knocking at the door, he could not help thinking that such matters were of very small importance, because everything depended upon the good feeling that should prevail between the members of the staff. But no head master who knew anything about the working of a school would do anything or say anything in a classroom (the class master and the boys alike being present) which would be in the nature of fault-finding or which would be derogatory or offensive towards the assistant master. The first principle that should always guide the head master was to uphold his assistant, and to say nothing and to do nothing in the classroom which would tend to weaken his authority. To his mind, it was inconceivable that a head master should call upon his assistant masters to do things out of the ordinary school times without consulting the convenience and wishes of the person to whom the suggestion was made. There was something to be said about upholding the dignity of the teacher—not the dignity of one teacher as against another, not the dignity of the head master as against the assistant. Teachers had to stand upon their dignity as against outsiders frequently, and they ought to encourage that mutual consideration which made for the harmonious working of the whole. W. E. Gladstone once said: "We honour a profession when we honour a member of that profession," and the reverse of this is also true. With regard to the assistants accompanying the boys in the playground, it had been his privilege to sit upon a County Education Committee, and he had been astonished to hear one of the members of that Committee put forward the distinction between the secondary school and the elementary school, that they never found the boys in the secondary schools marching up to their classrooms in a sort of military order. He supposed that in a large school it was an advantage to have rhythmical movements instead of a clashing and rushing upstairs and downstairs and along the corridors, and so they must have a certain amount of military order and discipline beth in large secondary schools and the elementary.

Mr. Addis, in replying upon the discussion, said he hoped every one would understand that these troubles did not affect himself: they were purely theoretical, but he had thought these things as worth while presenting because at the last General Election he found he had not the remotest idea of how complete the feeling of the people of England had turned; and, if one did not from time to time investigate or examine the data upon which one's impressions were based, one might sometimes reach a state of extraordinary surprise. So when one of those instances turned up in his own experience, he began to think, "Well, is it impossible that I, through not reinvestigating these points, may be entirely out of touch with the feeling and attitude of masters in schools?" All the points raised were points that had occurred in actual practice, though not in his own experience, and the reason he had suggested this subject was to elicit opinions from people who had thought about the matter. He had not expected anything different from what had been said and had expected to find a consensus of opinion that no dignity was lost and that there was no sense of derogation in the mind of the master. As to the allowing of smoking in the common room he knew of no school where a distinction was not made between class hours and non-class hours; but a good deal might depend upon the position of the common room. If the common room could be seen into by people coming in at the door then

Digitized by Google

perhaps a restriction might be made. With regard to the working out of school hours, what he had in mind in referring to it was not extra or evening duty, but the question of rapid departure at 4 o'clock. People varied, and some people who came late made up for it by departing early, and if masters were always out of school on the tick of four, such punctuality might be rather unhealthy. The point was one of some importance: in one large London school the arrangement was made and by agreement that the assistant master should not consider his day over until half-past four, although school stopped at four. He was very glad to hear Prof. Rippmann's remark as to the importance of method increasing in the lower classes of the school. It was a valuable idea, and one which was likely to be overlooked, that the man who had been specially trained in the direction of teaching the little ones was, although he might not be a brilliant scholar, the best man for the lowest school. One point as to which he was quite in agreement was as to the expression "assistant" master. It did not seem to him an altogether happy expression, because it seemed to make a slight distinction between men who were really on the same level; but co-ordination would be impossible without some slight distinction. If they could get rid of the term he should be very glad indeed. He had to thank the whole company for having dealt very closely with these five questions, and it had been exceedingly interesting to himself to hear the opinions of responsible head masters, and such representative assistant masters as the President and Treasurer of the Assistant Masters' Asssociation on the subject.

A hearty vote of thanks was passed to Mr. Addis and also to Dr. Wormell for presiding.

REVIEWS.

A Scots Classic.

The Bruce. By John Barbour, Archdeacon of Aberdeen. Edited by W. M. Mackenzie, M.A., F.S.A. (Scot). (5s. net. A. & C. Black).

"Who now reads Cowley?" asks Pope, and some may think that a new edition of the National Epic of Scotland by the old Archdeacon of Aberdeen can meet with no demand. They are mistaken; Barbour is still vitally alive both in Scotland and in the Colonies. The great incidents in the Scottish War of Independence are his—Bannockburn is his, as Marathon, Salamis, Plataea are the possession of Herodotus, and Scott in "The Lord of the Isles" yearly makes him known to the tourists on the West Coast. He is even more than this—he is an Imperial asset in a sense that Shakespeare and Chaucer can never be. Some years ago he came to his own in India in a fashion that fairly astonished the rulers of that country. One of the great educational firms had issued for native use a little book on Wallace and Bruce. Now all such works have to receive the sanction of the Viceroy in Council in order that no statement, however slight, that may offend the national or religious sentiment of India may incautiously pass. The book was put before two Scotsmen high in office, and they patriotically decided that no child, at home or abroad, could know too much about Stirling Bridge and Bannockburn. The result at first perplexed the Government. Something had clearly taken place—were we on the verge of another Mutiny? Investigation proved that in this case Indian unrest was Imperial attachment. All over India children had been playing a game with breathless interest: it was the pursuit, by the bloodhound of John of Lorn, of Bruce and his foster-brother, and the descendant of the hunted king was the popular Viceroy, Lord Elgin. Barbour had gone home, and what he told in Aberdeen more than five hundred years ago had become Imperial. The principle of the anecdote has a wider application. Whatever educational writers may say about the Jutes and Angles, the Heptarchy, and the wives of Henry VIII., let them remember that, as far as South Africa is concerned, William the Silent and the Relief of Leyden are now an integral portion of British Colonial history ranking with the taking of Quebec. John Bull must broaden the basis of Imperial interest, and annex the history of both Holland and the Huguenots for their descendants in his Empire to-day.

Barbour is older than Chaucer, but is read with much greater ease, and indeed with very little practice can be mastered and followed by the general reader. This is due to philological and other causes that need not be mentioned here: he wrote "Inglis," the common spoken idiom from York to Aberdeen, and his work is thus the great treasure-house of Northern English. He was Archdeacon of Aberdeen in 1357, and was a commissioner for the ransom of David II. He was a man of affairs, not of the cloister, and an Auditor of Exchequer. His poem was finished probably about 1376, and in the following year a sum of ten pounds was assigned to him by Royal Command. He died on March 13, 1396. He saw the spoils of Bannockburn hung in his own Cathedral, and down to the Reformation his anniversary was kept. He ranks as the father of Scottish history and literature.

By those who probably never read him he has been treated as a romancer. Green dismisses him ignorantly enough in a line or two; Cosmo Innes thought he was content with a general historical framework but was careless as to details; Sir Herbert Maxwell, whose ancestors we believe are on the Ragman Roll for treason to their country, insinuates that his patriotism was official and stimulated by his pension; others believe that his work is a romance, because he himself styles it so, and that little or nothing can be learned from a writer that confuses Bruce, the competitor with Baliol, and Bruce the King, the grandson. All such criticism is the result of ignorance of the text. It is detail in which Barbour is strong. The Rolls and contemporary documents show how accurate he is in his figures and facts, while of the contemporary feeling of Churchmen for necromancy, legends, saints, the Archdeacon knows simply nothing, and proclaims his intention to tell "a soothfast story." The editor of the present edition convincingly, we think, demolishes the idea, too hastily assumed by Burton, that Barbour confused the two Bruces, a thing rather impossible for either the author or his readers. A romance his book is, as he says, but a romance only in the technical sense of form following the metrical octosyllabic couplet. There was no other form in verse to follow. Barbour and his readers knew a whole library of forgotten French literature of this school, and, when Bruce passed over Loch Lomond in his retreat after Methven, Barbour says the King kept up the spirits of his followers by the recitation of the "romances" of Ferambrace, Roland, Oliver, the peers of Charlemagne, and Hannibal. But of the romance spirit there is nothing in "The Bruce." It is detailed and annalistic, full of facts and local scenes. The notes of the new edition will show—as Dr. Joseph Bain long ago pointed out—how closely Barbour sticks to the "soothfast story" which he professed to write. He wrote it before he was pensioned, and with no expectations. Bruce and Sir James Douglas are the two heroes, and nothing romantic, but only the practical, is related of them.

The present edition by Mr. Mackenzie was needed, and is a thorough piece of historical and literary work. The older editions of Pinkerton, Jamieson, and Cosmo Innes are now hard to come at, and the edition of Skeat leaves the history unsettled. Chaucer has of late been philologically overdone, and the claims of Northern English were well worthy of attention and adequate treatment. Great labour has been expended by the editor on his book, whose modest price and form are quite inverse to its real value as a firstrate contribution to history and philology. Here and there fresh touches may be given in a second edition—for instance, Mr. Mackenzie may explain in what sense Randolph was Bruce's "nephew," and he may usefully make some additions to the Glossary (full and careful though it is), especially for the benefit of Southrons. But Barbour's narrative, the staple of Sir Walter Scott, can now be read with interest by the general reader, who will find much new information in the appendixes. The historical site of Bannockburn, and generally the details of the battle, the editor shows, must be conceived in accordance with Barbour's account, which is clear and consistent—the poet must have seen the ground, and we know he conversed with actors in the war.

"James Watt," writes Mr. Carnegie in his life of the great engineer, "had been fed on Wallace and Bruce, and, when things looked darkest, his national hero, Wallace, came to mind. Did Wallace give up the fight? Did Bruce falter? 'Scots wha hae' has pulled many a Scottish boy through the crises of life when all was dark, as it will pull others yet to come." Bruce was buried in Mr. Carnegie's native city of Dunfermline, and Barbour was Bruce's *sacer vates*. Why should Barbour lack a worthy memorial on his native street, in sight of the University, and within fifty yards of his own Cathedral?

W. K. L.

The Romance of a Famous Shire.

The Heart of Scotland. Painted by Sutton Palmer. Described by A. R. Hope Moncrieff. (7s. 6d. net. A. & C. Black.)

"Among all the provinces in Scotland," writes Sir Walter Scott, "if an intelligent stranger were asked to describe the most varied and the most beautiful, it is probable that he would name

Digitized by Google

the county of Perth. But Mr. Moncrieff goes a long step further. "Scott," he says, "was an alien in Perthshire, his judgment of which, then, should be 'neither partial nor impartial,' as the Provost of Portobello desired; while it is so much my native heath that I give it no place but that of first in all the counties of Britain." We lack courage to contest the proud claim, for Mr. Moncrieff has tramped all the counties through and through with open eye, while we have mostly snoozed through them in night trains. Whatever may be the historical and picturesque claims centring in "Auld Reekie," or the arguments for "Glesca" and its environs in point of population and commerce, topographically at least Perthshire answers to the title of the volume, while it unquestionably takes first rank if the comparison is to rest on variety of natural beauty as well as historical and romantic incident—it is the heart of Scotland, "not only as containing its most famous scenery, but as best blending Highland and Lowland charms, and as having made the focus of national life and history." In the handsome series of "Colour Books," of which the present volume is the most recent member, the first consideration, we suppose, is really the pictures. Mr. Sutton Palmer furnishes twenty-four full-page illustrations, which are perhaps as fairly representative of the scenery and of the historical and literary associations as any other two dozen pictures would be. They catch the spirit of the localities, and they are very effectively reproduced in colours. It is Mr. Moncrieff's humour to hope, "after the words of another poet, that 'the pictures for the page atone'"; otherwise we should vehemently reject all necessity for such atonement—except indeed for beguiling a case-hardened reviewer to read the book straight through when samples might have adequately served the occasion. If "Bonnie Scotland" pleased so many readers that it had to be supplemented by the "Highlands and Islands," and then the "Highlands and Islands" had to be supplemented by "The Heart of Scotland," the only inference we can reasonably draw is that there still lies before us an indefinite and enchanting vista of further supplements. Mr. Moncrieff leaves all topographical details to the matter-of-fact map and guide-book—neither cartographer nor motorist would find much guidance from him. He "modestly presents himself, rather as a gossiping companion to the guide-book which, in its up-to-date form, dwells more on details of useful information, and has less room for giving strangers some notion what life was in this region before its flush of romance had died away like an Alpine glow." He assumes that the features of the scenery are familiar in Scott's verse, and therefore economizes epithets of hackneyed admiration; he is not so sure about the general mastery of Scott's prose, and therefore he tells freely tales that "are mostly to be found transfused into his romances or tacked on them as illustrations in his lively introductions and notes." But there is much more than that, though it is difficult to avoid Scott anywhere in Perthshire. And the whole of the material is shaped and presented by an expert literary artist working in absolute freedom. Mr. Moncrieff is full of his subject, and—he lets himself go, undismayed by critics of the preceding volumes that have accused him of "being flippant, discursive, garrulous, gossiping, everything that your gravely plodding writers are not." "It must be confessed," he admits, "that, as a model of style, I have an eye rather on the upper waters of the Tay, with its swirls and eddies and ripples, than on its broad and placid flow by the fat carse of Gowrie"; but, as "one loves to please all tastes, within reason," he does occasionally "try to be as steady and slow as the mill-lead at Perth." We decidedly prefer the swirls and eddies and ripples. Not a few autobiographical points add special interest (and humour) on various occasions—his first smoke, his adventures as an officer of volunteers on the Inch at Perth, his first literary article, his being taken into the nursery "to see Mr. Haldane invested with his first dignity as 'the new baby,'" and so forth. There could be no more sprightly and engaging companion through Perthshire. A very handsome, brilliant, and delightful volume.

Conic Sections.

The Analytical Geometry of the Conic Sections. By the Rev. E. H. Askwith, D.D. (7s. 6d. net. A. & C. Black.)

Readers of Dr. Askwith's earlier work on "Pure Geometry" will be pleased to welcome the author's recently published text-book on "The Analytical Geometry of the Conic Sections." The earlier and later treatises may be regarded to some extent as complementary, for, by frequent reference to his "Pure Geometry" in the later chapters of his new work, the writer has, in a measure, avoided giving the same information a second time. The present volume is more important than its predecessor with regard to size, and is fully illustrated. Both have been inspired by the teaching of the subject-matter forming the contents, and both possess the excellence born of thorough knowledge combined with the power of imparting it. The author is quite justified in claiming that his work is not stereotyped in character. The methods of framing many of the equations leave the well known lines and follow new ones. Thus, for instance, equations to a straight line are made to depend initially on the vanishing of a triangular area. The originality which this and other variations from the ordinary treatment introduce into the text-book is very refreshing and attractive. At times, however, one is forced to ask whether it is well to derive one equation from another not more fundamental than itself, rather than establish each independently from the geometry of its own figure. The reduction of the general equation of a straight line to the normal form and the treatment of perpendiculars to a straight line both from the origin and from points in general, are very interesting, and simpler than in many text-books. Again, the condition that the general equation of the second degree may represent a pair of straight lines is readily deduced without the solution of a quadratic equation. The method adopted in the above piece of work leads to the observation that a student of Dr. Askwith's "Analytical Geometry" must be ever on the alert in order that he may fully realize, and bring to bear on later passages in the book, implied as well as definitely expressed facts.

The seventh chapter opens with a most useful diagram illustrating the nature of the sections made by a variable plane cutting a complete right circular conical surface. The earlier portions of this chapter are devoted to constructing, in their standard forms, the equations of the conics (usually so called), and to discussing a few of the leading properties of the curves. The writer then establishes the fact that the general equation of the second degree always represents some conic section, and derives, with his usual skill, various important equations which apply equally to all conics. We must be content with but brief reference to the successive chapters of the volume. The eighth to the thirteenth, inclusive, are taken up with the detailed treatment of each of the principal conic sections by means of its Cartesian equation, and with the discussion of the polar equation of a conic, of conics in general, and of similar and confocal curves of the second degree. In the subsequent chapters the individual character of the treatise is very marked, for Dr. Askwith assigns a position of merely secondary importance to trilinear co-ordinates, whilst, on the other hand, he treats with perhaps unusual fullness the theory of homogeneous co-ordinate systems in general, introducing the subject to the student through the special system of areals, since, in his opinion, the particular is more easily grasped than the general. This is, indeed, often the case, and yet some of the best teachers advocate the opposite course, and, in point of fact, succeed in first making clear the demonstration of a proposition in all its generality; afterwards only do they proceed to place restrictions of various kinds which lead to special and less complex forms. Chapter xvi. takes up the subjects of cross ratios, harmonic section, and involution, and is followed by the discussion in due order of invariants, tangential equations, envelopes, and covariants. The close connexion between tangential and corresponding point equations is very carefully brought out. We are told in the preface that possibly some apology is needed for the publication of a fresh work on the subject, and that the book must itself supply the same. That the work justifies its existence no reader will doubt.

GENERAL NOTICES.

CLASSICS.

The Knights of Aristophanes. Edited by Robert Alexander Neil, M.A., LL.D. Aberd. (5s. net. Cambridge University Press.)

This is a cheaper reissue of the first edition, which appeared in 1901, a few months after the lamented death of the accomplished editor—"the only direct memorial of Neil's work as a classical scholar which his scanty leisure and fastidious pen permitted him to leave." It is a masterpiece of learning and judgment, and will long keep Neil's memory green among classical scholars.

The Silvae of Statius. Translated, with Introduction and Notes, by D. A. Slater, M.A., Professor of Latin in the University College of South Wales and Monmouthshire. (3s. 6d. net. Clarendon Press.)

Prof. Slater follows the Oxford recension of the text, with very occasional divergence; and, as the textual problems, if not all settled, are now substantially mastered, it is time that English readers should

Digitized by Google

have a translation. "The style of Statius is so extremely artificial, and his meaning at times so hard to grasp, that it is usually difficult, and often impossible, to produce a rendering that shall be at once idiomatic and faithful to the original." In the circumstances, Prof. Slater has struggled manfully with the conundrums, and, though the mark of translation is impressed on his pages, he must be conceded a substantial success. The notes might well have been extended; but, perhaps, he will one day give such extension in a commentary. The introduction, narrating the life of Statius and the literary history of the "Silvae," is reasonably full and instructive. We are very glad to welcome this new addition to the excellent series of Oxford translations.

Messrs. George Bell & Sons issue, in a fresh volume of their "Classical Translations," Books IX. and X. of the very careful prose rendering of *The Iliad of Homer*, by E. H. Blakeney, M.A., Head Master of the King's School, Ely (1s.). The foot-notes continue to offer useful and interesting literary illustrations. There is a brief excursus to Book X., on the authority and authenticity of the "Doloneia."

Mr. John Murray issues the *Classical Association Proceedings*, 1908—the sixth volume of the series (2s. 6d. net). Besides the business affairs of the Association, there is a goodly number of excellent papers read at the annual general meeting, Mr. Asquith's Presidential Address, the Interim Report of the Pronunciation Committee on the Pronunciation of Greek, the Report of the Curricula Committee, &c. The brochure ought, of course, to be in the hands of all that are interested in the progress of classical study and research.

MATHEMATICS.

The Elements of Geometry in Theory and Practice. Parts I. and II. By A. E. Pierpoint, B.Sc. (2s. 6d. Longmans.)

This is the complete text-book. Each of the two "Parts" is also issued separately, and the earlier has already been noticed in this column. Part II. is quite equal in standard to its predecessor, and the two Parts together form a very useful work for the junior student. The subject is treated in accordance with the views of the modern school of thought—namely, first experimentally, and later in parallel theoretical and practical courses to be followed concurrently. Together with the text, clear diagrams, numerous exercises, with hints for solution (the latter appearing at the close of the volume), and examination papers help to form the complete contents of the book.

Modern Arithmetic. Parts I. and II. By H. Sydney Jones, M.A. (3s. and 2s. 6d. Macmillan.)

The plan of the work and the manner in which it has been carried out are in thorough harmony with the title. The chief features can, on the whole, no longer lay claim to absolute novelty, seeing that the points to which the author directs special attention in the preface are mainly the following: the introduction of decimals and metric measurements at a very early stage in the course laid down by him; the provision of abundance of material for experimental work; the choice of practical problems dealing with subjects of actual interest and importance; the supply of exercises suitable for a training in the mental and oral solution of simple questions. Elementary work on statistics receives deserved attention, and many problems involving the evaluation of averages serve to illustrate the importance of the underlying principle. A most interesting discussion of the elements of the subject opens the section on Stocks and Shares. The first volume covers the course necessary as a preparation for Junior Local Examinations, and the second meets the requirements of Army and Civil Service candidates. The book is more suitable for teachers and for class purposes than for the student working alone, from whose point of view the explanations in many instances stand in need of further elaboration. Numerous well executed diagrams are helpful to readers.

Examples in Practical Arithmetic. Part II. Compiled by J. L. Martin. (6d. John Murray.)

A continuation of the very useful little work to the first "Part" of which we drew attention in these columns some months ago. The leading topics that form the subject-matter of the more advanced volume now before us are proportion, the principle of percentage with some of its many applications, the treatment of averages, and the mensuration of simple plane and solid figures. Some pages are devoted to a consideration of the "Use of Literal Symbols" and equations, and it is perhaps worth while to notice the curious misprint "lateral" for "literal," which recurs several times. The exercises present much variety, and are therefore calculated to interest the pupil in his arithmetical work. It may be well to remind the reader that the author has based his compilation on Consterdine and Andrew's "Practical Arithmetic." In these days, when drawing is so widely taught to the youngest children, the rough appearance purposely given to the "hand sketches" constituting a number of the diagrams seems to us to be out of place. Why should a sketch of the door of a church look like a milestone that has seen better days rather than like what it is supposed to represent?

SCIENCE.

Air Currents and the Laws of Ventilation. By W. N. Shaw, Sc.D., F.R.S., Honorary Fellow of Emmanuel College, Cambridge, Director of the Meteorological Office. (3s. net. Cambridge University Press.)

"Every house or building, considered from the point of view of its ventilation," says Dr. Shaw, "is an extraordinarily elaborate combination of aeromotive forces, due to wind acting in various ways, temperatures in flues, and sometimes blowing fans in addition, with resistances of chimneys, ducts, chinks, gratings, and possibly also of large areas of porous walls. On the electrical analogy the whole presents a complication of aeromotive forces and resistances, generally of a varying character, the interrelation of which no electrical engineer would care to specify in figures." Little marvel, then, if difficulties of ventilation are so often troublesome to deal with. Dr. Shaw considers (1) the laws of flow in air circuits and the verification of them; (2) the physical principles applicable to the ventilated space; and (3) the application of physical laws to practical ventilation. The inquiry is patient, careful, and thoroughly scientific; and it is set forth with remarkable lucidity and relieved with touches of humour. "When all is said and done, the successful management of a system of ventilation is a physical experiment of great difficulty."

The Essentials of Botany, by Joseph Y. Bergen, A.M. (5s., Ginn), is, if we mistake not, a new issue of a book that has enjoyed favour in the schools for the past dozen years. It is especially intended "for the use of secondary schools which devote a year to botany." The description is very full and careful, and laboratory instructions are appended. Frontispiece, 14 plates, and about 250 figures.

The Tutorial University Press issues a sixth impression (fifth edition) of *A Text-Book of Sound*—the first volume of "The Tutorial Physics"—by Edmund Catchpool, B.Sc., revised and enlarged by John Satterley, B.A., B.Sc., late Assistant in Physics at the Royal College of Science (4s. 6d., Clive). An excellent text-book, with abundant examples (answers appended) and 148 figures.

The First Part of *Engineering Wonders of the World*, a work that Messrs. Nelson have commenced to issue in about twenty fortnightly Parts (7d. net each), challenges the record of serial enterprise. The editor, Mr. Archibald Williams, whose popularization of scientific achievements we usually welcome at Christmas time, opens with an admirable article on "Ancient Engineering," which is followed by able and attractive papers on "The White Pass and Yukon Railway," "The Royal Albert Bridge," "The Salving of the Battleship 'Gladiator,'" and "The Rotherhithe Tunnel"—64 pages of varied scientific matter in popular form, with 68 excellent illustrations and a coloured plate. As Mr. Williams justly remarks, and the present Part enforces, "there is no more fascinating reading in the world than the story of machinery and what it has accomplished for the benefit of mankind." The complete work will cover practically the whole field of engineering, and "a large part of the letterpress is from the pens of professional engineers, whose status is sufficient guarantee for the worth of their respective contributions": thus, "The Rotherhithe Tunnel" in the present Part is from the pen of Mr. E. H. Tabor, M.Inst.C.E., the Resident Engineer in charge of the construction. "There must be thousands of persons living in this great workshop of ours who are eager to understand how such things as a tunnel, a suspension bridge, a battleship, a sky-scraper, or a lighthouse are constructed." Undoubtedly; and there need be no hesitation in predicting a wide and warm reception for this able, generously furnished, and most instructive and suggestive work.

ENGLISH LITERATURE.

"Cambridge English Classics."—*The Authorised Version of the English Bible*, 1611. Edited by William Aldis Wright, Vice-Master of Trinity College, Cambridge. In five vols. (20s. net, or 4s. 6d. net any one vol. Cambridge University Press.)

The Authorised Version of the English Bible—the "book which, if everything else in our language should perish, would alone suffice to show the whole extent of its beauty and power"—is now, very properly, included in the scholarly series of "Cambridge English Classics." "Many people are unaware of the fact that the text of modern English Bibles differs very considerably from that of the original Authorised Version of 1611." In 1611 there were two issues, a He Bible and a She Bible—so called from different readings in Ruth iii. 15. The first issue gave: "And when she helde it, he measured sixe measures of barley, and laide it on her: and *he* went into the citie." The second issue gave: ". . . and *she* went into the citie." Modern Bibles are variations of the She Bible; the present is a reprint of the He Bible—"for the first time an absolutely faithful reproduction of the original." "The original edition was a handsome black letter folio, with two columns on a page. In the present reprint each page represents one of these columns, so that a complete page of the original text is seen at the opening of two opposite pages of the reproduction." Of course, the type is more modern. The name of Mr. Aldis Wright guarantees the most competent and careful editing; and the excellence of the workmanship of the Cambridge University Press is thoroughly maintained. Volume I. contains Genesis to Deuteronomy; Volume II., Joshua to Esther; Volume III., Job to Malachi; Volume IV., the Apocrypha; and Volume V., the New Testament.

Shakespeare's Complete Sonnets. A New Arrangement, with an Introduction and Notes, by C. M. Walsh. (5s. net. Fisher Unwin.)

The introduction is a concise and trenchant essay, severe on Thorpe, critical of speculation upon his puzzling dedication, and hopeless of any

BLACKIE'S LIST

Practical Organic Chemistry.
An advanced Text-Book suitable for Pass and Honours Degree and A.I.C. Candidates. By J. J. SUDBOROUGH, Ph.D., D.Sc., F.I.C., Professor of Chemistry in the University College of Wales, Aberystwyth, and Director of the Edward Davies Chemical Laboratories; and T. CAMPBELL JAMES, M.A., B.Sc., Lecturer and Demonstrator in Chemistry in the University College of Wales, Aberystwyth. 400 pp., illustrated. Crown 8vo., 5s. net.
Just issued.

A General Geography of the World: Physical, Historical, and Political.
By HENRY E. EVANS, B.A., L.C.P., Rastrick Grammar School, Brighouse. A Text-Book for Students preparing for University and other Public Examinations. 416 pages, crown 8vo, cloth boards, 3s. 6d. [*Just issued.*

Geography: Structural—Physical—Comparative.
A Text-Book for Senior Students. By J. W. GREGORY, D.Sc., F.R.S., Professor of Geology in the Glasgow University. With Series of specially constructed Coloured Maps and Sketch Maps and Plans in Black and White. Large 8vo, 6s. net.

A First Geography.
With Coloured Pictures and Diagrams on every page. By C. A. E. RODGERS, M.A., F.R.G.S., Assistant Master, Bradford Grammar School; and an Examiner in Geography to the College of Preceptors. Small 4to, cloth, 1s.

Man on the Earth.
A Course in Geography. By LIONEL W. LYDE, M.A., Professor of Economic Geography, University College, London. Ninth Edition. With many Illustrations. 2s.

The Growth of Greater Britain.
A Sketch of the History of the British Colonies and Dependencies, with Biographies of Leading Persons. By F. B. KIRKMAN, B.A., Lincoln College, Oxford. Cloth boards, 1s. 9d.
This book is written in simple and attractive style by an Oxford Honoursman in History. Its title, "The Growth of Greater Britain," describes it with sufficient exactness, and will at once claim for if the teacher's attention in these days when imperial and colonial matters bulk largely in all school curricula.

INTRODUCTION TO THE NATURAL HISTORY OF LANGUAGE.
By **T. G. TUCKER, Litt.D. (Camb.), Hon. Litt.D. (Dublin)**, Professor of Classical Philology in the University of Melbourne.
Demy 8vo, cloth, 10s. 6d. net.
A new treatise which gathers together the results of the great amount of philological work that the last quarter of a century has produced. It is intended to fulfil to-day the purpose which was served in its time by Max Muller's "Science of Language."

The Call of the Homeland.
A Collection of English Verse. Selected and Arranged by R. P. SCOTT, LL.D., and KATHARINE T. WALLAS, M.A. In Two Volumes. 1s. 6d. each net.
Book I.—**Echoes from History—Britain Overseas—The Sea—The Changing Year.**
Book II.—**The English Countryside — Home — Exile — Compatriots — The Call to Serve — The Call to Happiness.**

Combined Course of Literary Reading and Composition.
Illustrated from Famous Paintings. Edited by LOUIS MARSH, M.A. Carefully chosen Readings from English Literature, with Graduated Exercises, forming a Complete Course of Instruction in English. 2s.

The Teaching of English.
By **A. E. ROBERTS, M.A.**, Principal Lecturer in English at the Islington Day Training College; and **A. BARTER, L.L.A.**, late Head Mistress of the Braintree Pupil-Teacher School. 2s. 6d. net.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C.

Digitized by Google

sure determination of the chronological order of the sonnets. This order, however, is judged to be "of slight importance." "The principal thing is to put the sonnets in a satisfactory arrangement of subjects, so that they flow one from another with the fewest breaks and mutually interpret one another, and to add headings which introduce them without danger of misleading the reader." Accordingly, the whole of the existing sonnets, including those contained in the plays and in the minor poems, are disposed in eight sections, the first consisting mostly of sonnets known to be early, the last consisting of sonnets exhibiting marks of mature art, and the intervening sections consisting of well defined groups more or less likely to have been composed in the order given. After all, however, the apparent connexion is not to be unduly pressed. Anyhow, the new arrangement is a good idea, and, whether the right way or not, it is, at any rate, one way of enabling the reader "to appreciate the beauty of these little poems." A considerable number of notes are appended, partly explanatory, but mostly adducing comparative passages, mainly from the other works of the poet. The volume is liberally printed and got up, and the form is convenient.

ENGLISH READERS.

"The Oxford Story Readers." (Henry Frowde and Hodder & Stoughton.)

The Joint Committee of these two well known houses issue several progressive series of readers containing excellent matter and well printed and agreeably got up. In the first series we have (1) *What Stella Did*, by Mabel Quiller-Couch; (2) *His Word of Honour*, by Douglas Grant; (3) *Mother Roundabout's Daughter*, by Sir George W. Dasent. (2d. each.) In the second series: (1) *The King of the Golden River*, by John Ruskin; (2) *The Christmas Cuckoo*, by Frances Browne; (3) *Beanflower and Peaseblossom*, from the French of Charles Nodier. (3d. each.) In the third series: (1) *The Escape of Desmond Burke*, by Herbert Strang; (2) *Adventures of Don Quixote*, by Cervantes; (3) *Gerard's Long Journey*, by Charles Reade. In the fourth series: *A Christmas Carol*, by Dickens. All the volumes are pleasantly illustrated.

"Stories to be Read." 6d. net each volume. Blackie.

A new series, very convenient in form, beautifully printed, nicely got up, and presenting very good and interesting matter. We have ten volumes: (1) *Robinson Crusoe* (Defoe); (2) *Sindbad the Sailor;* (3) *Tales from the Arabian Nights;* (4) *Gulliver's Travels* (Swift); (5) *Adventures of Ulysses* (Lamb); (6) *The Cricket on the Hearth* (Dickens); (7) *Tanglewood Tales* (Hawthorne); (8) *The Water Babies* (C. Kingsley); (9) *The Chimes* (Dickens); (10) *A Christmas Carol* (Dickens). Each volume has a frontispiece, and some of them have additional illustrations. The "stories" cannot be too widely circulated.

"The Temple Continuous Readers." Edited by G. Clifford Dent, B.A., Lecturer in English at the City of Leeds Training College. 6d. each volume. Dent.

The volumes are very convenient in size, clearly printed, strongly bound, and full of excellent matter. Hawthorne's *Tanglewood Tales* are provided for children of ten to twelve; Mrs. Gatty's *Parables of Nature*, for children of eleven to thirteen: there are *A Christmas Carol* (Dickens) and *A Wonder Book* (Hawthorne); and there are more to follow. A series of questions is appended to each book as a basis for discussion between teacher and pupil and for exercises in composition. The little folks will read the books at home with avidity, and no doubt will delight to talk them over; but the teacher will need all his tact to avoid stirring a feeling of task-work. If we were not very sure of our teacher, we had rather leave the children to discuss their "continuous" books among themselves.

"The Dwellers Series." By the Rev. Theodore Wood. (8d. each volume. Jack.)

Six volumes: (1) *Dwellers in the Garden;* (2) *Dwellers in the Pond;* (3) *Dwellers on the River Banks;* (4) *Dwellers in the Meadows;* (5) *Dwellers Underground;* (6) *Dwellers in the Woods.* Simple and interesting descriptions of the animals to be found in these various places, with abundant illustrations by F. M. B. Blaikie, the more important of them in colour. A very attractive and suggestive series.

"Chambers's Standard Author Readers." (8d. net each, limp cloth; 1s., cloth boards.)

Each volume contains some three or four hundred pages of excellent reading, beautifully printed on thin but sufficient paper: and the get-up is attractive. We have, at the moment, nine volumes: (1) *A Wonder Book* and *Tanglewood Tales* (Hawthorne), with 12 spirited illustrations by N. Buchanan; (2) *The Coral Island* (Ballantyne); (3) *Little Women* (Miss Alcott); (4) *The Lances of Lynwood* (Miss Yonge); (5) *The Children of the New Forest* (Captain Marryat); (6) *Tom Brown's School Days* (Hughes); (7) *Hereward the Wake* (C. Kingsley); (8) *The Talisman* (Scott); (9) *The Pathfinder* (Cooper). The series should be eminently useful both in and out of school.

"Chambers's Narrative Readers."

For the class corresponding to Standard I.: (1) *The Ugly Duckling* and *Little Thumb;* (2) *Prince Cherry* and *The Forest Rose;* (3) *Little Snowdrop* and *The Three Sisters.* For the class corresponding to Standard II.: (1) *The Christmas Cuckoo* (adapted from Frances Browne). Corresponding to Standard III.: (1) *Ali Baba and the Forty Thieves;* (2) *Aladdin and the Wonderful Lamp.* Corresponding to Standard IV.: *Sindbad the Sailor.*—Set C: *The Wonderful Pitcher* (adapted from Hawthorne). Set D: *Pandora's Box* (adapted from Hawthorne).—Set E: (1) *The Little Maories* (Finnemore); (2) *The Story of Marie the Black Girl* (Finnemore); (3) *The Young Africanders* (Finnemore); (4) *The Young Hindu* (Finnemore). (2d. each, paper; 3d., cloth.)

"Told through the Ages. (1s. 6d. each volume. Harrap.)

Three more volumes of this delightful series: (1) *Told by the Northmen*, stories retold from the Eddas and Sagas by E. M. Wilmot-Buxton; (2) *Stories from Don Quixote*, retold by H. L. Havell, B.A.; and (3) *Stories from Chaucer*, retold from the "Canterbury Tales" by J. Walker McSpadden. They are all charmingly written in simple style, and liberally printed and illustrated. They may serve well as supplementary readers.

PROSE AND VERSE FOR CHILDREN.

"Every Child's Library." (1s. 6d. each volume. Heinemann.)

A charming series of dainty little volumes in beautiful type, with numerous illustrations and picture cover, containing suitable matter of interest to the young folk. We have five examples: (1) *Sir Roger de Coverley* (Addison); (2) *My Uncle Toby* (Sterne); (3) *Brave Beowulf* (after the Old English poem); (4) *One for Wod and One for Lok;* or, *Asgard, Midgard, and Utgard* (Myths of the North); (5) *Reynard the Fox* (after Caxton). The children will be delighted with these stories and ask for more.

"The Open Road Library of Juvenile Literature." (1s. 6d. each volume. Ginn.)

The first two volumes consist of *Fairy Tales*, compiled and edited by Marion Florence Lansing, M.A., with illustrations by Charles Copeland. A third volume tells once more *Tales of Old England* in prose and verse, from "Tom Thumb" and "Childe Rowland" to "Sir Patrick Spens" and "The Cobbler and the King." The stories are written with much care and in simple style, and the volumes are nicely printed and got up, as well as handy in form. A very agreeable series.

Poems for Junior Schools. Edited by Lettice Thomson. (Three Books. 3d. each. Horace Marshall.)

Book I. contains poems of Spring; Book II. poems of Summer; and Book III. poems of Autumn and Winter. The collection is intended to supply teachers with "poems dealing with the subjects which come naturally under the observation of young children, and therefore lend themselves easily to correlation with everyday life." A very careful and judicious selection.

True Tales for my Children. By J. B. Marshall. (4d. E. J. Arnold.)

There are a hundred tales, very simply told, and bearing a moral as well as attracting interest. They are very suitable for children, say, from seven to ten, whether for class reading or for reading alone, or as providing subjects and material for compositions.

"Told to the Children." (8d. each volume. Jack.)

A selected number of this admirable series now appear in a "school edition" as supplementary readers: (1) *Simple Susan;* (2) *Stories of Siegfried;* (3) *Stories from the Ballads;* (4) *Stories of Beowulf;* (5) *Stories of Roland;* (6) *Undine* (after Fouquée). The only difference from the original form is that the little books are now issued in limp cloth. Matter, type, and illustrations are the same.

"Told Simply for the Lower Standards." By Gladys Davidson. (3d. each. Jack.)

(1) *Jason and the Golden Fleece;* (2) *The Story of King Alfred the Great;* (3) *The Story of Perseus;* (4) *The Story of Robin Hood;* (5) *Undine.* The Stories are simply and charmingly told, and each has a coloured frontispiece.

"Very Simply told for the Infants." By Gladys Davidson. (3d. each. Jack.)

(1) *The Snow Queen;* (2) *The Water Babies;* (3) *Jack at Oak Farm;* (4) *The Story of the Robins;* (5) *A Book of Fables.* The stories are very charmingly told, and each has a coloured frontispiece.

Loucy Chisholm's Fairy Book, Parts I. and II. (3d. each, Jack), tells half-a-dozen of the old stories in delightful form. Each Part has a coloured frontispiece. — *The Children's Fairy Book*, Parts I. and II. (3d. each, Jack), is very similar, but all the stories are different. Again each Part has a coloured frontispiece. Both series are paragraphed as if for school reading.

Longmans' Nature Poetry Book for Children, by Asenath Smith (1s.), provides original rhymes "to correlate as far as possible with nature and other lessons" in infant and junior schools. The verses are appropriate and simple, and they run smoothly. There are 35 illustrations.

Alice's Adventures in Wonderland, by Lewis Carroll, with 58 spirited illustrations by Brinsley le Fanu, is issued from "Books for the Bairns" Office (3d. net).

Nursery Rhymes. Music by Paul Arnold; additional verses by Marshall Steele. (1d. Cassell.)

Sixteen "little songs for little people," with 16 sweet melodies and 16 pretty illustrations. The collection is sure to be welcomed in all nurseries.

FIRST GLANCES.

Latin.

Caesar's Expeditions to Britain: De Bello Gallico IV., 20–36; V., 1–23. By William A. Edward, M.A., Classical Master, Broughton Higher Grade School, Edinburgh. 1s. 6d. Longmans.

[Notes largely original in character, and specially educative; vocabulary. Frontispiece (Julius Caesar), map, and 11 figures (chiefly military). Admirable.]

Caesar's Invasions of Britain: De Bello Gallico IV., 20–V., 23. Edited by the Rev. A. W. Upcott, D.D., Head Master of Christ's Hospital, and Arthur Reynolds, M.A. 1s. 6d. George Bell (Illustrated Classics).

[Introduction contains life of Caesar, account of the Ancient Britons and the Celts, and (by A. C. Liddell, M.A., Nottingham High School) a good description of the Roman Army. Useful notes, largely grammatical. Vocabulary. Excellent.]

Hymenaeus: a Comedy acted at St. John's College, Cambridge, in March, 1578–9. Now first printed, with an Introduction and Notes, by G. C. Moore Smith, Litt.D., Professor of English Language and Literature in the University of Sheffield. 3s. 6d. net. Cambridge University Press.

[Curious and interesting. "The language of the play is based on that of Plautus and Terence, from whom considerable borrowings are made." Textual and explanatory notes.]

Latin Delectus, The New. Book II. By W. Jenkyn Thomas, M.A., Head Master, and E. P. Doughty, M.A., Classical Master, Hackney Downs School. 2s. 6d. Marshall.

["For the earlier reading of boys and girls who learn Latin, and especially for schools with a leaving age of about sixteen." Seventy-four passages (chiefly myths of gods and heroes, stories of Troy and Aeneas, &c.); vocabulary full. Notes chiefly on personages. Ten good full-page illlustrations. Very serviceable.]

Science.

Botany, Elementary. By M.A. Liversidge, Assistant Mistress, Girls' High School, Gloucester. 1s. 6d. Blackie.

[Covers syllabus for Oxford and Cambridge Junior Local Examinations. Treatment simple and interesting to beginners. 112 figures.]

Chemistry, Junior. By R. H. Adie, M.A., B.Sc., Lecturer in Chemistry, St. John's College, Cambridge. 2s. 6d. Clive (School Junior Series).

[Usual order slightly varied to obtain a complete sequence of chemical ideas. Able exposition; abundant experiments and examples; questions on each chapter. Most useful.]

Chemistry, Physical, Outlines of. By George Senter, Ph.D., B.Sc. Lond., Lecturer on Chemistry at St. Mary's Hospital, University of London, &c. 3s. 6d. Methuen.

[Presupposes elementary knowledge of chemistry and physics; deals in considerable detail with branches usually found difficult by beginners; numerical illustrations as far as possible; only very elementary mathematics assumed. About 40 figures. Independent and able.]

Elasticity, Experimental. By G. F. C. Searle, M.A., F.R.S., University Lecturer in Experimental Physics and Demonstrator in Experimental Physics at the Cavendish Laboratory, Cambridge. 5s. net. Cambridge University Press.

["A Manual for the Laboratory." Has grown out of class notes. Will be very valuable to students everywhere.]

Direct Current Dynamo Electric Machinery, The Elementary Theory of. By C. E. Ashford, M.A., Head Master, Royal Naval College, Dartmouth, and E. W. E. Kempson, B.A., Assistant Master in the same College. 3s. net. Cambridge University Press.

[Elementary, logical; "intended to be used only as a note-book accompanying a course of experimental lectures." Extremely useful for the training of electrical engineers.]

Trees: a Handbook of Forest Botany for the Woodlands and the Laboratory. By the late H. Marshall Ward, Sc.D., F.R.S., Fellow of Sidney Sussex College, Hon. Fellow of Christ's College, and Professor of Botany in the University of Cambridge. Vol. IV., Fruits. 4s. 6d. net. Cambridge University Press (Cambridge Biological Series).

[Two divisions—general and special. 147 illustrations.]

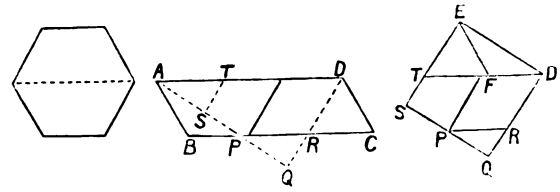
MATHEMATICS.

16505. (JAMES BLAIKIE, M.A.)—Show how to cut (1) a regular hexagon, (2) a regular octagon, into the smallest number of parts which can be placed together to form a square.

Solution in detail by H. M. TAYLOR, M.A., F.R.S.

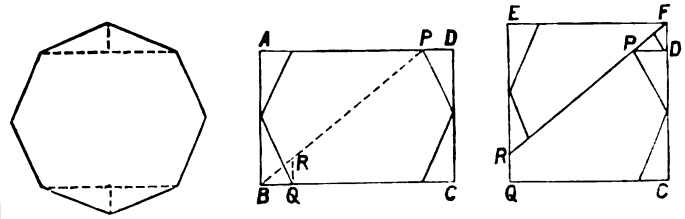
The following geometrical constructions show how to cut (1) a regular hexagon into five parts, (2) a regular octagon into eight parts, which can be fitted together to form a square:—

(1) Take a regular hexagon (inscribed in circle of radius 2) and divide it into two halves by cutting it along a diameter joining two vertices. Now fit these two pieces together in the position represented in the figure, so as to form a parallelogram ABCD, where AB = 2 and AD = 6. Take a point P in BC such that AP = $\sqrt{(6\sqrt{3})}$; join AP and produce it to Q, and draw DQ at right angles to AQ meeting BC in R. From



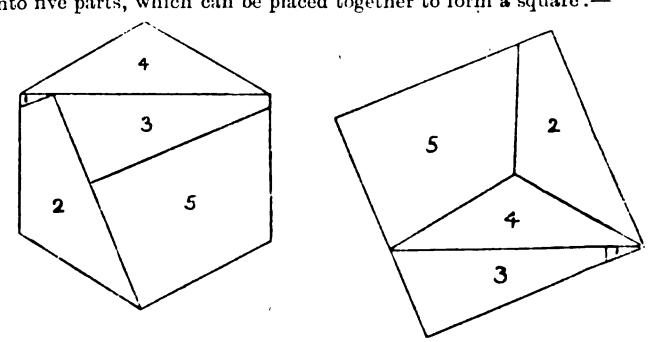
AP cut off AS equal to PQ, and draw ST at right angles to AS meeting AD in T. Then, if the lines AP, DR, ST be cut, the hexagon will have been divided into five parts which can be fitted together to form a square. Translate the triangle AST to PQR, the triangle ABP to EFD, and the triangle DRC to ETF. Then the figure ESQD will be be a perfect square.

(2) Take a regular octagon (inscribed in circle of radius 2). Draw a diameter, joining two opposite vertices, and draw two diagonals parallel to this diameter. Cut the octagon along those two diagonals, and divide each of the triangles so cut off into two equal triangles. Now fit these five pieces together in the position represented in the figure, so as to form a rectangle ABCD, where AB = $2\sqrt{2}$ and AD = 4. Take



points P, Q in AD, BC such that AP = CQ = $\sqrt{(8\sqrt{2})}$. Join BP, and draw QR parallel to CD to meet BP in R. If the lines BP, QR be now cut, the octagon will have been divided into eight parts which can be fitted together to form a square. Translate the triangle ABP to ERF and the triangle BQR to PDF. Then the figure EQCF will be a perfect square.

Note.—Professor STEGGALL sends, independently, the same solution for the hexagon, and the Proposer for the octagon as Mr. H. M. TAYLOR; Mr. W. E. PHILIP, H.M. Inspector of Schools, sends the following method of dissection by means of which a regular hexagon may be cut into five parts, which can be placed together to form a square:—



16590. (*Communicated by* C. M. ROSS.)—If

$a_1yz + b_1(y+z) + c_1 = 0$, $a_2zx + b_2(z+x) + c_2 = 0$, $a_3xy + b_3(x+y) + c_3 = 0$,

are true for an infinite series of values for x, y, z; prove that in general

$$a_2c_3 + a_3c_2 = 2b_2b_3, \quad a_3c_1 + a_1c_3 = 2b_3b_1, \quad a_1c_2 + a_2c_1 = 2b_1b_2.$$

Solution by G. N. WATSON, B.A., *and the* PROPOSER.

[This Question was originally set in the *Camb. Math. Trip.*, Part I., May 18th, 1906.]

Digitized by Google

From the first two equations

$$-z = \frac{b_1y+c_1}{a_1y+b_1} = \frac{b_2x+c_2}{a_2x+b_2},$$

i.e., $xy(a_2b_1-a_1b_2)+x(a_2c_1-b_1b_2)+y(b_1b_2-a_1c_2)+c_1b_2-c_2b_1=0.$

If this equation is not an identity (*i.e.*, if $a_2b_1-a_1b_2$, $a_2c_1-b_1b_2$, $b_1b_2-a_1c_2$, $c_1b_2-c_2b_1$ are not all zero), we get, on making use of the third equation,

$$-x = \frac{(b_1b_2-a_1c_2)y+c_1b_2-c_2b_1}{(a_2b_1-a_1b_2)y+a_2c_1-b_1b_2} = \frac{b_3y+c_3}{a_3y+b_3}.$$

We consequently get definite values for y unless

$$b_3 : c_3 : a_3 : b_3 = b_1b_2-a_1c_2 : c_1b_2-c_2b_1 : a_2b_1-a_1b_2 : a_2c_1-b_1b_2.$$

Consequently, $b_1b_2-a_1c_2 = a_2c_1-b_1b_2$.

i.e., $a_1c_2+a_2c_1 = 2b_1b_2$,

and each of the ratios

$$\frac{b_3}{b_1b_2-a_1c_2},\ \frac{c_3}{c_1b_2-c_2b_1},\ \frac{a_3}{a_2b_1-a_1b_2},\ \frac{b_3}{a_2c_1-b_1b_2}$$

is equal to $\dfrac{a_3c_1+a_1c_3-2b_3b_1}{c_1(a_2b_1-a_1b_2)+a_1(c_1b_2-c_2b_1)-b_1(b_1b_2-a_1c_2)-b_1(a_2c_1-b_1b_2)}$;

hence $a_3c_1+a_1c_3 = 2b_3b_1$, and similarly $a_2c_3+a_3c_2 = 2b_2b_3$.

16604. (Lt.-Col. Allan Cunningham, R.E.)—Show how to use tables of the roots $(y_2, y_3, y_4, y_6, y_8, y_{12})$ of the congruences

$$y_2^2+1 \equiv 0,\quad (y_3^3\mp1)\div(y_3\mp1) \equiv 0,\quad y_4^4+1 \equiv 0,\quad (y_6^6+1)\div(y_6^2+1) \equiv 0,$$
$$(y_{12}^{12}+1)\div(y_{12}^4+1) \equiv 0 \pmod p$$

to factorize numbers $N = (x^{12}+y^{12})\div(x^4+y^4)$,

where x and $y > 1$ and all symbols are integers, and give an example with $N > 10^7$.

Solution by the Proposer.

The congruences in the Question are all supposed to be formed to the same prime modulus (p). (This should have been stated in the Question.) To them may be added the congruences $y_1\mp1 \equiv 0 \pmod p$, the solution (y_1) of which is obvious. These congruences give

$$y_1 \equiv \pm1,\ y_2^2 \equiv -1,\ y_3^3 \equiv \pm1,\ y_4^4 \equiv -1,\ y_6^6 \equiv -1,\ y_{12}^{12} \equiv -1 \pmod p,$$

for every prime (p) of form $p = 24\varpi+1$ in the tables. Hence

$$y_1^{12} \equiv +1,\quad y_2^{12} \equiv +1,\quad y_3^{12} \equiv +1,\quad y_6^{12} \equiv +1,$$

and $$y_4^{12} \equiv -1,\quad y_{12}^{12} \equiv -1 \pmod p.$$

Hence $x^{12}+y^{12} \equiv 0 \pmod p$, and $x'^{12}+y'^{12} \equiv 0 \pmod p$,

where x = any of y_1, y_2, y_3, y_6, and y = any of y_{12}; also x' = any of y_3, y_6, and y' = any of y_4. And more generally

$$X^{12}+Y^{12} \equiv 0,\quad X'^{12}+Y'^{12} \equiv 0 \pmod p,$$

where $X = mp\pm x$, $Y = mp\pm y$, $X' = mp\pm x'$, $Y' = mp\pm y'$.

And note that if the values of any pair of (x, y), (x', y'), (X, Y), (X', Y') contain a common factor (μ), this factor should be rejected, as it is desirable that the two members (x, y), (x', y'), ... should be mutually prime.

Note that, as $x^{12}+y^{12} = (x^4+y^4).(x^{12}+y^{12})/(x^4+y^4)$, some of the factors above obtained may turn out to be factors of (x^4+y^4), and some of $(x^{12}+y^{12})\div(x^4+y^4)$.

The factor (x^4+y^4) may be separately factorized by a similar process, by aid of tables of solution of $y_1^4\mp1 \equiv 0$, $y_2^2+1 \equiv 0$, $y_4^4+1 \equiv 0$.

Example.—The Proposer has compiled a series of the above tables which are now complete up to $p > 32000$ (these are now in course of publication). These tables give

$$969^{12} \equiv (51.19)^{12} \equiv \overline{1},\ \text{and}\ 918^2 \equiv (51.18)^2 \equiv \overline{1} \pmod{2593};$$
$$1881^{12} \equiv (99.19)^{12} \equiv \overline{1},\ \text{and}\ 1782^2 \equiv (99.18)^2 \equiv \overline{1} \pmod{3433};$$
$$630^4 \equiv (35.18)^4 \equiv \overline{1},\ \text{and}\ 665^6 = (35.19)^6 \equiv \overline{1} \pmod{1609}.$$

Rejecting the common factors 51, 99, 35 respectively, it is seen that $(19^{12}+18^{12}) \equiv 0 \pmod{1609.2593.3433}$; and (on actual trial) it is found that $(19^{12}+18^{12})\div(19^4+18^4) = 1609.2593.3433$.

Also the tables give $19^4 \equiv 2^2 \equiv \overline{1} \pmod{17}$, and as $18^1 \equiv +1 \pmod{17}$, it follows that $19^4+18^4 \equiv 0 \pmod{17}$; and it is found that

$$(19^4+18^4) = 17.13841.$$

This number $(19^{12}+18^{12})$ contains 16 figures.

Note.—This process, though it suffices to detect pairs of bases x, y, such that $(x^{12}+y^{12}) \equiv 0 \pmod p$, where p is a given prime, is not convenient for finding factors of *given* numbers $(x^{12}+y^{12})$, and is also not convenient for detecting high primes (as it is not exhaustive).

16616. (Professor Neuberg.)—Sur les côtés d'un triangle ABC on construit extérieurement trois rectangles BCDE, CAFG, ABHK dont les trois hauteurs CD, AF, BH ont une somme donnée l. Trouver le maximum de la somme des aires des triangles CDG, AFK, BHE et celui de la somme $DG^2+FK^2+HE^2$.

Solution by C. M. Ross.

The areas of the triangles CDG, AFK, BHE are

$$\tfrac{1}{2}xy\sin C,\quad \tfrac{1}{2}yz\sin A,\quad \tfrac{1}{2}zx\sin B,$$

where x, y, z are CD, AF, BH. Now, let S be the sum of the areas, then $2S = xy\sin C+yz\sin A+zx\sin B = \sin C/c\,(cxy+ayz+bzx)$.

To find the maximum of $ayz+bzx+cxy$. Let

$$u = ayz+bzx+cxy \quad \ldots\ldots(1).$$

Also $$l = x+y+z \quad \ldots\ldots(2).$$

Differentiating $du = (cy+bz)\,dx+(az+cx)\,dy+(bx+ay)\,dz = 0$,

and $$0 = dx+dy+dz.$$

Hence $cy+bz-\lambda = 0$, $az+cx-\lambda = 0$, $bx+ay-\lambda = 0$ \ldots\ldots(3),

where λ is undetermined. Eliminating x, y, z from (2) and (3),

$$\begin{vmatrix} 0 & c & b & \lambda \\ c & 0 & a & \lambda \\ b & a & 0 & \lambda \\ 1 & 1 & 1 & l \end{vmatrix} = 0.$$

Whence $\lambda = 2abcl/(2\Sigma bc-\Sigma a^2)$.

Again, multiplying the equations (3) successively by x, y, z and adding $2\Sigma ayz-\lambda(x+y+z) = 0$; therefore

$$2\Sigma ayz = \lambda l = 2abcl^2/[2\Sigma bc-\Sigma a^2];$$

therefore $$2S = abl^2\sin C/(2\Sigma bc-\Sigma a^2),$$

which gives the maximum sum.

From the Fig.: $DG^2 = x^2+y^2+2xy\cos C$,

$$FK^2 = y^2+z^2+2yz\cos A,\quad HE^2 = z^2+x^2+2zx\cos B.$$

Let $w = x^2+y^2+z^2+xy\cos C+yz\cos A+zx\cos B$.

Also $l = x+y+z$. Proceeding, as before,

$$(2x+y\cos C+z\cos B)\,dx+(2y+z\cos A+x\cos C)\,dy$$
$$+(2z+x\cos B+y\cos A)\,dz = 0,$$

and $$dx+dy+dz = 0.$$

Hence, if μ is undetermined,

$$\begin{vmatrix} 2 & \cos C & \cos B & \mu \\ \cos C & 2 & \cos A & \mu \\ \cos B & \cos A & 2 & \mu \\ 1 & 1 & 1 & l \end{vmatrix} = 0;$$

therefore

$$\mu[\Sigma\sin^2 A+2\Sigma\cos B\cos C-4\Sigma\cos A+9] = 6l(1+\cos A\cos B\cos C).$$

Again, from the equations

$$2x+y\cos C+z\cos B = \mu,\quad x\cos C+2y+z\cos A = \mu,$$
$$x\cos B+y\cos A+2z = \mu,$$

by multiplying each by x, y, z successively, and adding

$$2\Sigma x^2+2\Sigma yz\cos A = \mu(x+y+z);$$

therefore $$2w = \mu l = \frac{l^2(1+\cos A\cos B\cos C)}{\Sigma\sin^2 A+2\Sigma\cos B\cos C-4\Sigma\cos A+9},$$

which is the maximum sum.

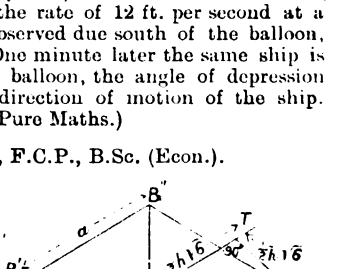
16585. (*Communicated by* "François.")—From a balloon which is travelling horizontally eastward at the rate of 12 ft. per second at a vertical height of 500 ft., a ship is observed due south of the balloon, the angle of depression being 45°. One minute later the same ship is observed to be due south-east of the balloon, the angle of depression being 30°. Find the velocity and direction of motion of the ship. (Univ. of London, B.Sc. Ex., 1908, Pure Maths.)

Solution by B. C. Wallis, F.C.P., B.Sc. (Econ.).

a = distance balloon travelled in 1 min., *i.e.*, 720 ft.;

h = height of balloon, *i.e.*, 500 ft.;

s = distance ship travelled in 1 min.



$$S = [(a+\tfrac{1}{2}h\sqrt6)^2+(\tfrac{1}{2}h\sqrt6-h)^2]^{\frac12}$$
$$= [a^2+4h^2+h\sqrt6\,(a-h)]^{\frac12}$$
$$= [720^2+4(500)^2+500.220.\sqrt6]^{\frac12}$$
$$= 10[5184+10000+1100\sqrt6]^{\frac12} = 1337 \text{ ft. (approx.)}.$$

φ = excess of angle at S' over 90°.

$$\tan\varphi = \frac{\frac{1}{2}h\sqrt6-h}{a+\frac{1}{2}h\sqrt6} = \frac{h\times\cdot225}{a+\frac{1}{2}h\sqrt6} = \frac{500\times\cdot225}{720+500.\frac12\sqrt6} = \frac{\cdot225}{1\cdot44+1\cdot225}$$
$$= \frac{225}{2665} = \cdot0844;$$

Digitized by Google

therefore $\phi = 5°$ approx.

Velocity = 1337 ft. per min. = 15·2 m. p. h. approx.

Direction, approx. 5° to the South of East.

16610. (Saradakanta Ganguli, M.A.)—TP, TQ are tangents to a given ellipse. If the area of the triangle TPQ be constant, find the locus of T.

Solution by J. Macmillan, M.A.

Project the ellipse into a circle. As tangents project into tangents and the ratio of areas is unaltered by projection, the triangle TPQ has the same ratio to its projection *tpq* as the ellipse has to the circle. But the locus of t is evidently a circle concentric with the circle got by projection; therefore the locus of T is an ellipse concentric with the given ellipse.

16589. (Professor E. Hernández.)—On donne la suite des nombres 1, 2, 5, 12, 29, ..., dont $u_n = 2u_{n-1} + u_{n-2}$, est la loi de formation. On aura: (1) Deux termes consécutifs et au plus trois, auront toujours le même nombre de chiffres. (2) La somme des $n-2$ premiers termes augmentée de la somme des $n-1$ premiers termes plus 1, est égal au terme de rang n. (3) Le carré d'un terme de la suite est égal au produit augmenté ou diminué de 1, du terme qui précède par celui qui suit. (4) Le terme u_{2p+1} est égal à la somme des carrés des termes consécutifs u_{p-1} et u_p. (5) Si des restes obtenues dans la recherche du plus grand commun diviseur de a et b, par la méthode abrégée, c'est à dire, en faisant toujours que chaque reste soit plus petit que la moitié du diviseur, on en trouve deux consécutifs, compris entre u_{n+1} et u_n, on n'en trouve point entre u_{n-1} et u_n. (6) Dans la recherche du plus grand commun diviseur de a et b, par la méthode abrégée, on aura à effectuer un nombre de divisions au plus égal à trois fois le nombre de chiffres du plus petit des nombres donnés.

Solution by the Proposer.

(1) On a $u_{n+1} = 2u_n + u_{n-1}$, $u_{n+2} = 5u_n + 2u_{n-1}$,
$u_{n+3} = 12u_n + 5u_{n-1}$, $u_{n+4} = 29u_n + 12u_{n-1}$.

Mais si u_n est le plus grand terme de la suite inférieur à 10^n, on aura

$$u_{n-1} < 10^n, \quad u_n < 10^n, \quad u_{n+1} < 10^{n+1},$$
$$u_{n+2} < 10^{n+1}, \quad u_{n+3} < 17.10^n \lessgtr 10^{n+1}.$$

Or, on a $u_{n+4} = 10u_{n+1} + 9u_n + 2u_{n-1} > 10^{n+1}$.

(2) On déduit aisément cette propriété, en ajoutant membre à membre, les égalités

$$\begin{aligned} u_n &= 2u_{n-1} + u_{n-2}, \\ u_{n-1} &= 2u_{n-2} + u_{n-3}, \\ \cdots &\quad \cdots \quad \cdots \quad \cdots \\ u_4 &= 2u_3 + u_2, \\ u_3 &= 2u_2 + u_1. \end{aligned}$$

(3) De $u_n = 2u_{n-1} + u_{n-2}$ et $u_{n+1} = 2u_n + u_{n-1}$,
on déduit aisément $u_n^2 = u_{n-1}u_{n+1} - (u_{n-1}^2 - u_n u_{n-2})$.

(4) On déduit aisément des égalités établies dans (1) que
$u_{p+n+1} = u_n u_p + u_{n-1}u_{p-1}$, d'où pour $n = p$, $u_{2p+1} = u_p^2 + u_{p-1}^2$.

(5) Soit r_{k-1}, r_k, r_{k+1}, trois restes consécutifs du p, g.c.d. de a et b. Si r_{k-1} et r_k, tombent entre u_n et u_{n+1}, on aura $r_{k+1} < u_{n-1}$; car de
$r_{k+1} = r_{k+1} - g_{k-1}r_k$ et $r_{k-1} < 2u_n + u_{n-1}$, et $r_k > u_n$,
on déduit $r_{k+1} < u_{n-1} - (g_{k-1} - 2)u^n$ et g_{k-1} étant au plus égal à 2 on a $r_{k+1} < u_n$.

(6) Soit $a > b$ et $b < 10^n$.

Il n'y a pas (1) entre deux termes de la suite (i.) 1, 10, 10^2, 10^3, ..., plus de trois termes consécutifs de (ii.) 1, 2, 5, 12, 29, ..., et entre ces trois termes il ne peut avoir (5) que deux restes du p, g.c.d. Il resulte que dans les n intervales de 1 à 10^n de (i.), il y aura au plus $3n$ termes consécutifs de (ii.) qui donnent $3n-1$ intervales.

16609. (W. J. Greenstreet, M.A.)—Find geometrically the locus of the centres of ellipses with the same focus, and touching a given line, and passing through a given point.

Solution by R. F. Davis, M.A.

Let Σ be the image of the given focus S in the given tangent; P, the given point; and H, the other focus. Then

$$SP + HP = \text{major axis} = \Sigma H;$$

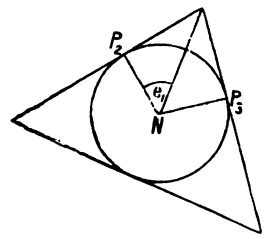
therefore $\Sigma H - HP$ is constant; and the locus of H is a hyperbola having Σ, P for its foci. Since $SC = \frac{1}{2}SH$, the locus of C is also a hyperbola.

16600. (W. Gallatly, M.A.)—If $A + B + C = 180°$; prove that
$(\sin B + \sin C)(1 + 2\cos B)(1 + 2\cos C) + \ldots$
$= 4(\sin B + \sin C)(\sin C + \sin A)(\sin A + \sin B)$.

Solution by the Proposer.

P_1, P_2, P_3 being the Feuerbach points where the nine-point circle is touched by the ex-circles, it is known that

$$\tan \tfrac{1}{2}P_2NP_3 = \frac{2(\sin B + \sin C)}{1 + 2\cos A}.$$



But $\theta_1 + \theta_2 + \theta_3 = \pi$;

therefore

$$\tan\theta_1 + \tan\theta_2 + \tan\theta_3 = \tan\theta_1 \tan\theta_2 \tan\theta_3;$$

and therefore, &c.

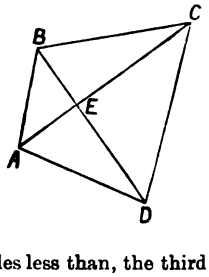
Or thus—

$$\begin{aligned} &(\sin B + \sin C)(1 + 2\cos B)(1 + 2\cos C) \\ &= (\sin B + \sin C) + (\sin 2B + \sin 2C) + 2\sin A \\ &\qquad + 4\sin B \cos B \cos C \cdot 4 \sin C \cos B \cos C, \\ S &= 4\Sigma \sin A + 2\Sigma \sin 2A + 4(\sin A + \sin B + \sin C)(\cos B \cos C + \ldots) \\ &\qquad - 4(\sin A \cos B \cos C + \ldots) \\ &= 4\Sigma \sin A + 2\Sigma \sin 2A + 4\Sigma \sin A \left\{\tfrac{1}{2}[\cos(B-C) - \cos A]\right\} + \ldots \\ &\qquad - 4 \sin A \sin B \sin C \\ &= 4\Sigma \sin A + 2\Sigma \sin 2A + 2\Sigma \sin A \,.\, \Sigma \cos \tfrac{1}{2}(B-C) \\ &\qquad - 2\Sigma \sin A (4 \sin \tfrac{1}{2}A \sin \tfrac{1}{2}B \sin \tfrac{1}{2}C + 1) - 4 \sin A \sin B \sin C \\ &= 32 \cos \tfrac{1}{2}A \ldots \text{ or } 32 \cos \tfrac{1}{2}(B-C) \ldots \\ &= 4(\sin B + \sin C)(\sin C + \sin A)(\sin A + \sin B). \end{aligned}$$

16580. (R. Gardner.)—Given the length of each side of a quadrilateral, and that the diagonals are perpendicular, find the lengths of the diagonals.

Solution by T. K. Venkataraman, M.A.

The lengths of the diagonals are indeterminate under the given conditions. This can be proved as follows.



Let the sides be a, b, c, d in order. Then

$$b^2 - a^2 = CE^2 - EA^2 = c^2 - d^2;$$

therefore $b^2 - a^2 = c^2 - d^2$ is a necessary relation among the sides, if the diagonals are at right angles .....(1).

Now, with a, b and any length x (AC in the Fig.) as sides describe a triangle. Here x lies between $b-a$ and $b+a$, for the sum of two sides is greater than, and the difference of two sides less than, the third side. x is otherwise indeterminate.

From B draw BE perpendicular to AC, and, with A as centre and radius = d, draw a circle cutting BE at D. Join CD. It can be shown from condition (1), by Euc. I. 47, that $CD = c$; therefore the diagonal of a quadrilateral under the given conditions lies between the difference and the sum of the two sides on either side of it, but is otherwise indeterminate.

QUESTIONS FOR SOLUTION.

16640. (Professor Sanjána, M.A.)—Prove that

$$\frac{1}{n^2} = \frac{1}{n(n+1)} + \frac{1!}{n(n+1)(n+2)} + \frac{2!}{n(n+1)(n+2)(n+3)} + \frac{3!}{n(n+1)(n+2)(n+3)(n+4)} + \ldots \text{ ad inf.}$$

From this formula (due to Stirling) show that

$$\Sigma_\infty^{n+1} 1/r^2 = 1/n - 1/2n^2 + B_1/n^3 - B_3/n^5 + B_5/n^7 - B_7/n^9 + \ldots,$$

where B_1, B_3, B_5, ..., are the numbers of Bernoulli. Examine if this series (which is divergent) can be employed in the arithmetical calculation of Σr^{-2}.

16641. (T. Muir, LL.D.)—If $|\alpha\beta'\gamma''|$ be an orthogonant, prove that

$$\begin{aligned} &(\alpha+\beta+\gamma)(\alpha'+\beta'+\gamma')(\alpha''+\beta''+\gamma'') - 2(\alpha\beta\gamma + \alpha'\beta'\gamma' + \alpha''\beta''\gamma'') \\ &= (\alpha+\alpha'+\alpha'')(\beta+\beta'+\beta'')(\gamma+\gamma'+\gamma'') - 2(\alpha\alpha'\alpha'' + \beta\beta'\beta'' + \gamma\gamma'\gamma''). \end{aligned}$$

16642. (G. H. Hardy, M.A.)—A. and B. are partners at whist, the latter being dealer. A. takes up his hand and finds he holds the ace of spades and no other ace. (i.) B, without turning up the last card, takes up his hand and after inspecting it remarks "I hold an ace." (ii.) On its being pointed out to B. that his conduct is irregular, he replies "All right, the ace I referred to was the turn-up," and places it on the table face downwards. (iii.) B. turns up the card, which

Digitized by Google

proves to be the ace of clubs. What are the chances, for A., at the end of stages (i.), (ii.), and (iii.) respectively, that he and his partner hold at least three aces between them? Is there any difference between these chances, and if so, why?

16643. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Show that, if

$$N_r = x_r^4 + 4y_r^4 = L_r M_r, \quad \text{where} \quad x_r^2 - 2y_r^2 = (\bar{1})^r;$$

then $M_{r-1} = y_{2r-1} = L_r$, and $M_r = y_{2r+1} = L_{r+1}$.

Ex.—Factorise into prime factors N_{16} (this contains 24 figures).

16644. (T. STUART, D.Sc.)—Is there any criterion by which we can determine whether the equations $\pm N = x_1^4 - 2y_1^2 = x_2^2 - 2y_2^4$ are soluble or insoluble in integers, N being a number of the form ± 1, mod 8? Exhibit your method by applying it to the numbers 281 and 241.

16645. (Professor E. B. ESCOTT.)—Solve completely by quadratics

$$x^2 - 2 = y, \quad y^2 - 2 = z, \quad z^2 - 2 = w, \quad w^2 - 2 = x.$$

16646. (Professor R. W. GENESE, M.A.)—Prove that the equation $\cosh x = x$ has no real root; and find the least value of m, to three places of decimals, for which the equation $\cosh x = mx$ has a real root.

16647. (Professor NANSON.)—Eliminate α, β, γ from

$$a\cos\alpha + b\cos\beta + c\cos\gamma = p, \quad a\sin\alpha + b\sin\beta + c\sin\gamma = q,$$
$$bc\sin(\beta-\gamma) + ca\sin(\gamma-\alpha) + ab\sin(\alpha-\beta) = 0, \quad \alpha+\beta+\gamma = 0.$$

16648. (M. T. NARANIENGAR, M.A.)—If the tangents at P, Q, R of a cardioide are parallel, show that (i.) $\Sigma(SP^2)$ = constant, (ii.) the centre of gravity of PQR lies on the axis of the cardioide and is fixed, (iii.) $(PQ^2 + QR^2 + RP^2)$ is constant.

16649. (SONTI V. RAMANUNTY.)—If a closed curve without singularities is symmetrical about each of two oblique axes, what restrictions are there on the nature of the curve or the inclination of the axes?

16650. (PULINBIHARI DAS, M.A.)—If A, B, and C be the vertices of a triangle inscribed in the circle $x^2 + y^2 = (a+b)^2$ and circumscribed about the ellipse $x^2/a^2 + y^2/b^2 = 1$, then the inverse arcs with respect to A, B, and C of an arc of the curve $[x^2 + y^2 + (a+b)^2]^2 = 4(a^2x^2 + b^2y^2)$ are connected by a linear relation.

16651. (A. M. NESBITT, M.A.)—Two conics S, S′, touch at A, and any line through A cuts them in P, P′. Find the locus of the intersection of the polar of P (as regards S′) with the polar of P′ (as regards S). In the particular case of two hyperbolas $1/x + 1/y = 1/l$ and $1/x + 1/y = 1/l'$, show that, if l and l' themselves vary in accordance with a certain relation, the locus is unchanged; and trace it.

16652. (H. L. TRACHTENBERG, B.A.)—S is a conic, and A, B two points. If P_1, P_2, P_3, P_4 are the four points whose joins with A and B are bisected by S, prove that A, B, P_1, P_2, P_3, P_4 will lie on a conic, provided that A, B lie on a conic coaxial with and similar to S.

16653. (W. F. BEARD, M.A.)—A conic circumscribed about a triangle passes through its centroid. Show that the triangle formed by joining the mid-points of the sides is self-conjugate to the conic.

16654. (Professor NEUBERG.)—En un point quelconque M de la surface $xyz = m^3$ on mène la normale qui rencontre les plans yz, zx, xy aux points A, B, C. (1) Démontrer que les segments MA, MB, MC sont entre eux comme les carrés des coordonnées de M. (2) Trouver l'équation du cône décrit par une droite passant par l'origine et parallèle à MA lorsque M se meut dans un plan parallèle au plan yz. (3) Au point C on mène la droite CM′ perpendiculaire au plan xy et égale à CM; trouver l'équation de la courbe décrite par M′ lorsque M se meut dans un plan passant par Oz.

16655. (D. BIDDLE.)—Given a regular n-gon ($n = 2m+1$), and a straight line in the same plane, (1) bisect the n-gon by a line parallel to the given line; (2) find the maximum distance of such bisectors from the centre of the n-gon, in terms of n and the circum-radius.

16656. (F. G. W. BROWN, B.Sc.)—Calculate the lengths of the sides of a triangle ABC, having given the semi-perimeter s, the area Δ, and the distance between the centres of the in- and the circum-circles, d. Show that, if $d^2 = \Delta(1 - a/s)$, the triangle is right-angled isosceles, a being the hypotenuse.

16657. (Professor V. RAMASWAMI AIYAR, M.A.)—P and Q are any pair of isogonal conjugates with respect to a triangle ABC. If AQ cut the circum-circle in O, and OP cut BC in R, show that QR is parallel to AP.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10862. (J. J. WALKER, F.R.S.)—Find at what points on an ellipsoid the product of the reciprocal of the square of the semi-diameter into the difference of the squares of the reciprocals of the perpendicular from centre on tangent plane and of that semi-diameter is a maximum.

11209. (Professor FRANZ ROGEL.)—Find an independent expression for the n-th differential coefficient, for the value $x = 0$, of the complex function $y = [lg(2lg\sec ax/a^2x^2)]^p$.

11352. (G. S. CARR, M.A.)—If a watch spring, normally straight, be made circular by soldering together the ends, and then compressed at the extremities of a diameter AA′ by forces P, P′, the length of the transverse diameter BB′ thus becoming $2b$, show that the curvatures at A and B respectively (putting E for the elasticity) will be

$$(Pb/2E) \mp 1/b.$$

11390. (W. J. GREENSTREET, M.A.)—Find the area of a triangle in terms of the distances of its vertices from those of a given triangle.

11474. (D. EDWARDES, B.A.)—Each vertex of a tetrahedron is joined to the in-centre of the opposite face. Prove that these lines are generators of the hyperboloid

$$(l'yz + lxw)(mm' - nn') + (m'zx + myw)(nn' - ll') + (n'xy + nzw)(ll' - mm') = 0,$$

where (l, l'), ... are the sines of the angles between the planes (yz), (xw), ...

11580. (Professor SYLVESTER.)—Prove that the norm of the 8-valued function $1 + [f + (f^2-1)^{\frac{1}{2}}]\,[g + (g^2-1)^{\frac{1}{2}}]\,[h + (h^2-1)^{\frac{1}{2}}]$ is sixteen times the square of the discriminant of $x^2 + y^2 + z^2 + 2fyz + 2gzx + 2hxy$.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XIV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, April 22nd, 1909.—Sir W. D. Niven, President, in the Chair.

The following papers were communicated:—

"The Principles of the general Theory of Integral Functions," Mr. F. Tavani.

"The Equations of Electrodynamics and the Null Influence of the Earth's Motion on Optical and Electrical Phenomena," Mr. H. R. Hassé.

"The Solution of a certain Transcendental Equation," Mr. G. N. Watson.

"The Physical Applications of certain Conformal Transformations of a Space of Four Dimensions and the Representation of a Space Time Point by means of a Sphere," Mr. H. Bateman.

"Some Criteria for the Residues of Eighth and other Powers," Mr. A. E. Western.

"On the Discontinuities of a Function of one or more Real Variables," Dr. W. H. Young.

USE during each VACATION
(for best results—three times a year only)

FLORIGENE

(A REGISTERED NAME suggested by FLOOR-HYGIENE)

ODOURLESS or powerful CERMICIDAL Floor Fluid

On all School, Laboratory, Library, Museum, Studio, Office, and other Floors — either Wood, Linoleum, Stone, Concrete, or Polished, &c.—for the hygienic, economic, and anhydrous

LAYING of DUST

(As recommended in the Education Dept. Blue Book).

"Florigene" need only be applied three times a year, as each application lasts for two to six months, according to wear. The ordinary daily sweeping alone required to clean the floors—no scrubbing (*unless preferred*) or sprinkling of any kind—therefore no injurious moisture.

Send for particulars, **Bacteriological** *& other Reports & Testimonials, to*

COLLEGE OF PRECEPTORS.
(INCORPORATED BY ROYAL CHARTER.)

GENERAL MEETING.

The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 17th of July, 1909, at 3 p.m.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 30th of August, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in October, 1909.

Certificate Examinations.—The Christmas Examination for Certificates will commence on the 7th of December, 1909.

Lower Forme Examinations.—The Christmas Examination will commence on the 7th of December, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Autumn Examination in 1909 will commence on the 7th of September.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary*.
Bloomsbury Square, W.C.

UNIVERSITY OF ST. ANDREWS.

L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

UNIVERSITY OF ST. ANDREWS.

UNIVERSITY HALL.

Warden:
Miss FRANCES H. MELVILLE, M.A.

UNIVERSITY HALL, for Women students, was opened in 1896, under the government of the University of St. Andrews.

The usual Course of Study at University Hall is in preparation for the Degree Examinations of the University of St. Andrews, of which all the Classes and Degrees in Arts, Divinity, Science, and Medicine are open to women on the same terms as to men.

The Sessions of Residence are the two University Sessions, viz. the Winter Session, October to March; the Summer Session (Optional), April to June.

University Hall fees for residence—Winter Session, £30–£60; Summer Session, £15–£25.

Matriculation and Class Fees average £10 for the Winter Session.

For further information, apply to the WARDEN, University Hall, St. Andrews, Fife.

COLLEGE OF PRECEPTORS.

A.C.P. and L.C.P.

For Terms, Testimonials, &c., address—

THE PRINCIPAL,

Burlington Correspondence College,

BIRKBECK BANK CHAMBERS, LONDON, W.C.

Messrs. TRUMAN & KNIGHTLEY, LTD.,

Educational Agents,

158 to 162 OXFORD STREET, LONDON, W.

Directors:

S. A. TRUMAN. F. E. KNIGHTLEY.
JAMES HEARD, B.A.
(Trinity College, Cambridge).

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSEKEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

The Pronunciation of English: Phonetics and Phonetic Transcriptions.

By DANIEL JONES, M.A., Lecturer on Phonetics at University College, London.

Crown 8vo
2s 6d net

The present work is primarily designed for the use of English students and teachers, and more especially for students in training colleges and teachers whose aim is to correct cockneyisms or other undesirable pronunciation in their scholars. At the same time it is hoped that the book may be found of use to lecturers, barristers, clergy, &c., in short, to all who desire to read or speak in public.

In Part I., dealing with Phonetics proper—that is, the analysis and classification of the elementary speech sounds of the English language—standard Southern English pronunciation is dealt with in detail and the principal varieties of pronunciation heard in London and elsewhere are described. Part II. consists of phonetic transcriptions of passages selected from well known English authors, illustrating five kinds of pronunciation: namely, the careful conversational, the rapid conversational, the declamatory style, the actual pronunciation of various educated persons, and the uneducated London dialect.

The Teaching of Modern Foreign Languages and the Training of Teachers.

By KARL BREUL, Litt.D., Ph.D., Cambridge University Reader in Germanic. Fourth Edition, Revised and Enlarged.

Crown 8vo
2s 6d net

Although only a short space of time has elapsed since the publication of the third edition of this book, the necessity for the preparation of a fourth edition has already arisen and this gratifying fact has encouraged the author to revise it again very carefully and to increase it not inconsiderably, in the hope that it may once more prove useful to many students and teachers.

A Grammar of the Old Testament in Greek according to the Septuagint.

By H. ST. JOHN THACKERAY, M.A. Vol. I. INTRODUCTION, ORTHOGRAPHY, and ACCIDENCE.

Crown 8vo
8s net

The Septuagint, in view both of the period which it covers and the variety of its styles, ranging from the non-literary vernacular to the artificial Atticistic, affords the most promising ground for the investigation of the peculiarities of the Hellenistic or "common" language. It has been the aim of the author to produce a complete Grammar, the first portion of which is here published.

ENGLISH HISTORY

A History of England for Use in Schools. By ARTHUR D. INNES, M.A. Complete in One Volume. Or in Three Parts:—Part I., to 1509 A.D.; Part II., 1509–1714 A.D.; Part III., 1689–1901 A.D. A separate Part is also issued containing the period "From the Wars of the Roses to the Death of Elizabeth."

Crown 8vo
with 18 Maps
and 8 Plans.
4s 6d;
Parts, 2s each

"Mr. Innes writes more especially for the middle and upper forms of schools, and he covers the whole space of English history, with a vigilant regard to proportion and to the educational value of historical teaching. He writes with great spirit and vividness, as well as with simplicity and lucidity, and he is remarkably well furnished with the latest results of historical inquiry. Appended are six admirable summaries—constitutional, ecclesiastical, Scottish, Irish, Indian, and Colonial; half-a-dozen careful genealogical tables; a glossary of technical terms, political phrases, &c.; a chronological summary, and an index. The work is exceptionally capable and useful."—*Educational Times*

ENGLISH GRAMMAR

The Elements of English Grammar. With a Chapter on Essay Writing. By A. S. WEST, M.A., Trinity College, Cambridge.

The Educational Times.

Not how to teach Modern Languages.

THE Board of Education, following the lead of the Scotch Education Department (and it could not, in the matter of secondary schools and of training, have a safer guide), has of late years issued several Circulars dealing with special branches of instruction and offering directions, suggestions, and counsels of perfection to school authorities and to the respective teachers of these subjects. Even a comparatively unimportant matter such as the pronunciation of Latin was not thought unworthy of the Board's attention, and a reform, with which the Head Masters' Conference had trifled for the last twenty years and more, and which was being slowly effected by the Classical Association, has been carried and enforced by a ukase from Whitehall. We may safely prophesy that a similar effect will be produced by the Circular on the teaching of geometry, which was discussed in our leader of last month, and that in future histories of English education 1909 will be the date assigned for the deposition and banishment of Euclid.

It was therefore with keen interest and an anticipation of benefits to come that we received Circular 705—a Memorandum on Language Teaching in State-aided Secondary Schools in England. A prefatory note informs us that the Memorandum was prepared as an answer to a motion in the House of Lords, early in 1908, asking for a return of the hours devoted to Latin, French, German, and Spanish in grant-earning secondary schools during the years 1903–4 and 1906–7 respectively. Clearly the object of the motion was to ascertain the present position of modern languages in schools—whether they are beginning to be taken seriously, or whether they are still an obol thrown to Belisarius, the ancient solitary monarch of Classics. Such was the genesis of the Memorandum, and, if there were any doubt that by "language teaching" the Board intend the teaching of modern languages, it is dispelled by the fact that the concluding and longest paragraph of the Memorandum is an answer to a memorial addressed to the Board last year by the Modern Language Association and similar educational bodies on the increasing neglect of the study of German in schools.

To this paragraph we shall return; but first we must express our profound disappointment and dissatisfaction with the Circular as a whole. We asked for bread and we are given a stone, or, to use a more appropriate metaphor, on the strength of former Circulars we looked for grapes and are offered thistles. The whole Memorandum is an apology—a *non possumus*, a defence of the *status quo*, a plea for the Board's inaction, its policy (if such it can be called) of drift.

More than half of the eight pages is ancient history. It recounts at length how the State first concerned itself with higher education; how the Board, as the successor of the Science and Art Department at South Kensington, began to regulate the curriculum of secondary schools; how its control over the science side gradually extended to the literary side; and how it now holds an equal scale between the two branches of learning, though not, as appears later, between the ancients and the moderns. This is all very interesting, but, as Talleyrand remarked to a long-winded petitioner, "Monsieur, passons au déluge." Even when we do come to languages we find nothing but negations. The Board has not the materials to supply the return asked for by the House of Lords, and such statistics as they could supply would be misleading. Doubtless a full investigation of the present state of language teaching in schools would be of value, but this is not the time to make it. The Board has at present other and heavier fish to fry. It has, first, to settle the organization and supply of secondary schools, and even when it has finished that task the more difficult and fundamental question of an investigation into the teaching of English has a prior claim. Modern languages must be content to take a back seat.

At this point, we confess, we begin to lose patience. Really, the Board protests too much. Has it not a Department of Special Inquiries and Reports? Are not the two chief officers of that department both specialists in modern languages? Could not Dr. Heath and Mr. Twentyman, between them, if they were instructed by Mr. Runciman, produce a full and authoritative report on the position and methods of modern language teaching in England—at least as informing as the Special Reports on Modern Language

Digitized by Google

Teaching on the Continent, prepared under the direction of Prof. Sadler? We are confident that neither of these gentlemen, nor the other two modern language specialists that the Board has on its staff (Mr. F. Spencer and Dr. Edwards), had a finger in drafting this so-called Memorandum on Language Teaching.

We come at last to the paragraph on German. The memorialists proved by statistics that the study of German in English schools, never general, is rapidly declining, and they petitioned the Board by means of a Circular, as in the case of Latin pronunciation and in other ways that are indicated, to use their influence and authority to stimulate the study.

The answer of the Board is, first, to depreciate and explain away the significance of the figures in evidence, as if, forsooth, there could be any doubt about the main fact alleged —that German is at a discount. Secondly, the suggestion that the Board should encourage and foster schools of the type of the German *Realschule* and *Oberrealschule*, in which two modern languages, but not Latin, are taught, is ignored and indirectly negatived. "The Board have seen no reason to depart from the traditional view that, without a knowledge of Latin, a scholarly study of modern literature, history, or philosophy is impossible." And, in this view, the Board shelter themselves behind the broad ægis of the Universities, regardless of the fact that not 5 per cent. of the pupils in State-aided schools (1 per cent. would be nearer the mark) proceed to the Universities. Might it not, with more truth, be asserted that, "without a knowledge of German a scholarly study of modern literature, history, philosophy," and, we may add, "of theology, medicine, and science, is impossible"?

A revolution in the methods and practice of modern language teaching has taken place and is still in progress, even more fundamental and far spreading than the revolution in the teaching of geometry. We have been encouraged in the latter case to look to authority for guidance and direction, and we have not been disappointed. In the case of modern languages, instead of just criticism and sage counsel, we are offered by the Board, through its Classical advisers, a dry-as-dust history and a lame apology for inaction and the maintenance of the Classical prerogative.

NOTES.

Is Oxford going to reform itself? An opportunity was furnished by the Government on the debate raised by the Bishop of Birmingham in the House of Lords nearly two years ago, when he asked for a Royal Commission of inquiry into the two ancient Universities and their constituent colleges with a view to the best service of the community. Lord Crewe, speaking for the Government, then said that "it was important for them to know, before arriving at a final conclusion, what the most thoughtful and competent opinion at both Universities really demanded, and also what the latter could not do of their own motion, and for what purposes legislation would be required on the recommendation of a Commission, and also whether there did exist at the Universities anything like a dead weight of obstruction against reforms, which could only be removed by statute." Utilizing the respite, Lord Curzon of Kedleston, the Chancellor, with his constitutional energy, set about gathering and co-ordinating the views prevalent in the University and among Oxford men outside of it. All this information he has summarized and commented upon in a substantial Memorandum entitled "Principles and Methods of University Reform," which Mr. Frowde has published in a half-crown volume. He is "convinced that there exists, both among the resident and non-resident members of Oxford University, a powerful and consentient feeling in favour of certain changes, and that the moment is singularly favourable for carrying them into execution." Oxford is not "the home of stationary forces or ideas: on the contrary, the spirit of reform is probably even more active inside the walls of the University than it is among the vast and scattered constituency of non-resident Oxford men." But, even if we substitute "certainly" for "probably," the argument seems to miss the point: we want to know the strength and the direction of the driving forces, whether internal or external. Anyhow, the thing is "to establish contact and to create harmony between the most enlightened opinion within and without." And when Lord Curzon succeeds in this enterprise the world will see what Oxford can do without direct external pressure to make itself "the focus of the best educational activities, the highest civic aspirations, and the most advanced thought of the age and the race."

The points upon which Lord Curzon concentrates attention as admitting of reform relate to the Government, the Endowments, the Teaching, and the Internal Administration of the University, including the admission of poorer men (both of the professional and the working classes), the difficult question of the finances both of the University and of the Colleges, compulsory Greek and examinations generally, facilities for advanced study and research, and a variety of miscellaneous matters of importance, such as degrees and academic votes for women. Lord Curzon's own criticisms and suggestions are expressly restrained: "I have refrained." he says, "from expressing strong personal opinions, regarding it as my privilege rather to place before the University the evidence which I have collected and examined on the main issues of academic reform, and to invite the consideration of the Hebdomadal Council to so many of these subjects as they may think it advisable to pursue." Already, it appears likely that the Council will discuss freely the whole range of the subjects thus proposed, and we shall presently see the tendency of University opinion, and be in a position to form a judgment as to its adequacy. There can be no doubt whatever that "Oxford, ever since the last Commission, has been, and still is, engaged in reforming itself, and that the steps here suggested are but the logical continuation of a process that is in course of development from day to day." But the point is the rate of development. Outside the University educational progress has been highly accelerated, and social movements have been increasingly active; and, although the University and the Colleges have had greater freedom to make administrative and even constitutional changes during the past generation, the question is whether they have adequately exercised such freedom,

Digitized by Google

and whether the "due checks" may not be advantageously relaxed. In any case, Lord Curzon has stirred the waters, and his comprehensive review of points of reform, together with the resulting action of the University Authorities, cannot but give an immense impulse towards the improvement of the existing conditions.

A FEW points of detail may be noted. Lord Curzon would reform Congregation, which consists of a fortuitous concourse of persons qualified by residence for twenty weeks of the year within a mile and a half of Carfax, into a representative assemblage of the teachers of the University—as the Commissioners of 1850, Lord John Russell, and Mr. Gladstone all wanted to do. As to Convocation, he states four different schemes of reform, without essaying to decide between them; only something must be done. The admission of poor men is very fully treated: "My own idea," says Lord Curzon, "is that instead of, or in addition to, utilizing the existing machinery of the Collegiate and Non-Collegiate systems, we should found at Oxford a University Working Men's College, not confined to artisans alone, but embracing—according to its size and capabilities—the members of all those classes who are too poor, even with financial assistance, to enter the ordinary Colleges, or to spend half the year in vacations"; the cost to be "if possible not more than £60 per annum," with a large number of maintenance scholarships or exhibitions, "which I would appeal to the richer Colleges to contribute." Yes; stereotype class distinction, and that, too, at a stiff price. Does not this question go to the root of the matter? Is there no suggestion in Scotland, Ireland, Germany, France, America—anywhere else? Lord Curzon finds the number of classical scholarships excessive, and would evidently support a drastic reorganization of the whole scholarship and fellowship system. He would substitute some literary equivalent for Greek in Responsions, though he would rather abolish Responsions altogether. The teaching and financial arrangements are too complicated for notice here. As regards a policy of Research, "the real need at Oxford is not more advanced teachers, but more advanced students," so that "the efforts of the University should be directed primarily, by the encouragement that it gives and the rewards that it offers, to attracting the men." This is true, we think, for Oxford, though not for all other places of learning. Lord Curzon would grant degrees to women, but he is "not in sympathy with the proposal that women should become members of Convocation, or of Congregation, or should sit upon the governing bodies of the University." On the whole, indeed, unless the University can take considerable steps in several directions beyond the cautious advances of Lord Curzon, Oxford, we suspect, will require external assistance in making such reforms as will satisfy the expectations of the public.

CAMBRIDGE, which has also been disturbed by agitations for reform, appears to be concentrating on points of more or less general agreement. Thus, it is proposed to associate more closely with the direction of academic effort such graduates as are more intimately in touch with the actual work of the University. Again, the average graduate is to be induced to proceed M.A., so as to render the Senate more representative of the University than it can be said to be now. As for the scholastic work of the University, much improvement is anticipated from fuller representation of the teachers, more careful arrangement of the lectures and grading of the lecturers, greater co-operation of the colleges, and larger provision for University as opposed to college teaching. It is a nice point how to encourage the colleges to make voluntary contributions to the University, and it is thought that Fellows under no obligation to teach should be placed under obligation to undertake some definite work. The opinion seems to prevail that, "with the large sums given to assist students, a Cambridge education is accessible to any student, however poor, who has given evidence of ability." We should be glad to consider the facts on which this opinion is based. It is all very well to tell us that "the expenses of a careful undergraduate need not exceed £120 a year"—we have had experience to the contrary—"or £80 to £90 for a non-collegiate undergraduate," and that "the principle of fixed inclusive charges, whether in connexion with the hostel system or not, affords an effective means of reducing and regulating expenses." Consider all this—so far as it is tangible—in relation to the means of a poor man and the great national object of opening up a career to the boy with brains. So far the tendencies of reform at Cambridge and at Oxford seem to run in pretty similar grooves. But the reformers should try to realize what a "poor" student is, and to lift their eyes to be instructed by the treatment he gets at Universities elsewhere.

THE conference at Grosvenor House upon the importance of a scientific training for women in domestic economy, heralded as it was by a long article in the *Times*, ought to exercise no inconsiderable practical influence. The three years' University course established in the King's College Women's Department at Kensington, which was professedly more in the eye of the Conference than any other institution, will no doubt provide ample instruction for women that propose to engage in public service in one or other of the many forms requiring special knowledge of domestic methods, or in the management of considerable private establishments. "It is very unpleasant," an Honourable Lady is reported to have said, "to appear as a fool before the cook, and a great nuisance to be as putty in the hands of the plumber." The plumber is in any case a hopeless personage, and he comes and goes; but the cook is there every day. And probably the lady spoke feelingly, if frankly, for she is said to have avowed that "she was totally ignorant of all the principles of housekeeping." Well, some people can afford such ignorance, discreditable as it may be, and even humiliating. The real importance of the movement, apart from special training for public positions, lies in the probability that the idea of domestic training will filter down to the five million married women that must, the *Times* thinks likely, "be their own housekeepers." We are glad to be assured by our contemporary that "much has been already effected by reformers in primary schools and in the Polytechnic." We should be still

Digitized by Google

more glad to recognize some evidence of the affirmation in the actual everyday domestic performances of the pupils that go into private kitchens or become "their own housekeepers." "The fullest results," says the *Times*, "can only be achieved if women enlist at every stage the sympathy and co-operation of men." But what of sympathy and co-operation when the woman can't cook a potato, and casts into the dusthole oddments that would serve a French or a Scots housewife to furnish a tasty meal?

SUMMARY OF THE MONTH.

An influential deputation waited upon Mr. Walter Runciman to urge that Local Education Authorities should be encouraged to provide, wherever practicable, for direct systematic and graduated moral teaching, and that training colleges should be required to provide instruction in the methods of imparting it. Dr. Clifford stated that it was impossible to exaggerate the gravity of the matter. It had to do with unemployment and the defence of the country. The greater part of the time devoted to education was occupied with the amassing of knowledge, and he urged that more time should be given to the education of the conscience and the heart. Mr. Runciman said the Board had been considering the whole question of the curriculum of the elementary schools, and the matter was still under consideration. He thought it best to state quite frankly that they must leave moral instruction in its present position in the code, without making it a compulsory subject. With regard to the subject of the teachers, they were considering the question of adding to the instruction in their training colleges. He would be sorry if moral instruction were to be treated as a thing by itself. The most fruitful field for the activities of the Moral Instruction League lay in the Local Authorities.

A report to the Education Committee of the London County Council the other day showed that the number of Junior County Scholarships awarded for 1909 was 1,649 (840 boys and 809 girls), as against 1,818 (779 boys and 1,039 girls) last year. The number of candidates was 23,860, as compared with 24,252 last year. The reply to Progressive criticisms was that the number of scholarships was fixed by the number of applicants, and there had been a steady decrease in the number of qualified candidates. A list of evening schools to be closed in order that the classes might be amalgamated with those of neighbouring schools was submitted by the Polytechnics and Evening Schools Sub-Committee. The recommendation was sent back to the Sub-Committee with a view to the preparation of a complete list.

Some idea of the result likely to follow from the step taken last autumn by the University of Oxford with the object of providing higher education for the manual working classes is now obtainable. The first twelve weeks' work of the eight tutorial classes organized by the Committee of the University Extension Delegacy has been completed with success. The committee consisted of the Dean of Christ Church, Mr. David Shackleton, M.P., Mr. C. W. Bowerman, M.P., together with several other representatives of Oxford University and of Labour, and the classes were held at Chesterfield, Glossop, Littleborough, Longton, Oldham, Rochdale, Swindon, and Wrexham. The subjects studied were industrial history and economics. Out of 169 students 48 were engineers, 35 were engaged in the textile industries, 17 belonged to the building trades, 12 were labourers, 10 were potters, 7 were engaged in the clothing trades, 5 were miners, 4 were printers, while a large number of industries were represented by one or two members. Sixty per cent. of the 234 students were under the age of thirty-four. The committee report that the students are keenly alive to questions of civic importance and desire to increase their knowledge.

A joint conference of representatives of workers' organizations and of the Victoria University of Manchester, on the subject of higher education for work-people, was held at the University (April 29), the Vice-Chancellor in the chair. Mr. D. J. Shackleton, M.P., spoke of the increasing desire among working men and women for higher education. The Universities would, he said, be neglecting their opportunities if they failed to respond to those desires. Experience of the working of the schemes already in existence had convinced him of their value and of the readiness of the Universities to help. It was resolved that the approval of the University be asked to a scheme which should provide for the establishment in Manchester and other towns of tutorial classes, and the promotion of the delivery of pioneer lectures and courses of extension lectures in industrial history, economics, and subjects cognate thereto, and other subjects of a liberal education, more particularly literature. The scheme should be worked by a joint committee consisting of seven representatives of workers' organizations and seven representatives of the University. The Vice-Chancellor of the University was nominated provisionally as chairman, and Mr. J. R. Clynes, M.P., vice-chairman. Mr. L. V. Gill, the secretary to the North-Western District of the Workers' Educational Association, and Mr. H. P. Turner, M.A., LL.B., secretary to the University Extension Committee, were nominated as joint secretaries. After the sanction of the University has been obtained, the Committee will meet to complete arrangements and draw up courses of study. It is intended to establish classes and courses at the beginning of the University session in October next.

At the Conference of Welsh members of Parliament with the representatives of the University of Wales, the Welsh University colleges, and the Education Authorities of Glamorgan and Monmouth, held at the House of Commons, it was decided (1) that the Welsh Parliamentary representatives be asked to petition the President of the Board of Education to have the powers of the Board over the training of teachers in Wales transferred to the Welsh department of the Board of Education, and (2) that the suggestions of Principal E. H. Griffiths, of Cardiff, as to a suitable scheme for the training of teachers in Glamorganshire and Monmouthshire be submitted to a conference representative of the education authorities of those counties and the University College of South Wales and Monmouthshire, and that a report of this conference be submitted to an adjourned meeting of the general conference to be convened later on.

A first meeting of the General Committee for the United Kingdom of the International Interchange of Students was held at University College, Gower Street, Prof. Poynting (Birmingham) in the chair. The meeting was called by the Provisional Committee, which has been working for some months to effect an interchange of undergraduates between Canada and the United States and the United Kingdom, for study of forms of government and industrial, social, and educational effort, rather than for purely academic work. In addition to fourteen travelling scholarships which it is hoped will be founded, a travelling bureau is to be opened in London and another in New York. These will provide information upon such problems as the student may wish to investigate, and will give introductions to the student traveller to leaders in the different spheres of life in the country which he visits. An Executive Committee has been elected as follows:—Vice-Chancellor Sir Charles Eliot, Sheffield; the Provost of University College, London; the Master of Downing College, Cambridge; Prof. J. H. Poynting, Birmingham; Mr. H. B. Hartley, Balliol, Oxford; Mr. A. E. Shipley, Christ's College, Cambridge; Mr. F. J. Wylie, Oxford; and Mr. H. W. Crees (Honorary Secretary).

At a Conference on "The Place of the Classics in Education," held by the King Alfred School Society at University College, Sir J. Cockburn said that formerly the classics contained the keys of all knowledge, but times had changed, and educationists should be very sensitive to change. Yet it would be a loss to civilization and to humanity if the high ideals of the classics were not kept up. The true spirit of Nature study was in the Greek language, but if it were taught too early the children hated it. Prof. Rippmann suggested that, in schools where the leaving age was sixteen, an hour a week should be given to the classics in the later years of school life, not for the study of grammar, but to make the ancient life and literature live again. The papers set by examiners, being pure memory work, were generally a disgrace. Mr. Harold Spender said there was no sterner drilling than the classics for a boy. We had too many half-baked scholars and not enough whole-baked craftsmen in this country, and education had no definite aim. Dr. Rouse thought that the classics had been more intelligently taught in the last two generations. Two hundred years ago Latin was not a dead language, but a living one, but in the eighteenth century it became very dead in England. Now classical teachers were taking a leaf from the book of the teachers of modern languages, and recognized that the

Digitized by Google

simplest way was the most educational, and that the free use of the spoken language was the best plan.

University College School, Hampstead, gave three performances of the "Alcestis" of Euripides in an English translation by Mr. G. Warre Cornish. The setting, designed by Prof. Simpson, was something like that of the performances of Greek tragedies at the Court Theatre. Unlike those at Bradfield and at the performance of the "Medea" given some time ago in Greek by the Bedford College for Women, it included no thymele and no orchestra, but consisted merely of a raised platform, with the porch of a Greek palace flanked by hangings. The Chorus was largely reduced in importance—it numbered only two citizens of Pherae; there was no singing or dancing, and its speeches were considerably cut down. The aim of the production was not an antiquarian revival, but one under the conditions more serviceable—to exhibit with all the intensity of the stage the wonderful beauty of the story and to give forcible expression to the exquisite things which Euripides at that time had to say about love, sacrifice, and life. This aim, thanks to very intelligent acting, evidently very well coached, was fully attained. The dresses were from designs by Prof. Percy Gardner, and the school orchestra in a gallery over the stage played incidental music from Glück's "Alceste."

The Council of the Tonic Sol-fa College some few months ago sent a memorial to the Board of Education with the main object of preventing the compulsory use of the staff notation in infants' schools and in classes corresponding to the first three standards. In their reply the Board of Education express themselves as "glad to have the opportunity of removing some misconceptions," and make it clear that their "suggestions" are not to be regarded as "regulations," and that head teachers are free to introduce the staff notation in such part of their schools where they consider it can be wisely done.

The East Suffolk County Education Committee has carried out a series of experiments in disinfection. Forty schools were selected, equal as far as possible in size, character, and condition of building. In twenty of these schools the walls, furniture, and floors were sprayed daily with a liquid disinfectant; in the remaining twenty no operation other than washing the floors and furniture with hot water at the commencement of the experiment was carried out. During the period covered by the experiment, the percentage of absence caused by sickness in the disinfected schools was 4·65, and in the non-disinfected 5·5. For the seven months the increase of Government grant in the twenty disinfected schools was £31. 9s., equivalent to £54. 7s. for these schools for a whole year, and £452. 2s. for the whole county for the year. The cost of the disinfectant was £23. 6s. 6d. Some time back, it will be remembered, the Bucks Education Committee conducted similar experiments and reported similar results.

Dr. Wormell presented the prizes and certificates gained at the Christmas examination of the College of Preceptors at the Folkestone Centre. That function (he said) was associated particularly with one class of school—the private schools. The private schools had had to formulate the principles and methods by which the human intellect should be developed through education. Private schools were everything in the past, and he ventured to think there never was a time when they were more needed in England than they were now. The country would be in a very poor state in regard to real educational progress if it were not for the private schools. Therefore he was there to say from conviction, although he never was a private-school master—he had been head master for thirty years of a very large city school, but was out of it now—"Long live the private schools of England." The College of Preceptors was associated with private schools, because it originated sixty years ago by the efforts of private-school teachers. They determined to support this College, and a system of examinations of a curriculum that should be advanced and advancing; that should be very broad and yet not too broad; that should offer a very large variety of subjects, but should not require every candidate to take more than a certain group in that curriculum. It had proceeded on that plan, and he thought it was the right plan. It was advisable that every one should have a foundation of general education and that every one should be encouraged to develop those special powers of intellect with which the individual had been endowed. It was a bad thing to try to train all the people of the country the same way and make them all alike, think alike, and work alike. The men who succeeded were those who were not exactly like other men. The College of Preceptors did not oscillate this way and that way. It had always year by year improved and amended its curriculum, the aim always being the development of intelligence. A great deal of time and thought was given to the working out of the scheme. If the examiners overstepped the mark, went beyond the curriculum, or were not not quite clear, there was a body of very learned men called moderators who criticized and corrected. He mentioned those details to show them how careful the College was to meet the requirements of the time, and to show them how free it was from red tape.

The Rev. Canon Henry Holden, D.D., formerly Head Master of Uppingham and of Durham Schools, and editor of many scholarly editions of classical works, died at Boscobel, Streatham Common, S.W., at the age of ninety-four (March 30).

It is with deep regret that we record the death of the Rev. Charles H. T. Wood, M.A., late Head Master of Sherborne, and son of the Rev. Dr. Wood, of Harrow, at the age of forty.

The Very Rev. John Marshall Lang, D.D., LL.D., C.V.O., Principal of the University of Aberdeen, died (May 2) at the age of seventy-five. He was educated at the High School and the University of Glasgow, and spent the main part of his life in the service of the Church of Scotland, succeeding Dr. Norman Macleod in the Barony Church, Glasgow, and rising to be Moderator of the General Assembly in 1893. In 1900 he was appointed Principal of Aberdeen University, and, while he administered the office with great business capacity and tact, he specially distinguished himself on the occasion of the quatercentenary celebrations in 1906. His second son is the Archbishop of York.

UNIVERSITIES AND COLLEGES.

Oxford.

Elsewhere (Notes) we refer to Lord Curzon's Memorandum of proposed reforms.

At a meeting of the University Reform Association (May 16), Prof. Firth in the chair, the following resolutions were passed unanimously:—(1) "That the Association thanks the Chancellor for his letter to the University, and cordially accepts the general principles set forth in it as a basis for immediate action." (2) "That this Association supports the action of the Council in selecting the subjects mentioned in its resolutions as those upon which it recommends early and definite action."

Cambridge.

(*From our own Correspondent.*)

The *University Reporter* of May 4 contained an apparently unimportant notice by the Vice-Chancellor that he had received a memorial from certain members of the Senate. We were not surprised to receive shortly afterwards a copy of certain reports formulated by an unofficial Committee, giving their views on University reform as well as disquisitions on all the burning questions of the day. It is imagined that some prominent members of the University invited by circular all those whom they considered moderate men to join a representative committee to discuss certain questions. The result is that the moderate men have presented a moderate report.

Imprimis, the electoral roll is to be reorganized. Membership is to be restricted to those who have some definite qualification, such as University or College office. This body will practically regulate matters that are now dealt with by the Senate. An appeal is to lie from Congregation (as the new body is to be called) to the Senate, provided that a hundred members of the Senate favour such appeal. There are other provisions relating chiefly to matters of detail. Statutes may only be changed by the concurrence of Congregation and Senate, but changes in ordinances may be made by Congregation, subject to appeal to the Senate.

Digitized by Google

The report states that it is desired to give to those engaged in teaching research and administration a larger share than they possess at present in the legislative action of the University. It seems to have escaped the notice of the Committee that a certain amount of teaching is done here by private coaches, who in some cases do, but in other cases do not, possess the necessary qualifications for the new body. There will, perhaps, be found some mode by which this rather numerous class may be officially recognized.

The part of the report which deals with the relation between the Colleges and the University is sure to provoke acrimonious discussion. Any change in existing arrangements must financially affect all who are officially engaged in Cambridge work. But, with all deference to the shade of the late Cecil Rhodes, Cambridge men are not altogether babes in finance, and the most difficult questions of all will yield to common sense and tact.

There is one underlying evil upon which the reports are discreetly silent. Perhaps the authors were conscious that the suppressed fact is common knowledge. Vast changes were made some years ago in the fellowship system. A life pension for a place in the Tripos—that idea has gone, and some Colleges, like Trinity, make it hard even for the best of their Fellows to continue after their seven years of probation. It seems bad politics that a professor who has served for a solid lifetime should be denied the privileges and pension of one who has performed the functions of bursar or lecturer for a stated term of years. In spite of the numerous fellowships filled every year, the teaching staff both of the Colleges and of the University contains the names of men who have not won prize fellowships. It is, perhaps, a fact that all Fellows of Colleges are not born teachers; but of this prime difficulty the reports say nothing.

An interesting feature of the report is a statement that a careful student can go through his University course at a cost of £120 per annum; medical students requiring about £140, and engineering students rather more than this. On the other hand, it is stated that £80 to £90 will enable a non-collegiate student to meet his Cambridge expenses for the academic year. "The Committee are of opinion that, with the large sums given to assist students, a Cambridge education is accessible to any student, however poor, who has given evidence of ability." These are brave words. We get our news from other sources than newspapers.

But the reports are, on the whole, worthy of the fullest consideration. It is clear that Cambridge means to reform itself from within, and thinks that mistakes are of two classes: omissions and commissions, whereof the latter are the deadliest.

Prof. Oppenheim was fortunate enough to be able to induce Prof. Wilson, of Harvard, to give us a second lecture on the subject of the International Naval Conference. Much that the Professor said was of the deepest interest, and much that he left unsaid was of supreme importance, when one considers that he represented at the Conference the great nation which refused to be a party to the Declaration of Paris. Prof. Wilson will always be welcome here, if only to strengthen the friendly relations between Harvard and Cambridge.

The valuable services of Dr. Haddon in the field of ethnology are to be recognized, though one cannot say adequately rewarded, by his being appointed Reader in Ethnology at a stipend of £200 per annum. We shall thus be able to compete with Oxford in giving a suitable training to our candidates for the Indian and Egyptian Services. The Colonial Office is insistent and the India Office sympathetic; Cambridge again will show its readiness to train men for the work of government beyond the seas.

The "General" Syndicate has published draft rules for carrying into effect the recent decision of the Senate allowing two Special examinations to take the place of the General and one Special, as the normal course for the Poll Degree. One regulation, though obviously well meant, may lead to curious results. It is that Part I. of any Special may be taken in or after the second term, Part II. in or after the fourth term, "provided that neither Part I. of two special examinations nor Part II. of two Special examinations may be taken in the same term." The idea seems to be that men should, as far as possible, clear off one subject before starting another. But this curious anomaly will arise. A man in his fourth term may take the second part of one Special and the first of another, a course which is surely more reprehensible than taking two first parts. Doubtless this omission will be rectified later on.

The Board of Agriculture intend changing the venue of their operations from Impington to Gravel Hill Farm, close to the Observatory. This will be a great convenience to the large and growing number of agricultural students.

The May week threatens to be more successful than ever. For most of the balls tickets were all sold out a month beforehand, and the programme of festivities is unusually long and attractive.

Prof. Sedgwick leaves us at the end of this term. What Cambridge loses London gains. A forceful man, who knows his business and does it, he leaves no enemies here, and goes to make fresh friends away from us. Mr. Duff, of Trinity, retires from his tutorship at the end of this term, to the deep regret of all his pupils. Rarely has any College officer won to such an extraordinary extent the respect and affection of his men. His successor is Mr. R. Vere Laurence, who will doubtless carry on the high traditions established by his predecessors, Dr. Verrall and Mr. Duff.

On the river there are strong rumours that Trinity Hall may yield pride of place to Jesus; but the Hall have a happy knack of getting together at the right moment. At any rate, the struggle between the three head boats—Hall, Jesus, and First Trinity—promises to be unusually interesting.

London. There was a brilliant assemblage on Presentation Day. The Principal's report showed that in the year 1908–9 there was an increase in the number of candidates for entry to the University, being 7,973 against 7,356 and 7,112 in the two preceding years. The number of candidates for the various examinations continued to show a marked increase under each heading, and amounted to 12,483, as against 11,591 last year. The total number of successful candidates was 5,764, the total number of those who obtained degrees being 880. The total number of internal students was now 3,925—an increase of nearly 10 per cent. on the figure for 1907–8, which itself was more than 8 per cent. higher than that for 1906–7.

Offices have now been definitely assigned to the Royal Commission on University Education in London, and all communications in reference thereto should in future be addressed to the Joint Secretaries, 12 Queen Anne's Gate, S.W.

After prolonged negotiations, the University has decided to recognize the certificates of the Joint Matriculation Board of the four Northern Universities, and to admit candidates who have passed the Board's examination to courses of study at London University, or to the higher examinations under certain well defined conditions. The London Matriculation Certificate will confer like privileges in regard to the other Universities.

Durham. The Newcastle-on-Tyne Education Committee have approved a scheme for co-ordination in technical evening instruction between the Rutherford College and Armstrong College. The main object of the scheme is to avoid over-lapping the classes at the two colleges and the consequent wasteful duplication of teachers and equipment, and the placing of the subjects of instruction in the best possible environment. The Higher Education Sub-Committee stated that it was desirable that the highest work should be focused at Armstrong College and the intermediate at Rutherford College. But in certain subjects it appeared that complete provision could have been made at Armstrong College and in others at Rutherford College. It was proposed that subjects of a technological character should be taken at Rutherford College, and that there should be a conference sitting frequently between the heads of departments at Armstrong College and the principal lecturers at Rutherford College, to be called the Joint Board of Studies. The City Council at its last meeting confirmed the Education Committee's recommendation to build a new wing to Rutherford College for technical instruction at a cost of £6,000.

Edinburgh. In the Annual Report by the Business Committee to the General Council it is shown that, of the ordinary graduating students in Arts of the first year, 94 are taking a five-subject curriculum, 35 six subjects, and 40 seven subjects. French is first with 49, followed by English with 40, and then come Mathematics, Latin, Natural Philosophy, Greek, German, Moral Philosophy, Chemistry. Considering the small number of subjects in which double courses have been authorized, the preponderance of five-subjects selection is very significant. In the report of the Finance Committee it is stated that there were 3,292 matriculated students

Digitized by Google

for 1907–8 (of which 1,128 are in Arts, 64 in Divinity, and 1,487 in Medicine), as compared with 3,196 and 3,147 in the previous years. The Report shows the capital funds at £801,405, compared with £753,285 last year. The general revenue and expenditure account shows a revenue of £114,243 and an expenditure of £112,334, compared with £107,466 and £107,243. Referring to lectureships, the Report states that, with the addition of a Lectureship in Accounting and Commerce, and perhaps one in Banking, a degree in Commerce might be offered which would rival that of any other British University.

The University has decided to institute a full ordinary course in Scottish History, to be taken as a double course with British History. The course is to be constituted by the recognition of Prof. Hume Brown's present Honours Course in Ancient Scottish history, to be delivered during the autumn and spring terms, together with not less than twenty-five lectures on the later Scottish history to be delivered during the summer term by a lecturer appointed for the purpose.

THE EDUCATIONAL LADDER.

CAMBRIDGE: GIRTON COLLEGE.—Clothworkers' Scholarship, £60 for 3 years and an additional term: Miss M. K. Brandebourg, Portsmouth High School (French and German). Goldsmiths' Scholarship, £60: Miss I. Thwaites (Mathematics). College Scholarship, £50: Miss E. A. Parfitt, County School, Aberdare, and University College, Aberystwyth (Chemistry and Physics). Russell Gurney Scholarship, £40: Miss C. Selby, Sydenham High School (History). Pfeiffer Scholarship, £30: Miss K. M. J. M'Clure, North London Collegiate School (History). College Scholarship, £20: Miss H. V. Stuart (Classics). Goldsmiths' Scholarship, £40: Miss H. O'Brien, Notting Hill High School (French and German). Mary Anne Leighton Scholarship, £17. 12s.: Miss E. M. Elligott, Clapham High School (Physics and Chemistry). College Exhibitions, £15 each: Miss E. L. Barnard (Mathematics) and Miss E. B. Duff, St. Leonard's School, St. Andrews (Classics). The following attained the standard for Exhibitions: Miss A. Tregaskis, Clapham High School (Botany and Chemistry), Miss F. A. O. Cunningham (History), Miss G. N. L. R. Murray, Oxford High School (Mathematics), and Miss P. C. Inman, Blackheath High School (Mathematics).

CAMBRIDGE UNIVERSITY.—Stewart of Rannoch Scholarships—Hebrew (open): S. Brodetsky, Trinity, and A. Jephcott, Queens', equal. For the restricted scholarships there were no candidates. Greek and Latin: A. E. F. Wood, Trinity; G. S. Hellings, St. John's. Sacred Music (open): F. V. Haines, Clare. Adam Smith Prize: J. M Keynes, Fellow of King's. Adams Prize: G. A. Schott, B.A., Scholar of Trinity. Winchester Reading Prizes: (1) R. W. Pole, King's; (2) E. H. J. M. Dalton, King's, and W. H. Humphreys, B.A., Christ's, equal. Lightfoot Scholarship (History, especially Ecclesiastical): John W. Reynolds, B.A., Scholar of Trinity. Boden Sanskrit Scholarship: Edward H. Johnston, B.A., New College. Tyrwhitt Hebrew Scholarships: W. A. L. Elmslie, B.A. Christ's. and R. H. Willey, B.A., Caius, equal. Mason Prize for Biblical Hebrew: R. H. Willey, B.A., Caius. Le Bas Prize: Not awarded.

Christ's.—Skeat Prize: John Gordon Simpson.

St. John's.—Choral Studentships, £40 a year: Tenor, A. Guest-Williams and R. Stansfeld; Bass, H. M. Lloyd and R. M. Winder.

LONDON: ROYAL ACADEMY OF MUSIC AND ROYAL COLLEGE OF MUSIC: ASSOCIATED BOARD FOR LOCAL EXAMINATIONS IN MUSIC.—Advanced Grade: Gold Medal, Margaret Stoddart, Jersey Centre (Violin); Silver Medal, Helen M. Radcliffe, Bristol Centre (Violin). Intermediate Grade: Gold Medal, Gladys Daniel, London Centre (Violin); Silver Medals, Richard J. Millidge, London Centre (Harmony), Isa M. Meikle, Edinburgh Centre (Harmony), and Dorothy Thuell, Truro Centre (Violoncello).

LONDON UNIVERSITY.—
University College.—Quain Studentship in English: Gerald Gould, B.A., Fellow of the College.

OXFORD: SOMERVILLE COLLEGE.—D. M. Thorpe, Gilchrist Scholarship of £50 for three years: Margaret Tennant (Classics), Edinburgh University. Clothworkers' Scholarship of £50 for three years, Dorothy R. Smith (Mathematics), Leamington Municipal School and King's High School, Warwick. Students' Scholarship of £40 for three years, Elsie M. Elligott (Physics and Botany), Clapham High School. Conybeare Exhibition of £16. 13s. 4d. for three years, Madeleine Giles (Classics), North London Collegiate School. College Exhibitions of £25 for three years: Dorothy Thorpe (History), University College, Bristol; Dorothy Skinner (Latin and French), Conamur School, Sandgate; Elizabeth Whyte (English), Aberdeen University.

OXFORD UNIVERSITY.—Chancellor's Prizes: English Essay, H. A. Smith, B.A., late Scholar of St. John's; Latin Essay, not awarded; Latin Verse, John Noel Dark, Scholar of St. John's. Newdigate Prize (English Verse): Frank T. A. Ashton-Gwatkin, Commoner of Balliol.—Charles Oldham Prize: Stanley T. Collins, Scholar of Wadham. Ellerton Theological Essay Prize: Rev. Ernest F. Morison, B.A., late Scholar of Lincoln.—Gaisford Prizes: Greek Verse, Algernon E. A. F. Spencer, Scholar of Christ Church; *proxime accessit* Edgar Lobel, Scholar of Balliol; Greek Prose, George Douglas Brooks, Scholar of Worcester. Stanhope Historical Essay Prize: Leonard V. Davis Owen, Scholar of Keble.—Gladstone Memorial Prize: Alwyn T. P. Williams, Scholar of Jesus.

Exeter.—Exhibition (Modern History): Allen C. Moore, Felsted School. Exhibition (Modern Languages): F. D. Barker, Royal Grammar School, Colchester.

Queen's.—Honorary Scholar: Leonard Davies, Commoner of the College.

Pembroke.—Open Scholarships in Classics: W. S. Clark, Edinburgh University, Hull Scholar, £100 a year; A. J. Mainwaring, King's School, Worcester, Cleobury Scholar, £100 a year; A. M. Whitehead, Dulwich College, Henney Scholar, £90 a year; T. F. Heyworth, Birkenhead School, Foundation, £80 a year. Open Scholarships in Modern History: P. M. Vincent, Cheltenham Grammar School, Boulter and Radcliffe Scholar, £80 a year; A. G. Gamble, Mill Hill School, Abingdon Scholar, £80 a year; and R. E. M. Haines, St. David's College, Lampeter, King Charles I. Scholar, £80 a year.

ST. ANDREWS UNIVERSITY.—Berry Scholarships, £80 for one year: Divinity and Church History, A. J. H. Gibson, M.A., B.D.; Classics, J. G. W. Ferguson, M.A.

THE COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on May 19. Present: Dr. Wormell, in the chair; Mr. Bain, Mr. Baumann, Rev. J. O. Bevan, Rev. J. B. Blomfield, Rev. A. W. Boulden, Mr. Brown, Mr. Charles, Miss Crookshank, Mr. Easterbrook, Mr. Eve, Mr. Hawe, Mr. Holland, Miss Jebb, Mr. Kelland, Miss Lawford, Rev. R. Lee, Sir Philip Magnus, Dr. Maples, Mr. Marx, Mr. Millar Inglis, Dr. Moody, Mr. Pendlebury, Mr. Rule, and Mr. White.

The minutes of the last meeting were read and confirmed.

Prof. Adams was appointed to deliver the Autumn Course of Lectures on the Practice of Teaching, to commence in September next.

Dr. E. W. Maples was appointed to represent the College on the Committee of the International Home Education Congress, to be held in connexion with the Brussels Exhibition in 1910.

Saturday, July 17, was fixed as the date of the forthcoming General Meeting of the members of the College.

The representatives of the College on the Federal Council reported that, with a view to securing unanimity among the different branches of the teaching profession as to the constitution of a Registration Council and the principles upon which a Register should be framed, Dr. Gow's Committee had proposed to convene a conference of representatives of Associations of teachers, but that the Committee had not been able to agree as to the matters which should be laid before such a conference. The following resolution was adopted in reference to the above: "That the Council express its approval of the action of its representatives on the Federal Council, and request them to continue their efforts to bring about a conference to discuss the subject of registration and to frame a scheme."

A Special Committee was appointed to consider what steps should be taken in view of Mr. Eve's intended retirement from the office of Dean of the College.

Mr. E. C. Jee, D.Sc. Lond., F.I.C., F.C.S., 39 Pepys Road, New Cross, S.E., was elected a member of the College.

The following books had been presented to the Library since the last meeting of the Council:—

By MR. H. BAUMANN.—Bernhardy's Grundriss der Griechischen Litteratur (3 vols.); Kohler's Die Praxis des Kindergartens; Wiese's Verordnungen und Gesetze, and Das Höhere Schulwesen in Preussen, Vols. II. and III.

By J. CURWEN & SONS.—Fisher's The Musical Examinee.

By HACHETTE & CO.—Defodon's Choix de Fables de la Fontaine et autres Auteurs.

By MACMILLAN & CO.—Earle's Swift's Gulliver's Travels (abridged); Glazebrook's Selections from the Poems of Robert Browning; Punchard's Lamb's Tales from Shakespeare (Second Series); Siepmann's French Series for Rapid Reading (12 Parts).

By J. MURRAY.—Weekley's Mérimée's Chronique du Règne de Charles IX.

By RIVINGTONS.—Edwards's Notes on British History, Parts I. and II.

Calendar of the Royal University of Ireland, 1909, and Supplement.

CURRENT EVENTS.

Fixtures.

M. B. MINSSEN will address the Société Nationale des Professeurs de Français en Angleterre on "Le Masque de Fer," at the College of Preceptors, on June 26, at 4 p.m.

* * *

THE seventh vacation term for Biblical Study will be held at Girton College, Cambridge, July 24 to August 14.

* * *

MR. H. J. MACKINDER will deliver an address at the Caxton Hall on June 4 at 3.30 p.m., describing the work of the Visual Instruction Committee of the Colonial Office in various parts of the Empire. Tickets from the Secretary to the Committee, Colonial Office, Downing Street, S.W.

* * *

THE Nature Study Society's Exhibition of Aquaria, Vivaria, and other means of observing animals, with photographic and microscopic illustrations, will be held at the Gardens of the Royal Botanic Society, Regent's Park, on June 4 and 5.

* * *

THE new buildings of the University of Birmingham will be formally opened on July 7 by the King, who will be accompanied by the Queen.

* * *

AT Manchester University, the new Engineering Laboratories will be opened by Sir Alexander Kennedy on July 15, and Viscount Morley of Blackburn (Chancellor) will open the new session with an address on October 5.

* * *

THE University of Caen announces Cours de Français in July and August. Diplomas given. Particulars from M. le Prof. Lebonnois, 16 rue Guilbert, Caen.

Honours.

ON the occasion of the Darwin centenary celebrations the University of Cambridge proposes to confer the honorary degree of Sc.D. upon the following:—

Edouard van Beneden, Professor of Zoology in the University of Liége; Robert Chodat, Professor of Botany in the University of Geneva; Francis Darwin, M.A., Christ's College; Karl F. von Goebel, Professor of Botany in the University of Munich; Ludwig von Graff, Professor of Zoology, in the University of Gratz; Harald Höffding, Professor of Philosophy in the University of Copenhagen; Jacques Loeb, Professor of Physiology in the University of California; Edmond Perrier, Director of the Natural History Museum, Paris; Gustav Albert Schwalbe, Professor of Anatomy in the University of Strasburg; Hermann von Vöchting, Professor of Botany in the University of Tübingen; Hugo de Vries, Professor of Botany in the University of Amsterdam; Charles Doolittle Walcott, Secretary of the Smithsonian Institution, Washington; Edmund Beecher Wilson, Professor of Zoology in the Columbia University of New York; and Charles René Zeiller, Professor of Palæobotany in the Ecole Nationale Supérieure des Mines, Paris.

It is proposed that the honorary degree of M.A. be conferred upon J. D. Anderson, Gonville and Caius College, Teacher of Bengali.

* * *

THE title of Professor Emeritus has been conferred by Oxford Convocation upon Dr. T. Kelly Cheyne, late Oriel Professor of the Interpretation of Holy Scriptures.

* * *

OXFORD UNIVERSITY has conferred the honorary degree of D.Litt. upon Mr. John Sampson, Librarian of the University of Liverpool.

IN addition to the honorary degrees recorded in our March issue, the University of Liverpool has conferred the following:—

D.Litt.: Dr. Edward Meyer, Berlin University.
D.Sc.: Dr. Francis Darwin, Cambridge; and Prof. J. L. Todd, McGill University, Montreal.
D.Eng.: Hon. C. A. Parsons.
M.A.: William Fergusson Irvine, of Liverpool.

* * *

THE University of Wales has resolved to confer the honorary degree of LL.D. on Sir Samuel Evans, the Solicitor-General; Lit.D. on Prof. Kuno Meyer, of Liverpool University; M.A. on the Rev. Evan Rees, Archdruid of Wales, and on Mr. John Ballinger, ex-Librarian of Cardiff.

* * *

THE University of Glasgow has conferred the honorary degree of D.Litt. upon Mr. Stanley H. Turner, Lecturer in Political Economy in Aberdeen University.

* * *

THE REV. T. KELLY CHEYNE, and Prof. J. Cook Wilson, M.A., late Fellow of Oriel College, Oxford, and Lord Balfour of Burleigh have been elected Honorary Fellows of Oriel.

* * *

MR. WILLIAM SCHLICH, M.A., F.R.S., Professor of Forestry, Oxford, has been elected an honorary Fellow of St. John's College.

* * *

DR. DREYER, Professor of Pathology, and Dr. Vinogradoff, Professor of Jurisprudence, in the University of Oxford, have been admitted as foreign members of the Danish Royal Scientific Society.

* * *

A MEDALLION of the late Prof. Strachan, by Mr. John Cassidy, was unveiled at Manchester University (May 26).

* * *

THE Associateship of Bristol University College has been conferred upon Prof. W. C. Swayne, M.D., B.S.; Mr. A. J. M. Wright, M.B., B.S.; Miss E. H. Geake, B.Sc.; and Miss C. Slade, B.A.

Endowments and Benefactions.

THE Bishop of London heads an appeal on behalf of St. Mary's College, Paddington, for £10,000 for removal to more suitable locality and buildings, and for £500 a year (guaranteed for five years) to replace the London County Council grant (£300 to £500 for the past seven years, but to be withdrawn at the end of the present year).

* * *

OXFORD Convocation has accepted some £1,000 subscribed to establish a studentship, tenable at the British School at Rome, in memory of the late Prof. Pelham.

* * *

THE trustees of the Oxford University Endowment Fund have given £250 for three years to provide the stipend of a Lecturer in Japanese in the University; and £250 for three years for a Lecturership in Political Theory and Institutions.

* * *

BRASENOSE COLLEGE has given £200 a year for five years to augment the stipend of the Professor of Human Anatomy at Oxford.

Digitized by Google

Mr. Charles M. Powell, of Corpus Christi College, has provided for a perpetual annual sum of £250 for increasing the endowment of White's Professorship of Moral Philosophy, to which the College contributes.

* * *

Mr. Francis L. Griffith, Reader in Egyptology at Oxford, has given the University £8,000 in aid of Egyptological research.

* * *

An anonymous donor has offered to add £500 (if required) to the £500 voted by the University of Cambridge for the Darwin commemoration this month.

* * *

The Goldsmiths' Company has made a munificent gift of £50,000 to the Imperial College of Science and Technology, to facilitate an extensive addition to the City and Guilds Central Technical College.

* * *

Mr. C. Hawksley has promised a donation of £4,000 for a Hydraulics Laboratory, in memory of his father, Mr. Thomas Hawksley, M.I.C.E.

* * *

Dr. Caton, on completing his term of office as Lord Mayor of Liverpool, has presented to the University of Liverpool a silver mace (fashioned by Messrs. Elkington) "as a testimony of the love of the citizens for humane and scientific studies."

* * *

Mr. Henry Rutson, of Newby Wiske, has given a fifth donation of £1,000 to the University of Leeds.

* * *

The Working Men's Club and Institute Union proposes to establish a Scholarship (a year's tuition fees and maintenance, with £10 out-of-pocket expenses and railway fares to and from college) at Ruskin College, Oxford, in memory of the late Mr. Hodgson Pratt.

* * *

The Drapers' Company have made a furthur donation of £10,046 to Bangor University College—this sum together with the £5,000 previously granted to be applied in payment of the new library and museum of the College.

* * *

Mrs. Bell Pettigrew has given £400 to St. Andrews University towards the cost of the new hot-houses for the Botanical Gardens.

* * *

An appeal for £5,000 towards the building fund of St. Michael's College, Llandaff, is issued with the cordial support of the Welsh Bishops.

* * *

The Hon. Lewis Thomas, M.L.C., Queensland, has given £1,000 to found a scholarship at the University College of Wales, Aberystwyth, for boys from the parishes of Llanfihangelgoneu'r-glyn and Llancynfelin.

* * *

The Council of Serampore College appeals to Christians generally, and to the British Baptists in particular, for £250,000 for endowments and equipment, in view of the proposed revival of the University Charter granted in 1827 by Frederick VI. of Denmark, and confirmed in 1845 by the Treaty of Cession of the Danish Colony of Serampore to Great Britain. Liberal aid is expected from America; and it is proposed that the British Baptists should contribute £60,000—the capitalized equivalent of the £2,000 a year now spent by the Baptist Missionary Society on its work at Serampore. Carey, Marshman, and Ward well deserve such a commemoration.

Scholarships and Prizes.

Brasenose College, Oxford, offers a Colquitt Exhibition, £40 a year. Examination, June 15, in Divinity and Classics. Candidates must declare intention of taking Holy Orders.

* * *

Christ's College, Cambridge, offers two Choral Exhibitions, £25 a year for three years. Competition, June 17. Apply to the Tutor (Rev. J. W. Cartmell).

* * *

Selwyn College, Cambridge, offers an Organist Scholarship, £30 a year. Examination, June 18. Apply to the Vice-Master.

* * *

Westminster School offers not less than seven residential and two non-residential Scholarships and some Exhibitions. Examination, June 23–25. Particulars (by letter) from the Bursar, Little Dean's Yard, S.W.

* * *

Cheltenham College offers at least eighteen scholarships, £80 to £20, and some House Exhibitions. Examination, June 8 to 10. Particulars from the Bursar.

Appointments and Vacancies.

The Belfast Commissioners, under the Irish Universities Act, 1908, will proceed at an early date to appoint to Professorships in the Queen's University in Modern History, Economics, Botany, French Language and Romance Philology, Jurisprudence, and Roman Law; and to Readerships or Lectureships in Archæology and Ancient History, English Language, Celtic Languages and Literature, Moral Philosophy and History of Philosophy, Logic and Scholastic Philosophy, Physics, Organic Chemistry, Bio-Chemistry, Geology, and Mineralogy. Information as to salary and other terms of these appointments may be obtained from Arthur Jaffé, Secretary to the Commissioners, Queen's College, Belfast.

* * *

Prof. Burnet, of St. Andrews, has declined the invitation to occupy the Chair of Greek at Harvard.

* * *

The Vinerian Chair of English Law to Oxford is vacant by the resignation of Prof. A. V. Dicey, D.C.L., after twenty-seven years' service.

* * *

Mr. John H. Gubbins, C.M.G., has been appointed to the new Lectureship in Japanese at Oxford.

* * *

The Principalship of the University of Aberdeen is vacant by the death of the Very Rev. Dr. John Marshall Lang, C.V.O.

* * *

The Principalship of New College, Edinburgh, vacant through the death of the Rev. Marcus Dods, D.D., has been filled by the appointment of the Rev. Dr. Whyte, Edinburgh.

* * *

The Rev. Dr. J. O. F. Murray, Warden of St. Augustine's College, Canterbury, formerly Fellow, Dean, and Tutor of Emmanuel, has been appointed Master of Selwyn College, Cambridge.

Mr. Grafton Elliot Smith, Professor of Anatomy in the Government School of Medicine, Cairo, has been appointed to the Chair of Anatomy in the University of Manchester.

* * *

Mr. T. H. Laby has been appointed Professor of Physics in Victoria University College, Wellington, N.Z.

* * *

Mr. H. O. Meredith, M.A., M.Com., Lecturer in Economic History in Manchester University, has been appointed Girdlers' Lecturer in Economics in Cambridge University.

* * *

Mr. W. T. Layton, B.A. Lond. and Camb., has been appointed Newmarch Lecturer at University College, London, in succession to Mr. G. Udny Yule, resigned.

* * *

Miss Rachel R. Reid, M.A., Lecturer in History at Girton College, has been appointed Assistant in the Department of English History in University College, London.

* * *

Mr. S. Ménardo, D.Ph., LL.D. Athens, has been appointed Lecturer on Late Greek in the University of Oxford.

* * *

Mr. Douglas Knoop, M.A., Gartside Scholar and Langton Fellow, has been appointed Assistant Lecturer in Economics and Commerce in Manchester University.

* * *

The Rev. Stuart Blofeld, B.A., B.Sc. Lond., Vice-Principal of St. John's College, Battersea, has been appointed Principal of the Training College, Saltley.

* * *

The Head Mastership of Haberdashers' Aske's Hampstead Boys' School is open. About £700. Apply, by June 5, on form to be obtained from R. J. Ellis, Aske's Hatcham School, Jerningham Road, New Cross, S.E.

* * *

Mr. G. B. Alcock has been appointed Principal of the Secondary School and Technical Institute, Chorley.

* * *

Dr. Burnie, Principal of the Central Polytechnic, Croydon, has been appointed Principal of the Municipal Technical College, Brighton.

* * *

Mr. Walter Ernest Cross, B.A. Cantab., Senior Science and House Master, Whitgift School, Croydon, has been appointed Head Master of King's School, Peterborough.

* * *

The Rev. Edmund Audley Downes, M.A. Oxon., Assistant Master, Wellington College, has been appointed Head Master of St. John's College, Leatherhead.

* * *

Mr. Alfred Cradock Maples, B.A. Cantab., Mathematical Master, Exeter School, has been appointed Head Master of Midhurst Grammar School.

* * *

Mr. E. C. Chappell, M.A., LL.B. Dubl., Organizer of Commercial Education at the Grocers' School, Clapton, has been appointed Head Master of Spalding Grammar School, in succession to the Rev. E. M. Tweed, M.A., who has been appointed Rector of Burton Coggles, near Grantham.

* * *

Mr. J. J. Lloyd Williams, M.A. Oxon., Head Master of Oswestry Grammar School, has been appointed Head Master of Ruthin Grammar School, vacant by the resignation of the Rev. W. P. Whittington, M.A., after twenty-eight years' service.

Literary Items.

Mr. J. H. Yoxall, M.P., has undertaken to edit a new series of the *Schoolmaster*, which will commence on June 5. While the old-established weekly will continue its customary features and remain the organ of the N.U.T., it will develop a wider scope.

* * *

The World's Work rises to the occasion of the "Imperial Press" Conference. The June number is much enlarged, containing a wide range of articles on Imperial topics, with portraits of the leading members of the Conference. The cover reproduces a symbolical painting indicative of the world-wide influence of the "Imperial Press."

General.

Oxford University has established a Professorship of the Romance Languages, to be supported from the funds of the Taylor Institution (£300) and the Common University Fund (£200), till Corpus Christi College is in a position to endow the chair.

* * *

A Chichele Professorship of Military History has been founded in Oxford University by All Souls College.

* * *

Bristol has now obtained its University Charter. The Town Council has resolved to grant the University £7,000 a year—a penny-in-the-pound rate.

* * *

At the meeting of the British Association at Winnipeg (August 25), Dr. Gray, Head Master of Bradfield College, will be President of the Educational Science Section, and Mr. J. L. Holland, Director of Education in Northamptonshire, will be Recorder.

* * *

Prof. Viëtor has just celebrated the twenty-fifth anniversary of his appointment to the Chair of English Philology at Marburg. Dr. Viëtor was previously a Lecturer at University College, Liverpool.

* * *

The Aerial League of the British Empire purposes to establish a National (surely it ought to be an "Imperial") Aeronautical College.

CORRESPONDENCE.

REGISTRATION OF TEACHERS IN SECONDARY SCHOOLS.

To the Editor of "The Educational Times."

Sir,—Do not the negotiations between the Board of Education and Dr. Gow's Committee reveal the fact that it is in vain to look to the Government for a speedy or satisfactory settlement of this question?

Why should not secondary teachers cut the Gordian knot by taking the matter into their own hands, and by arranging—as a preliminary measure—for the compilation of a list of acting teachers in all schools other than public elementary?

There seems no valid reason why the College of Preceptors should not co-operate with the Federal Council and take the lead in this matter. The present position of affairs is a disgrace and scandal to all parties concerned.—I am, Sir, &c.

Chillenden Rectory, Dover. J. O. Bevan.
May 22, 1909.

THE TEACHING OF EDUCATIONAL HANDWORK.

[From a Paper by Mr. CHARLES BIRD, Superintendent of Educational Handwork to the Leicester Education Committee, read to the National Union of Teachers at Morecambe.]

HITHERTO our schemes of education have depended upon adult ideas as to what children require for their development. We now see that the needs and desires of children are necessarily different from our own, and, if we would help instead of hinder and thwart that development, we must study the child. In the first few years of his life the child has absorbed an enormous amount of knowledge of vital importance to his very existence; his every sense is quivering for fresh experiences and fresh power, even in the most narrow and gloomy surroundings. Watch his vast unaided conquests, his fertile, ingenious brain; his vivid imagination, and his intense excitement over little things which have long ago ceased to interest us. His great delight is in feeling, seeing, hearing, tasting, and smelling, especially in feeling and seeing. He stores up truths in harmonious order unconsciously in his little mind, and weeds out the false from the true—that most potent factor in all animal life in the war of self-preservation—with the unerring instinct of unsophisticated nature. The child finds his interests in the multitudinous affairs of home, garden, street, and field; his play and his work bring him into intimate relationship with the visible world around him. I do not think we sufficiently take into account the tremendous difference to a child between the work and freedom of its home life, and the work and restrictions, often needless and even ridiculous, of the school. It is a new and often incomprehensible world.

In the typical school of the period, little or no provision is made for educating the child through these all-absorbing interests and activities, and yet it is through his interests alone the child can be developed, for if a child lacks interest it is folly to expect him to absorb knowledge; the faint impression produced soon fades away. On the other hand, however, if the interest be awakened, the teacher's task is changed from a hard, unnatural, and unfruitful labour to a pleasant guidance.

"WHAT MUST BE OUR AIM IN THIS WORK?"

Foremost among the reasons for making educational handwork an essential part of the school method is the interest it creates in the children. If a reasonable method be adopted not interest merely, but enthusiasm, will be the result. During the past six years, in my experience of handwork at Leicester, I have several times known the Government Inspectors endeavour to find out how long the children would continue to be interested. The question has not yet been satisfactorily settled, because the school session invariably ended before the interest. I have certainly *heard* of children taking little or no interest in handwork, but am quite convinced the fault lies elsewhere than in the subject. Day by day I see hundreds of different boys and girls at their handwork, and their eager, bright, joyous faces all tell the same story. Give educational handwork a fair trial upon right lines, and I know you will find its potentialities increase and widen as your own knowledge of it extends, until there will scarcely be a nook or cranny of your whole curriculum that will not in some way or other be lightened and brightened, both for you and your children. And what must be our aim in this work? It must be the harmonious development of the children—we cannot aim higher, we must not aim lower.

It will hardly be denied that the normal child possesses in a marked degree such characteristics as curiosity, inquisitiveness, a love of prying into things, of questioning and doubting, which are frequently amusing and sometimes embarrassing. Of his originality, adaptability, rescurcefulness, and independence there can be no possible doubt. It is these characteristics, so pre-eminent in their importance as assets in after-life, which a reasonable system of educational handwork can stimulate and strengthen. It is greatly to be feared these characteristics have not been strengthened, but rather weakened, by the educational method of the past.

For this purpose the children must be allowed to depend upon their own thought and judgment in doing things. If the work given be interesting in character, and not too difficult for mind and hand to fashion, surely the children may be allowed to exercise their whole powers upon it without let or hindrance; where unreasonableness is shown, failure to adapt means to ends and the like, the cause is discoverable, and it is the business of the teacher to see that the children discover it. Let the children see, think, and do; later may possibly be the time for explanations, surely not before.

As regards moral development, it may be noticed that, under the conditions mentioned, the children are *revealing* themselves. Their own thoughts, ideas, words, and actions are what we seek and require. It can hardly be questioned that an atmosphere—an environment favourable for moral growth—is thus created. Character depends largely upon action; it must therefore be all-important that the activity be mental as well as physical. Strenuous intellectual and bodily work, done in a free atmosphere, must call for the exercise of moral qualities of the highest order, and help to develop a power to concentrate the attention and a courage to persevere which cannot fail to be of the greatest service in after life.

METHOD.

I have attempted to realize these aims in the following manner. For each standard I have drawn up a series of models—a scheme of work in material. These models, wherever the materials allow it, are all useful articles or toys, and interesting from the children's point of view. The series is constantly being altered. One of the reasons for substituting fresh models for those already in the courses is the knowledge that the children do not like them. At present the lesson occupies one hour per week in Standards I. to IV., and the same kind of material is employed the whole year. If a longer time weekly were devoted to such work, different kinds of material could, I think, be advantageously used in the same year — say, one following another alternately. The time is about two and a half hours weekly for the handwork of the boys of Standards V. to VII., and the special grant is paid on this work. The material is plastic in the First Standard, cane in the Second, paper and thin cardboard in the Third, and wood, cut with a knife, in the Fourth. If, for any reason, the teachers prefer not to take the knife-work with the girls, they can take a second course of cardboard work. In passing, I may state that in my experience it is the *men* who think knife-work is "ridiculous," "nonsensical" (the selection of adjectives I have heard used is by no means exhausted) as a means of education for girls. The *lady* teachers are by no means so sure as to its being useless. As a matter of fact, I know several who are enthusiastic in its favour. A lady visitor of great experience told me the other day it was the finest thing for girls she had ever seen. After the Fourth Standard, the boys take, or should take, the ordinary woodwork and the girls the domestic subjects.

The dominant note of the whole of the courses of models is simplicity. They depend for their beauty, if the charity of critics will allow any, upon good proportion and a simple outline adapted to the purpose for which they are intended, rather than upon elaborations of any kind. This simplicity is necessary; the work is to be the result of the children's own thought—the activities are to be self-directed and the experience gained be really first hand. The courses are used so as to stimulate the inventive faculty; the children are encouraged to use the class model merely as a standard—something to which reference can be made to show essential features, &c., details being left to their own initiative.

The method of teaching is the same in each of the courses.

The first model in each course is intended to be the simplest possible for the material, such as a little ball in the plastic media, a little mat in cane, a simple rule in wood, &c. The grading is by very easy steps, so that the least developed child can surmount the difficulties. As the teacher begins to find out the capacities and capabilities of the children, provision is made for the quicker ones by allowing them to miss models here and there, and so arrive at the more difficult ones quicker. This method is adopted with classes working the same model, and when each individual is doing a different one.

ILLUSTRATION OF PROCEDURE.

As an example of the manner of dealing with the handwork, let us take the first model of any course. This model is made by the teacher previous to the lesson, so that the children do not see how the work has been done. The model is shown to the children, and they are asked to tell all they can about it. Whatever information is given comes from *the children's own initiative*, not from the promptings of the teacher. It is evident that the more senses which are employed in conveying the impressions to the mind and the nearer the senses are to the object, the deeper and the more truthful will those impressions be. It is therefore reasonable that every sense be brought to bear that can be of service. The children are required to give expression to these

Digitized by Google

impressions in clear and exact language. This part of the work is never omitted, but it is often deferred to the end of the lesson. Similar observational and critical lessons are taken on every tool, material, &c., employed in the work. It is very important that these expressions of sense impression be encouraged by every possible means, and that, of course, in as many different ways as possible—by drawing, in material, by writing, painting, &c., but especially by *word*, the common method of intercourse between human beings. How loose and inexact the language of ordinary school children is!

It can generally be arranged that each child has a model, tool, piece of material, &c., in his hand when giving oral expression to his sense impressions. The children must be required to dig deeper and deeper into the matter as time goes by, till nothing is concealed that can be revealed. This ample and extensive, not to say profound, revelation of the object must come entirely from the children—they must *not* be told. It appears to me to be a sound principle to act upon, that children should know *everything about something*. Has the shallowness of the age, of which one hears so much, anything to do with beginning too soon to learn *something about everything?* Any way, as the child is to be his own engineer in this matter, he must know all his senses can tell him of the thing, or the hiatus will cause illogical thinking and poor execution.

The model is thus reviewed and criticized from every aspect that the ingenuity of the children can devise. They are now required to draw it or get material and make it, as the case may be. The teacher watches the proceedings with "masterly inactivity," as a Government Inspector named the attitude of one of my teachers the other day. When sufficient, reasonable and unreasonable, methods of attacking whatever problem awaits solution have been observed, the teacher calls a halt. The methods, tools used, &c., are all brought to the notice of the scholars and freely and critically discussed by them.

I think it very important that the teacher should not bias the children in their judgments: each and all must, and will, take a part in questioning, in Socratic vein, the various methods brought to their notice; other methods also must be obtained from the children. There is a discoverable reason why one method is better than another, if it be better, one tool more adapted to the purpose in hand than another, &c. If we wish children to develop a reasonable judgment in all things, as we surely do, we must on no account discover for them what they can discover for themselves. And what can they not discover?

Self-Reliance.

The teaching proceeds on these lines throughout. It will be understood that the unreasonableness tends to apply to the individual rather than the class as the work proceeds; hence the criticism tends to become individual. My experience is that children treated in this way, left to their own resources for their seeing, thinking, and doing, and then examined critically in every detail of their action, become more and more reasonable as time goes by. Uniformity of method—in other words, the teacher's method—is not even desirable. What is wanted is that each child finds its own method. If the children reveal themselves, the teacher can act from sure knowledge of strengths and weaknesses, of needs and necessities. Otherwise, if the teacher supplies the method, the children are robbed of their natural inquisitiveness and curiosity, and may become mere storehouses of dead information. A little patience and a cheerful manner are all that are required to bring out the innate courage and capacity of the children, and cause them to attack their work with an intelligence, a vim, and a vigour delightful to observe.

We all depend for self-preservation upon our own judgment. It cannot be a reasonable thing that, in the thousand and one daily actions and activities of the school, the child should be compelled so often to act by the judgment of others. "You must do things this way" and "You must not do things that way" are far too frequently heard. I think a better answer to the question, "How should I do this?" is, "Do it as you please."

It is perhaps necessary to say a few words with regard to the accuracy of the finished work it is reasonable to demand. I say "perhaps," because some will doubtless be wondering how a method, entirely voluntary and dependent for its success upon the interest it creates in the children, can or need "demand." If the right atmosphere is there, the children will give freely and spontaneously all they have the power to give as regards accuracy and the other virtues, and the power to give will grow by the exercise.

BLACKIE'S LIST

A GENERAL TEXT-BOOK OF ELEMENTARY ALGEBRA.

By A. E. Layng, M.A., late Head Master of Stafford Grammar School; formerly Scholar of Sidney Sussex College, Cambridge. Author of "Layng's Arithmetic," "Layng's Euclid," &c. With or without Answers. 530 pp. Crown 8vo, 4s. 6d.

This work is intended for students who have already studied the easiest portions of a course in Algebra for a year or so, and provides all that is required for a complete school course. [*Just Published.*

THE WARWICK SHAKESPEARE.

Edited by Prof. Herford, Litt.D. The best and most widely used edition of Shakespeare for School purposes. Price 1s. and 1s. 6d. (each play).

MR. MURRAY'S NEW BOOKS.

Now Ready, Volumes III. and IV. of

AN INTRODUCTORY HISTORY OF ENGLAND.

By C. R. L. FLETCHER, M.A., late Fellow of Magdalen College, Oxford.

Vol. I.—**From the Earliest Times to the End of the Middle Ages.** 5s.
Vol. II.—**From Henry VIII. to the Restoration.** 5s.
Vol. III.—**From Charles II. to the Beginning of the Great War.** 5s. [*Now ready.*
Vol. IV.—**The Great European War.** 5s. [*Now ready.*

These volumes conclude Mr. Fletcher's "Schoolboy's" History of England, of which the first volume appeared in 1904.

Owing to the length and importance of the period covered it has been found necessary to divide it into two portions, of which the first takes the reader down to the year 1792, and the second to 1815.

There are separate chapters on Scotland, Ireland, India, and the Industrial Revolution.

Textes et Questions.

By W. MANSFIELD POOLE, M.A., Head of the Modern Language Department, Royal Naval College, Osborne, and E. L. LASSIMONNE, Officier de l'Instruction Publique, Senior Master at the Royal Naval College, Osborne. 1s. 6d.

A new book on Composition in French by modern methods. It consists of 50 pieces of French, of graduated difficulty and varied vocabulary, each of which occupies a left-hand page of the volume. Facing them will be found a series of twenty questions, bringing out the points of the narrative and practising the pupil in the grammar which arises in the course of the reading lesson.

The book can also be used for the purposes of reading aloud, dictation, reproduction, and recitation, if the master wishes. It has already been thoroughly tested in class and the results have encouraged the authors to believe that it will be especially welcomed by teachers who believe in catechetical lessons but have themselves little time to provide the material for them.

Grammaire Française Élémentaire.

With Exercises. By W. MANSFIELD POOLE, M.A. 2s. 6d.

An Elementary French Grammar on modern lines, written entirely in French, with numerous Exercises, and intended for the use of scholars up to 14 or 15 years of age.

MURRAY'S FRENCH TEXTS.

FOR UPPER AND MIDDLE FORMS.

Edited by W. G. HARTOG, M.A. (Lond.), Lecturer in French at University College, London; Oral Examiner to the London County Council and to the Army Qualifying Board.

This series contains, in addition to short notes in French, exercises providing questions on the subject matter of the story, practice in Grammar on points arising in the text, and suggestions for free composition, parsing, &c.

La Mare au Diable. Par GEORGE SAND. 1s. 6d.

Confessions d'un Ouvrier. Par ÉMILE SOUVESTRE. 1s. 6d.

Bug-Jargal. Par VICTOR HUGO. 1s. 6d.

La Vénus d'Ille et La Dame de Pique. Par PROSPER MÉRIMÉE. 1s. 6d.

Chronique du Règne de Charles IX. Par PROSPER MÉRIMÉE. Edited by ERNEST WEEKLEY, M.A., Professor of French at University College, Nottingham. 1s. 6d.

By W. C. FLAMSTEAD WALTERS, M.A., and R. S. CONWAY, Litt.D.,
Professor of Classical Literature in King's College, London. | Professor of Latin in the University of Manchester.

LIMEN. A First Latin Book.

Crown 8vo. Pp. xxii+376. *Price* 2*s.* 6*d. Also in Two Parts,* 1*s.* 6*d. each.*

SUPPLEMENT FOR TEACHERS, CONTAINING HINTS ON THE ORAL METHOD. 6d.

Journal of Education.—"The book is well conceived and well carried out, and we are confident that it will repay the pains that authors and publisher have bestowed upon it."

Guardian.—"*Limen* is both strictly scientific and eminently practical. . . . is a book which should be in the hands of every teacher of elementary Latin."

Higher Schools for Boys in England.

By CYRIL NORWOOD, M.A., Head Master of the Bristol Grammar School, and ARTHUR H. HOPE, M.A., late Assistant Master at Radley College. [*Ready Shortly.*

With Contributions by Messrs. J. L. PATON, M.A.; W. LATTIMER, M.A.; W. H. FYFE; M. D. HILL, M.A.; P. H. L'ESTRANGE, B.A.; H. L. ROGERS, B.A.; A. WILSON GREEN; B. WOOD HILL; A. H. HALES; F. BEAMES, B.A.; A. J. CLARK; R. RACE; H. G. FORD, M.A.; Dr. C. J. THOMAS; C. J. HAMILTON; Rev. S. R. JAMES; S. B. HARTLEY; F. P. GIBBON; and H. W. SERPELL.

The aim of this book is comparative, critical, and constructive. It deals with every aspect of the subject in a thorough and comprehensive manner and will, it is hoped, prove of the greatest value to all connected with Secondary Education.

Old Testament History.

In Five Periods. By the Rev. J. M. HARDWICH, M.A., and the Rev. H. COSTLEY-WHITE, M.A., Assistant Masters at Rugby School. 2s. each Volume.

Vol. I.—**From the Creation to the Crossing of the Red Sea.**
Vol. II.—**From the Crossing of the Red Sea to Ruth.**
Vol. III.—**From the Birth of Samuel to the Death of David.**
Vol. IV.—**From the Accession of Solomon to the Fall of the Northern Kingdom.**
Vol. V.—**From Hezekiah to the End of the Canon.**

Vols. I., II., and V. are published.
Vols. III. and IV. are in preparation.

Each volume is complete in itself; it contains commentary, text, and notes—everything, in fact, that is needed for the preparation of the Subject in class.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.
Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,351,137. Annual Income, £471,097.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS. LARGE BONUSES. Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES. Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

1. **WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

2. **PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

ANNUAL PREMIUMS FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

LIST OF BOOKS

FOR

SECONDARY SCHOOLS.

Geography, Text-Book of. By G. CECIL FRY, M.Sc., F.I.C. For University Entrance Examinations and the Upper Forms in Schools. 4s. 6d.

"Mr. Fry brings out the fascination of the broad view of geography."—*Literary World.*

Arithmetic, The School. An Edition of the *Tutorial Arithmetic* for School use. By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. *Second Edition.* 3s. 6d. Also in two Parts:—Part I., 2s.; Part II., 2s.

"The best arithmetic for schools on the market."—*Mathematical Gazette.*

Geometry, Theoretical and Practical. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc.

PART I. Contains the matter of Euclid I., III. (1-34), IV. (1-9). With or without Answers. 2s. 6d.

PART II. Euclid II., III. (35-37), IV. (10-16), VI. 2s.

"The book is sound and sensible throughout, and deserves to hold its own easily in the severe competition which text-books on elementary Geometry have to face at present."—*Nature.*

Botany for Matriculation. By Professor F. CAVERS, D.Sc., F.L.S. 5s. 6d.

Adapted to modern methods of teaching; suitable for the new Matriculation Syllabus of London University.

Chemistry, Junior. A Text-Book for the Oxford and Cambridge Junior Locals, and Examinations of similar standard. By R. H. ADIE, M.A., B.Sc., Lecturer in Chemistry at St. John's College, Cambridge. 2s. 6d.

"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine.*

Magnetism and Electricity, The School. By R. H. JUDE, M.A., D.Sc. 3s. 6d.

"One of the most instructive elementary text-books that we have ever come across. We recommend the book throughout."—*Knowledge.*

English History, Groundwork of. By M. E. CARTER, Honour School of Modern History, Oxford. 2s.

"Any student in search of the best bird's-eye view of English History will turn to 'The Tutorial Series' in the natural order of search, and will there find his reward."—*School Guardian.*

English Course, The Matriculation. By W. H. LOW, M.A., and JOHN BRIGGS, M.A., F.Z.S. *Second Edition.* 3s.6d.

"The matter is clearly arranged, concisely and intelligently put, and marked by accurate scholarship and common sense."—*Guardian.*

Our Mother Tongue. A Grammar and History of the English Language. By H. M. HEWITT, M.A., LL.M., and GEORGE BEACH, M.A., LL.D. *Twelfth Edition.* 3s. 6d.

"Scholarly, practical, clear, and helpful, it should in its revised form command a wide acceptance."—*Schoolmaster.*

French Course, The Matriculation. By ERNEST WEEKLEY, M.A. *Third Edition, Enlarged.* 3s. 6d.

This book, though written primarily to meet the requirements of London University Matriculation Examination in French, is generally suitable as a school text-book, and as such has met with a wide adoption.

French Course, Junior. By E. WEEKLEY, M.A. *Second Edition.* 2s. 6d.

"The execution is distinctly an advance on similar courses."—*Journal of Education.*

Latin Grammar, The Tutorial. By B. J. HAYES, M.A., and W. F. MASOM, M.A. *Fourth Edition.* 3s. 6d.

"It is accurate and full without being overloaded with detail, and varieties of type are used with such effect as to minimize the work of the learner."—*Schoolmaster.*

Latin Course, Junior. By B. J. HAYES, M.A. *Second Edition.* 2s. 6d.

"A good practical guide. The principles are sound, and the rules are clearly stated."—*Educational Times.*

University Tutorial Press, Ld.,

Drury Lane, London, W.C.

THE DANGERS OF ILLUSTRATION IN CLASS TEACHING.

AT the Evening Meeting of the members of the College of Preceptors on Wednesday, May 26, Dr. A. E. C. DICKINSON in the chair, Prof. JOHN ADAMS read the following paper:—

Speaking generally, teachers are not in danger of giving too much attention to the subject of Illustration. The danger is all the other way. It is the commonest thing in the world to find a teacher depending for his illustrations on the spur of the moment. If he has a mind particularly well stored with matter on the subject he is dealing with, he may escape from the most serious defect of all—the supplying of tiresome strings of more or less similar and eminently commonplace examples of the rules he is expounding. It is easy enough to supply in almost unlimited quantity examples of the declension of nouns, the conjugation of verbs, natural orders of botany, coalfields, quadrilateral figures, and long division. In all these cases, the connexion between the rule and the example is so clear that no mistake is possible except through such culpable ignorance as is seldom to be found among teachers. Here one example does almost as well as another. The individual content of the example does not affect the general rule.

So soon, however, as we come to a region where the content of the illustration is in itself of importance, we find the hand-to-mouth method very dangerous. The teacher who carelessly dictates at random half-a-dozen English sentences to be turned into Latin to illustrate the construction of *cum* with the subjunctive may lead to all manner of confusion among his pupils who find in the sentences difficulties that have not been prepared for by any previous instruction. Brilliant classical scholarship is no safeguard against error here. All such illustrative sentences must be carefully edited by the teacher who knows the previous training of the boys. No doubt, at a later stage in the teaching of Latin prose, the pupils must be prepared to deal with unedited English passages for translation; for at that stage they have a sufficiently wide knowledge of general construction to allow them to exercise a certain freedom. But even at this stage the master must not select his English classic at random. Certain passages simply cannot be translated into Latin: they contain words and ideas that the classical writers have not had the kindness to anticipate.

In almost every subject the hand-to-mouth illustrator gets into trouble by demanding from his pupils knowledge that is not yet due in the course of study. It is probably idle to labour this point here, for the teacher who has taken the trouble to come to this lecture has given proof that he has enough interest in the subject of method to prevent his making the discreditable bungles that not unfrequently mark the teaching of brilliant scholars, who rely upon their knowledge of their subject to carry them through without taking the trouble necessary to make their teaching efficient. The hearer's danger may indeed be quite the opposite. He may be inclined to over-elaborate his illustrations, and thus to fall into certain errors that may interfere with the success of his teaching.

To begin with, there is the danger of over-illustration. Some teachers seem to regard it as essential to illustrate every point that arises, whether it involves any difficulty or not. What is perfectly clear already needs no illustration. A straightforward statement of fact, dealing with elements well within the pupils' mental content, needs no illustration so long as the teacher's purpose at the time is limited to getting the pupil to understand. Indeed, it is possible that by illustrating what needs no illustration the teacher may cause needless difficulty to arise, especially in the case of the more eager and attentive pupils. Accustomed to attach a meaning to all that the teacher says, they are apt to

Digitized by Google

think that since he makes so much of the point he is labouring there must be something in it which they do not understand, and they may grope about for a meaning that is not there.

To be sure, the purpose of illustration is not always to cause another to understand. It may be to make him realize more vividly, to appreciate, to enjoy. We must, therefore, make provision for the æsthetic use of illustration. Some of our older English writers make a very systematic application of this form of illustration. Thomas Fuller, for example, marks off his essays into short paragraphs, each beginning with an easily understood generalization, immediately followed by one or more illustrations that give it point. Thus in his essay, "Of Memory," we have the fourth paragraph:—

> Overburthen not thy memory to make of so faithful a servant a slave. Remember Atlas was weary. Have as much reason as a camel, to rise when thou hast thy full load. Memory, like a purse, if it be overful that it cannot shut, all will drop out of it. Take heed of a gluttonous curiosity to feed on many things, lest the greediness of the appetite of thy memory spoil the digestion thereof. Beza's case was peculiar and memorable. Being above fourscore years of age, he perfectly could say by heart any Greek chapter in St. Paul's Epistles or anything else which he had learnt long before, but forgot whatsoever was newly told him, his memory, like an inn, retaining old guests, but having no room to entertain new.

This use of illustration, common in Bacon and, in a less condensed form, in modern essayists, is valuable in sermons and hortatory addresses, but must be used sparingly in lectures and more sparingly still in lessons.

Essayists who follow, more or less, the method of Fuller are read largely for the interest of the illustrations. But, after all, the best essayists do make their generalizations the important points. All the rest of the matter centres round them. The illustrations may not be necessary to make clear the meaning of the theses; but they at least illustrate. They form an organic part of the whole; they are worked into the warp and woof of the composition. They are not dragged in for the sake of their intrinsic interest. There is a certain danger that illustration may be degraded from its function and used merely as a means of adornment. The weak teacher and the feeble lecturer are sometimes tempted to use illustrations as sedatives. In a well organized lecture or lesson it is possible that the illustration may occupy more space than the statements to be illustrated; but the main statements are felt to be the essential matters. The illustrations, however numerous, are organically interstitial. On the other hand, there are lectures and lessons, and even books, in which the illustrations are the main element, and the rest of the matter is worked in around them. The generalizations are interstitial; the substantive matter is made up of what are nominally illustrations. A lecture on "The Humour of Mark Twain," on "The Blunders of School Children," on "The Ballads of Scotland" are all very likely to turn out to be series of illustrations, with a few strenuously invented generalizations keeping them apart. Very many book reviews are mainly made up of interstitial matter, and lantern lectures have an almost irresistible tendency to resolve themselves into interstitial commonplaces.

Some teachers may sensibly interpose here and maintain that lantern lectures ought to be interstitial. This point of view has a great deal to recommend it, but in adopting it we would be changing the standpoint of our criticism. It is quite reasonable to maintain that the most valuable part of the lantern lecture is the information conveyed by the slides. These are therefore no longer regarded as means of illustration, but as the substantive matter of teaching. The interstitial remarks of the lecturer are really illustrative of the slides. In the case of a literary lecture professing to give a critical estimate of a writer's works, it is illegitimate to depend on the quotations for the main interest of the lecture. The interest should be in the relation the lecturer is able to establish between his generalizations and the particular quotations that he uses to support his views. It is quite possible, too, for a lantern lecture to depend on the actual lecture, so that the hearers recognize that the slides, however good they may be, would either have been meaningless without the lecturer's exposition or would have had quite a different meaning from that they actually took under his manipulation.

It is clearly important for the teacher to distinguish between the values of certain materials as illustrations and as the subject-matter of actual teaching. It is an excellent thing to read to a class a series of extracts from a standard author with only a few explanatory comments—probably a better thing for the class than to give it a seriously worked out lecture in which only illustrative extracts are given. The important point to remember is that the purpose in the two cases is different. In the first case you are giving the actual material; in the second you ought to assume that the pupils know the whole of the works of the author and that your business is to communicate to them certain generalizations supported by quotations. So long as slides are used as teaching matter, the pupil is entitled to attend mainly to them and to the teacher's explanation only in so far as he feels the need of it. When the slides are used as illustration, the incidence of attention should be reversed.

One of the chief dangers in the use of illustration is connected with this problem of the incidence of attention. There is always danger that the illustration may prove more attractive than the matter to be illustrated. An illustration fails when it derails the interest of the pupils from the main lines of the lesson. With certain material illustrations, such as models or pictures, the derailing of interest is so obvious that it at once attracts the teacher's attention, and he takes means to recall it to the main subject. This is comparatively easily done if he has the sense to allow the illustration to exhaust most of its primitive interest before he proceeds to use it as a mere illustration. The time spent in allowing the excitement that follows on the production of the illustration to exhaust itself is well spent, as the pupils will find it possible to concentrate on the line of secondary interest as brought out in the illustrative process. But frequently the derailing is not observed by the teacher, since he may not have considered the immediately previous mental content of the pupils' minds. Any reference to certain of the more urgent interests of the boys may be an excellent way of getting up a secondary interest in some part of the school work. Mensuration may be connected with the football field or the cricket pitch, hydrostatics with boating, dynamics with the proceedings in the gymnasium. In all such cases there is a danger of temporarily derailing the interest from the school subject. No doubt it may be won back again, but in a case of class instruction the temporary aberration may have caused the loss of some important link that may not be caught up throughout the lesson.

The teacher has to remember that every illustration he uses must run the gauntlet of diverging association in the mind of every one in the class. He can never be quite sure that the most innocent illustration may not derail the interest of some of his pupils, even though he takes all possible precautions. But he ought at least to minimize the danger by doing all he can to remove temptations. For example, he must avoid the *arithmetical challenge*. Certain minds are so constituted that as soon as two terms of an arithmetical problem are presented they must proceed at once to work it out. If at one part of a lesson the master or lecturer offers the information that he was sixteen years of age when he read a particular book, and at a later stage mentions how many years ago it was since he first read that book, he will make most of the pupils in the class work out a little sum to determine his present age. Here the loss of attention is slight, but the same sort of thing may take place on a larger scale. Any reference, for example, to a person or place without giving the name will often set up a disturbance that takes quite a long time to settle down. Teachers should avoid the allusive style. To refer to Milton in a lesson merely as "the author of the 'Defensio Populi Anglicani'" may give satisfaction to a certain number of the pupils who happen to know who is referred to. But to certain others the reference will prove a stumbling block; for they will go on wondering who it can be, when they should be following the work of the class. In this particular case the average boy would probably not trouble much, for the reference is not interesting in itself. But let the teacher use some superlative descriptive reference and dissipation of attention will necessarily follow. "The worst king who ever ruled England," "the author of the longest poem in the English language," are references that will disturb any intelligent class. It goes without saying that it is a laudable thing to be interested in discovering the actual persons referred to. The trouble is that the interest is roused at a wrong time. We are so fond of rousing interest that we are apt to forget that it is necessary to allay interest as well as to rouse it. Interest in the right thing at the wrong time is as troublesome as interest in the wrong thing at the right time. In order that the interest of the pupils in the main subject of the lesson may be maintained, all subordinate interests must be ruthlessly dissipated.

Since writing the above, I have furnished for myself an unexpected and involuntary illustration of my theme. No sooner

Digitized by Google

had I written the words, "the author of the longest poem in the English language," than I began to feel uncomfortable. I realized that I did not know, and I wondered who it could be. My attention was taken up by this new problem, to the disadvantage of the main subject. Still, I felt that all I had to do was to turn to some standard book on the subject of English literature to get the question answered; so I was able to dismiss temporarily the troublesome interest in favour of the general interest, which was in any case stronger. Had I been a careless pupil in a class the work of which was to me uninteresting, it is probable that I should have gone on worrying about that longest poem instead of turning to the main subject. To practise what I preach I should probably add here that I am told that the longest poem in the English language is Drayton's "Polyolbion."

The allusive style may be excellent in print, but when used in lecturing or teaching it ought to be limited to the most obvious allusions—allusions that are well within the range of the less informed of the class or audience, so that the main effect of the allusion will be to rouse that feeling of satisfaction that accompanies the recognition of an old friend in new circumstances. A typical example of the sort of thing that may, perhaps, be permitted in a book, but that must be excluded from oral teaching, is to be found in Mme. de Coulevain's attempt to explain the meaning of the term *bourgeois*: "The peasant, the workman, the artisan are not *bourgeois*. I might name a king who is more so than many people born in the Rue du Sentier. Napoleon I. was *bourgeois*, Napoleon III. was not. Balzac, Guy de Maupassant were not *bourgeois*: Zola was. Two of our great newspapers, one of our best reviews, are."* At this point Mme. de Coulevain's reader puts his finger between the leaves and leans back, wondering who that king and these publications can be. Unless from the point of view of piquancy, the allusions are a mistake in exposition. If there were any indication of how the missing names could be discovered by the reader for himself, there might be some justification for the mystification, since it would rouse him to take a proper share of the work. But, as they stand, they only aggravate the reader by making him feel his ignorance and, it is no extenuating circumstance to add, Mme. de Coulevain's superiority. Apart from this unprofitable disturbance of mind, the same end could be obtained by saying merely that a king could be as *bourgeois* as the tenant of a flat, and that some of our great newspapers and reviews are *bourgeois*. In a lecture or lesson the hearer would not only be irritated; he would necessarily lose a great deal of what immediately followed the vague references. If the authoress means Louis Philippe, why not say so? The names of the two great newspapers and the review would be much more illuminating than the piquant riddle she has set us. No doubt, in thus making our references specific, we kill a certain amount of interest, but the interest killed is of the unhealthy, distracting kind.

Another very real danger in the use of illustration is the tendency to carry over the illustration as a whole with non-essential as well as essential elements. A teacher wished his class to understand that, for a particular experiment he was describing, it was necessary to cut out an oblong piece from the middle of one end of a board. As some of the pupils had a difficulty in understanding what he meant, he explained that the bit cut out was to leave a hole in the bottom of the board so that when it was placed on end there would be an opening in it like the entrance to a dog's kennel. This seemed to satisfy the pupils, but at a later stage, when they had to make a drawing of the apparatus, several of them made the board appear as a pentagon, like the gable end of a house. They had carried the kennel comparison too far. What in this case could be tested by the sketches would, in the case of merely verbal description, probably have escaped detection, and with young children, in particular, it is probable that many of our illustrations are carried over bodily and incorporated in connexions in which certain of their elements are quite out of place. The teacher must be continually on his guard trying to anticipate possible misconceptions of this kind. Nearly always he will find that, in spite of all his endeavours, some dull commonplace child has contrived an impossible combination that, had it been deliberately made, would have been regarded as very ingenious. To meet such contingencies, a certain amount of verbal pruning is necessary, but, above all, there ought to be a good deal of intercourse in the way of applying the illustrations. A teacher in a City school, in giving a lesson on "The Charge of the Light Brigade at Balaclava," made a sketch-plan on the blackboard with the Russian guns on the right of the board and the formation of Hussars, represented by two vertical lines, on the left. The class, as a whole, seemed to understand the state of affairs on the field; but in the course of discussion it came out that some of the boys—the average age of the class was twelve plus—thought a mistake had been made in the position of the Hussars. As they were represented, the boys maintained, they were charging either north or south instead of eastwards, as they ought to do, if they meant to get at the Russian guns. On probing, the teacher discovered that the double line had misled the boys. There was a cavalry barracks in the city, and when the troops passed through the streets they always went two abreast because of the traffic. The boys had got it into their heads that this two-abreast mode of progression was the natural one for cavalry, and that, therefore, they would charge in this order. It was a revelation to them that the charge was made with such a wide front.

Allied to this error of carrying over non-essentials is that of arousing altogether wrong masses of ideas through some superficial resemblance. Beginners in landscape painting are warned against the little cottage on the hillside with its two tiny windows one on each side of the door, and the little doorstep with the resulting resemblance to a grotesque human face. Not infrequently young people see a ludicrous aspect of some matter that, to the adult mind, appears to be of the most matter-of-fact character. "Speaking of babies," said the Sunday School Superintendent, "I have a baby in my eye now." He was quite serious, and did not at first understand what the youngsters found to laugh at in what he regarded as a very commonplace statement. Occasionally, private jokes of this kind interrupt the attention of individual pupils, but it is the business of a good teacher to anticipate and provide against any such misapplication of ordinary words, so far as such misapplications are likely to affect a whole class. The teacher's safety here depends upon his knowledge of the pupils' mental content. Unintentional jokes in class are always the mark either of ignorance or of bad psychology.

Illustrations are often put in what the illustrator regards as a striking way, and yet are apt to mislead the pupils because of their very vividness. I have heard a teacher, in seeking to give his class an adequate idea of the size of London, make the statement that if all the houses in that city were placed end to end they would reach right round the earth, following the equator. In dealing with the class afterwards I found that the general impression produced was complicated by an incongruous picture in the pupils' minds of an interminable street with only one side to it. Quite a number of the pupils had the literal objection that most of the houses would be flooded, as the equator was for most of the time over the ocean. On asking the teacher how he got his data for the measurement, he frankly confessed that he had no data, but, "thought it would be a very effective way of bringing home to the class the enormous extent of the city." He further wanted to know, "morals apart," what objection I had to the illustration. The objection is indicated in the incongruity brought out above, and also in the mistaken notion that, in some way or other, the imagination of the pupils is aided by the picture of this straggling street. As a matter of fact, the figure suggested great extent, but nothing more. We have only a limited power of being impressed: we have, in fact, a threshold of impressiveness. This threshold no doubt may be raised a little by extended experience, but at the best it soon reaches its limit, and beyond that all further stimulation is useless. As Mr. H. G. Wells says, speaking of Niagara: "a hundred tons of water is really just as stunning as ten million. A hundred tons of water stuns one altogether, and what more do you want?"*

A companion picture to that of the ingenious teacher referred to above is to be found in a text-book of geography that seeks to emphasize the size of London in this way: "A house rises out of the ground every hour of the day; a village of more than three hundred persons is added to its population every day."† This has obviously no pictorial value. We certainly do not want to figure forth the daily emergence of a completed house, and the very name of a village suggests something antipathetic to the city spirit. The mere statement of a daily addition of three hundred inhabitants is sufficiently clear without the obscuring

* Winifred Stephens, "French Novelists of To-Day." 1908. Page 94.

* "The Future in America," page 72.

† Meiklejohn, "The British Empire," page 49.

Digitized by Google

figure. As a matter of experience, it turns out that a great many of the pupils who were questioned on the subject proclaimed that they at once multiplied 300 by 365 to get the annual increase, and that the resulting 109,500 was a much more stimulating item than the daily village. The unit adopted has, in fact, a certain influence in the effectiveness of this class of illustration. We all know the stimulating effect of stating our incomes in francs.

At Niagara I read one of those folder advertisements of which the Americans usually make such an effective use. Its purpose was to enhance the wonders of the Falls. The length, breadth, depth, and weight of the body of water was given, and, after the mind had been sufficiently harrowed, the climax was reached by a statement of the number of cubic miles of water that fell over every day. I do not remember the exact figures of the folder, but have a vivid recollection of the sense of anti-climax involved. On calculating out the whole matter, I find the effect even more flattening than my memory led me to expect. Taking the figures supplied by the "Encyclopædia Britannica" (these are old enough not to allow for the great diversion of water for the power stations, and thus give the Falls a fair chance to show up well), I find that 18,000,000 cubic feet of water fall over every minute. This is sufficiently impressive; but, when worked out on the cubic mile basis, the best we can do is to say that in thirteen and a half hours a whole cubic mile of water tumbles over the cliffs. How much more impressive it is to proclaim that in this same period 147,197,952,000 cubic feet pass over. The impressiveness gained by using the magnificent unit of one cubic mile is not nearly sufficient to counterbalance the enormous loss in actual digits. Few people are able to realize what a cubic mile means. In fact, the calculation we have just made has enabled us to understand better what is implied in the higher unit, and so far is of use. But the question we are at present considering is the illustrative value of the one-mile unit, not the possibility of realizing that unit. As a matter of fact, the effect of this paragraph has been to illustrate the enormous bulk of a cubic mile by means of the Falls of Niagara. If it takes even these famous Falls thirteen and a half hours to tumble over one cubic mile of water, then we may have some idea of what this unit implies.

Violent as are the efforts made to raise what may be called "the threshold of stun," they seldom carry us very far. A notable example is to be found in the attempts to convey to the human mind some realization of the enormous distances that separate us from the fixed stars. A favourite plan is to assume that a train starts from the earth and travels day and night at sixty miles an hour. We are then told the exact length of time this train would take to reach the nearest fixed star. The time, however, is so great that there is an opportunity for the mind to conceive of the journey as being a rather restful experience. Instead of being impressed by the enormous space passed over, the mind is inclined to rest upon the evenness of the journey. So far as the illustration appeals to the pictorial it defeats itself, as the hurry and bustle of the train disappears when we project it against the silence of limitless space. Take the following illustration that was burned into my mind at a very early period. It occurs in the geography text-book* on which I was brought up:—

> The distance from Liverpool to New York is about 3,500 miles, and can be traversed in about ten days. At this rate, the time required to go from the Sun to the planets would be as follows:—
>
> | | | |
> |---|---|---|
> | 289 | years to | Mercury. |
> | 540 | ,, | Venus. |
> | 744 | ,, | Earth. |
> | 1,127 | ,, | Mars. |
> | 1,720 | ,, | the nearer Asteroids. |
> | 2,372 | ,, | the more distant Asteroids. |
> | 3,867 | ,, | Jupiter. |
> | 7,092 | ,, | Saturn. |
> | 14,262 | ,, | Uranus. |
> | 22,521 | ,, | Neptune. |
> | 156,500,000 | ,, | nearest fixed star. |
>
> At this rate it would have taken from 1,000 years before the creation of man till now in order to reach even Saturn.

This old illustration is not introduced for its own sake, but because of the effect it produced on certain students to whom it was presented. Their attitude was at once that of the superior person. They did not quote Molière, but they led me clearly to understand that we had now changed all that, and that, thanks to the "Mauretania" and her rivals, we could now cut down these figures by exactly one half. So difficult is it to keep the relative and the absolute in their proper places. To be sure the young men immediately saw their error, and one of them justified himself to some extent by saying that, after all, America *is* really nearer to Europe than it was last century, and to gainsay him was not the part of one who teaches that the true meaning of an idea is the power of behaving intelligently in relation to the content of the outer world involved in that idea.

The only way in which we can realize vast quantities is by manipulating them, and utilizing the conception of relativity. When the astronomer tells us that Sirius is 1,375,000 times further away from us than the Sun is, we take the gentleman's word for it; but we do not realize what he means. It is true that most of us would accept his "arithmetical challenge" and work out the equation:

$$91{,}750{,}000 \times 1{,}375{,}000 = 126{,}156{,}250{,}000{,}000;$$

and some of us might derive some satisfaction from being able to say that Sirius is one hundred and twenty-six trillion, one hundred and fifty-six billion, two hundred and fifty million miles from the earth; but are we any further forward as to what it all means? The answer is to be found in the fact that we can manipulate those figures in an intelligent way. We can make calculations and come to certain conclusions based on them—conclusions, be it observed, that a plain man can come to on his own account when the matter is properly presented to him. The following is taken from a formerly much used text-book of which only a small section is set apart for astronomical matters:

> It has been calculated that if the sun were removed to the distance of Sirius it would shine with only $\frac{1}{1\,5\,0}$ part of its lustre, and it has been conjectured therefore that the diameter of Sirius must be at least twelve times greater than that of the sun. Of this, however, we cannot be certain, for spectrum analysis has taught us, among other things, that stars shine with different degrees of brightness, owing probably to differences of temperature, and that Sirius is among the hottest and brightest of all.*

We have here a calculation—not a very safe one, as the writer indicates, but a quite intelligible one—based upon the enormous distance that we admit we cannot realize. The calculation is none the less valid. When we begin to compare one fixed star with another and arrange the stars into their various magnitudes, we gradually attach a more or less definite meaning to the enormous astronomical numbers: we can behave intelligently towards them. So with the minute subdivisions implied in the atomic theory and the others that are seeking to supplant it. Chemists can act intelligently upon certain calculations based on elements that they cannot realize.

Many illustrations aim at the pictorial when they should really seek to eliminate it. The pupil is told that there are approximately sixteen hundred million human beings at present living upon the earth. It is difficult to realize this vast number; so the illustrator sets about making a picture. He selects some particular part of the world that will just hold all the inhabitants of the earth standing packed together. The best situation is obviously an island, because the imagination will have the aid of the sea in limiting its operations. It is well that the island selected should have some hill from the top of which the whole island can be envisaged. The Isle of Wight fulfils this condition almost perfectly. Standing on Ashey Down, the spectator can command the whole island, with a very trifling exception. The illustrator now proceeds with his calculations. The island contains about 147 square miles, and each square mile contains 27,878,400 square feet. Accordingly the island contains 4,098,124,800 square feet. This, divided by 1,600,000,000, gives almost exactly 2·5 square feet per human being, or a square of about 19 in. side. Having now gathered the whole human race on the Isle of Wight, what better off are we? So far from being helped, the imagination is harassed. It has to work overtime, there are so many things for it to do with this huge crowd. The scene calls up too many irrelevant elements: the different sizes, colours, and odours of those people swept in from all ends of the earth. How are they to be fed? Are we to picture them as arranged by nations, or indiscriminately? How could they stand on some of the steep places in the island? I have seen many a class reduced to desperation by the surging questions raised by this preposterous

Digitized by Google

picture. As a preliminary to a word picture of the Day of Judgment, the scheme may have its advantages, but for giving an idea of the population of the world it is not very successful. In actual practice it conveys the general impression that there are not so many people in the world after all. The Isle of Wight is such a little place. If the purpose is to show how much room there is still in the world, the illustration has its advantages, though it could hardly be used as a fair argument.

The best appeal is always to the highest unit available in the experience of the persons concerned. Taking the biggest city with which the pupil has personal acquaintance, this could be compared quantitatively with the number of people in the pupil's native country, and then with the world population. The United States has now a population that is approaching the good-natured number 100,000,000, so the American boy has the advantage of a ready-made standard that renders comparison very easy. It does not follow that the American boy realizes what even the population of his Republic means. But all that is necessary for intelligent comparison is present.

We need a standard for our illustrative work, but it is not always necessary to reduce our quantitative illustrations to this standard unit. It is enough if we have a unit to which we can reduce them all, if that be necessary. We ought to have a clear idea of what one square foot means, an acre, and, if possible, a square mile. In certain towns the Municipal Authorities are good enough to lay out somewhere in their parks a square acre, so that the children of the town may grow up accustomed to this as a standard. The Bank of England, in London, we are told, covers exactly one acre of ground, but this is not nearly so useful a standard as the square acre. The bigger the quantities we are to deal with, naturally the bigger the standard unit. With certain astronomical measurements the unit is the radius of the earth, with others the diameter of the moon's orbit, with still others the major axis of the earth's orbit. Whatever the standard, it must be a definite one. The ordinary householder is so perplexed at the unintelligible order to put one fluid ounce of pepsin in a quart of milk that he welcomes the practicable, if inexact, equivalent of two tablespoonfuls. But, in deliberate illustration, some sort of standard should be insisted on. Sir John Herschel has a deplorable illustration of the magnitude and distances of the various planets in the solar system. We are to imagine a level field or bowling green, with a globe two feet in diameter in the middle to represent the sun. Then:

For Mercury, put a grain of mustard seed at distance of			82	feet.
,, Venus,	,,	pea	,, 142	,,
,, Earth,	,,	pea	,, 215	,,
,, Mars,	,,	large pinhead	,, 327	,,
,, the smaller planets, grains of sand at distances varying from			500 to 600	,,
,, Jupiter, a moderate-sized orange at distance of				½ mile.
,, Saturn, a small orange		,,	nearly ½	,,
,, Uranus, a full-sized cherry		,,	¾	,,
,, Neptune, a good-sized plum		,,	1¼	,,

There is no standard here at all. What is the standard size of a pea, a cherry, a plum, an orange? Who is to determine how big a large pin-head is, and, whatever the real size of a pea, the effect the illustration produces on the mind of the ordinary reader is that Venus is larger than it really is in proportion to the earth. If it is said that all that is wanted is to convey a general impression, the answer is that it invites comparisons, and suggests by its discrimination among the various qualifications that the comparisons are accurate. Further, the distances should keep to the same standard: they ought to be all expressed in feet. These criticisms are not the outcome of mere arm-chair reflection. They express the complaints of many classes of students (ages ranging from nineteen to twenty-two) who have been offered instruction through this table.

Naturally the greater the number of different illustrations used, the less the chance of this particular form of misunderstanding, since by the process of arrest the contrary ideas in the different complexes will oppose each other and lead to the elimination of the conflicting elements.

A final danger of the use of certain forms of illustration is the tendency it has to make the pupils dependent on a more or less pictorial setting for their knowledge. If they are always accustomed to have concrete examples set before them, they may lose the power of thinking without such aids. Many people never get beyond the need of having some sort of picture by means of which they can carry on their thinking; and, while this pictorial thinking has its place in our mental life, our efficiency is greatly diminished if we cannot on occasion discard it for a freer form.

Mr. Orchard said there were three primary conditions that all illustrations should fulfil. They should, above all things, be clear; they should not be in any way difficult of apprehension or outside the experience of the pupil; and they should not be overdone, but should always be ancillary to the immediate object of instruction.

Dr. Hayward said, with regard to the danger of illustrations being off the track of the lesson, he would be well content to accept the risk, if only the main object of all teaching—to stimulate the faculties of the pupils—could thereby be secured. A certain amount of distraction there must necessarily be, and the more lively the illustration the more danger of diverting the attention of the pupil; but the aim of the teacher should be to impress as strongly as possible—to exert, as the lecturer aptly described it, a "stunning" effect. If this could be secured, he would willingly sacrifice even such important matters as logical continuity and proportion. Every teacher must have experienced the propensity on the part of the pupils to attach a wrong meaning to general terms—such as "House" of Stuart, "kingdom" in natural history, &c.; and to fix ideas and clear up vague and faulty conceptions was the proper province of illustration.

Miss Stevens remarked that it was often found that personal experiences—what the teacher himself had seen or done—had an unfailing interest for the pupils in the way of illustration; but that it might be necessary for him to be on his guard lest, in his desire to secure an easy effect, the egotistical element should become too marked a habit.

Prof. Adams having replied to the remarks of the various speakers, a hearty vote of thanks to the lecturer concluded the proceedings.

CONFÉRENCES FRANÇAISES.

Société Nationale des Professeurs de Français.

ENGLAND THROUGH FRENCH GLASSES.

By M. J. Duhamel, L. ès L.

Nous nous plaisons à constater que les conférences mensuelles organisées par la Société Nationale des Professeurs de Français en Angleterre au College of Preceptors, Bloomsbury Square, sont régulièrement suivies par un public averti et capable d'en apprécier tout l'intérêt.

Le 24 avril dernier, M. Duhamel, L. ès L., Chargé de Cours à l'Académie Royale Militaire de Woolwich, traitait, devant une nombreuse et brillante assistance, cet intéressant sujet: "Choses et Autres sur l'Angleterre."

Le conférencier s'est attaché à nous démontrer, dans ses prémisses, que Français et Anglais, en général, ne se connaissaient pas. Après avoir fait quelques restrictions en faveur d'une élite, dans les deux pays, il nous a presque convaincu lorsqu'il nous a tracé les amusants portraits que voici:

"La tradition veut, en France, que les Anglais soient longs, portent des favoris rouges et des complets à carreaux. . . . Les Français en font le type du sans-gêne et aussi du sang-froid, de l'aplomb, et aussi de l'excentricité. Ils lui mettent une pipe à la bouche toujours fumante et sur la tête une casquette qui n'en bouge pas. . . .

"Quant aux Français, ah! aux yeux des Anglais, ils ont la réputation de vivre de grenouilles et d'escargots, de parler pour ne rien dire, de papillonner sans cesse autour d'un tremblotant idéal, de ne jamais s'occuper d'œuvres utiles ou sérieuses, d'être colères, ridicules, noirs, petits, de passer leur temps au café à causer politique, femmes ou duels et de faire des gestes." . . .

— Ignorance en deçà, erreur au delà, s'écrie le conférencier. Des aphorismes jamais vérifiés, les maximes, les on-dit, les propos de salon, toutes les causes que Bacon classait sous le chef d'*idola fori*, racontars que n'eût osé rapporter le trop confiant Hérodote, expliquent cet éloignement social, moral et intellectuel, qui n'est guère à notre mutuel honneur.

Les Anglais disent, après un court voyage en France: "Ces extraordinaires Français font tout au rebours de nous!" Et les descendants des Gaulois qui viennent en Albion s'écrient, parodiant Montesquieu: "Comment, mais comment peut-on être Anglais! Mon Dieu, mon Dieu, nom d'un petit bonhomme dans leur île, on ne fait rien comme chez nous!"

* * *

Sapiens nihil affirmat quod non probet, dit M. Duhamel. Et il prouve ce qu'il avance:

En Angleterre on compte par douzaines, en France par dizaines.

Les pains de Paris sont longs, ceux de Londres carrés.

Paris mange les pommes de terre frites, Londres les mange bouillies.

Digitized by Google

Paris boit du vin, Londres de la bière.

Paris prend du café, Londres du thé.

Le cocher parisien garde sa droite (quand il y pense), le *cabby* garde sa gauche.

Paris a des fenêtres à espagnolette, Londres des fenêtres à guillotine.

Les *clergymen* ont une femme et pas de soutane, les prêtres catholiques ont une soutane et pas de femme. . . .

Les Anglais tiennent leur fourchette de la main gauche, nous la tenons à tour de rôle dans la gauche et dans la droite. En France les gens comme il faut mettent leurs gants les plus frais pour faire une visite, en Angleterre ils les ôtent pour entrer au salon.

Et l'on pourrait continuer ainsi pendant des heures—mais à quoi bon? Puisque cette proposition est maintenant admissible: "Si *géographiquement* l'Angleterre est aux portes de la France, *socialement* elle en est plus éloignée que la plupart des contrées du vieux Continent."

— Pourquoi?

— Parce que, répond M. Duhamel, nous sommes séparés par des différences de race (vous êtes des Anglo-Saxons, nous sommes des Latins); de climat (vous habitez le pays où il y a du brouillard et nous celui où il y a du soleil); de milieu (l'Angleterre est un pays traditionnaliste, discipliné et pratique, la France un pays d'idéologues et de théoriciens).

* * *

Puis, par une transition habile, le conférencier passe en revue l'art et la littérature des deux pays. Il dit le culte des Français pour la beauté,

Qui flamboie immuable, éternelle,
Des univers entiers roulent sous ses pieds blancs.*

— Vous la comprenez, ajoute-il, mais nous la faisons. Bien vite il rend justice aux Gainsborough, Whistler, Turner, Constable, mais il se demande à bon droit: où sont vos très grands sculpteurs, à part de pures exceptions comme Coysevox, et vos très grands musiciens, à part les compositeurs sacrés? Je sais, dit-il, que vous avez assez d'esprit pour ne pas vous froisser de ces constatations; l'art chez vous, sa réalisation, son concept existe, mais c'est le privilège d'une élite; chez nous, c'est l'apanage du vulgaire.

Après l'art, la littérature.

— La vôtre a des noms, la nôtre des périodes. Vous avez Shakespeare, "l'une des forces de la nature," et la Bible; nous avons le siècle de Louis XIV, etc., etc. Rapidement le conférencier nous fait assister à l'évolution des lettres dans nos deux pays. Il compare ensuite nos langues—l'une énergique, compacte, riche en mots, l'autre flexible comme un fleuret, acérée, riche en idées. L'une, langue des affaires et de la Bible; l'autre, langue de l'amour, de la dissertation et de la conversation.

Souple et à l'aise dans son vaste sujet, M. Duhamel arrive à nous parler du roman français. Il le défend, tout en le jugeant impartialement. Il déclare avec raison, croyons-nous, qu'avec une clientèle *purement* française, les éditeurs de Paris ne pourraient imprimer leurs volumes égrillards. Ils ne feraient pas leurs frais.

"Assurément, continue-t-il, il y a du mélange dans notre roman, dans notre théâtre, comme dans notre peinture; mais, en vérité, les mauvais livres ont trop grande renommée à côté des bons, de ceux que produisent les Paul Bourget, les Maurice Barrès et bien d'autres encore."

Toujours dans son sujet, dont il examine les moindres côtés, le conférencier met ses auditeurs en gaîté par les innocentes questions que voici:

— Pourquoi votre devise est-elle: "Honni soit qui mal y pense," quand Mrs. Grundy est toujours là, vigilante et sévère, prête à voiler des pans de son pudique manteau les statues par trop académiques? Pourquoi dites-vous de quelqu'un *qu'il vous tire la jambe*, quand nous disons qu' "il se paie notre tête"; et pourquoi appelez-vous des *sea-dogs* ceux que nous nommons des "loups de mer"? Pourquoi dites-vous *to take French leave* quand nous disons "filer à l'anglaise"; pourquoi un mouton est-il *sheep* lorsqu'il est sur pied et *mutton* lorsqu'il est sur le plat? Pourquoi, à table, la maîtresse de maison, pour faciliter les choses, ne dirait-elle point à ses hôtes: "Have some more OX"?

M. Duhamel, bon sorcier, avait encore bien d'autres tours dans son sac; il est regrettable que nous ne puissions, faute d'espace, les rapporter ici fidèlement.

* Le Leconte de Lisle, "Poèmes antiques."

Il conclut. "Nos deux peuples, nos deux races, nos deux pays constituent une vivante antithèse. Hélas, entre eux, il est bien plus facile de chercher des contrastes que de trouver des affinités. Nous ne sommes que contrastes! Nous n'avons qu'un point de ressemblance: nous sommes des hommes; et, comme hommes, nous nous sommes véritablement traités comme des chiens. Nous avons guerroyé les uns contre les autres, comme peuples n'ont jamais guerroyé, nous nous sommes franchement haïs, nos intérêts ont toujours été opposés, nos ambitions antagonistes.

Dire qu' à l'heure actuelle ces ferments de jalousie, de rancune, se sont dissous, évaporés, serait une opinion bien crue. Je crois que la race et l'hérédité sont plus fortes que la volonté individuelle et l'affection spontanée.

Il est indéniable, cependant, qu'au moment présent nous nous sentons irrésistiblement portés les uns vers les autres.

Trois causes à cet effet:

1° *Individuellement* nous nous connaissons davantage: ceux des Français qui ont pratiqué l'Angleterre et les Anglais non seulement pendant des mois, mais des années, analysent ainsi qu'il convient, après un long séjour dans l'île inconnue et mystérieuse, le caractère, l'état d'âme de ses habitants; apprécient leur vie confortable et large; jugent favorablement l'insulaire, d'apparence — d'apparence rude et froid, ardent — qui le croirait?—discrètement charitable, et rendent justice à "la force harmonieuse qui, chez lui, unit le culte du passé, la religion des traditions, à l'amour effréné du progrès, à la passion vivace et jamais satisfaite de l'avenir,"—le comprennent enfin, pour l'aimer sans arrière-pensée, lui et sa terre hospitalière, sans que pareille affection les empêche de conserver une noble et filiale tendresse pour leur "doux pays de France, à la lumineuse auréole." Quant aux Anglais qui connaissent la France, ils se seront à la longue assimilé son génie, ils l'auront sondé, ils auront découvert que le fond valait certainement mieux que la surface, ils auront compris—eux aussi—nos compatriotes "adorateurs du hasard, du succès, de l'éclat, du bruit, de la *gloire*, plus capables d'héroïsme que de vertu, propres à concevoir d'immenses desseins plus qu'à parachever de grandes entreprises," comme l'a dit le célèbre historien Alexis de Tocqueville, "tour à tour pour l'Europe un objet d'admiration, de haine, de pitié, de terreur, mais jamais d'indifférence."

2° Commercialement nous nous sentons indispensables les uns aux autres. L'effet du commerce est non seulement de porter à la paix, mais aussi à l'amitié.

3° Enfin, *politiquement* et *mondialement*, Français et Anglais doivent se tenir les coudes. Et celle-ci est une raison d'airain.

Vous, Anglais, avez un vaste empire, le fruit de votre énergie nationale, fertilisé du sang et du labeur de vos enfants, vous voulez le conserver et en jouir dans la paix. Fin légitime.

Nous, Français, possédons un patrimoine intellectuel et moral que nous voulons entretenir et accroître sans cesse, nous reposons sur un passé de gloire, nous vivons sur une fortune détenue par nos rentiers et éparpillée par l'univers. Nous aussi voulons la tranquillité. A côté de nous, d'autres nations, parvenues avides, brûlent, elles, d'agrandir leur place au soleil. A nous de les en empêcher. *Dura lex* . . . Ce sont leurs convoitises qui nous ont rapprochés: "Nous avons une communauté à défendre contre le germanisme."

Telle est la base de l'Entente Franco-Anglaise, nouvel astre du ciel diplomatique autour duquel gravite maintenant un nouvel et imposant satellite: la Russie, qui s'est jointe à nous selon les règles de l'équilibre européen, aussi rigides que celles de la gravitation universelle. Voici la combinaison du XXième siècle, les puissances du centre de l'Europe, d'une part, contre celles de la périphérie.

"Nous, Angleterre, Russie, France, formons la Triple-Entente, opposée à la Triple-Alliance. Nous sommes unis, il nous faut l'être. C'est notre *intérêt*. Il n'y a pas de plus puissant moteur.

"Toutes les manœuvres étrangères pour briser notre lien ont échoué. Réjouissons-nous en, mais prenons garde! N'oublions pas que les *traités* valent toujours mieux que les *accords*—ne nous en tenons donc pas à ceux-ci et acheminons-nous vers ceux-là!"

* * *

Et le conférencier, après cette revue de la politique européenne, termine ainsi: "Jusqu'à cette heure, les conventions qui sont intervenues entre l'Angleterre et la France ressemblent étrangement à celles d'un . . . mariage de convenances; mais personne ne pourra m'empêcher de lever un verre imaginaire au mariage d'amour de John Bull, Esq., et de Madame la France."

Ces souhaits sont les nôtres.

REVIEWS.

British Glimpses of American Education.

(1) *America at College as seen by a Scots Graduate.* By Robert K. Risk, M.A. (3s. 6d. net. Constable.) (2) *Impressions of American Education in 1908.* By Sara A. Burstall, M.A., Head Mistress, Manchester High School for Girls and Lecturer in Education in the University of Manchester. (4s. 6d. Longmans.)

(1) Written primarily for the newspaper reader, Mr. Risk's pages afford a good deal of information to all who, being interested in American educational developments, are without a first-hand acquaintance with the subject. While the official or conventional views enunciated in documents and upon platforms are stated, the author does not leave us in the dark about the facts as they stand revealed in the daily life of college and University. More particularly he dwells upon features of American University administration which promise direction to those who govern policy and methods in the Universities of Great Britain. For example, Mr. Risk makes it clear that the system of "elective studies" sanctioned by the authority of the late President of Harvard is not capable of indefinite extension without injury to intellectual thoroughness. His remarks upon the position of women undergraduates in a "co-ed. shop" like Cornell should prove illuminating to those who know American co-education only in the pages of its English admirers. The multiplication of Universities would seem to have passed the limits of usefulness in some parts of the Union, where those institutions are said to suffer from a fierce competition whose motive force is not always a pure zeal for knowledge.

Whether that hint prove useful in this country or not, there is no question that we have much to learn from America concerning the proper place of the library in educational organization. German methods and ideals have had great influence upon American conceptions of the purpose and functions of Universities, and in consequence the University libraries of America are the indispensable workrooms not only of teachers and seniors, but of all undergraduates who are intent upon study. Enormous additions are made yearly to the store of books, and much ingenuity is employed, especially in subdivision, cataloguing and ready access, to ensure that workmen and tools are brought frequently and expeditiously together. At home the tyro too frequently, as Mr. Risk says, "has to select his book, without knowing what it contains, and to take it home in order to discover that it does not contain what he wants."

The clubbable disposition of the English-speaking races, grafted upon the German students' *Vereinigungen*, has produced the American "Fratman," member at once of a tiny social coterie in his own University and associated in the bonds of his "fraternity" with members of very many other Universities. In this connexion Mr. Risk tells us of the unsuccessful attempts made at Princeton and elsewhere to break down the exclusiveness of these voluntary societies by the institution of colleges on the model of Oxford and Cambridge. Even the Middle Ages "come by their own" in due course.

Mr. Risk's manner is as entertaining as his matter; his little book is eminently readable from its dedication to Dr. Tuke to its final dictum: "It is a great country, America. In University matters, as in social and political affairs, it does not know where it is going, but it is determined to get there."

(2) Much more comprehensive in scope and more detailed in treatment is the book which Miss Burstall modestly describes as "Impressions." Certain characteristic differences between American and English education are set forth in a general introduction to the volume, which then reviews the work of the high schools, colleges, and Universities. Those responsible for University administration in this country will welcome the information given in these chapters concerning the system of a common entrance examination, which is favoured in the Eastern States, and the system of accrediting to the matriculant the work which he has done in the course of his school career, a plan favoured by the newer State foundations of the Middle-West and West. A chapter on educational institutions, which American law and custom designate "private," furnishes incidentally a criticism of American secondary instruction from within; in many quarters there seems to be considerable distrust of the publicly managed high schools, and a marked preference for secondary schools of the type representing the English public school, which in the American sense is a private corporation.

Miss Burstall then passes from organization to method, dealing in turn with the "Recitation" (whose defect, not noted by the author, is to produce chatterers at large), the teaching of history, the extension of laboratory methods to literary studies, and the recently introduced plan of "group-work," whose object is to foster the social sentiment through close co-operation in the pursuit of studies selected by the members of the group themselves—this last appearing to be one more illustration of the tendency to confuse the child with the adult learner. Miss Burstall fully justifies her statement that "probably there is more to be learned in this subject (History) by English students of American education than in any other." She gives an admirable account of the very valuable work done in many American schools and colleges under the stimulus of the Committee of Seven, and of the fine historical work of many American scholars, work which differs *toto coelo* from the piffle of those who suppose that cooking beans and cranberries is studying seventeenth-century history.

Another chapter of peculiar value to English teachers and administrators is that on Home Economics, since it gives an insight into modes of dealing with a study which already has practical associations with the work of our high schools and of at least one English University. The relative superiority of equipment and of method in American commercial and industrial education is well brought out in the chapters which follow. Whereas we are apt to regard the studies of this order as narrowly technical, impoverished and impoverishing, the American educator has grasped their relation not merely to economic and national life, but to life in general, so that he looks to these to correct that characteristic error of schools which inclines them to separate themselves from the workaday world. The permanence of what may be called the problem of the continuation school justifies the American experiments.

Miss Burstall's last chapter but one discusses the place of women in American education, a discussion which easily passes into that of woman's position with reference to public affairs in general. She notes with some surprise the inferior place occupied by the American woman in this respect, makes it clear that women are confined for the most part to subordinate situations, and that their numerical preponderance amongst teachers is to be accounted for by financial reasons only. The American girl in the high school "exquisitely shod" and wearing "a good deal of jewellery," the American woman at college with her ideal of "social availability," both appear to be *enfants gâtées* who must seriously impair any system of co-education. Indeed, our author gives reasons for believing that at school the boys are sacrificed to the supposed interests of the girls, whilst in mixed Universities the women tend to depress the level of scholarship.

The final chapter is a significant summing up of the author's impressions. It begins by warning us to avoid America's violation of principle, and holds up for our imitation her clever adaptation of labour-saving devices in the schoolroom. These appear to be the chief lessons to be learned from a consideration of American secondary education to-day. In some other fields, however, she thinks we may with advantage imitate things more vital—for example, the less mechanical teaching of the American primary school and the liberal spirit underlying American technical instruction.

That the American belief in education permeates all classes as a very real force is evident not only from the large expenditure, public and private, upon magnificent buildings and equipment, but also from the sacrifices which individual parents make as a matter of course for the sake of their children's education. Apparently the American poor do not make those whining excuses for a neglect of duty which is far too frequently condoned amongst ourselves. But their belief in education does not seem to be a well-instructed belief. American teachers are almost confined to one sex, because women's labour is remunerated at a lower rate: they are paid much less than other Americans, have but a very insecure tenure of office, are crushed under the tyranny of officials, so that men quickly pass out of the teachers' ranks, and first-rate men are rarely found there. The expenditure on the public high schools is insufficient to secure a first-rate secondary education, their classes are too large, and their work is over-organized. American sentiment demands a liberal provision for education, and Americans are ready to make great sacrifices to secure it, but they trust too much to officials and their bureaux. In short, America over-values machinery.

These are some of the conclusions which occur to the reader of Miss Burstall's volume—probably her own view is more just. "It is not easy to dogmatize positively about American education: the more one studies the less one seems to know. But even

Digitized by Google

a superficial study of it helps one to understand home better, to see what is best in English education, what must at all costs be preserved" (page 286). As Miss Burstall knows, the test of a national system of education is not in its published programmes and syllabuses, the declamations of the press, the platform or the essay, nor in the statements of the enthusiastic ladies and the astute superintendents who conduct the schools. It is to be found rather in the general tone and intelligence of the community, in the national ideals, in the arts most esteemed amongst them, and in similar observable facts of national life. Tried by these tests, a dogmatizer is tempted to say that American education as at present conducted either fails in its purpose or is too recent to have produced measurable effect. Comparison on this basis seems to indicate that we in this country are already too American, and that we should look across the Atlantic for things to avoid even more than for things to imitate.

Moral Education.

Report on Moral Instruction (General and Denominational) and on Moral Training in Eighteen Countries. By Gustav Spiller. (2s. 6d. net. Watts.)

The Report of the First International Moral Education Congress and the two recent volumes on "Moral Instruction and Training in Schools" edited by Prof. Sadler (Longmans), gave a comprehensive survey of foreign and colonial opinion and practice by a considerable number of expert educationists. The present "Report," which is issued by the International Union of Ethical Societies, may be regarded as complementary. It deals with eighteen countries—Austria, Belgium, the British Empire, China, Denmark, Germany, Holland, Hungary, Italy, Japan, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United States—with Denmark, Norway, Sweden, and Turkey very briefly. Mr. Spiller gives in full most of the moral instruction syllabuses used in the schools, details of the definitely ethical portions of the religious instruction manuals of the principal countries, a large number of references to the subject in the education codes of the civilized world, notes containing the pith of the best literature on the subject, and an annotated bibliography of some 750 volumes. In two introductory essays he discusses the whole question very frankly and at some length. The first essay appeals to the Churches. "The Churches," he says, "by their very principles are bound to hail the spread of universal education, physical, intellectual, and moral; and, since the State is the only force which can compass so far-reaching an end, and since the variety of beliefs makes all theological teaching unjust to tax-payers, parents, teachers, and children as a whole, the State is compelled to develop a non-theological system of moral instruction," in which the State "should have, as in time it will have, the hearty concurrence and co-operation of the Churches." Meantime, however, he has to persuade the Minister of Education to find a place for moral instruction on his lines in the ordinary curriculum: and it will scarcely tend to bring the recalcitrant Churches into concurrence and co-operation to tell them plainly that they "are unfortunately making an efficient system of national education an impossibility by their mistaken insistence on antiquated notions and privileges." Mr. Spiller, in fact, seems not to realize adequately the position of these Churches, and consequently to treat them in a less sympathetic spirit than prudence—not to say justice—might have suggested. Of course, if it is war to the knife, the question of phraseology becomes irrelevant. The second essay discusses the problem of moral education in detail. "The ordinary routine of a good school must be followed in moral instruction as in other subjects, and co-ordinated material must be supplied to the teacher." "For practical purposes the syllabus could not be too explicit or too comprehensive: perhaps by combining the syllabuses of the English Moral Instruction League with those used in the French State schools, considerably extending the variety of detail, the maximum of good might be achieved." Mr. Spiller leaves his "very rough sketch of the material basis of a possible system of moral instruction" to be elaborated by a special committee representing the most varied interests and experiences.

The work is very ably executed, and educationists will be interested in the mass of materials collected as well as in the argument and the suggestions. Apart altogether from the question of religious differences, we confess we cannot resist an unregenerate impatience with such an intolerable deal of moral concussion. How much better than the whole would be much less than the half! Bode a silk gown, and you may get a sleeve of it. The exigencies of polemics may justify Mr. Spiller's thoroughgoing claims, but probably most of the supporters of moral education would be content with the realization of a substantial fragment of his hopes. The British mind may learn much from other countries, but it has its peculiarities—it will not be over-shepherded even into the fold of all the virtues.

Mathematics for Engineers.

A Course in Mathematics. Vol. I. By Frederick S. Woods and Frederick H. Bailey. (10s. 6d. Ginn.)

The authors of the above treatise, of which at present only the earlier and more elementary of its two volumes is under consideration, are excellent exponents of the ideas that have grown up in recent years with regard to mathematical teaching. The subjects discussed and the stage to which the reader advances correspond to the usual course in mathematical study prescribed for the first two years of training in one of the engineering schools of the United States. But whereas, in the past, algebra, analytical geometry, infinitesimal calculus, &c. have formed distinct units of study pursued separately, an able attempt is made by the present writers to combine the instruction in the several subjects. The leading principles of each are introduced just when they seem to the authors calculated to lend most aid in building up the entire mathematical structure. By these means it is sought to make the various branches of mathematical science contribute towards mutual development; by these means it is hoped that the student's more thorough grasp of mathematics as a whole will be secured, and that a general mastery of the tools at his disposal will enable the reader to select for the solution of any given problem the most powerful—often also the most simple—instruments available. For the engineer of the future it will be to prove the superiority or inferiority of the present day training as compared with older methods of preparation.

In the course of instruction framed by the writers of this manual, the early introduction of first ideas of co-ordinate geometry and the calculus offers an undoubted advantage, in that it promotes greater familiarity with the principles of these subjects by extending over a longer period the time devoted to them. The manner in which the contents of the work are treated is excellent. The demonstrations are marked by simplicity both of character and language. An unsatisfactory feeling is naturally created at times by the constantly recurring necessity of deferring the remainder of an argument or the rest of a subject until a later stage. This, however, is preferable to allowing the student either, on the one hand, to regard as complete the discussion of the matter under consideration, or, on the other, to waste time and energy in the attempt to grasp facts not yet within his reach. The gradual unfolding of ideas is very skilfully managed—as, for instance, in the second chapter, when, in connexion with the classification of numbers, the necessity for extending the boundaries of the category so as to include in turn not only positive integers, but fractions, negative quantities, irrationals, and imaginaries, is established in the most interesting manner. Another feature of the work owes its origin to the tendency on the part of junior students to regard analytical geometry as if it related only to the geometry of the conic sections. The authors of the treatise we are considering endeavour to correct the error by the discussion of other curves also. In fact, the aim of the whole work is to enlarge the ideas of the student and to place him in possession of the instruments best calculated to increase his power and aid him in his pursuits. Every effort has been made to produce the book as well as possible, one characteristic being the general excellence of the diagrams, of which, from the very nature of the work, the number is necessarily large.

GENERAL NOTICES.

CLASSICS.

(1) *The Rhetoric of Aristotle: a Translation.* By Sir Richard Claverhouse Jebb, O.M., Litt.D., late Regius Professor of Greek in the University of Cambridge. Edited by John Edwin Sandys, Litt.D., Fellow of St. John's College, and Public Orator. (6s. net.) (2) *Aristotle's Nicomachean Ethics, Book VI.* With Essays, Notes, and Translation. By L. H. G. Greenwood, M.A., Fellow of King's College, Cambridge. (6s. net.) (Cambridge University Press.)

(1) Dr. Sandys has performed the functions of an editor with judicious regard alike to the eminence of the translator and to the claims of scholarship. Whilst supplying accidental omissions and correcting

Digitized by Google

occasional oversights, he has added a considerable number of notes, indicating the sources of Aristotle's numerous quotations, explaining literary and historical allusions, and marking variations in the text (so far as they affect the translation) and now and again alternative renderings or opinions as to the meaning. He also furnishes a very able introduction on the general subject of the treatise, keeping in view Jebb's own references in his "Attic Orators," but at the same time handling the matter freely. The translation is characterized by the translator's sureness and deftness of touch, and will be warmly welcomed by scholars and by students.

(2) Mr. Greenwood's work is a fellowship-dissertation slightly altered and enlarged. He finds considerable scope for criticism and explanation, for "probably no book among the whole ten" of the Nicomachean Ethics "has received so little attention from Aristotelian students." The introduction investigates the question of Aristotle's authorship and discusses the doctrine of the Book and its relation to the whole treatise. The text, which however does not rest on any fresh examination of the manuscripts—not likely, indeed, to be very rewarding—is closer to Bywater's than to Susemihl's; and the critical notes are confined to an account of the readings of the best manuscripts and of the chief modern editors in such passages as raise any real doubt. The translation has been thoroughly well thought out and the expression is perspicuous. Two essays, on Dialectic Method and on Formal Accuracy, while quite relevant to the Sixth Book and illustrated entirely from its contents, necessarily take a much wider range of application: the first is largely a running polemic against views of Prof. Burnet. A considerable number of miscellaneous notes discuss points of interpretation in some detail. The volume is very capable, sincere, and independent, making a substantial addition to the Cambridge work on Aristotle and claiming the attention of classical and philosophical students.

Caesar's Commentaries on the Gallic War. Translated into English by T. Rice Holmes, Hon. Litt.D. Dublin. (4s. 6d. net. Macmillan.)

Dr. Rice Holmes has evidently been much exercised about the right method of translating Caesar with success, and he modestly hopes "that even this attempt, with all its defects, will here and there reflect, however faintly, the dignity, the terseness, the directness, the lucidity, the restraint, the masculine energy of Caesar's style." He doth protest too much. His translation is a plain, straightforward, vigorous narrative carefully reproducing the sense of the original. It suffices for the general reader as well as for the student. There is a brief introduction, occasional foot-notes, a full index, and an excellent map—all of them useful additions. The translator's previous works on the subject should be available as collateral aids in the study of the "Commentaries."

MATHEMATICS.

A Preliminary Geometry. By Noel S. Lydon. (1s. Methuen.)

Designed as an accompaniment to class lessons in first principles, Mr. Lydon's "Preliminary Geometry" outlines an interesting course which many teachers will be ready to follow, and its pages set forth the leading facts which the beginner must make his own before he can profitably commence formal study. The author is skilful in the analysis of his subject, and an excellent feature of his text-book consists in the lists of simply and clearly defined geometrical terms that are placed at the close of the lessons in which such terms present themselves for the first time. Teachers using the work for their classes will find it necessary from time to time to improve the text of a passage, but the alterations will not involve much trouble. The diagrams are numerous and carefully executed; in other respects also the book has been well brought out.

The Arithmetic of Commerce. By H. H. Talbot. (1s. 3d. Jack.)

A "First Year Course" in the subject and arranged with special reference to the work of evening and continuation schools. If employed as the writer expressly intends it to be, the little book will serve a very useful purpose. Most text-books gain in value from the student's point of view when used to supplement rather than to supply the place of oral instruction; this one advises its readers of its reliance on *viva voce* explanations of theory and confines itself to suggestive notes and descriptions of methods adopted. The author gives a large number of fully worked examples for the illustration of arithmetical processes, in many instances furnishing more than one mode of working a problem, in order that the relative value and neatness of the given solutions may become evident. The student is thus enabled to grasp clearly the advantage of adopting one method and avoiding another, because the latter is clumsy or unnecessarily cumbersome. Exercises, including miscellaneous collections of problems and questions that have been set at public examinations, are provided in abundance. The rules given for approximation in division of decimals will not always secure the required degree of accuracy, although they will perhaps be sufficient in the majority of the cases that occur in practical applications of the method.

McDougall's Girls' Arithmetic. Book I. (Pupil's Book, 4d.; Teacher's Book, 1s. 3d. net.)

The first "Book" of each series is before us. That for pupils contains exercises both for mental and written work, together with very occasional notes. The entire compilation should prove acceptable, seeing that it has been arranged in response to suggestions, from more than one source, that girls may derive much benefit from dealing with problems of which most are based on the domestic interests and occupations of women. Each series consists of three "Books" for use in the fourth and higher classes respectively of girls' schools. The teacher's "Books" include all that is in the corresponding pupils' volumes and, in addition, there are here given the answers to the questions set in the pupil's "Books," hints on methods of solution, and a number of supplementary exercises.

SCIENCE.

An Elementary Treatment of the Theory of Spinning Tops and Gyroscopic Motion. By Harold Crabtree, M.A., formerly Scholar of Pembroke College, Cambridge, Assistant Master at Charterhouse. (5s. 6d. net. Longmans.)

Every properly constituted boy spins a top, but it is not every boy that considers so curiously as Mr. Crabtree does the behaviour of that interesting plaything, or dreams of the "surprising possibilities of knowledge and power" that lie within it. "Who would have thought that in tops lay concealed the secret of steering a torpedo, of steadying ships, or of travelling with security in a single car on a tight-rope at the rate of 130 miles an hour?" "Who would have thought that on such motion as theirs depends the foundation of the most astounding theory of Modern Science—that the so-called solid matter with which we come in contact every day is not really solid after all, but composed of a vast infinitude of particles whirling round one another at inconceivable speeds like planets in the heavens?" The first four chapters are expressly of an elementary character: they "should be intelligible to any reader conversant with the principles of momentum and energy as applied to Particle Dynamics," and suffice to explain the motion of a spinning top, and the practical applications to ships, &c., which are set forth in the fifth chapter. Other chapters deal with the steady motion and the general motion of a top, moving axes, stability of rotation, and periods of oscillation. There are numerous examples and questions (with answers appended), over a hundred figures, and three plates. The whole discussion is most interesting, lucid, and able.

"Science Series."—*British Minerals, and where to find them.* By J. Stephen Neil, F.G.S., F.C.I.S. (2s. Murby.)

The larger part of the book consists of an index of the principal localities where minerals are found in the British Isles, with a list of the mineral species in each locality. The remainder of the volume is occupied by a list of British mineral species, with an outline of their physical features and notes on the rocks or the geological situation in which they usually occur. A useful list of reference works is appended. The subject is very interesting to many people that do not aim at being mineralogists or geologists—workers in mines or quarries, intelligent people generally, and not least boys in their teens. Though unpretentious in form, the work has cost much trouble and care in compilation. One is not surprised to find occasional topographical lapses: for instance, Stonehaven Bay is in Kincardine, and cannot be claimed by Aberdeen; and Ruxburn should probably be Buxburn (or, as it is now locally spelled, we believe, Bucksburn). But these are small matters. The book will be a very useful practical guide.

The University Tutorial Press issues (1) a third impression (second edition) of *Technical Electricity*, by H. T. Davidge, B.Sc., M.I.E.E., Professor of Engineering at the Ordnance College, Woolwich, and R. W. Hutchinson, B.Sc., A.M.I.E.E., Head of the Department of Physics, Municipal Technical Schools, Hull, and Deputy Principal of the Day Engineering and Commercial School (4s. 6d.); 2) a sixth impression (fourth edition) of *The New Matriculation Chemistry* (specially adapted to the London University Matriculation Syllabus), by G. H. Bailey, D.Sc. Lond., Ph.D. Heid., Lecturer in Chemistry, Manchester University, and William Briggs, LL.D., &c., Principal of the University Correspondence College (5s. 6d); and (3), a fifth impression (fourth edition) of *A Text-Book of Botany*, by J. M. Lowson, M.A., B.Sc., F.L.S., formerly Lecturer at University Tutorial College (6s. 6d.)—thoroughly revised to date, and including a new chapter on "Ecology and Plant Distribution." All these volumes are excellently adapted to their purposes.

ENGLISH.

"Cambridge English Classics."—*The Poetical Works of Giles and Phineas Fletcher.* In Two Volumes. Edited by Frederick S. Boas, M.A., formerly Professor of English Literature in Queen's College, Belfast, and Clark Lecturer in Trinity College, Cambridge. (4s. 6d. net each. Cambridge University Press.)

The first volume contains all the extant poetical works of Giles Fletcher and such of the undisputed poems of his brother Phineas as were published before 1633. The second volume includes the remainder of the poems of Phineas, original and translated, together with "Brittain's Ida" (1628), which is ascribed on the title-page to Spenser, but assigned confidently to Phineas Fletcher by Mr. Boas. The editorial work of Mr Boas has been protracted and laborious, the chief textual problems being raised by Phineas; but students of English will warmly acknowledge the success of his painstaking diligence, and recognize that these volumes "lay the foundation for a more critical and considered estimate of Phineas Fletcher's poetic merits than has hitherto been possible." The type and the get-up are excellent.

"The King's Classics," General Editor, Prof. Gollancz, Litt.D. (1s. 6d. net each volume. Chatto & Windus.)

Recent volumes of this charming series are Nos. 36 and 37, George Pettie's *Petite Pallace of Pettie his Pleasure*, "containing many (12) pretie histories by him set forth in comely colours and most delightfully

Digitized by Google

discoursed"—in style the direct precursor of Lyly's euphuism; No. 46, Dante's *Vita Nuova*, together with the version of D. G. Rossetti, edited by H. Oelsner, Ph.D., Lecturer in Romance Literature, Oxford University; No. 58, *Translations from the Icelandic*, being select passages in prose and in verse, introductory to Icelandic literature, translated and edited by the Rev. W. C. Green, M.A.; and No. 60, Daniel's *Delia* and Drayton's *Idea*, two Elizabethan sonnet-sequences, edited by Arundell Esdaile, M.A. The introductions and notes are pointed and helpful, and each volume has a frontispiece. The get-up is artistic and delightful.

(1) *Pierce the Ploughman's Creed.* (2s.) (2) *The Proverbs of Alfred.* 2s. 6d. Edited by the Rev. Walter W. Skeat, Litt.D., LL.D., D.C L., &c., Elrington and Bosworth Professor of Anglo-Saxon in the University of Cambridge, and Fellow of Christ's College. (Clarendon Press.)

We have left over these admirable editions for more leisurely notice in the convenient season that is so apt never to arrive. The texts are clarified by strict adherence to the forms of the best manuscripts, and the details of the introductions—and especially of the introduction to (2)—often have much wider bearings than illustration of the particular work. Introductions, textual notes, explanatory notes, and glossarial indexes, are all excellent models of thorough workmanship.

MODERN LANGUAGES.

A History of German Literature. By Calvin Thomas, LL.D., Professor of Germanic Languages and Literature in Columbia University, New York. (6s. Heinemann.)

This is a new addition to the lengthening and popular series of "Short Histories of the Literatures of the World." The limits of space press severely upon a writer that has to handle such a long and varied development as that of German Literature, and Prof. Thomas omits writings in scholarship, philosophy, and science, confining himself to literature in the restricted sense. For further relief he has deliberately chosen "to select from the manifold concrete facts those which seem to be most representative and most pregnant, and to dwell on those at some length, leaving the minor phenomena unnoticed." He is thus able to present in an agreeably fluent narrative a comprehensive and effective sketch of his subject, sufficient for the general reader and useful as collateral reading for the student. A bibliographic note gives a good selection of works for more extended study.

"Methuen's Simplified German Texts."—Edited by T. R. N. Crofts, M.A., Modern Language Master at Merchant Taylors' School, London. (1s. each volume.)

The series consists of German stories retold in easy German for young pupils that have made some progress in the study of the language, with vocabularies in which the idioms are explained. We have four volumes—(1) *Der Müller am Rhein*, founded on Brentano's "Märchen von dem Rhein und dem Müller Radlauf," and adapted by Miss A. F. Ryan, Modern Language Mistress, High School, Derby; (2) *Undine und Huldbrand*, founded on Fouqué's "Undine," and adapted by T. R. N. Crofts, M.A.; (3) *Die Geschichte von Peter Schlemihl*, founded on Chamisso's "Peter Schlemihls Wundersamegeschichte," and adapted by R. C. Perry, M.A., Modern Language Master, Merchant Taylors' School; (4) *Die Nothelfer*, founded on Riehl's "Die Vierzehn Nothelfer," and adapted by F. B. Ingham, B.A., Modern Language Master, Merchant Taylors' School. The form is convenient and the get-up is agreeable and substantial.

Jean Rotron's Saint Genest and Venceslas. Edited by Thomas Frederick Crane, Professor of the Romance Languages in Cornell University. (4s. 6d. Ginn.)

Prof. Crane breaks fresh ground. He thinks that "students of the French classical dramas should know of the romantic tendencies of the age as expressed in the tragi-comedy of Rotron—tendencies that resulted in the Romantic drama of the last century"; and so he issues a somewhat elaborate edition of two of Rotron's plays. An extensive introduction deals with the life of Rotron and his works—their sources, characteristics, conditions of production, and literary qualities and relations—with many sidelights upon French dramatic literature in the seventeenth century. A reasonably full apparatus of notes and references is disposed at the foot of the pages of text; and a variety of illustrative matter is relegated to three appendixes. There is a serviceable bibliography, and indexes—one specially provided for the introduction. The volume is for advanced students, able to cope with fairly difficult French and to grasp the Spanish plays on which the present plays of Rotron are based, well read in contemporary literary history, and moderately equipped for literary criticism. It is a laborious and learned monograph.

HISTORY AND GEOGRAPHY.

Geography: Structural, Physical, and Comparative. By J. W. Gregory, D.Sc., F.R.S., Professor of Geology in the University of Glasgow. (6s. net. Blackie.)

The main object of the author is "to state the most important facts concerning the structural geography of the earth and the evolution of our present continents from older lands." Part I. deals with the structure, shape, and materials of the earth. Part II. explains the making of the land forms—coasts, islands, lakes, &c. Part III. considers briefly the influence of the atmosphere and of the oceans. Part IV., occupying two-thirds of the volume, is systematically descriptive of the various regions of the earth. The treatment is comprehensive, simple, and lucid, the essential points being unfailingly selected and driven home. Prof. Gregory makes special acknowledgment of his indebtedness to Prof. E. Suess, of Vienna, "the most original force in contemporary geography." A select bibliography and other useful matters are given in appendixes. There are 32 plates and coloured maps—very valuable adjuncts. A very fresh, compact, and able work.

"Six Ages of European History."—(1) *The End of the Middle Age*, 1273–1453. By Eleanor C. Lodge, Vice-Principal and Modern History Tutor, Lady Margaret Hall, Oxford. With an Introduction by R. Lodge, M.A., Professor of History in the University of Edinburgh. (2) *The Age of the Enlightened Despot*, 1660–1789. By A. H. Johnson, M.A., Fellow of All Souls College, Oxford. (2s. 6d. each. Methuen.)

These are the third and fifth volumes of a new series of six, intended to cover European History from A.D. 476 to 1878 in a manner adapted to the use of the higher forms of schools. The undertaking is full of difficulties: it is very hard to sketch the main lines of the history of the several countries and to co-ordinate the points where they meet or intertwine, and at the same time to carry along the young reader that knows nothing of the events beyond the facts communicated in the necessarily concise narrative before him. Both the volumes, however, will convey a very good general idea of the course of historical development within their several periods. The writers dispose the materials in clear order, and bring the details to bear lucidly upon the essential topics. The style is plain and simple, but capable of improvement. There are useful maps (16 in the first volume and 11 in the second), chronological and genealogical tables, selected bibliographies for collateral and more extended study, and an index. The series promises to be a valuable help towards a firm grip of the outlines of European history.

Mr. Fisher Unwin has issued a second impression of *Uganda to Khartoum*, by Albert B. Lloyd—an extremely interesting sketch of life and adventure on the Upper Nile—"a record, simply told, of travel and adventure and honest work among the natives of a part of Central Africa very little known to the public." (5s.) There are eighty illustrations.

RELIGIOUS AND MORAL.

A Commentary on the Holy Bible. By various writers. Edited by the Rev. J. R. Dummelow, M.A., Queens' College, Cambridge. Complete in one volume. (7s. 6d. net. Macmillan.)

With the assistance of a considerable number of well known theologians, American as well as British, the editor has compressed into eleven hundred pages (double columns) an instructive running commentary upon the Old and New Testaments. An introduction is prefixed to each book, and notes help to explain the principal difficulties, textual, moral, and doctrinal. A series of general articles—about thirty—deal, in more than a hundred pages, with the larger questions suggested by the Bible as a whole; for example, the creation story and science, the laws of Hammurabi, the Synoptic problem, miracles, Bible antiquities, &c. The writers incorporate "the most assured results of modern scholarship, whilst avoiding opinions of an extreme or precarious kind." The editor has performed his most difficult task with great judgment, and there can be no doubt that the volume will be most welcome both to clergy and to laity. It will be specially useful to teachers.

"Cambridge Bible for Schools and Colleges."—*The Wisdom of Solomon.* In the Revised Version. With Introduction and Notes by the Rev. J. A. F. Gregg, M.A., late Scholar of Christ's College, Cambridge. (2s. 6d. net. Cambridge University Press.)

The introduction deals concisely and pointedly with the literary and doctrinal aspects of the subject, and the notes are very full and instructive. The many difficulties are handled with adequate scholarship, judgment, and patience. "The Solomonic authorship is a purely literary artifice": "the writer lived about 100 B.C. and was an Alexandrian Jew, possessing considerable acquaintance with the poetry and philosophy of Greece; he may have been a professional religious teacher." The workmanship of this edition will rank with that of the best in the series.

Among recent "Cheap Reprints" (6d.) issued by Messrs. Watts for the Rationalist Press Association are (1) *Asiatic Studies, Religious and Social*, by Sir Alfred C. Lyall, K.C.B., D.C.L.; (2) *Twelve Lectures and Essays*, by Huxley; (3) *Haeckel, his Life and Work*, by Prof. W. Bölsche; (4) *A Selection from Paine's Political Writings*; (5) *Life of Thomas Paine*, by M. D. Conway, Part I.
